[34] Secs. 1033(d) and (e). If a taxpayer sells or exchanges more livestock than normal because of a drought, the sale or exchange of the excess amount is treated as an involuntary conversion. The livestock must be other than poultry and be held by the taxpayer for draft, breeding, or dairy purposes.
[35] Sec. 1033(a)(2).

Realized Gain. The taxpayer's realized gain is the excess of the amount received due to the involuntary conversion over the adjusted basis of the property converted. The total award or proceeds received are reduced by expenses incurred to determine the amount realized (e.g., attorney's fees incurred in connection with determining the settlement to be received from a condemnation). If the payment of the award or proceeds is delayed, any amounts paid as interest are not included in determining the amount realized.[36] Amounts received as interest on an award for property condemned are taxed as ordinary income even if the interest is paid by a state or political subdivision.[37]

EXAMPLE I:12-32 ▶ Richard's property with a $100,000 basis is condemned by the city of Phoenix. Richard receives a $190,000 award and pays $1,000 in legal expenses for representation at the condemnation proceedings and $800 for an appraisal of the property. The amount realized is $188,200 [$190,000 − ($1,000 + $800)], and the realized gain is $88,200 ($188,200 − $100,000). Richard may elect to defer part or all of the realized gain if the requirements of Sec. 1033 are satisfied. ◀

SELF-STUDY QUESTION

In Example I:12-32, what is the minimum amount Richard must pay for qualified replacement property to defer all of the gain?

ANSWER

$188,200

Gain Recognized. To defer the entire gain, one must purchase replacement property with a cost equal to or greater than the amount realized from the involuntary conversion. If the replacement property is purchased for an amount less than the amount realized, that portion of the realized gain equal to the excess of the amount realized from the conversion over the cost of the replacement property must be recognized.[38] Stated differently, the recognized gain is the lesser of the realized gain or the excess of the amount realized over the cost of the replacement property.

EXAMPLE I:12-33 ▶ Bob owns a restaurant with a $200,000 basis. The restaurant is destroyed by fire, and he receives insurance proceeds of $300,000. Bob's realized gain is $100,000 ($300,000 − $200,000). He purchases another restaurant for $275,000. Bob may elect to defer $75,000 of the gain under Sec. 1033, and $25,000 ($300,000 − $275,000) of Bob's gain must be recognized because he failed to reinvest all of the $300,000 insurance proceeds in a suitable replacement property. ◀

EXAMPLE I:12-34 ▶ Stacey owns a racehorse with a $450,000 basis used for breeding purposes. The racehorse is killed by lightning, and she collects $800,000 from the insurance company. Stacey's realized gain is $350,000 ($800,000 − $450,000). She purchases another racehorse for $430,000. The entire $350,000 of gain is recognized, because the amount realized from the involuntary conversion exceeds the cost of the replacement property by $370,000 ($800,000 − $430,000) which is more than the realized gain. ◀

Basis of Replacement Property. If replacement property is purchased, the basis of the replacement property is its cost less any deferred gain. If the taxpayer elects to defer the gain, the holding period of the replacement property includes the holding period of the converted property.[39]

EXAMPLE I:12-35 ▶ Tracy owns a yacht held for personal use with a $20,000 basis. The yacht is destroyed by a storm, and Tracy collects $24,000 from the insurance company. She purchases a new $35,000 yacht for personal use and elects to defer the $4,000 ($24,000 − $20,000) gain. The basis of the new yacht is $31,000 ($35,000 − $4,000). The holding period for the new yacht includes the holding period of the destroyed yacht. ◀

SELF-STUDY QUESTION

In Example I:12-34, what is Stacey's basis for her new racehorse?

ANSWER

$430,000

Severance Damages. If a portion of the taxpayer's property is condemned, the taxpayer may receive **severance damages** as compensation for a decline in the value of the retained property. For example, if access to the retained property becomes difficult or if the property is exposed to greater damage from flooding or erosion, its value may decline.

---

[36] *Flushingside Realty & Construction Co.*, 1943 PH T.C. Memo ¶43,286, 2 TCM 259.

[37] *Spencer D. Stewart v. CIR*, 52 AFTR 2d 83-5885, 83-2 USTC ¶9573 (9th Cir., 1983).

[38] Sec. 1033(a)(2)(A).

[39] Sec. 1223(1)(A).

The IRS considers severance damages to be "analogous to the proceeds of property insurance; they represent compensation for damages to the property."[40] Amounts received as severance damages reduce the basis of the retained property, and any amount received in excess of the property's basis is treated as gain.[41]

EXAMPLE I:12-36 ▶ Cindy owns a 500-acre farm with a $200 basis per acre ($100,000 basis). The state condemns ten acres across the northwest corner of her farm to build a major highway. Cindy receives a condemnation award of $500 per acre for the ten acres. The highway separates the farm into a 25-acre tract and a 465-acre tract. Because her ability to efficiently use the 25-acre tract for farming is reduced, the state pays additional severance damages of $90 per acre for the 25 acres. Cindy's gain realized from condemnation of the ten acres is $3,000 [$5,000 − ($200 × 10 acres)]. The $2,250 ($90 × 25 acres) of severance damages reduce the basis of the 25-acre tract from $5,000 to $2,750 [($200 × 25 acres) − $2,250]. The reduction in basis is applied solely to the 25 acres because of its decline in value as farmland. ◀

REAL-WORLD EXAMPLE

Seven of the 18 holes of a golf course were condemned. Although 11 holes remained, it was anticipated that the course would have to be reduced to 9 holes. Therefore, $21,000 of the condemnation award was allocated to severance damages to reflect the decline in value of the two lost holes. *Marco S. Marinello Associates, Inc.,* 1975 PH T.C. Memo ¶75,078, 34 TCM 392.

The Sec. 1033 provisions concerning nonrecognition of gain may apply to severance damages. For instance, if severance damages are used to restore the retained property, only that portion of severance damages not spent for restoration reduces the basis of the retained property. A taxpayer who uses severance damages to purchase adjacent farmland to replace the portion of the farm condemned may use Sec. 1033 to defer a gain due to the receipt of the severance damages.[42]

REPLACEMENT PROPERTY

To qualify for nonrecognition of gain due to an involuntary conversion, the taxpayer must acquire qualified replacement property. With some exceptions, the **replacement property** must be "similar or related in service or use to the property so converted."[43] Taxpayers who own and use the property must use the functional-use test although replacement may be made with like-kind property in certain cases. A taxpayer who owns and leases the property that is involuntarily converted may use the taxpayer-use test.

REAL-WORLD EXAMPLE

The replacement of bowling alleys destroyed in a fire with a recreational billiards center did not pass the functional-use test. Rev. Rul. 76-319, 1976-2 C.B. 242.

Functional-Use Test. The **functional-use test** is more restrictive than the like-kind test. To be considered similar or related in service or use, the replacement property must be functionally the same as the converted property. For example, the exchange of a business building for land used in business qualifies as a like-kind exchange. Replacing a building with land does not qualify as replacement property under the involuntary conversion rules. The building must be replaced with a building that is functionally the same as the converted building.

EXAMPLE I:12-37 ▶ Julie's movie theater is destroyed by fire, and she uses the insurance proceeds to purchase a skating rink. The converted property has not been replaced with property that is similar or related in service or use under the functional-use test. The election to defer gain under Sec. 1033 is not available. ◀

Replacement with Like-Kind Property. If real property held for productive use in a trade or business or for investment is *condemned*, a proper replacement may be made by acquiring like-kind property.[44] This exception to the functional-use test applies only to real property used in a trade or business or held for investment.

EXAMPLE I:12-38 ▶ Ken owns a building used in his business that is condemned by the state to widen a highway. He uses the proceeds to purchase land to be held for investment. The land is a qualified replacement property because the condemned building is real property used in a trade or business, and the like-kind exchange rule may be applied to the condemnation. ◀

---

[40] Rev. Rul. 53-271, 1953-2 C.B. 36.

[41] Rev. Rul. 68-37, 1968-1 C.B. 359.

[42] Rev. Ruls. 69-240, 1969-1 C.B. 199, 73-35, 1973-1 C.B. 367, and 83-49, 1983-1 C.B. 191.

[43] Secs. 1033(a)(2)(A) and 1033(f). The replacement of property requirement is modified when proceeds from the involuntary conversion of livestock may not be reinvested in property similar or related in use to the converted livestock because of soil contamination or other environmental contamination. Sec. 1033(f) permits the livestock to be replaced with other property, including real property, used for farming purposes.

[44] Sec. 1033(g)(1).

EXAMPLE I:12-39 ▶ Assume the same facts as in Example I:12-38 except that the building is destroyed by a violent windstorm. Ken's purchase of the investment land is not qualified replacement property because the more flexible like-kind exchange rules apply only to condemnations. He must purchase property with the same functional use as the business building. ◀

REAL-WORLD EXAMPLE

A nursery with its trees and shrubs was condemned, and the taxpayer replaced the condemned property with land and greenhouses. The replacement was considered to have been made with like-kind property. The taxpayer was allowed to defer the gain. *Evert Asjes, Jr.*, 74 T.C. 1005 (1980).

If business or investment property is involuntarily converted as a result of a Presidentially declared disaster after 1994, the taxpayer may replace the property with any tangible property that is held for productive use in a trade or business.

Taxpayer-Use Test. The **taxpayer-use test** applies to the involuntary conversion of rental property owned by an investor. This test permits greater flexibility than the functional-use test. The principal requirement is that the owner-investor must lease out the replacement property that is acquired. However, the lessee is not required to use the leased property for the same functional use.[45]

EXAMPLE I:12-40 ▶ Sally owns an apartment complex rented to college students, and the apartment complex is destroyed by fire. She uses the insurance proceeds to purchase a medical building that is leased to physicians. Sally has acquired a qualified replacement property under the taxpayer-use test, and the gain, if any, may be deferred if an election is made under Sec. 1033. ◀

STOP & THINK

Question: Greg Stacey's motel is destroyed by fire on March 10 of the current year. The basis of the property is $400,000 and he receives $2,000,000 from the insurance company. Greg is concerned about the possibility of having to pay income tax on the $1,600,000 gain and is aware of the tax rules relating to involuntary conversions. Greg is considering replacing the destroyed motel by building either a new motel or an ice skating rink on the vacant lot. The cost of a new motel or an ice skating rink is expected to be $2,500,000, and he expects to borrow 60% of the cost. What tax advice would you give him?

Solution: Greg may defer the $1,600,000 gain if the involuntary conversion requirements are met and he makes a proper election. The principal issue is whether the replacement property is considered to be "similar in service or use" to the converted property. Because the functional-use test is applicable in this case, an ice skating rink is not similar property and the gain of $1,600,000 must be recognized. Conversely, the new motel is similar property and, since Greg is reinvesting an amount greater than $2,000,000, none of the gain is recognized. His basis in the new motel is $900,000 ($2,500,000 − deferred gain of $1,600,000). The fact that he borrows money and does not spend the $2,000,000 insurance proceeds does not prevent him from electing to defer the gain. The tax requirement is only that he must reinvest an amount equal to or greater than the $2,000,000 insurance proceeds. In this case, the tax law clearly encourages the taxpayer to build a new motel rather than an ice skating rink.

REAL-WORLD EXAMPLE

Taxpayer owned land and a warehouse held for rental purposes. Upon condemnation of this property, taxpayer invested the proceeds in a gas station on land already owned by the taxpayer which was also held for rental purposes. The taxpayer-use test applied, and taxpayer was able to defer the gain. Rev. Rul. 71-41, 1971-1 C.B. 223.

OBTAINING REPLACEMENT PROPERTY

The general rule is that the taxpayer must purchase the replacement property.[46] Taxpayers may purchase replacement property indirectly by purchasing control (i.e., 80% or more of the stock) of a corporation that owns the replacement property.[47] However, this exception is not applicable to the purchase of like-kind property to replace condemned real property used in a trade or business or held for investment.[48]

EXAMPLE I:12-41 ▶ Hank's airplane, used in business, is hijacked and taken to a foreign country. He uses the insurance proceeds to purchase 80% of Fast Corporation stock. Fast Corporation owns an airplane which is qualified replacement property. The involuntary conversion requirements are satisfied if Hank elects to defer any gain realized. ◀

---

[45] Rev. Rul. 64-237, 1964-2 C.B. 319.

[46] To qualify as a purchase of property or stock under Sec. 1033(a)(2)(A)(ii), the unadjusted basis of the property or stock must be its cost within the meaning of Sec. 1012 without considering the basis adjustment for the deferred gain. Property acquired by inheritance, gift, or a nontaxable exchange does not qualify as replacement property (see Reg. Sec. 1.1033(a)-2(c)(4)).

[47] Sec. 1033(a)(2)(A) and Reg. Sec. 1.1033(a)-2(c).

[48] Sec. 1033(g)(2).

EXAMPLE I:12-42 ▶ Lynn's farm is condemned by the state for public use. She uses the proceeds to purchase 80% of Vermont Corporation stock. Vermont Corporation owns eight parking lots. A qualified replacement property has not been obtained through the stock purchase because the parking lots are not functionally the same as the farm. A qualified replacement does occur if she buys the parking lots from the Vermont Corporation. ◀

TYPICAL MISCONCEPTION

The first taxable year in which any part of the gain on the conversion is realized is the year in which the insurance proceeds are received, not the year in which the involuntary conversion took place.

TIME REQUIREMENTS FOR REPLACEMENT

To qualify for nonrecognition of gain treatment, the converted property must be replaced within a specified time period. The general rule is that the period begins with the date of disposition of the converted property and ends "two years after the close of the first taxable year in which any part of the gain upon the conversion is realized."[49] If the involuntary conversion is due to condemnation or requisition, or the threat of such, the replacement period begins on the date of the threat or imminence of the requisition or condemnation. The replacement period may be extended by obtaining permission from the IRS.[50]

EXAMPLE I:12-43 ▶ On December 8, 2025, Craig's business property was destroyed by fire. Craig receives insurance proceeds in 2026 and elects to defer recognition of the gain. He must replace the property between December 8, 2025, and December 31, 2028. The two-year time period includes 2028 because the gain is realized when the insurance proceeds are received in 2026. ◀

KEY POINT

The replacement period is three years instead of two years on the condemnation of real property used in a business or held for investment.

The replacement period is longer if the involuntary conversion is due to the condemnation of real property (excluding inventory) held for productive use in a trade or business or for investment. The replacement period ends three years after the close of the first tax year in which any part of the gain is realized.[51] This provision for a longer replacement period applies to the same type of real property that may be replaced with like-kind property.

EXAMPLE I:12-44 ▶ Beth owns a building used in her dry cleaning business. In 2025, the state condemns the building and awards Beth an amount greater than the adjusted basis of the building. Beth may replace the property with like-kind property, and the replacement period ends on December 31, 2028. ◀

The involuntary conversion rules are summarized in Topic Review I:12-2.

TOPIC REVIEW I:12-2

Section 1033: Involuntary Conversions

1. Section 1033 applies only to gains, not losses.
2. Nonrecognition of gain under Section 1033 is elective. (Nonrecognition of gain is mandatory in a direct conversion, but direct conversions seldom occur.)
3. Section 1033 applies to involuntary conversions of all types of properties.
4. Some gain may be recognized if the taxpayer replaces the involuntarily converted property with property that costs less than the amount realized in the involuntary conversion.
5. The nonrecognized gain is deferred.
6. The basis of property acquired to replace the involuntarily converted property is the cost of the property less the deferred gain.
7. Property acquired to replace the involuntarily converted property generally must be functionally related property.
8. The required replacement period generally begins with the date of disposition of the converted property and ends two years after the close of the first taxable year in which any part of the gain on the conversion is realized. (A three-year period applies to condemnations of real property used in a trade or business or held for the production of income.)

---

[49] Sec. 1033(a)(2)(B).
[50] Sec. 1033(a)(2)(B)(ii).
[51] Sec. 1033(g)(4).

SALE OF PRINCIPAL RESIDENCE

OBJECTIVE 3

Determine when a gain resulting from the sale of a principal residence is excluded

Congress uses the tax law to encourage home ownership in many ways: (1) Real estate taxes and interest on a mortgage used to acquire a principal or second residence are deductible (see Chapter I:8), (2) part or all of the interest on home equity debt may be deductible if proceeds are used to buy, build, or substantially improve the residence, and (3) taxpayers may elect to exclude up to $250,000 ($500,000 on a joint return) of gain from the sale of a principal residence.

Individuals who sell or exchange their personal residence after May 6, 1997, may exclude up to $250,000 of gain if it was owned and occupied as a principal residence for at least two years of the five-year period before the sale or exchange. A married couple may exclude up to $500,000 when filing jointly if both meet the use test; at least one meets the ownership test; and neither spouse is ineligible for the exclusion because he or she sold or exchanged a residence within the last two years.[52]

The Sec. 121 exclusion is available regardless of age, and taxpayers do not have to purchase a replacement residence. Any gain not excluded is capital gain because a personal residence is a capital asset. If long term, these gains are eligible for preferential tax rates. However, any recognized gain on the sale of a personal residence is considered to be investment income, so the gain may be subject to the 3.8% tax on net investment income due to the so-called Medicare tax on higher-income taxpayers (see Chapter I:5 for further discussion of the preferential rates and the additional tax on net investment income). A loss on the sale or exchange of a personal residence is not deductible because the residence is personal-use property.[53]

EXAMPLE I:12-45 ▶ Maki, who is single and 35 years old, sells her principal residence purchased four years ago and realizes a $230,000 gain. Maki may exclude the entire gain regardless of her age or whether she purchases a new principal residence. ◀

EXAMPLE I:12-46 ▶ Assume the same facts as in the above example except the realized gain is $320,000. Maki may exclude $250,000 and recognize a $70,000 LTCG. ◀

EXAMPLE I:12-47 ▶ Assume the same facts as in Example I:12-46 except Maki is married to Yixin, and they have owned and occupied the residence for the last four years. They may exclude the entire $320,000 gain. ◀

ADDITIONAL COMMENT

The elimination of taxes on up to $500,000 of gain from the sale of a personal residence has been a great benefit for many taxpayers who had large built-in gains.

Prior to the Taxpayer Relief Act of 1997, taxpayers could defer gain resulting from sale of a personal residence if they purchased another principal residence within two years at a cost greater than the **adjusted sales price**. Taxpayers who were at least 55 years old could exclude up to $125,000 of gain resulting from the sale of a personal residence. The deferral provision of Sec. 1034 has been repealed; the exclusion has been increased to $250,000 or $500,000; and taxpayers may exclude gain regardless of age and use the exclusion more than once.

Today, the rules for excluding gain resulting from the sale of a personal residence are more favorable for most taxpayers than the old rules because Congress wanted to eliminate the need for homeowners to maintain records for long periods of time. However, taxpayers who expect to sell their homes and have a realized gain of more than $250,000 ($500,000 if a joint return is filed) still need to maintain records. Also, taxpayers who convert their personal residence to business property or rental property will need to know the property's correct adjusted basis to compute depreciation.

Determining the Realized Gain. Gain realized is the excess of the amount realized over the property's adjusted basis.[54] The amount realized on the sale of the property is equal to the selling price less selling expenses.[55] Selling expenses include commissions, advertising, deed preparation costs, and legal expenses incurred in connection with the sale.[56]

EXAMPLE I:12-48 ▶ Kirby sells his personal residence, which has a $100,000 basis, to Maxine. To make the sale, Kirby pays a $7,000 sales commission and incurs $800 of legal costs. Maxine pays $30,000 cash and assumes Kirby's $90,000 mortgage. The amount realized is $112,200 [($30,000 + $90,000) − ($7,000 + $800)]. The realized gain is $12,200 ($112,200 − $100,000). ◀

---

[52] Sec. 121(a) and (b).

[53] Reg. Secs. 1.165-9(a) and 1.262-1b)(4).

[54] Reg. Sec. 1.1034-1(b)(5).

[55] Reg. Sec. 1.1034-1(b)(4).

[56] Reg. Sec. 1.1034-1(b)(4)(i).

Adjusted Basis of Residence. The original basis of a principal residence is a function of how the residence is obtained. It could be purchased, received as a gift, or inherited. The cost of a residence includes all amounts attributable to the acquisition including commissions and other purchasing expenses paid to acquire the residence.[57] Capital improvements, but not repairs, increase the adjusted basis of the residence. The costs of adding a room, installing an air conditioning system, finishing a basement, and landscaping are capital improvements. Expenses incurred to protect the taxpayer's title in the residence are also capitalized. A taxpayer who deferred gain on the sale of a principal residence before 1997 was required to reduce the basis of the replacement residence by the amount of the deferred gain.[58]

EXAMPLE I:12-49 ▶

In 1996, Susan paid $200,000 to purchase a new residence. She paid a realtor $4,000 to help locate the house and paid legal fees of $1,200 to make certain that the seller had legal title to the property. As a result of the purchase, she deferred a gain of $50,000 from the sale of a former residence in 1995. In 1997, she added a new porch to the house at a cost of $6,000 and installed central air conditioning at a cost of $5,200. Since purchasing the house, she has paid $1,500 for repairs. The adjusted basis of her house is $166,400 [$200,000 + $4,000 + $1,200 − $50,000 + $6,000 + $5,200]. ◀

ADDITIONAL COMMENT

For Example I:12-49, assume the dates are increased by ten years (1996 is 2006; 1995 is 2005 and 1997 is 2007) what is Susan's adjusted basis for the house?

ANSWER

$216,400. There is no $50,000 deferred gain from the sale in 2005.

Multiple Use of the Exclusion. Previously under Sec. 121, a taxpayer was limited to the exclusion once in their lifetime, and a married taxpayer whose spouse had taken the exclusion could not use the exclusion even if the taxpayer filed as married filing separately. The exclusion is now determined on an individual basis. An individual may claim the exclusion even if the individual's spouse used the exclusion within the past two years. Also, for a married couple filing a joint return when each spouse maintains a separate principal residence, the $250,000 exclusion is available for the sale or exchange of each spouse's principal residence.

EXAMPLE I:12-50 ▶

Krista, who has owned and used a house as her principal residence for the last seven years, marries Josh in January 2025. Josh sold his residence in October 2024 and excluded a $145,000 gain. Krista sells her residence in December 2025 and realizes a gain of $378,000. She may exclude $250,000 of the gain.

Assuming that Krista and Josh use her residence in the above example for a two-year period starting in January 2025, they could exclude up to $500,000 if she waits to sell the house until January 2027. ◀

PRINCIPAL RESIDENCE DEFINED

For Sec. 121 to apply, taxpayers must sell property that qualifies as their principal residence. Whether property is used as the taxpayer's principal residence depends upon all the facts and circumstances. If a taxpayer uses more than one property as a residence during the year, the property used a majority of the time will normally be the principal residence.[59]

EXAMPLE I:12-51 ▶

Lanny, a 40-year-old college professor, owns and occupies a house in Oklahoma. During the summer, he lives in a cabin in Idaho. After owning the cabin for eight years, Lanny sells it for $95,000 and realizes a gain. Gain on the sale of the cabin in Idaho must be recognized because Lanny's principal residence is in Oklahoma. ◀

KEY POINT

A taxpayer may own two or more residences, but only one qualifies as the principal residence.

Factors other than use of the property that are relevant when determining a taxpayer's principal residence include place of employment, mailing address for bills and correspondence, address for tax returns and voter registration, and location of religious organizations and recreational clubs with which the taxpayer is affiliated. The principal place of abode for the taxpayer's family members is also relevant.[60]

The property does not have to be one's principal residence at time of the sale to qualify for the exclusion. The exclusion applies if the property has been used as a principal residence for at least two of the five years before the sale or exchange and the exclusion has not been used within the past two years.

---

[57] Reg. Sec. 1.1034-1(c)(4).

[58] Sec. 1034(e).

[59] Reg. Sec. 1.121-1(b)(2).

[60] Reg. Sec. 1.121-1(b)(2).

EXAMPLE I:12-52 ▶ Canan owned and used a house in Buffalo as her principal residence from March 10, 2021, until November 21, 2023, when she purchased a new house in Kansas on December 1, 2023. Her brother lives in the house in Buffalo until Canan sells it on July 10, 2025, and realizes a gain of $288,000. She may exclude $250,000 and recognize a $38,000 LTCG. ◀

Condominium apartments, houseboats, and house trailers may qualify as principal residences.[61] Stock held by a tenant-stockholder in a cooperative housing corporation is a principal residence if the dwelling that the taxpayer is entitled to occupy as a stockholder is used as his or her principal residence.[62]

ADDITIONAL COMMENT

The taxpayer does not have to be occupying the old residence at the date of sale. The taxpayer may have already moved to a new residence and could even be renting the old residence temporarily before its sale.

SALE OF MORE THAN ONE PRINCIPAL RESIDENCE WITHIN A TWO-YEAR PERIOD

The new exclusion provided by Sec. 121 applies to only one sale or exchange every two years. However, a portion of the gain may be excluded in certain circumstances even if the two-year requirement is not satisfied.

If a principal residence is sold within two years of a previous sale or exchange of a residence, part of the gain may be excluded if the sale or exchange is due to a change in employment, health, or unforeseen circumstances. The portion of the gain excluded is based on a ratio with a numerator in days or months and a denominator of 730 days or 24 months.[63] The numerator is the shorter of:

(1) the period during which the ownership and use tests were met during the five-year period ending on the date of sale, or

(2) the period of time after the date of the most recent prior sale or exchange for which the exclusion applied until the date of the current sale or exchange.[64]

The amount excluded is $250,000 or $500,000 times the above ratio.

EXAMPLE I:12-53 ▶ Winnie, who is single, sold her principal residence in Detroit on November 1, 2025, and excluded the $127,000 gain because she owned and used the residence for two of the last five years. Winnie had purchased another residence in Cleveland on October 1, 2025. She occupies the residence in Cleveland until June 12, 2026, when she moves to Dallas to accept a new job. She sells the residence in Cleveland on November 15, 2026, and realizes a gain of $40,000. Winnie may exclude all of the gain because the sale of her Cleveland residence was due to a change in employment and 254/730 of $250,000 is more than the $40,000 realized gain. She owns and uses the residence in Cleveland for 254 days, and the period between the sale of the residence in Detroit and the sale in Cleveland is 378 days. ◀

ADDITIONAL COMMENT

If Winnie's gain in Example I:12-53 is $100,000, she may exclude $86,986 (254/730 × $250,000).

Ownership and Use Tests. If a principal residence is sold before satisfying the ownership and use tests, part of the gain may be excluded if the sale is due to a change in employment, health, or unforeseen circumstances. The portion of the gain excluded is determined by multiplying the amount of the exclusion (i.e., $250,000 or $500,000) by a fraction whose numerator is the number of days the use and ownership tests were met and whose denominator is 730 days (or 24 months).

EXAMPLE I:12-54 ▶ Tim, a single taxpayer who purchased his home on March 1, 2025, for $500,000, recently became ill and sells his home in order to move closer to a relative who can care for him. Tim sells his principal residence on August 12, 2025, for $620,000, realizing a gain of $120,000. Because he owned and occupied the residence for 164 days and the sale was due to a change in his health, he may exclude $56,164 ($250,000 × 164/730). ◀

For purposes of the two-year ownership rule, a taxpayer's period of ownership includes the period during which the taxpayer's deceased spouse owned the residence. When a taxpayer receives a residence from a spouse or an ex-spouse incident to a divorce, the taxpayer's period of owning the property includes the time the residence was owned by the spouse or ex-spouse.[65] When attempting to determine if the taxpayer has occupied the residence for two years, short temporary absences such as for vacation or other seasonal absence are counted as use by the taxpayer.[66]

---

[61] Rev. Rul. 64-31, 1964-1 C.B. 300.

[62] Reg. Sec. 1.1034-1(c)(3).

[63] Reg. Sec. 1.121-3(g).

[64] Sec. 121(c).

[65] Sec. 121(d)(2) and (3).

[66] Reg. Sec. 1.121-1(c)(2)(i).

EXAMPLE I:12-55 ▶ Sachie receives an $800,000 residence owned for six years by Richard, her former spouse, as part of a divorce settlement. Richard's basis for the residence is $430,000. They lived in the house for five years prior to the divorce. Three months after transfer of the residence to Sachie, she sells it for $825,000, and $250,000 of her $395,000 realized gain is excluded. Sachie must recognize a $145,000 LTCG. Sachie's period of ownership includes the six years Richard owned the residence. ◀

ADDITIONAL COMMENT

The five-year period does not include any period up to ten years during which the taxpayer or the taxpayer's spouse is on qualified official extended duty as a member of the uniformed services.

A Change in Place of Employment, Health, or Unforeseen Circumstances. The Treasury has issued Regulations to provide guidance as to how a homeowner may qualify for partial exclusion if the sale was before the two-year use and ownership test is satisfied or if the sale occurs within two years of a previous sale where the exclusion was used. The exceptions may apply even if a person other than the taxpayer has a change in employment or health.

Taxpayers may qualify for the partial exclusion if a qualified individual moves to commence employment with a new employer, continue employment with the same employer, and commence or continue self-employment. A qualified individual includes the taxpayer, the taxpayer's spouse, co-owner of the residence, or a person who uses the residence as a principal place of abode. However, the following distance test must be satisfied.

The qualified individual's new place of employment must be at least 50 miles farther from the residence sold or exchanged than was the former place of employment. If there was no former place of employment, the distance between the qualified individual's new place of employment and the residence sold or exchanged must be at least 50 miles.

The change in employment must occur when the taxpayer is satisfying the ownership and use test for the residence except for the two-year requirement.[67]

EXAMPLE I:12-56 ▶ Mark has lived in his first house for one year in Omaha when he marries Karen. Six months later, Karen receives a job offer and they move to Florida. Mark may exclude a realized gain equal to 18/24 of $250,000, because the move is due to a change in employment of a qualified individual. ◀

When determining if the sale or exchange of the residence is due to a change in health, the definition of a "qualified individual" is expanded to include relatives who satisfy the relationship test used to determine if one is a dependent of the taxpayer. The relative must satisfy the relationship test but does not have to be a dependent to be a qualified individual. A sale or exchange is because of health if the primary reason is "to obtain, provide, or facilitate the diagnosis, cure, mitigation, or treatment of a disease, illness, or injury of a qualified individual."[68]

EXAMPLE I:12-57 ▶ Daniel has lived in his first house in Virginia for eight months when he sells the house and moves to Texas to take care of his 60-year-old father who recently suffered a stroke. Daniel may exclude a realized gain equal to 8/24 of $250,000 because the primary reason for the sale is due to the health of a qualified individual. ◀

REAL-WORLD EXAMPLE

In LTR 200601009, taxpayers who sold their home within two years of the purchase because they became aware of various criminal activities occurring in their neighborhood were allowed to utilize Sec. 121. In addition to their son being assaulted and threatened, one of the taxpayers was assaulted by the neighbors.

A sale or exchange is due to unforeseen circumstances if the primary reason for the sale or exchange is an event that the taxpayer could not reasonably have anticipated before purchasing and occupying the residence. For the unforeseen circumstances exception, a qualified individual is the same as a qualified individual for the change in employment test.

The following are specific events considered to qualify as unforeseen circumstances:

1. Involuntary conversion of residence;
2. Natural or man-made disasters or acts of war or terrorism resulting in a casualty to the residence;
3. Death of a qualified individual;
4. Loss of employment by a qualified individual if the individual is eligible for unemployment compensation;
5. Change of employment that results in the taxpayer's inability to pay housing costs and reasonable basic living expenses;
6. Divorce or legal separation;
7. Multiple births from the same pregnancy.[69]

Note that marriage and adoption are not included in the above safe-harbor list of unforeseen circumstances. One who sells her residence before meeting the two-year test because she has adopted a child will not be assured of qualifying for possible exclusion under the unforeseen circumstances exception. She will have to argue that the facts and circumstances justify her use of the partial exclusion.

---

[67] Reg. Sec. 1.121-3(c).

[68] Reg. Sec. 1.121-3(d).

[69] Reg. Sec. 1.121-3(e).

The IRS has issued a number of letter rulings that suggest that it is willing to consider many different reasons for selling due to unforeseen circumstances. In LTR 200601022, a taxpayer purchased a house, but then married someone with a child who attended a school in a different school district. They decided to temporarily use their house as rental property and rent another house for their use located in the child's school district. While living in the rented house, they had a child and decided to sell the first house because it was too small for their expanding family. Despite the fact that the taxpayer did not use the house as a principal residence, they were allowed to utilize Sec. 121.

EXAMPLE I:12-58 ▶ Benjamin purchases a house near the airport and sells it four months later because of noise caused by planes. He may not exclude any of the gain, because the airport noise is not an unforeseen circumstance. ◀

REAL-WORLD EXAMPLE

Unlike Example I:12-58, a taxpayer in LTR 200702032 was able to utilize Sec. 121 when he sold his principal residence located near an airport because he was misled about the amount of noise, despite his considerable efforts to determine if noise would be a problem. He sold the house at a loss, but he sued the real estate agents and the seller for their failure to disclose the excessive noise during peak periods in the early morning and evening. The defendants settled and the settlement proceeds were treated as additional proceeds from the sale of the residence resulting in a gain which the taxpayer was able to exclude.

STOP & THINK

Question: Rebecca's uncle told her that she could purchase his house for $150,000 in five years provided that she could pay at least $30,000 of the purchase price in cash. Rebecca has $15,000 and is considering two alternative methods to obtain the remaining $15,000 in five years. The first alternative is to purchase $15,000 of non-dividend paying stock that she expects to increase in value to $30,000 within five years. The second alternative is to purchase an $80,000 residence by paying $15,000 and borrowing $65,000. Payments on the mortgage will be interest only for five years and amount to $450 per month. Insurance, property taxes, and other home ownership expenses average $90 per month. She expects the house to be worth $95,000 at the end of five years. She will rent an apartment for $540 per month, including utilities, if she buys the stock. Ignoring transaction costs and assuming that she does not itemize deductions, should Rebecca purchase the stock or the house?

Solution: The $15,000 gain resulting from sale of the stock is LTCG and probably taxed at 15%. If the rate is 15%, she must pay taxes of $2,250 and has only $27,750 available to purchase her uncle's house. She will have a gain of $15,000 if she sells the house but the gain is excluded. She has $30,000 of cash and is able to buy her uncle's house. The tax law encourages Rebecca to buy a principal residence.

NONQUALIFIED USE AFTER 2008

A taxpayer who owns a principal residence and a second home (rental property, vacation home, etc.) that has appreciated in value has an incentive to convert the second home to a principal residence if planning to sell the second home. The Housing Assistance Tax Act of 2008 reduced the advantage of converting residences that have not been the principal residence to one's principal residence.

Gain from the sale of a principal residence that is allocable to periods of nonqualified use after 2008 is not excluded from income. Gain allocated to periods of nonqualified use after 2008 is based on the ratio which the aggregate periods of nonqualified use after 2008 bears to the total time the property was owned. A period of nonqualified use is any period that the property is not used as a principal residence after 2008. As under prior law, any depreciation attributable to periods of business use is subject to taxation.

Any portion of the five-year period ending on the date of sale that is after the property ceases to be used as a principal residence is not considered nonqualified use, thus the taxpayer may vacate the residence before selling it without recognizing that time after moving out as nonqualified use. Absences due to change in employment, health condition, or other unforeseen circumstances are not considered nonqualified use. Also, nonqualified use does not include any period in which the taxpayer or taxpayer's spouse is serving on qualified official extended duty.

EXAMPLE I:12-59 ▶ The Eberts owned a house on Elm Street used as rental property for 18 years until they moved into it on May 1, 2008. They used it as their principal residence until the current year when they sell the Elm Street property and realize a $700,000 gain. Any of the gain due to depreciation must be recognized, but they are eligible to exclude up to $500,000 of the remaining gain. The use of the property as rental property is not nonqualified use because it occurred before 2009. ◀

EXAMPLE I:12-60 ▶ Assume the same facts as in Example I:12-59 except the Eberts did not move into the Elm Street property until May 1, 2020, and sell the property on December 22, 2025. In this case, the period from January 1, 2009, through April 30, 2020, is nonqualified use and a pro rata share of the gain after considering the gain due to depreciation is not eligible for the $500,000 exclusion. In this case, the Eberts have 136 months of nonqualified use. ◀

EXAMPLE I:12-61 ▶ Dale owned a house purchased on January 1, 2004 and used as rental property for 18 years until January 1, 2022, when he moved into the house and used it as a principal residence. Depreciation for the 18 years used as rental property is $50,000. If he sells the house on January 1, 2025, and realizes a gain of $230,000, the first $50,000 of gain is recognized because of depreciation. He may exclude 8/21* of the remaining gain of $180,000, and must recognize another $111,429 (13/21 of $180,000) due to the nonqualified use. Gain attributed to the eight years of the 21-year period is eligible for the Sec. 121 exclusion. He must recognize $161,429 ($50,000 + $111,429) of the $230,000 gain and may exclude $68,571.

* To further clarify the calculations in this example, an explanation of the relevant time periods is below:

21 years = total ownership period, 1/1/04–1/1/25.
13 years = nonqualified use period, 1/1/04–12/31/21.
8 years = qualified use years, 1/1/04–12/31/08 and 1/1/22–1/1/25. ◀

INVOLUNTARY CONVERSION OF A PRINCIPAL RESIDENCE

Ordinarily, the involuntary conversion of a principal residence is governed by Sec. 1033, discussed earlier in this chapter. A gain due to an involuntary conversion of a personal residence may be deferred if the requirements of Sec. 1033 are satisfied. The functional-use test must be satisfied regardless of the type of involuntary conversion.

For purposes of Sec. 121, the destruction, theft, seizure, requisition, or condemnation of property is treated as a sale.[70] Thus, taxpayers may exclude a gain of up to $250,000 or $500,000 due to the involuntary conversion of a principal residence if the use and ownership tests are satisfied. Taxpayers normally prefer to exclude gain if the use and ownership tests are satisfied rather than defer gain under the involuntary conversion provisions.

If taxpayers make a proper and timely replacement of the residence subject to the involuntary conversion, gain may be excluded up to $250,000, or $500,000, and the remaining gain may be deferred. For purposes of applying the involuntary conversion provisions, the amount realized due to the involuntary conversion is reduced by any gain excluded under Sec. 121.[71]

EXAMPLE I:12-62 ▶ The Kochs' principal residence, with an adjusted basis of $200,000, has been used and owned by them for nine years. The house is destroyed by a hurricane, and the Kochs receive insurance proceeds of $820,000. Four months later, they purchase another residence for $900,000. The Kochs have a realized gain of $620,000 and may exclude $500,000 under Sec. 121. The remaining $120,000 gain may be deferred and the basis of their replacement residence is $780,000 ($900,000 − $120,000). ◀

Because the amount realized is reduced by the gain excluded, the Kochs could have deferred the $120,000 gain in the above example by investing only $320,000 in a replacement residence.

If gain due to the involuntary conversion of a principal residence is deferred under Sec. 1033, the holding period of the replacement residence includes the holding period of the converted property for purposes of satisfying the use and ownership tests of Sec. 121.[72] The Kochs satisfy the use and ownership requirements for Sec. 121 with respect to their new residence in Example I:12-62 because gain is deferred under Sec. 1033.

A loss due to a condemnation of a personal residence is not recognized. If the loss is due to a casualty, the deductibility of the loss follows the rules for casualty losses of nonbusiness property (see Chapter I:9).

TAX PLANNING CONSIDERATIONS

OBJECTIVE 4

Describe tax planning considerations for nontaxable exchanges

AVOIDING THE LIKE-KIND EXCHANGE PROVISIONS

In some cases, a taxpayer may prefer a taxable exchange to a nontaxable like-kind exchange. For instance, if the gain is taxed as a capital gain and the taxpayer has capital losses to offset the gain, the taxpayer may prefer to recognize the gain during the current year. If gain on the exchange is recognized instead of deferred, the basis of the property received in the exchange is higher.

---

[70] Sec. 121(d)(5)(A).
[71] Sec. 121(d)(5)(B).
[72] Sec. 121(d)(8).

EXAMPLE I:12-63 ▶ Connie owns land with a $20,000 basis. The land is held as an investment. Connie exchanges the land for a duplex to be used as rental property with a $100,000 FMV. Because the exchange qualifies as a like-kind exchange, no gain is recognized and Connie's basis for the duplex is $20,000. If the exchange does not qualify as a like-kind exchange (e.g., the land is a personal-use asset), Connie recognizes an $80,000 capital gain. Connie's basis for the duplex is $100,000. The basis of the duplex, except for the portion allocable to land, is eligible for depreciation. ◀

If an exchange qualifies as a like-kind exchange, no loss on the exchange is recognized. A taxpayer who prefers to recognize a loss should avoid making a like-kind exchange. It may be advantageous to sell the property to recognize the loss and then purchase the replacement asset in two independent transactions. If the sale and purchase transactions are with the same party, the IRS may maintain that the like-kind exchange rules apply because the two transactions are in substance a like-kind exchange (i.e., the judicial doctrine of substance over form might be applied).

SALE OF A PRINCIPAL RESIDENCE

Election Provision. When the requirements of Sec. 121 are satisfied, gain is excluded unless the taxpayer elects not to have Sec. 121 apply.[73]

EXAMPLE I:12-64 ▶ Paula has owned a house in Wyoming for eight years and occupied it until 18 months ago when she moved to Idaho and purchased a new house. She sells the house in Wyoming on May 23 of the current year, and the realized gain is $25,000. Paula anticipates that she will move next year and have to sell the house in Idaho which has appreciated more than $100,000 since purchased. Paula may want to elect not to have Sec. 121 apply and recognize the $25,000 gain and then use the exclusion when she sells the house in Idaho next year. ◀

Property Used as Residence and for Business. If a house is used for both residential use and business use, the tax treatment depends on whether or not the business portion of the house is conducted in a separate structure. If the business portion of the house is conducted in a separate structure, the sale should be treated as a sale of two assets, the residence and the portion of the property used as a business. The Sec. 121 exclusion only applies to the residence portion of the property.

EXAMPLE I:12-65 ▶ Mormor owns a one-acre lot with a house she uses as her residence and a barn that she uses to display and sell antiques. She purchased the property in 1990 for $100,000 and $10,000 of the purchase price was allocated to the barn. Depreciation of $8,000 has been allowed for the barn. She sells the property during the current year for $300,000 and estimates that 10% of the price received is for the barn. She may exclude the $180,000 ($270,000 − $90,000) gain on the sale of the residence. Her $28,000 ($30,000 − $2,000) gain on the sale of the barn is recognized. ◀

ADDITIONAL COMMENT

As explained in Chapter I:13, Mormor's $28,000 gain in Example I:12-65 is a Sec. 1231 gain and $8,000 is taxed at a maximum rate of 25% because it is unrecaptured Sec. 1250 gain.

If the business activity is conducted within the house and not in a separate structure, the sale does not have to be treated as a sale of two different assets. However, gain attributable to depreciation after May 6, 1997, is not eligible for the exclusion. The remaining gain is eligible for the exclusion.

EXAMPLE I:12-66 ▶ Kate, who is self-employed, purchased a house in 2015 for $200,000 and uses 15% of the house as an office. The office is used on a regular and exclusive basis and is her principal place of business. Depreciation of $3,400 has been deducted when she sells the house for $430,000. Her gain is $233,400 ($430,000 − $196,600), and she may exclude $230,000 but must recognize $3,400 of the gain. ◀

The government's decision to allow Kate to treat the property in the above example as one property instead of two is beneficial for her. If the property was viewed as two properties or if the office was in a separate structure, only $195,500 ($365,500 − $170,000) of the gain would qualify for the exclusion.

---

[73] Sec. 121(f).

EXAMPLE I:12-67 ▶ Bobbi purchased a house on March 1, 2014 and used it as her principal residence until March 1, 2016, when she rented the house to the Allens while she lived with her mother. On November 1, 2023, the Allens' lease expired and Bobbi moved back into the house. She sells the house on July 12, 2025, and realizes a gain of $210,000. She may not exclude any of the gain because she has not used the property as her principal residence for two of the last five years. ◀

If Bobbi in the above example did satisfy the two-out-of-five-year requirement, gain equal to depreciation would first be recognized. A portion of the remaining gain could not be excluded because of the nonqualified use after 2008.

EXAMPLE I:12-68 ▶ Assume the same facts as in the above example except that Bobbi sells the house on December 1, 2025. Because she has used the property as her principal residence for two of the last five years, she may exclude part of the excess of the $210,000 gain over depreciation allowed. Ninety-two months of the use is nonqualified use because of its use as rental property for 92 months after 2008. Because she owned the property for 141 months and nonqualified use amounted to 92 months, 92/141 of the gain remaining after gain recognized due to depreciation is recognized. ◀

SELF-STUDY QUESTION

If Bobbi has deducted $16,000 of depreciation in Example I:12-68, how much of her $210,000 gain is recognized?

ANSWER

$142,585 = [$16,000 + (92/141) × $194,000]

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 5

Describe compliance and procedural considerations for nontaxable exchanges

REPORTING OF INVOLUNTARY CONVERSIONS

The election to defer recognition of the gain from an involuntary conversion is made by not reporting the gain as income for the first year in which gain is realized. All details pertaining to the involuntary conversion (including those relating to the replacement of the converted property) should be reported for the taxable year or years in which any of the gain is realized.[74]

A taxpayer who elects to defer recognition of the gain but does not make a proper replacement of the property within the required period of time must file an amended return for the year or years for which the election was made. An amended return may be needed if the cost of the replacement property is less than expected at the time of the election. All details pertaining to the replacement of converted property must be reported in the year in which replacement occurs.[75]

ADDITIONAL COMMENT

The failure to include gain from an involuntary conversion in gross income is deemed to be an election even though the details are not reported.

EXAMPLE I:12-69 ▶ Bob's property, with a $40,000 adjusted basis, was destroyed by a storm in 2024. Bob received $45,000 insurance proceeds in 2024 and planned to purchase property similar to the converted property in 2025 at a cost of $47,000. Bob elected to defer recognition of the gain in 2024. In 2025 the replacement property is purchased for $44,500. Bob must file an amended return for 2024 and recognize a $500 ($45,000 − $44,500) gain. ◀

ADDITIONAL COMMENT

The replacement period may be extended if special permission is obtained from the IRS.

A taxpayer who either is ineligible or does not want to defer the gain must report the gain in the usual manner. If a taxpayer does not elect to defer the gain in the year the gain is realized and the replacement period has not expired, a subsequent election may be made. In such an event, a refund claim should be filed for the tax year in which the gain was realized and previously recognized.[76]

Taxpayers who do not initially elect to defer the gain from an involuntary conversion may later make the election, but the election may not subsequently be revoked. The Tax Court has ruled that the Treasury Regulations allow the filing of an amended return for a year in which the election is made only if proper replacement is not made within the specified time period or the replacement is made at a cost lower than anticipated at the time of the election.[77] The IRS takes the position that taxpayers who designate qualifying property as replacement property may not later designate other qualifying property as the replacement property.[78]

EXAMPLE I:12-70 ▶ In 2023 Troy collected $200,000 from an insurance company as the result of the destruction of rental property with a $140,000 basis. He made the election to defer the gain realized in 2023 and attached a supporting schedule of details regarding the involuntary conversion including a designation of replacement property to be acquired in 2024. In 2024 Troy purchased the designated replacement rental property for $225,000. In 2025 Troy purchases other rental property for $400,000 and now wants to designate that property as the replacement property for the property destroyed in 2023. Troy may not designate the property acquired in 2025 as the replacement property because the rental property purchased in 2024 was already designated as such. ◀

[75] *Ibid.*

[76] *Ibid.*

[77] *John McShain*, 65 T.C. 686 (1976).

[78] Rev. Rul. 83-39, 1983-1 C.B. 190.

REPORTING OF SALE OR EXCHANGE OF A PRINCIPAL RESIDENCE

Taxpayers only have to report the sale if any of the gain is not excluded. If the taxpayer does not qualify to exclude all of the gain or elects not to exclude the gain, the entire gain realized is reported on Schedule D either on line 1, if residence is held for one year or less, or on line 8. On the line below where the entire gain is shown, the taxpayer should indicate on the following line the amount of the gain that is being excluded as a loss (i.e., show in parentheses).

Publication 523, Selling Your Home, provides a series of worksheets that may be used to determine if any gain is recognized. If the taxpayer has to utilize the exceptions to the two-year ownership and use tests, the publication provides additional guidance on calculating the impact of the exceptions.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:12-1 Evaluate the following statement: The underlying rationale for the nonrecognition of a gain or loss resulting from a like-kind exchange is that the exchange constitutes a liquidation of the taxpayer's investment.

I:12-2 Why might a taxpayer want to avoid having an exchange qualify as a like-kind exchange?

I:12-3 Debbie owns a building with a basis of $300,000 and a holding period starting on May 10, 2013. Debbie exchanges the building for a building owned by Doug on July 23, 2025. Doug's building has a FMV of $500,000. Both Debbie and Doug use the building in their businesses.

- **a.** What is Debbie's basis for the building received in the exchange and when does the holding period start for that building?
- **b.** If Debbie and Doug are related taxpayers, explain what action could occur that would cause the exchange not to qualify as a like-kind exchange.

I:12-4 Kay owns real property used in her business and exchanges the property for other like-kind real property and marketable securities.

- **a.** Will Kay's recognized gain ever exceed the realized gain?
- **b.** Will Kay's recognized gain ever exceed the FMV of the marketable securities?
- **c.** What is the basis of the marketable securities received?
- **d.** When does the holding period of the marketable securities begin?

I:12-5 When may a sale of real property and a subsequent purchase of real property be treated as a like-kind exchange?

I:12-6 When determining whether property qualifies as like-kind property, is the quality or grade of the property considered?

I:12-7 When does a nonsimultaneous exchange qualify as a like-kind exchange?

I:12-8 Burke is anxious to purchase land owned by Kim for use in his trade or business. Kim's basis for the land is $150,000, and Burke has offered to pay $800,000 if she will sell within the next 10 days. Kim is interested in selling but wants to avoid recognizing gain. What advice would you give?

I:12-9 Lanny wants to purchase a farm owned by Jane, but Jane does not want to recognize a gain on the transfer of the appreciated property. Explain how a three-party exchange might be used to allow Lanny to obtain the farm without Jane having to recognize a gain.

I:12-10 Does the receipt of boot in a transaction that otherwise qualifies as a like-kind exchange always cause the exchange to be at least partially taxable?

I:12-11 When must a taxpayer who gives boot recognize a gain or loss?

I:12-12 What is the justification for Sec. 1033, which allows a taxpayer to elect to defer a gain resulting from an involuntary conversion? May a taxpayer elect under Sec. 1033 to defer recognition of a loss resulting from an involuntary conversion?

I:12-13 Must property be actually condemned for the conversion of property to be classified as an involuntary conversion? Explain.

I:12-14 What are severance damages? What is the tax treatment for severance damages received if the taxpayer does not use the severance damages to restore the retained property?

I:12-15 The functional use test is often used to determine whether the replacement property is similar or related in service or use to the property converted. Explain the functional use test.

I:12-16 In what situations may a gain due to an involuntary conversion of real property be deferred if like-kind property is purchased to replace the converted property?

I:12-17 Prior to the Taxpayer Relief Act of 1997, taxpayers could defer a gain on the sale of a principal residence sold before May 7, 1997, if they purchased and occupied a new principal residence within two years before or after the sale and the cost of the new residence was at least equal to the adjusted sales price of the old residence. Some taxpayers who were at least 55 years old had a once-in-a-lifetime exclusion up to $125,000 if they owned and used the property as a principal residence for at least three years of the five-year period ending on the date of sale. Discuss why current law with respect to the sale of a personal residence is more favorable than the law prior to the Taxpayer Relief Act of 1997.

I:12-18 One reason Congress expanded the exclusion of gain on the sale of a principal residence and eliminated the deferral provision was to eliminate the need for many taxpayers to keep records of capital improvements that increase the basis of their residence. Why might taxpayers still need to maintain such records to substantiate the adjusted basis of their principal residence?

I:12-19 Steve maintains that the cost of wallpapering his three-bedroom house is a capital expenditure while Martha maintains that the cost of wallpapering her three-bedroom house is an expense. Steve uses his house as his personal residence while Martha's house is rental property. Explain why Steve and Martha view the cost of wallpapering differently.

I:12-20 The Nelsons purchased a new residence in 2008 for $300,000 from David who owned and used the residence as rental property. When the Nelsons wanted to purchase the property, it was being rented to tenants who had four months remaining on their lease. The Nelsons paid the tenants $1,000 to relinquish the lease and vacate the property. In 2012, they added a family room to the house at a cost of $79,200. In 2014, they suffered hail damage to the roof and received $7,000 from the insurance company. They did not repair the damaged roof, and no casualty loss deduction was allowed. What is their adjusted basis for the house today?

I:12-21 What requirements must be satisfied by an unmarried taxpayer under Sec. 121 to be eligible for the election to exclude a gain up to $250,000 on the sale or exchange of a principal residence?

ISSUE IDENTIFICATION QUESTIONS

I:12-22 John owns 25% of the ABC Partnership and Jane owns 25% of the XYZ Partnership. The ABC Partnership owns a farm and produces corn and the XYZ Partnership owns a farm and produces soybeans. John and Jane agree to exchange their partnership interests. What tax issues should John and Jane consider?

I:12-23 Chauvin Housing Corporation operates primarily in the United States and owns a large houseboat that can provide sleeping accommodations for as many as ninety individuals. Chauvin is considering a possible exchange of its houseboat, with an adjusted basis of $3,000,000, for a new houseboat with a FMV of $7,000,000. Chauvin will also need to pay $1,200,000 cash. Chauvin is considering the possible relocation of the houseboat to Finland. What tax issues should Chauvin consider?

I:12-24 Jaharta, Inc., owns land used for truck farming and cattle raising. The California Division of Highways condemned 36 acres of Jaharta's land to build a new highway. Jaharta owned a 50% interest in property being used for apricot, prune, and walnut orchards. Jaharta used the proceeds received as a result of the condemnation to purchase the remaining interest in the property being used for orchards. What tax issues should Jaharta consider?

PROBLEMS

I:12-25 ***Like-Kind Property.*** Which of the following exchanges qualify as like-kind exchanges under Sec. 1031?

a. Acme Corporation stock held for investment purposes for Mesa Corporation stock also held for investment purposes
b. A motel used in a trade or business for an apartment complex held for investment
c. A pecan orchard in Texas used in a trade or business for an orange grove in Florida used in a trade or business
d. A one-third interest in a general partnership for a one-fourth interest in a limited partnership
e. Inventory for equipment used in a trade or business
f. Unimproved land held as an investment for a warehouse used in a trade or business
g. An automobile used as a personal-use asset for marketable securities held for investment

I:12-26 ***Like-Kind Property.*** Which of the following exchanges qualify as like-kind exchanges under Sec. 1031?

a. A motel in Texas for a motel in Italy
b. An office building held for investment for an airplane to be used in the taxpayer's business
c. Land held for investment for marketable securities held for investment
d. Land held for investment for a farm to be used in the taxpayer's business

I:12-27 ***Like-Kind Exchange: Boot.*** Determine the realized gain or loss, the recognized gain or loss, and the basis of the land received for the following like-kind exchanges:

Basis of Land Exchanged	*FMV of Boot Received*	*FMV of Land Received*
$20,000	$ –0–	$85,000
45,000	14,000	70,000
60,000	25,000	65,000
70,000	38,000	60,000
90,000	22,000	55,000

I:12-28 ***Exchange: Personal Property.*** Beach Corporation owns a computer with a $34,000 adjusted basis. The computer is used in the company's trade or business. What is the realized and recognized gain or loss for each of the following independent transactions where the computer is exchanged for?

a. A used computer with a $70,000 FMV plus $16,000 cash.
b. A used computer with a $18,000 FMV plus $7,000 cash.
c. Marketable securities with a $61,000 FMV.

I:12-29 ***Like-Kind Exchange: Liabilities.*** Paul owns a building used in his business with an adjusted basis of $340,000 and a $750,000 FMV. He exchanges the building for a building owned by Kelley. Kelley's building has a $950,000 FMV but is subject to a $200,000 liability. Paul assumes Kelley's liability and uses the building in his business. What is Paul's

a. realized gain?
b. recognized gain?
c. basis for the building received?

I:12-30 ***Like-Kind Exchange: Liabilities.*** Helmut exchanges his apartment complex for Heidi's farm, and the exchange qualifies as a like-kind exchange. Helmut's adjusted basis for the apartment complex is $600,000 and the complex is subject to a $180,000 liability. The FMV of Heidi's farm is $770,000 and the farm is subject to a $100,000 liability. Each asset is transferred subject to the liability. What is Helmut's recognized gain and the basis of the new farm?

I:12-31 ***Like-Kind Exchange: Liabilities.*** Carol owns land used in her business with a basis of $70,000 and a fair market value of $90,000. She is planning to exchange the land for a warehouse owned by Jeff and used in his business. Jeff's warehouse has a basis of $50,000 and a fair market value of $110,000. The warehouse is also subject to a liability of $20,000. Carol has agreed to assume the liability for Jeff. What is Jeff's recognized gain and his basis in the new land?

I:12-32 *Like-Kind Exchange: Transfer of Boot.* Wayne exchanges unimproved land with a $50,000 basis and marketable securities with a $10,000 basis for an eight-unit apartment building having a $150,000 FMV. The land and marketable securities are held by Wayne as investments, and the apartment building is held as an investment. The marketable securities have a $25,000 FMV. What is his realized gain, recognized gain, and the basis for the apartment building?

I:12-33 *Like-Kind Exchange: Related Parties.* Bob owns a duplex used as rental property. The duplex has a basis of $86,000 and $300,000 FMV. He transfers the duplex to Cindy, his sister, in exchange for a triplex that she owns. The triplex has a basis of $279,000 and a $300,000 FMV. Two months after the exchange, Cindy sells the duplex to a business associate for $312,000. Determine:

a. Bob's realized and recognized gain on the exchange.
b. Cindy's realized and recognized gain on the exchange.

I:12-34 *Like-Kind Exchange: Related Parties.* Assume the same facts as in I:12-33 except Cindy sells the duplex to a nonrelated individual more than two years after the exchange with Bob. Ignore any changes in adjusted basis due to depreciation that would have occurred after the exchange. Determine:

a. Bob's realized and recognized gain on the exchange.
b. Cindy's realized and recognized gain on the exchange.
c. Cindy's realized and recognized gain on the sale.

I:12-35 *Involuntary Conversion.* Duke Corporation owns an office building with a $400,000 adjusted basis. The building is destroyed by a tornado. The insurance company paid $750,000 as compensation for the loss. Eight months after the loss, Duke uses the insurance proceeds and other funds to acquire a new office building for $682,000 and machinery for one of the company's plants at a $90,000 cost. Assuming that Duke elects to defer as much of the gain as possible, what is the recognized gain, the basis for the new office building, and the basis for the machinery acquired?

I:12-36 *Involuntary Conversion: Replacement Period.* The Madison Corporation paid $3,000 for several acres of land in 2001 to use in its business. The land is condemned and taken by the state in March 2025. The company receives $25,000 from the state. Whenever possible, the corporation elects to minimize taxable income. For each of the following independent cases, what is the recognized gain or loss in 2025 on the conversion and the tax basis of the replacement property (replacement land will be purchased in July)?

a. 2026 for $22,500.
b. 2027 for $28,500.
c. 2028 for $23,600.

I:12-37 *Involuntary Conversion of Real Property.* On April 27, 2025, an office building owned by the Ava James Corporation, an offshore drilling company that is a calendar-year taxpayer, is destroyed by a hurricane. The basis of the office building is $600,000, and the corporation receives $840,000 from the insurance company.

a. To defer the entire gain due to the involuntary conversion, what amount must the corporation pay for replacement property?
b. To defer the gain due to the involuntary conversion, by what date must the corporation replace the converted property?
c. If Ava James replaces the office building by purchasing a 900,000 gallon underground storage tank for $810,000, may it defer any of the gain due to the involuntary conversion?
d. Will answers to Parts b and c change if the office building had been condemned by the state? Explain.

I:12-38 *Involuntary Conversion: Different Methods of Replacement.* On September 3, 2025, Federal Corporation's warehouse is totally destroyed by fire. $800,000 of insurance proceeds are received, and the realized gain is $300,000. Whenever possible, Federal elects to defer gains. For each of the following independent situations, what is the amount of gain recognized? Explain why the gain is not deferred, if applicable.

a. On October 23, 2025, Federal purchases a warehouse for $770,000.
b. On February 4, 2026, Federal purchases 100% of the Park Corporation, which owns a warehouse. Federal pays $895,000 for the stock.
c. On November 20, 2027, Federal purchases an apartment complex for $900,000.
d. On March 26, 2028, Federal purchases a warehouse for $888,000.

I:12-39 *Severance Damages.* Twelve years ago, Marilyn purchased two lots in an undeveloped subdivision as an investment. Each lot has a $10,000 basis and a $40,000 FMV when the city condemns one lot for use as a municipal sewage treatment plant. As a result of the condemnation, Marilyn receives $40,000 from the city. Because the value of the other lot is reduced, the city pays $7,500 severance damages. She does not plan to replace the condemned lot. What is her:

a. recognized gain due to the condemnation?
b. recognized gain from the receipt of the severance damages?
c. basis for the lot she continues to own?

I:12-40 *Sale of a Principal Residence.* Marc, age 45, sells his personal residence on May 15, 2025, for $180,000. He pays $8,000 in selling expenses and $900 in repair expenses to help sell the residence. He has lived in the residence since 1996, when he purchased it for $55,000. In 2006, he paid $6,000 to install central air conditioning. If Marc purchases a new principal residence in December of the current year for $162,000, what is the realized gain, recognized gain, and the basis for the new residence?

I:12-41 *Sale of a Principal Residence.* Mr. and Mrs. Rusbarsky purchased a residence on June 12, 2022, for $200,000. On March 12, 2025, they sell the residence for $300,000, and selling expenses amount to $11,000. They purchase another house in a new subdivision for $275,000. Determine the gain realized and recognized.

I:12-42 *Sale of a Principal Residence.* On January 10, 2025, Kirsten married Joe. Joe sold his personal residence on October 25, 2024, and excluded the entire gain of $175,000. Although they had originally planned to live in the house that Kirsten had received as a gift from her parents in 2016, they decided to purchase a larger house, and Kirsten sold her house 60 days after their wedding and realized a $370,000 gain.

a. If they file a joint return, how much of the $370,000 gain may be excluded?
b. If Kirsten files as married filing separately, how much of the $370,000 gain may be excluded?

I:12-43 *Involuntary Conversion of Principal Residence.* Mr. and Mrs. Snell own and live in a house, with an adjusted basis of $300,000, that was purchased in 2001. The house is destroyed by a tornado on March 10 of the current year, and the Snells receive insurance proceeds of $410,000. They purchase another residence for $480,000 four months later.

a. May they exclude the $110,000 gain, and if so, what is the basis of the residence purchased in July?
b. May they defer the $110,000 gain, and if so, what is the basis of the residence purchased in July?

I:12-44 *Sale of a Principal Residence.* Mr. and Mrs. Kitchens purchased their first home in Ohio for $135,000 on October 1, 2024. Because Mr. Kitchens' employer transferred him to Utah, they sold the house for $160,000 on January 10, 2025. How much of the gain is recognized?

I:12-45 *Sale or Other Disposition of a Principal Residence.* In 1971, Mr. and Mrs. Self purchased their first principal residence for $80,000. In 1996, they sold the house for $300,000 and purchased a new residence for $1.5 million. At that time, the Selfs were allowed to defer the $220,000 gain because they purchased a more expensive residence, but the basis of the residence was reduced by the gain deferred. The Taxpayer Relief Act of 1997 eliminated this deferral provision and made it easier for taxpayers who sell a principal residence to exclude the gain resulting from the sale even if they do not purchase a replacement residence.

In 2008, the Selfs spent $200,000 to add a porch to their house that overlooks the small pond behind their house. In 2011, they hired painters to paint the entire house at a cost of $18,000. They estimate that $20,000 has been spent on routine repairs since 1997. Insurance of $11,000 was collected for other repairs resulting from a small tornado in 2015. No casualty loss deduction was allowed. They hold the residence as joint tenants.

a. What is the current adjusted basis of the house?
b. Mrs. Self is an employee of Bulldog Consulting and has a nice office on the business premises; however, she finds it helpful to use one of the bedrooms as an office to do work in the evenings and on weekends. May the Selfs claim a deduction for depreciation?

c. Determine their recognized gain and character if they sell the house today for $2.8 million.
d. If the property is owned by Mrs. Self instead of owned jointly, determine their recognized gain and character if they sell the house today for $2.8 million.
e. If the property is owned by Mrs. Self instead of owned jointly and Mr. Self dies, will the basis of the house be increased?
f. Determine their recognized gain if they exchange the house today for an apartment complex valued at $2.8 million. The Selfs will purchase another house and hire someone to manage the apartment complex.
g. If the house is destroyed by a fire when its FMV is $2.8 million and the Selfs receive $2.6 million, determine their casualty loss deduction and gain recognized, if any. The Selfs do not plan to purchase another residence.
h. If the Selfs want to purchase another principal residence after collecting the insurance in part g. above, what is the minimum amount they would have to pay for the new residence to avoid recognizing any gain?

I:12-46 ***Unqualified Use.*** Sherron, who is single, purchased a house to use as rental property on April 1, 2008, for $300,000. He moved into the house on June 1, 2024, and used it as a personal residence until August 1, 2025, when he sells the house for $500,000. Depreciation allowed while property was used as rental property amounts to $160,000. Determine his:
a. realized gain on the sale
b. recognized gain on the sale
c. recognized gain on the sale if he had moved in to the house on June 1, 2023

I:12-47 ***Sale of a Principal Residence: Rental Property.*** For the last five years, Mr. and Mrs. Cockrell rented their furnished basement to local college students. When determining their taxable income each year, they deducted a portion of the utilities, property taxes, interest, and depreciation based on the fact that 15% of the house is used for rental purposes. The original basis of the property is $100,000, and depreciation of $4,000 has been allowed on the rental portion of the property. During the current year, Mr. and Mrs. Cockrell sell the house for $300,000. No selling expenses or fixing-up expenses are incurred. Determine:
a. realized gain on the sale.
b. recognized gain on the sale.

I:12-48 ***Multiple Sales of a Principal Residence.*** Consider the following information for Mr. and Mrs. Di Palma:

- On June 10, 2024, they sold their principal residence for $80,000 and incur $6,000 of selling expenses. The basis of the residence, acquired in 2012, is $50,000.
- On June 25, 2024, they purchased a new principal residence for $90,000 and occupied it immediately.
- On May 10, 2025, they purchase their neighbor's residence for $115,000 and occupy the residence immediately.
- On August 29, 2025, they sell the residence purchased on June 25, 2024, for $148,000. They pay $7,000 of selling expenses. Determine:
  a. realized gain on the sale of the residence in 2024.
  b. recognized gain on the sale of the residence in 2024.
  c. realized gain on the sale of the residence in 2025.
  d. recognized gain on the sale of the residence in 2025.

I:12-49 ***Multiple Sales of a Principal Residence.*** Consider the following information for Mr. and Mrs. Gomez:

- On May 26, 2024, they sold their principal residence, acquired in 2004, for $200,000. They paid $8,000 of selling expenses. Their basis in the residence was $70,000.
- On July 25, 2024, they purchased a new principal residence for $250,000.
- On June 2, 2025, Mr. Gomez, a bank officer, is transferred to another bank in the northern part of the state and they vacate their house.
- On July 1, 2025, they purchase a new principal residence for $420,000.
- On October 6, 2025, they sell the residence that was purchased on July 25, 2024, for $520,000. They pay $30,000 of selling expenses. Determine:

a. realized gain on the sale of the residence in 2024.
b. recognized gain on the sale of the residence in 2024.
c. realized gain on the sale of the residence in 2025.
d. recognized gain on the sale of the residence in 2025.

COMPREHENSIVE PROBLEM

I:12-50 Paden, who is single and has been employed as an accountant for 27 years with Harper, Inc., lost his job due to company downsizing. His last day of employment is July 31, 2025, and Harper provides a $9,000 severance payment. The severance payments are based on an employee's time of employment. During the year, Paden received a salary from Harper of $72,000. Harper also paid $8,500 of Paden's medical insurance premiums.

In May 2025, Paden, who had always wanted to be associated with a football team, applied for the head coaching job at Hawk University in Iowa and, much to his surprise, received the job beginning on August 1. In June and July, Paden paid $4,500 to take courses in sports management at the local university. Hawk University is substantially short of funding and Paden paid $2,000 for entertainment expenses related to his job and $500 for supplies. No reimbursement was received.

His salary from Hawk is $11,000 per month payable at the end of each month. His salary for December was not received until January 6, 2026.

On August 1, he sold his house for $329,000 in Texas and paid a sales commission of $14,000. He inherited the house 20 years ago when his mother died. Her basis for the house was $37,000 and the FMV when she died was $50,000. Property taxes for the 2025 calendar year amount to $8,200, and property taxes were apportioned at the closing. Property taxes are payable on October 1. He paid $2,100 of interest on home equity debt of $30,000, incurred to purchase a new car.

To move to Iowa, he drove 700 miles and spent $62 for meals during the trip in July. Movers charged $4,150 to move his household items. He purchased a new house in Iowa for $250,000 on August 15 and borrowed $222,000. He also agreed to pay all property taxes for 2025. Real property taxes for the home in Iowa will be paid on January 30, 2026, and amount to $1,500.

Interest on the $222,000 debt during the current year is $3,120. To obtain the loan, Paden paid points of $2,000.

He contributed common stock (basis of $1,000 and FMV of $8,000) held as an investment for three years to Hawk University. He also paid Iowa state income taxes of $2,465 (which was greater than state sales taxes for the year) as well as Iowa personal property taxes of $555 for his car.

Paden sold 200 shares of Dell Corporation stock on April 10 for $100 per share. His basis was $145 per share. On May 1, he purchased 300 shares of Dell at $89 per share.

Determine:

1. gross income without considering the sale of his house or the Dell Corporation stock.
2. recognized gain due to the sale of his house.
3. net capital gain.
4. adjusted gross income.
5. total amount of itemized deductions.
6. taxable income.
7. basis of his house in Iowa.
8. if the sales price for his home was $470,000 instead of $370,000, would his taxable income increase by more than $100,000. If yes, explain.

TAX STRATEGY AND CRITICAL THINKING PROBLEM

I:12-51 ***Sale of a Principal Residence.*** Ray and Ellie have each owned a principal residence used for more than five years. Ray's residence has an adjusted basis of $100,000 and a FMV of $325,000, while Ellie's residence has an adjusted basis of $300,000 and a FMV of $490,000. They plan to marry and will purchase another house.

a. Should they sell their houses before the marriage in order to minimize their taxes?
b. Will your answer to Part a change if the FMV of Ellie's house is $690,000?
c. In Part b, what tax strategy should Ray and Ellie consider?

TAX FORM/RETURN PREPARATION PROBLEMS

I:12-52 *Short Tax Form.* On October 29, 2024, Miss Joan Seely (SSN 123-45-6789) sells her principal residence for $150,000 cash. She purchased the residence on May 12, 2015, for $85,000. She spent $12,000 for capital improvements in 2015. To help sell the house, she pays $300 for minor repairs. The realtor's commission amounts to $7,500. Her old residence is never rented out or used for business. Complete the worksheets in Publication 523 to determine the recognized gain for Miss Seely for 2024.

I:12-53 At the beginning of 2024, Donna Harp was employed as a cinematographer by Farah Movie, Inc., a motion picture company in Los Angeles, California. In June, she accepted a new job with Ocala Production in Orlando, Florida. Donna is single and her Social Security number is 000-00-1111. She sold her house in California on August 10 for $500,000. She paid a $14,000 sales commission. The house was acquired on March 23, 1997, for $140,000.

The cost of transporting her household goods and personal effects from California to Orlando amounted to $2,350. To travel from California to Florida, she paid travel and lodging costs of $370 and $100 for meals.

On July 15, she purchased a house for $270,000 on 1225 Minnie Lane in Orlando. To purchase the house, she incurred a 20-year mortgage for $170,000. To obtain the loan, she paid points of $3,400. The $3,600 of property taxes for the house in Orlando were prorated with $1,950 being apportioned to the seller and $1,650 being apportioned to the buyer. In December of 2024, she paid $3,600 for property taxes.

Other information related to her return:

Salary from Farah Movie, Inc.	$30,000
Salary from Ocala Production, Inc.	70,000
Federal income taxes withheld by Farah	6,000
Federal income taxes withheld by Ocala	22,000
FICA taxes withheld by Farah	2,295
FICA taxes withheld by Ocala	5,355
Interest income from Sun National Bank	1,800
Dividend income (qualifying dividends)	10,000
Interest paid for mortgage:	
Home in California	6,780
Home in Orlando	3,800
Property taxes paid in California	4,100
Sales taxes paid in California and Florida	3,125
State income taxes paid in California	2,900

Donna had no transactions involving virtual currency and had no foreign bank accounts or trusts.

a. Determine the amount of recognized gain on the sale of the residence.

b. Prepare Form 1040, including Schedules A, B, and D, as well as Forms 3903 and 8960 if needed.

I:12-54 Jim Sarowski (SSN 000-00-2222) is 70 years old and single. He received Social Security benefits of $16,000. He works part-time as a greeter at a local discount store and received wages of $7,300. Federal income taxes of $250 were withheld from his salary. Jim lives at Rt. 7 in Daingerfield, Texas, and he had no transactions involving virtual currency during the year.

In March of 2024, he purchased a duplex at 2006 Tennessee Street to use as rental property for $100,000, with 20% of the price allocated to land. During the year, he had the following receipts and expenditures with respect to the duplex:

Rent receipts	$8,800
Interest paid	5,900
Property taxes	1,400
Insurance	800
Maintenance	300

Other expenditures during the year:

Personal property taxes	225
Sales tax	345

On July 24, he exchanged ten acres of land for a car with a $16,500 FMV to be held for personal use. The land was purchased on November 22, 1997, for $18,000 as an investment. Because of pollution problems in the area, the value of the land declined.

On December 1, he sold his residence, which had been his home for 30 years, for $475,000. Sales commissions of $16,000 were paid, and the adjusted basis for his home is $110,000. He plans to rent an apartment and does not plan to purchase another home. His only other sale of a principal residence occurred 32 years ago.

a. Determine the amount of recognized gain on the sale of the residence.
b. Prepare Forms 4562 and 1040, including Schedules D and E.

CASE STUDY PROBLEM

I:12-55 The Electric Corporation, a publicly held corporation, owns land with a $1,600,000 basis that is being held for investment. The company is considering exchanging the land for two assets owned by the Quail Corporation: land with a FMV of $4,000,000 and marketable securities with a $1,000,000 FMV. Both assets will be held by the Electric Corporation for investment, although the corporation is considering the possibility of developing the land and building residential houses. The president of the corporation has hired you to prepare a report explaining how the exchange will affect the corporation's reported net income and its tax liability. The corporation has a tax rate of 21%.

TAX RESEARCH PROBLEMS

I:12-56 For the last nine years, Mr. and Mrs. Orchard live in a residence located on eight acres. In January of the current year they sell the home and two acres of land. The purchaser of the residence does not wish to own the entire eight acres of land. In December they sell the remaining six acres of land to another individual for $60,000. The house and the land have never been used by the Orchards in a trade or business or held for investment. The realized gains resulting from the two sales are computed as follows:

	House and Two Acres January Sales	*Eight Acres December Sale*
Selling price	$140,000	$ 60,000
Minus: Selling expenses	(8,000)	(3,000)
Amount realized	$132,000	$ 57,000
Minus: Basis	(80,000)	(18,000)
Realized gain	$ 52,000	$ 39,000

As a result of the sales described above, what is the amount of realized gain that must be recognized during the current year?

A partial list of research sources is:

- Reg. Sec. 1.121-1(b)

I:12-57 George, age 68, decides to retire from farming and is considering selling his farm. The farm has a $100,000 basis and a $400,000 FMV. George's two sons are not interested in farming. Both sons have large families and would like to own houses suitable for their needs. The Iowa Corporation is willing to purchase George's farm. George's tax advisor suggests that Iowa Corporation should buy the two houses the sons want to own for $400,000 and then exchange the houses for George's farm. After the exchange, George could make a gift of the houses to the sons.

a. If the transactions are executed as suggested by the tax advisor, George's recognized gain will be $300,000. Explain why the transaction does not qualify as a like-kind exchange.
b. George wants the exchange to qualify as a like-kind exchange and still help his sons obtain the houses. What advice do you have for him?

- *Fred S. Wagensen,* 74 T.C. 653 (1980)

I:12-58 On March 10, 2022, Elizabeth, a college professor, purchased a house for $300,000. She did not move into the house until August 8, 2022. On August 1, 2023, she accepted a position as a visiting professor at Hogwatts University for one year and moved to Liverpool where she rented an apartment. While away at Hogwatts, two of her former students lived in the house but did not pay rent. She returned to the house on August 1, 2024, and lived in the house until July 15, 2025, when she sold the house for $500,000. The realtor's commission was $35,000. Determine her recognized gain.

- Reg. Sec. 1.121-1(c)

I:12-59 Mr. and Mrs. Hattan have lived in their residence for 20 years and purchased the house for $100,000 as joint tenants with right of survivorship. Mr. Hattan died in May of the current year when the house's FMV was $800,000. Mrs. Hattan wants to sell the house. What is the tax effect of selling the house this year for $825,000 or next year for $830,000?

A partial list of research sources is:

- Sections 121 and 1014

I:12-60 Joseph Allen, who is single, purchased his first house in Orono, ME one year ago for $200,000. Katahdin wants to purchase the house for $360,000. Refer to the regulations to determine if he may exclude part of the gain in the following independent cases:

a. He has been unemployed for 16 months and has a chance to start work for Penobscot Manufacturing whose plant is located 62 miles from Joseph's home in Orono.

b. His dependent son, Ryan, has chronic asthma, and the son's doctor has advised Joseph that Ryan should live in a warm, dry climate to mitigate the chronic asthma. Joseph and Ryan move to Nevada.

c. Joseph has become increasingly annoyed at the amount of traffic in his neighborhood although the amount of traffic has not increased much compared to the traffic when he purchased the house.

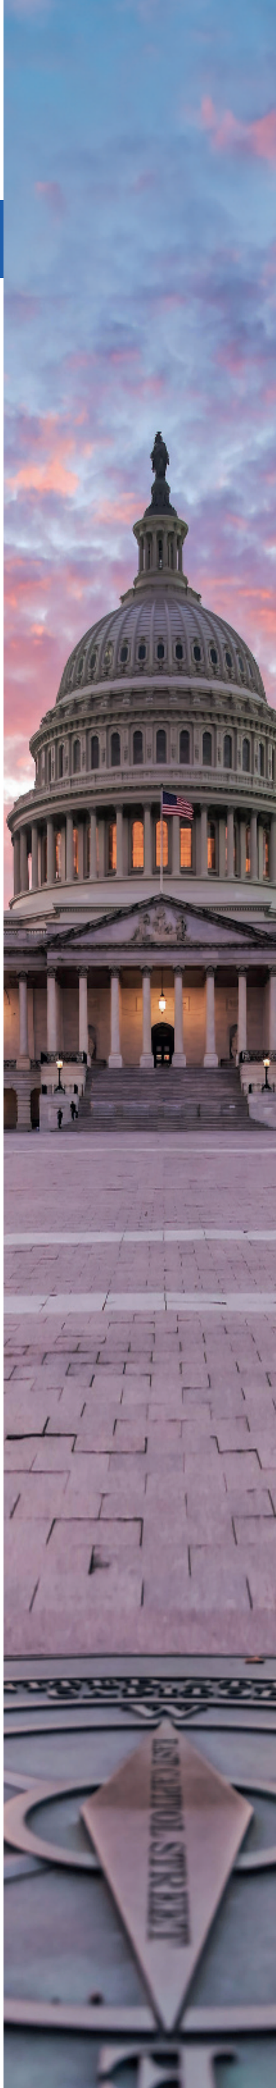
CHAPTER

13

PROPERTY TRANSACTIONS: SECTION 1231 AND RECAPTURE



LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Understand the basic tax treatment for Sec. 1231 transactions
2. Identify Sec. 1231 property
3. Understand the tax treatment for Sec. 1231 transactions
4. Apply the recapture provisions of Sec. 1245
5. Apply the recapture provisions of Sec. 1250
6. Understand recapture provisions for corporations
7. Describe other recapture applications
8. Describe tax planning considerations for Sec. 1231 assets
9. Describe compliance and procedural considerations for Sec. 1231 assets

James Byard/Zoonar GmbH/Alamy Stock Photo

Procedure for Sec. 1231 Treatment...13-7
Recapture Provisions of Sec. 1245...13-8
Recapture Provisions of Sec. 1250...13-10
Additional Recapture for Corporations...13-16
Recapture Provisions—Other Applications...13-18
Tax Planning Considerations...13-23
Compliance and Procedural Considerations...13-24

Chapter I:5 states that all recognized gains and losses must eventually be designated as either capital or ordinary. However, gains or losses on certain types of property are designated as Sec. 1231 gains or losses, which are given preferential treatment under the tax law. Section 1231 property primarily is business property, either real or depreciable property used in a trade or business.[1] A net Sec. 1231 loss, defined as the excess of Sec. 1231 losses over Sec. 1231 gains, is treated as an ordinary loss.[2] Net Sec. 1231 gain, the excess of Sec. 1231 gains over Sec. 1231 losses, is generally treated as long-term capital gain.[3] However, the preferential treatment of Sec. 1231 gains is diminished, principally by the so-called depreciation recapture rules and the five-year lookback rule. This chapter discusses the important rules dealing with Sec. 1231 gains and losses and depreciation recapture.

HISTORY OF SEC. 1231

During the depressed economy of the early and mid-1930s, business property was classified as a capital asset. Many business properties were worth less than their adjusted basis. Instead of selling business properties, taxpayers found it advantageous to retain assets that had declined in value because they could recover the full cost as depreciation. Capital losses had only limited deductibility during this period. To encourage the mobility of capital (i.e., the replacement of business fixed assets), the Revenue Act of 1938 added business property to the list of properties not considered to be capital assets.

From 1938 to 1942, gains and losses on the sale or exchange of business property were treated as ordinary gains and losses. Without favorable capital gain treatment, taxpayers with appreciated business properties were reluctant to sell the assets because of the high tax cost. This restriction on the mobility of capital was more significant than usual because business assets had to be shifted into industries that were heavily involved in the production of military goods. Furthermore, taxpayers were often forced to recognize ordinary gains because the government used the condemnation process to obtain business property for the war effort. In 1942, Congress created the predecessor of Sec. 1231, which allowed taxpayers to treat net gains from the sale of business property as capital gains and net losses as ordinary losses. Before 1987, only 40% of an individual's net capital gain might be subject to tax because of the 60% long-term capital gain deduction.

KEY POINT

Taxpayers normally prefer to have gains treated as capital gains, and losses treated as ordinary losses. Because Sec. 1231 property receives the preferable treatment for both net gains and losses, it has been said that this property enjoys the best of both worlds.

The Tax Reform Act of 1986 eliminated the 60% long-term capital gain deduction for net capital gains. Favorable long-term capital gain treatment was reinstated into the tax law in 1991 in the form of a 28% maximum tax rate applying to net capital gains for noncorporate taxpayers. The Taxpayer Relief Act of 1997 significantly increased the preferential tax treatment by reducing the maximum rate to 20% for net capital gain that is adjusted net capital gain. The maximum rate was reduced by the Jobs and Growth Tax Relief Reconciliation Act of 2003 (2003 Tax Act) to 15%, for sales after May 5, 2003. The American Tax Relief Act of 2012 increased the maximum rate to 20% starting in 2013. For 2025, this maximum rate of 20% applies for single taxpayers with taxable income above $533,400, head of household taxpayers with taxable income above $566,700, and married taxpayers with taxable income above $600,050.

ADDITIONAL COMMENT

Beginning in 2013, higher-income taxpayers also have to pay an additional 3.8% tax on net investment income, which includes capital gains. Generally, for this provision, higher-income taxpayers are defined as those with modified AGI of greater than $200,000 if single or head of household and $250,000 if married, filing jointly. More information on this additional tax can be found in Chapter I:5.

It may also be advantageous to have gains classified as capital or Sec. 1231 if taxpayers have capital losses or capital loss carryovers because of the limitations imposed on the deductibility of capital losses. Furthermore, there are other situations where it may be important for the property to be Sec. 1231 property (e.g., a contribution of appreciated property to a charitable organization).

---

[1] (See page I:13-5 for a more complete definition of Sec. 1231 property.)

[2] Secs. 1231(c)(4) and (a)(2).

[3] Secs. 1231(c)(3) and (a)(1). There are several exceptions to this rule that are covered later in this chapter.

OVERVIEW OF BASIC TAX TREATMENT FOR SEC. 1231

OBJECTIVE 1

Understand the basic tax treatment for Sec. 1231 transactions

NET GAINS

At the end of the tax year, Sec. 1231 gains are netted against Sec. 1231 losses. If the overall result is a net Sec. 1231 gain, the gains and losses are treated as long-term capital gains (LTCGs) and long-term capital losses (LTCLs), respectively.[4] For the sake of expediency, it is often stated that a net Sec. 1231 gain is treated as a LTCG. However, a portion or all of the net Sec. 1231 gain may be treated as ordinary income because of a special five-year lookback rule (see discussion below).

EXAMPLE I:13-1 ▶ Dawn owns a business that has $20,000 of Sec. 1231 gains and $12,000 of Sec. 1231 losses during the current year. Because the Sec. 1231 gains exceed the Sec. 1231 losses, the gains and losses are treated as LTCGs and LTCLs. After the gains and losses are offset, there is an $8,000 net long-term capital gain (NLTCG). ◀

EXAMPLE I:13-2 ▶ Assume the same facts as in Example I:13-1 except that Dawn also recognizes a $7,000 LTCG from the sale of a capital asset. After considering the $8,000 net Sec. 1231 gain, which is treated as a LTCG, Dawn has a $15,000 NLTCG ($8,000 + $7,000). ◀

NET LOSSES

If the netting of Sec. 1231 gains and losses at the end of the year results in a net Sec. 1231 loss, the Sec. 1231 gains and losses are treated as ordinary gains and losses.[5] For expediency, it is often stated that the net Sec. 1231 loss is treated as an ordinary loss.

EXAMPLE I:13-3 ▶ David owns an unincorporated business and has $30,000 of Sec. 1231 gains and $40,000 of Sec. 1231 losses in the current year. Because the losses exceed the gains, they are treated as ordinary losses and gains. ◀

EXAMPLE I:13-4 ▶ Assume the same facts as in Example I:13-3 except that David receives a $67,000 salary as a corporate employee. David has no other income, losses, or deductions affecting his adjusted gross income (AGI). The Sec. 1231 gains and losses are treated as ordinary gains and losses, and David's AGI is $57,000 ($67,000 salary − $10,000 of ordinary loss). The $40,000 of ordinary losses offsets the $30,000 of ordinary gains and $10,000 of David's salary. ◀

TYPICAL MISCONCEPTION

It is sometimes erroneously thought that each Sec. 1231 gain should be treated as a LTCG and each Sec. 1231 loss as an ordinary loss. However all Sec. 1231 gains and losses must be combined to determine whether the Sec. 1231 gains and losses are LTCGs and LTCLs or ordinary gains and losses.

One important advantage of Sec. 1231 is illustrated in Example I:13-4. Because the Sec. 1231 gains and losses are treated as ordinary, the $10,000 net Sec. 1231 loss is fully deductible in the current year. If the gains and losses were classified as long-term capital gains and losses, David would have a $10,000 net long-term capital loss (NLTCL). Only $3,000 of the $10,000 NLTCL would have been deductible against David's other income. As explained in Chapter I:5, only $3,000 of net capital losses may be deducted from noncapital gain income per year for individual taxpayers.

ADDITIONAL COMMENT

A taxpayer's share of a Sec. 1231 loss from a partnership or S Corporation may be subject to the passive activity loss rules.

Five-Year Lookback Rule Beginning in 1985, the benefits of Sec. 1231 were reduced. For tax years beginning after 1984, any net Sec. 1231 gain is ordinary gain to the extent of any nonrecaptured net Sec. 1231 losses from the previous five years.[6] This provision is referred to as the *five-year lookback rule*. In essence, net Sec. 1231 losses previously deducted as ordinary losses are recaptured by changing what would otherwise be a LTCG into ordinary income.

EXAMPLE I:13-5 ▶ In 2025, Craig recognizes $25,000 of Sec. 1231 gains and $15,000 of Sec. 1231 losses. In 2021, Craig reported $14,000 of Sec. 1231 losses and no Sec. 1231 gains. No other Sec. 1231 gains or losses were recognized by Craig during the five-year period, 2020–2024. The $10,000

---

[4] Sec. 1231(a)(1).

[5] Sec. 1231(a)(2).

[6] Sec. 1231(c)(1).

($25,000 − $15,000) of net Sec. 1231 gain in 2025 is treated as ordinary income due to the $14,000 of nonrecaptured net Sec. 1231 losses. ◀

HISTORICAL NOTE

Congress reduced the benefits of Sec. 1231 by requiring the recapture of any nonrecaptured net Sec. 1231 loss. This recapture is required because taxpayers have a certain amount of control over the timing of the recognition of Sec. 1231 gains or losses. Taxpayers attempted to recognize Sec. 1231 losses in one year and Sec. 1231 gains in another year to avoid the netting process.

To determine the amount of nonrecaptured net Sec. 1231 losses, compare the aggregate amount of net Sec. 1231 losses for the most recent preceding five tax years with the amount of such losses recaptured as ordinary income for those preceding tax years. The excess of the aggregate amount of net Sec. 1231 losses over the previously recaptured loss is the nonrecaptured net Sec. 1231 loss. In Example I:13-5, the remaining $4,000 of nonrecaptured net Sec. 1231 losses could be recaptured in 2026. In 2026, the preceding five-year period includes 2021 through 2025.

TAX RATE FOR NET SEC. 1231 GAIN

In general, net Sec. 1231 gains are taxed similarly to net long-term capital gains. Thus, a Sec. 1231 gain may be taxed at a rate of zero, 15% or 20%. Section 1231 property must have a holding period of more than one year. Recall from Chapter I:5 that adjusted net capital gain (ANCG) is net capital gain (NCG) determined *without* regard to:

(**1**) the 28% rate gain (collectible gain and possibly part of Sec. 1202 gain), and
(**2**) unrecaptured Sec. 1250 gain, which is taxed at no more than 25% as explained later.

ANCG might be taxed at 20%, 15% or zero. If Sec. 1231 property is sold at a gain, the Sec. 1231 gain is LTCG if there are no Sec. 1231 losses or nonrecaptured net Sec. 1231 losses. However, all or part of this gain is unrecaptured Section 1250 gain if the asset is a building. Thus, net Sec. 1231 gain might be taxed today at 15%, 20%, or 25% depending on the taxpayer's taxable income and whether or not the gain is unrecaptured section 1250 gain. Part or all of Sec. 1231 gain due to the sale of real property subject to depreciation that is unrecaptured Sec. 1250 gain is taxed at a maximum of 25%.

EXAMPLE I:13-6 ▶

Savannah, who is single with a tax rate of 24%, which means her taxable income is equal to or less than $197,300, sells land at a gain of $10,000 and other land at a gain of $15,000. Both tracts of land qualify as Sec. 1231 property. She has no other transactions involving capital assets or 1231 property and no nonrecaptured net Sec. 1231 losses. Savannah has net Sec. 1231 gain of $25,000 that is NLTCG and her NCG is $25,000. Her ANCG is $25,000 taxed at a rate of 15%. ◀

EXAMPLE I:13-7 ▶

Assume the same facts as in Example I:13-6 except Savannah also has a $7,000 loss from the sale of a third tract of land that is Sec. 1231 property. Her net Sec. 1231 gain is $18,000. Her NCG is $18,000 and her ANCG is $18,000 taxed at a rate of 15%. ◀

EXAMPLE I:13-8 ▶

Grace, whose tax rate is 10%, sells land that is Sec. 1231 property at a gain of $2,000. She has no other transactions involving capital assets or Sec. 1231 property and no nonrecaptured net Sec. 1231 losses. The $2,000 gain is not taxed since her tax rate for ANCG is zero. ◀

ADDITIONAL COMMENT

Because Sec. 1231 property in Examples I:13-6, I:13-7, and I:13-8 is land, none of the gain is unrecaptured Section 1250 gain.

Applying the Five-Year Lookback Rule. As explained earlier, net Sec. 1231 gain is ordinary income to the extent of nonrecaptured net Sec. 1231 losses. Net Sec. 1231 gain is recharacterized as ordinary income under the five-year lookback rule in the following order:

(**1**) Net Sec. 1231 gain in the 25% group (unrecaptured Sec. 1250 gain)
(**2**) Net Sec. 1231 gain in the 20% or 15% group

EXAMPLE I:13-9 ▶

Chris, whose tax rate for ANCG is 15%, has nonrecaptured net Sec. 1231 losses of $20,000 at the beginning of the current year when he recognizes gains from the sale of two assets used in his trade or business and held more than one year. Asset #1 is a building and the entire $14,000 Sec. 1231 gain is unrecaptured Sec. 1250 gain. Asset #2 is land and the Sec. 1231 gain is $15,000. All gain resulting from the sale of asset #1 is ordinary income and $6,000 of the gain from the sale of asset #2 is ordinary income because of the five-year lookback rule. The remaining $9,000 gain from the sale of asset #2 (land) is taxed at 15%. ◀

KEY POINT

The existence of the nonrecaptured net Sec. 1231 loss does not affect Chris' taxable income in Example I:13-9. It does affect the character of the gain and the tax liability. If Chris did not have any nonrecaptured net Sec. 1231 losses, the $20,000 net Sec. 1231 gain is LTCG.

SECTION 1231 PROPERTY

OBJECTIVE 2

Identify Sec. 1231 property

SECTION 1231 PROPERTY DEFINED

Section 1231 property includes the following types of property:

- Real property or depreciable property used in a trade or business with a holding period of more than one year
- Timber, coal, or domestic iron ore
- Livestock
- Unharvested crops

Each of these types of Sec. 1231 assets are discussed below.

REAL OR DEPRECIABLE PROPERTY USED IN TRADE OR BUSINESS

As noted in Chapter I:5, the IRC does not provide a definition of a capital asset. Instead, Sec. 1221 provides a list of noncapital assets that includes both depreciable property and real property used in a trade or business.[7] These properties are treated as Sec. 1231 properties if held for more than one year. Depreciable property and real property used in a trade or business and held for *one year or less* are neither capital assets nor Sec. 1231 property. Any gain or loss resulting from the disposition of such assets is ordinary.

EXAMPLE I:13-10 ▶ The Prime Corporation owns land held as an investment and land used as an employee parking lot. The land held as an investment is a capital asset, but the land used as a parking lot is real property used in a trade or business and is not a capital asset. The land used as a parking lot is a Sec. 1231 asset if held for more than one year. ◀

EXAMPLE I:13-11 ▶ Dale, a self-employed plumber, owns an automobile held for personal use and a truck used in his trade. The automobile is a capital asset, but the truck is a Sec. 1231 asset if held for more than one year. As described later, a portion or all of any gain realized on the sale of the truck may be taxed as ordinary income due to the Sec. 1245 depreciation recapture provisions, explained on page I:13-8. ◀

KEY POINT

Only property used in a trade or business is included in the definition of Sec. 1231 property. Gains and losses on property held for investment may be included if the property is a capital asset and the gain or loss is the result of a condemnation or casualty.

Certain types of property, such as inventory and U.S. government publications received other than by purchase, do not qualify as Sec. 1231 property, even if used in a trade or business. Thus, a sale of inventory results in ordinary gain or loss. Section 1231 property also does not include property such as patents, inventions, designs, secret formulas, copyrights, literary, musical, or artistic compositions, letters or memorandums, or similar property held by certain taxpayers, such as their creator.[8]

EXAMPLE I:13-12 ▶ Sonia, who owns a restaurant and is also an artist, prepared three paintings of scenes of fertile hills and prairies in the Palouse region to display in her restaurant. The paintings are not Sec. 1231 property or capital assets because she is the creator. If Sonia purchased the paintings at a local gallery to use in her restaurant, these paintings are Sec. 1231 property if held more than one year. ◀

KEY POINT

Sonia in Example I:13-12 should be able to depreciate the cost of the artwork if it is subject to wear and tear and used in her trade or business. The cost basis for her own painting transferred to the restaurant is probably low.

REAL-WORLD EXAMPLE

Christmas trees can be included in the definition of Sec. 1231 property.

Timber. Section 631 allows taxpayers to elect to treat the cutting of timber as a sale or exchange of such timber. To be eligible to make this election, the taxpayer must own the timber or hold the contract right on the first day of the year and for more than one year. Furthermore, the timber must be cut for sale or for use in the taxpayer's trade or business.[9]

The gain or loss is determined by comparing the timber's adjusted basis for depletion with its fair market value (FMV) on the first day of the tax year in which it is cut. If the timber is eventually sold for more or less than its FMV (determined on the first day of the year the timber is cut), the difference is ordinary gain or loss.

---

[7] Sec. 1221(2).

[8] Sec. 1231(b)(1).

[9] Sec. 631(a) and Reg. Sec. 1.631-1.

EXAMPLE I:13-13 ▶ Vermont Corporation owns timber with a $60,000 basis for depletion. The timber, acquired four years ago, is cut during the current year for use in the corporation's business. The FMV of the timber on the first day of the current year is $200,000. Vermont Corporation may elect to treat the cutting of the timber as a sale or exchange and recognize a $140,000 ($200,000 − $60,000) gain. ◀

If the election is made to treat the cutting of timber as a sale or exchange, the timber is considered Sec. 1231 property.[10] Thus, the $140,000 gain in Example I:13-13 is Sec. 1231 gain. If the taxpayer does not make the election, the character of any gain or loss depends on whether the timber is held for sale in the ordinary course of the taxpayer's trade or business (ordinary), held for investment (capital), or held for use in a trade or business for more than one year (Sec. 1231).

SELF-STUDY QUESTION

Is the possible inclusion of timber and coal or domestic iron ore in the definition of Sec. 1231 property favorable to the taxpayers who produce these items?

ANSWER

Yes, it can result in income being taxed at rates applicable for LTCG instead of ordinary income from the sale of inventory.

Coal or Domestic Iron Ore. An owner who disposes of coal (including lignite) or domestic iron ore while retaining an economic interest in it must treat the disposal as a sale.[11] The coal or iron ore is considered Sec. 1231 property.[12] The owner must own and retain an economic interest in the coal or iron ore in place.[13] An economic interest is owned when one acquires by investment any interest in mineral in place and seeks a return of capital from income derived from the extraction of the mineral.

ADDITIONAL COMMENT

Livestock includes cattle, hogs, horses, mules, donkeys, sheep, goats, fur-bearing animals, and other mammals but excludes poultry, fish, frogs, and reptiles.

Livestock. Livestock held by the taxpayer for draft, breeding, dairy, or sporting purposes is considered Sec. 1231 property if held for 12 months or more from the date of acquisition. However, cattle and horses must be held for 24 months or more from the date of acquisition to qualify as Sec. 1231 property.[14]

ADDITIONAL COMMENT

The treatment of unharvested crops as a Sec. 1231 asset is largely a rule of convenience. If the taxpayer were not permitted to treat the crops in this fashion, it would be necessary to allocate the selling price between the land and crops.

Unharvested Crops and Land. An unharvested crop growing on land used in a trade or business is considered Sec. 1231 property if the crop and the land are both sold at the same time to the same person and the land is held more than one year.[15] Section 1231 does not apply to the sale or exchange of an unharvested crop if the taxpayer retains any right or option to reacquire the land.[16]

If Sec. 1231 applies to the sale or exchange of an unharvested crop sold with the land, no deductions are allowed for expenses attributable to the production of the unharvested crop.[17] Instead, costs of producing the crop must be capitalized.

INVOLUNTARY CONVERSIONS

Gains and losses from involuntary conversions of property used in a trade or business generally are classified as Sec. 1231 gains and losses. Involuntary conversions of capital assets that are held in connection with a trade or business or in a transaction entered into for profit also generally qualify for Sec. 1231 treatment. The property that is involuntarily converted must be held more than one year. Certain involuntary conversions are treated differently for income tax purposes. For example, the tax rules are different for condemnations and casualties, even though both are involuntary conversions of property.

CONDEMNATIONS

Gains and losses resulting from condemnations of Sec. 1231 property and capital assets held more than one year are classified as Sec. 1231 gains and losses. As indicated above, the capital assets must be held in connection with a trade or business or with a transaction entered into for profit.[18]

EXAMPLE I:13-14 ▶ Kathryn owns land with a $20,000 basis and a $30,000 FMV as well as a building with a $40,000 adjusted basis and a $26,000 FMV. Both assets are used in her trade or business and have been held for more than one year. As a result of the state exercising its powers of requisition or condemnation, Kathryn is required to transfer both properties to the state for cash equal to their FMVs. No other transfers of assets occur during the current year. The $10,000 gain due to condemnation of the land is a Sec. 1231 gain and the $14,000 loss due to condemnation of the building is a Sec. 1231 loss. ◄

[18] Secs. 1231(a)(3)(A) and (4)(B).

OTHER INVOLUNTARY CONVERSIONS

TYPICAL MISCONCEPTION

The inclusion of gains and losses from condemnations in the netting of the other involuntary conversions is a common error.

Gains or losses resulting from an involuntary conversion arising from fire, storm, shipwreck, other casualty, or theft are not classified as Sec. 1231 gains or losses if the recognized losses from such conversions exceed the recognized gains.[19] In such a case, the involuntary conversions are treated as ordinary gains and losses. However, if the gains from such involuntary conversions exceed the losses, both are classified as Sec. 1231 gains and losses.

EXAMPLE I:13-15 ►

Jose owns equipment having a $50,000 adjusted basis and a $42,000 FMV and a building having a $30,000 adjusted basis and a $35,000 FMV which are used in Jose's trade or business. The straight-line method of depreciation is used for the building. Both assets are held for more than a year. As a result of a fire, both assets are destroyed, and Jose collects insurance proceeds equal to the assets' FMV. No other transfers of assets occur during the current year. Because the $8,000 ($42,000 – $50,000) recognized loss exceeds the $5,000 ($35,000 – $30,000) recognized gain, the recognized loss and gain are both treated as ordinary and not Sec. 1231. ◄

KEY POINT

If the FMV of the building in Example I:13-15 is $54,000 instead of $35,000, Jose's Sec. 1231 loss is $8,000, and his Sec. 1231 gain is $24,000.

PROCEDURE FOR SEC. 1231 TREATMENT

OBJECTIVE 3

Understand the tax treatment for Sec. 1231 transactions

After determining the recognized gains and losses from transfers of property qualifying for Sec. 1231 treatment, it is necessary to determine whether any gain must be recaptured as ordinary income under Secs. 1245 and 1250. The recaptured gain, discussed later in this chapter, is not eligible for Sec. 1231 treatment. After eliminating the gain recaptured as ordinary income due to the recapture of depreciation, the procedure for analyzing Sec. 1231 transactions is as follows:

STEP 1. Determine all gains and losses resulting from casualties or thefts of Sec. 1231 property and non–personal-use capital assets held for more than one year. Gains and losses are netted and the net gain is treated as Sec. 1231 gain if the gains exceed the losses.

If the losses exceed the gains, both are treated as ordinary losses and gains and do not, therefore, enter into the Sec. 1231 netting procedure. Recall from Chapter I:8 that business casualty losses are deductible *for* AGI and other casualty losses are taken *from* AGI, if deductible.

KEY POINT

Gains that are recaptured under Secs. 1245 and 1250 are not eligible for Sec. 1231 treatment.

STEP 2. Combine the following gains and losses to determine whether Sec. 1231 gains exceed Sec. 1231 losses or vice versa:

- Net casualty and theft *gains* resulting from Step 1, if any
- Gains and losses resulting from the sale or exchange of Sec. 1231 property
- Gains and losses resulting from the condemnation of Sec. 1231 property and non–personal-use capital assets held more than one year.

If a net Sec. 1231 loss is the result, the losses and gains are treated as ordinary losses and gains. If a net Sec. 1231 gain is the result, the gains and losses are treated as LTCGs and LTCLs, although a portion or all of the capital gain may be recaptured as ordinary income as outlined in Step 3 (five-year lookback rule) below.

STEP 3. If a net Sec. 1231 gain is the result of Step 2, determine if the taxpayer has any nonrecaptured net Sec. 1231 losses. Nonrecaptured net Sec. 1231 losses are the excess of aggregate net Sec. 1231 losses for the preceding five years over losses previously recaptured as ordinary income due to the recapture provision of Sec. 1231. Net Sec. 1231 gains to the extent of any nonrecaptured net Sec. 1231 losses are treated as ordinary income. Section 1231 gain that is unrecaptured Sec. 1250 gain is first treated as ordinary income to the extent of nonrecaptured net Sec. 1231 losses. Any net Sec. 1231 gain in excess of nonrecaptured net Sec. 1231 loss is treated as a LTCG.

---

[19] Sec. 1231(a)(4)(C).

EXAMPLE I:13-16

The following gains and losses pertain to Danielle's business assets that qualify as Sec. 1231 property. Danielle does not have any nonrecaptured net Sec. 1231 losses from previous years, and the portion of gain recaptured as ordinary income due to the depreciation recapture provisions has been considered.

Gain due to an insurance reimbursement for fire damage	$10,000
Loss due to condemnation	(19,000)
Gain due to the sale of Sec. 1231 property	22,000

The $10,000 casualty gain is classified as a Sec. 1231 gain because gains resulting from casualties or thefts of Sec. 1231 property exceed losses. Danielle has $32,000 ($10,000 + $22,000) of Sec. 1231 gains and a $19,000 Sec. 1231 loss. Danielle's $13,000 net Sec. 1231 gain is treated as a LTCG. No portion of the $13,000 LTCG is recaptured as ordinary income because Danielle does not have any nonrecaptured net Sec. 1231 losses during the preceding five-year period.

ADDITIONAL COMMENT

If Danielle has AGI of $80,000 without considering the gains and losses in Example I:13-16, her AGI is $93,000.

EXAMPLE I:13-17

Assume the same facts as in Example I:13-16 except that Danielle has a $10,000 loss because of the fire instead of a $10,000 gain. The $10,000 casualty loss is an ordinary loss, not a Sec. 1231 loss because losses resulting from casualties or thefts of Sec. 1231 property exceed gains. Because the loss is a business loss, it is deductible *for* AGI. Due to the $19,000 condemnation loss and the $22,000 of Sec. 1231 gain, she has a $3,000 net Sec. 1231 gain treated as a LTCG.

ADDITIONAL COMMENT

If Danielle has AGI of $80,000 without considering the gains and losses in Example I:13-17, her AGI is $73,000.

EXAMPLE I:13-18

The following gains and losses recognized in 2025 pertain to Fred's business assets that were held for more than one year. The assets qualify as Sec. 1231 property.

Gain due to an insurance reimbursement for a casualty	$15,000
Gain due to a condemnation	25,000
Loss due to the sale of Sec. 1231 property	(12,000)

A summary of Fred's net Sec. 1231 gains and losses for the previous five-year period is as follows:

Year	*Sec. 1231 Gain*	*Sec. 1231 Loss*	*Cumulative Nonrecaptured Net Sec. 1231 Losses (from five prior years)*
2020	$ 5,000		–0–
2021		$2,000	$2,000
2022		6,000	8,000
2023	13,000		–0–
2024		9,000	9,000

The $15,000 gain due to the insurance reimbursement for a casualty is treated as a Sec. 1231 gain. The $25,000 gain from the condemnation is also a Sec. 1231 gain. Fred's net Sec. 1231 gain in 2025 is $28,000 [($15,000 + $25,000) − $12,000]. However, $9,000 of the Sec. 1231 gain is recaptured as ordinary income due to the $9,000 of nonrecaptured net Sec. 1231 loss existing at the end of 2024. The remaining $19,000 of net Sec. 1231 gain is a LTCG.

RECAPTURE PROVISIONS OF SEC. 1245

OBJECTIVE 4

Apply the recapture provisions of Sec. 1245

In 1962, Congress enacted Sec. 1245, which substantially reduced the advantages of Sec. 1231. A gain from the disposition of Sec. 1245 property is treated as ordinary income to the extent of the total amount of depreciation (or cost-recovery) deductions allowed since January 1, 1962. The gain recaptured as ordinary income cannot exceed the amount of the realized gain.

EXAMPLE I:13-19

Adobe Corporation sells equipment used in its trade or business for $95,000. The equipment was acquired several years ago for $110,000 and is Sec. 1245 property.[20] The equipment's adjusted basis is $60,000 because $50,000 of depreciation was deducted. The entire $35,000 ($95,000 − $60,000) gain is treated as ordinary income because the total amount of depreciation taken ($50,000) is greater than the $35,000 realized gain.

KEY POINT

If the equipment in Example I:13-19 is sold for $46,000, there is no depreciation recapture, and Adobe has a $14,000 Sec. 1231 loss.

---

[20] Throughout this chapter, property is considered to be placed in service when it is purchased or acquired. The term *Sec. 1245 property* is used here to refer to either recovery property under the ACRS or MACRS rules or nonrecovery property that falls outside of the ACRS or MACRS rules.

TYPICAL MISCONCEPTION

It is sometimes thought that only tangible property is subject to Sec. 1245 recapture. In fact, both tangible and intangible personal property are included.

The recapture provisions of Sec. 1245 apply to the total amount of depreciation (or cost recovery) allowed or allowable for Sec. 1245 property. It makes no difference which method of depreciation is used.[21]

Generally, the entire gain from the disposition of Sec. 1245 property is recaptured as ordinary income because the total amount of depreciation (or cost recovery) is greater than the gain realized. A portion of the gain will receive Sec. 1231 treatment if the realized gain exceeds total depreciation or cost recovery.

EXAMPLE I:13-20 ▶ Assume the same facts as in Example I:13-19 except that the asset is sold for $117,000. Because the $57,000 ($117,000 − $60,000) realized gain is greater than the $50,000 of total depreciation, $50,000 of the gain is ordinary income and the remaining $7,000 is a Sec. 1231 gain. ◀

ADDITIONAL COMMENT

Section 1245 does not apply to losses because in these cases the taxpayers have not taken more depreciation than the asset's decline in value.

PURPOSE OF SEC. 1245

The purpose of Sec. 1245 is to eliminate any advantage taxpayers would have if they were able to reduce ordinary income by deducting depreciation and subsequently receive Sec. 1231 treatment when the asset was sold. For individuals, Sec. 1245 recapture prevents net Sec. 1231 gain from being treated as LTCG. The conversion of Sec. 1231 gain to Sec. 1245 ordinary income also prevents taxpayers from possibly using capital losses.

EXAMPLE I:13-21 ▶ During the current year, Coastal Corporation has capital losses of $50,000 and no capital gains for the current year or the preceding three years. The corporation owns equipment purchased several years ago for $90,000, and depreciation deductions of $48,000 have been allowed. If Coastal sells the equipment for $72,000, the entire $30,000 ($72,000 − $42,000) gain, which is due to the depreciation deductions, is Sec. 1245 ordinary income. Without Sec. 1245, the $30,000 gain is a Sec. 1231 gain that could be offset by $30,000 of the corporation's capital loss if Coastal has net Sec. 1231 gain. ◀

KEY POINT

On the sale of Sec. 1245 property, a portion of the gain is treated as Sec. 1231 gain only if the property is sold for more than the original cost. This is very unlikely for factory equipment, trucks, office equipment, and other Sec. 1245 property.

Note that Sec. 1245 does not apply to losses. If Coastal Corporation sells the equipment in Example I:13-21 for $40,000, a $2,000 ($40,000 − $42,000 basis) Sec. 1231 loss is recognized.

KEY POINT

Property must be depreciable or amortizable to be considered Sec. 1245 property.

Section 1245 Property. **Section 1245 property** is certain property subject to depreciation and, in some cases, amortization. The most common example of Sec. 1245 property is depreciable personal property such as equipment. Automobiles, livestock, railroad grading, and single-purpose agricultural or horticultural structures are Sec. 1245 properties as well as intangible assets subject to amortization under Sec. 197 (see Chapter I:10).[22] Except for certain buildings placed in service after 1980 and before 1987, buildings and structural components generally are not Sec. 1245 property.[23]

EXAMPLE I:13-22 ▶ Buckeye Corporation owns the following assets acquired in 2019: equipment, a patent, an office building (including structural components), and land. The equipment and patent are Sec. 1245 property. The office building and the land are not Sec. 1245 property. ◀

REAL-WORLD EXAMPLE

Pipelines, electric transmission towers, blast furnaces, greenhouses, and oil tanks are examples of real property that are included in the definition of Sec. 1245 property.

In many cases, taxpayers are allowed preferential treatment with respect to amortizing certain costs. For example, taxpayers may elect to expense up to $15,000 of the cost of making any business facility more accessible to handicapped and elderly people,[24] or to amortize pollution control facilities over 60 months[25] and reforestation expenditures over 84 months.[26] If taxpayers have amortized the costs of any real property under the special provisions, Sec. 1245 applies to the gain resulting from the disposition of such property.[27]

If taxpayers elect to expense certain depreciable property under Sec. 179, the amount deducted is treated as a depreciation deduction for purposes of the Sec. 1245 recapture provisions.[28]

---

[21] As explained later in this chapter, the method of cost recovery used determines whether certain real property is treated as Sec. 1245 recovery property.

[22] Sec. 1245(a)(3).

[23] Sec. 1245(a)(3)(B)(i). Tangible real property "used as an integral part of the manufacturing, production, extraction, or furnishing of transportation, communication, electrical energy, gas, water, or sewage disposal services" is Sec. 1245 property.

[24] Sec. 190.

[25] Sec. 169(a).

[26] Sec. 194(a).

[27] Sec. 1245(a)(3)(C). The Sec. 1245 rules recapture amortization deductions claimed on real property under Secs. 169, 179, 185, 188, 190, 193, and 194.

[28] Sec. 1245(a)(2)(C). The maximum amount deductible under Sec. 179 is $1,250,000 in 2025.

EXAMPLE I:13-23

Compact Corporation purchased $90,000 of five-year equipment on March 10, 2024, and elected to expense $20,000 of the cost under Sec. 179. Compact sells the equipment on July 30, 2025, for $95,000. Regular depreciation allowed under MACRS for 2024 and 2025 is $14,000 and $11,200 (1/2 year), respectively. The adjusted basis of the equipment on the date of sale is $44,800 ($90,000 – $20,000 – $25,200 depreciation). The realized gain is $50,200 ($95,000 – $44,800), and $45,200 ($20,000 + $25,200) of the gain is Sec. 1245 ordinary income. The remaining $5,000 is Sec. 1231 gain.

TYPICAL MISCONCEPTION

The categorization of nonresidential real estate acquired between 1981 and 1986 on which an accelerated depreciation method was used as Sec. 1250 property rather than as Sec. 1245 property is a common error.

Application of Sec. 1245 to Nonresidential Real Estate. Most real property is not affected by Sec. 1245. However, Sec. 1245 does apply to nonresidential real estate that qualified as recovery property under the ACRS rules (i.e., placed in service after 1980 and before 1987) unless the taxpayer elected to use the straight-line method of cost recovery.[29] Section 1245 does not apply to depreciable real estate acquired after 1986.

EXAMPLE I:13-24

Brad sells two warehouses during the current year that are totally depreciated because their recovery period is 19 years.

	Warehouse 1	*Warehouse 2*
Year of purchase	1985	1985
Cost*	$720,000	$900,000
Cost recovery—straight line ACRS	720,000	
Cost recovery—ACRS statutory rates (accelerated)		900,000
Adjusted basis	0	0
Selling price	700,000	800,000

*does not consider the cost of land

Both warehouses were placed in service after 1980 and before 1987 and qualify as recovery property under ACRS. The $700,000 ($700,000 – $0) gain on the sale of Warehouse 1 is a Sec. 1231 gain. Section 1245 does not apply because Brad elected to use the straight-line method of cost recovery. Section 1245 applies to the sale of Warehouse 2 because accelerated cost recovery was used and the property is nonresidential real estate placed in service after 1980 and before 1987. Therefore, the $800,000 ($800,000 – $0) gain is Sec. 1245 ordinary income because the $800,000 gain is less than the $900,000 total ACRS cost-recovery allowance.

HISTORICAL NOTE

Taxpayers acquiring nonresidential real property in 1981 through 1986 were confronted with choosing between straight-line ACRS and ACRS using the statutory rates. In making the decision, these taxpayers should have considered the number of years the property would be held, the estimated selling price, the present value of the tax savings due to deducting depreciation sooner, and any preferential treatment for net capital gains.

SELF-STUDY QUESTION

If warehouse 2 in Example I:13-24 is sold for $940,000, what is the character of the gain?

ANSWER

$900,000 is Sec. 1245 ordinary income and $40,000 is Sec. 1231 gain.

As illustrated in the example above, nonresidential buildings placed in service after 1980 and before 1987 are Sec. 1245 property if an accelerated method of cost recovery was used.

If the properties in Example I:13-24 were acquired before 1981 or after 1986, they would not be subject to the Sec. 1245 recapture rules regardless of the method of depreciation used.

The Sec. 1245 recapture rules are summarized in Topic Review I:13-1.

RECAPTURE PROVISIONS OF SEC. 1250

OBJECTIVE 5

Apply the recapture provisions of Sec. 1250

In 1964, Sec. 1250 was enacted to extend the recapture concept to include most depreciable real property. Unlike Sec. 1245, where the recapture is based upon the total amount of depreciation (or cost recovery) allowed, Sec. 1250 applies solely to additional depreciation. **Additional depreciation**, also referred to as **excess depreciation**, is the excess of the actual amount of accelerated depreciation (or cost-recovery deductions under ACRS) over the amount of depreciation that would be deductible under the straight-line method. Any gain due to excess depreciation is Sec. 1250 ordinary income.

---

[29] Sec. 1245(a)(5).

TOPIC REVIEW I:13-1

Section 1245 Recapture

- Section 1245 affects the character of the gain, not the amount of gain. Character refers to gain being classified as either ordinary income or Sec. 1231 gain.
- Section 1245 does not apply to assets sold or exchanged at a loss.
- Section 1245 ordinary income is never more than the realized gain.
- Section 1245 recapture applies to the total depreciation or amortization allowed or allowable but not more than the realized gain.
- Section 1245 property includes depreciable personal property and amortizable intangible assets (e.g., a patent).
- Section 1245 property includes nonresidential real estate placed in service after 1980 and before 1987 under the ACRS rules *unless* the taxpayer elected to use the straight-line method of cost recovery.
- Section 1245 does not apply to any buildings placed in service after 1986.

EXAMPLE I:13-25 ▶ Wyatt sells a building that was placed in service before 1981 and the gain is $50,000. Accelerated depreciation was used and excess depreciation amounts to $74,000. All $50,000 of the gain is Sec. 1250 ordinary income. If the gain is $90,000, $74,000 is Sec. 1250 ordinary income and $16,000 is Sec. 1231 gain. ◀

ADDITIONAL COMMENT

Since buildings generally must be depreciated on a straight-line basis since 1987, Sec. 1250 depreciation recapture becomes less and less applicable as time passes.

PURPOSE OF SEC. 1250

Section 1250 has the effect of converting a portion of the Sec. 1231 gain into ordinary income when real property is sold or exchanged. The incremental benefits from using accelerated depreciation or ACRS cost recovery may be recaptured when the property is sold. Noncorporate taxpayers can avoid Sec. 1250 recapture by either using the straight-line method of depreciation or cost recovery or holding the Sec. 1250 property for its entire useful life or recovery period. If the building Wyatt sells in Example I:13-25 is fully depreciated, which is likely, none of the gain is Sec. 1250 ordinary income (as explained later, some of the gain is ordinary income if Wyatt is a corporation).

The Sec. 1250 recapture rules are applied solely to the additional depreciation amount instead of total depreciation allowable as is the case for Sec. 1245 property. Sec. 1250 provides for less depreciation recapture than Sec. 1245.

ADDITIONAL COMMENT

Elevators and escalators are Sec. 1250 property if placed in service after 1986.

SECTION 1250 PROPERTY DEFINED

Section 1250 property is any depreciable real property other than Sec. 1245 property.[30] As stated on page 13-10, nonresidential real estate placed in service after 1980 and before 1987 is Sec. 1245 property unless the straight-line method of cost recovery is elected. The property is Sec. 1250 property if straight-line cost recovery is elected.

Depreciation recapture is not required on real property placed in service after 1986 because such property must be depreciated under the straight-line MACRS rules.[31]

KEY POINT

An apartment building is the most common type of property classified as residential real estate.

EXAMPLE I:13-26 ▶ Frances sells an office building during the current year for $800,000. The office building was purchased before 1981 for $700,000* and depreciation of $500,000 has been allowed using an accelerated method of depreciation. If the straight-line method was used, depreciation would be $420,000. The office building is Sec. 1250 property. Her recognized gain is $600,000 and $80,000 is Sec. 1250 ordinary income due to excess depreciation ($500,000 – $420,000). The remaining $520,000 gain is Sec. 1231 gain.

If Frances purchased the building after 1986, she was required to use the straight-line method. Thus her recognized gain is $520,000 ($800,000 – $280,000) with straight-line depreciation being $420,000. None of the gain is Sec. 1250 ordinary income. The gain is Sec. 1231 gain. ◀

*does not consider the cost of land

ADDITIONAL COMMENT

If the building in Example I:13-26 was placed in service after 1980 and before 1987, the building is Sec. 1245 property if Frances uses accelerated cost recovery and not the straight-line method.

---

[30] Sec. 1250(c).

[31] As explained in the Additional Recapture for Corporations section in this chapter, corporations may have depreciation recapture under Sec. 291(a) despite the use of straight-line depreciation.

As explained below, $420,000 of the Sec. 1231 gain in Example I:13-26 is taxed at a maximum rate of 25% because it is unrecaptured Sec. 1250 gain and $100,000 is taxed at 15% or 20% if there are no Sec. 1231 losses, nonrecaptured net Sec. 1231 losses, and no capital gains and losses from other transactions. Recall from Chapter I:5 that the tax rate on ANCG may be 20%, 15%, or zero.

UNRECAPTURED SECTION 1250 GAIN

For sales of real property, some or all of the Sec. 1231 gain may be LTCG that is unrecaptured Sec. 1250 gain taxed at a maximum rate of 25%. Unrecaptured Sec. 1250 gain is the amount of LTCG which would be taxed as ordinary if Sec. 1250 provided for the recapture of all depreciation instead of additional (excess) depreciation. When a taxpayer sells Sec. 1250 property (e.g., an office building) at a gain, any gain due to excess depreciation is ordinary income. Any remaining gain is Sec. 1231 gain and may be LTCG; however, any of the LTCG due to depreciation other than excess depreciation is unrecaptured Sec. 1250 gain taxed at a maximum rate of 25%.

An individual taxpayer who uses straight-line depreciation for Sec. 1250 property does not have any additional depreciation that would be recaptured as ordinary gain under Sec. 1250. Therefore, for buildings placed in service after 1986, all of the Sec. 1231 gain to the extent of the depreciation is unrecaptured Sec. 1250 gain subject to a maximum tax rate of 25% because only straight-line depreciation may be used.

HISTORICAL NOTE

Prior to the Taxpayer Relief Act of 1997, all LTCGs were taxed at a maximum rate of 28%. When the maximum rate was reduced to 20% (now 15% unless taxable income exceeds threshold amounts when the rate is 20%). Congress did not extend this favorable treatment to depreciable real estate. The maximum rate on this type of property was reduced from 28% to 25%.

EXAMPLE I:13-27 ▶

Linnie, whose tax rate for ANCG is 15%, owns a building used in her trade or business that was placed in service in 1995. She has no Sec. 1231 losses, nonrecaptured net Sec. 1231 losses or capital gains and losses. The building cost $400,000* and depreciation-to-date amounts to $172,000. If she sells the building for $350,000, her $122,000 gain ($350,000 – $228,000) is Sec. 1231 gain and there is no depreciation recapture under Sec. 1250 because straight-line depreciation was allowed. The $122,000 Sec. 1231 gain is LTCG taxed at a maximum rate of 25% because it is unrecaptured Sec. 1250 gain. ◀

*does not consider the cost of land

STOP & THINK

Question: What is the difference between *Sec. 1250 depreciation recapture* and *unrecaptured Sec. 1250 gain*?

Solution: Section 1250 depreciation recapture is the recharacterization of some or all of the Sec. 1231 gain on a building to ordinary income. Section 1250 depreciation recapture only applies to a noncorporate taxpayer if accelerated depreciation was used. Because accelerated depreciation is not allowed after 1986, this provision does not apply to noncorporate taxpayers for buildings placed in service after 1986. Unrecaptured Sec. 1250 gain is taxed at a maximum rate of 25% and occurs when there is a sale or an exchange of a building that is not Sec. 1245 property. If straight-line depreciation is used for a building, the gain is Sec. 1231 gain and the portion of the gain due to depreciation is unrecaptured Sec. 1250 gain. Part or all of the Sec. 1231 gain is taxed at a maximum rate of 25% with any excess taxed at 15% (or possibly 20%).

SELF-STUDY QUESTION

In Example I:13-24, how much of the $700,000 Sec. 1231 gain resulting from the sale of warehouse #1 is unrecaptured Sec. 1250 gain?

ANSWER

All $700,000

EXAMPLE I:13-28 ▶

Assume the same facts as in Example I:13-27 except Linnie sells the building for $500,000. Her Sec. 1231 gain is $272,000 ($500,000 – $228,000), and $172,000 of the gain is taxed at 25% because it is unrecaptured Sec. 1250 gain. The remaining $100,000 of gain is taxed at 15%. ◀

TAXATION OF GAINS ON SALE OR EXCHANGE OF DEPRECIABLE REAL PROPERTY

Noncorporate taxpayers who placed real property in service after 1963 and before 1981 may have to recognize Sec. 1250 ordinary income if they used a depreciation method greater than straight-line. Only noncorporate taxpayers may have gain treated as unrecaptured Sec. 1250 gain and the amount of unrecaptured Sec. 1250 gain is not greater than the amount of depreciation allowed.

There is a difference between Sec. 1250 ordinary income and unrecaptured Sec. 1250 gain. Section 1250 ordinary income could be taxed at 37% after 2017 for noncorporate taxpayers

ADDITIONAL COMMENT

When a building is sold at a gain, different tax rates might apply to portions of the gain: rate for ordinary income, 25% for unrecaptured Sec. 1250 gain, and 15% or 20% for ANCG.

while unrecaptured Sec. 1250 gain is taxed at a maximum rate of 25%. To have unrecaptured Sec. 1250 gain, the property must have a holding period greater than one year.

EXAMPLE I:13-29 ▶ Erin, whose tax rate is 35%, owns an office building purchased for $1 million* on April 10 of last year. The building is sold on March 28 of the current year for $990,000 when its adjusted basis is $966,850. The $23,150 gain is not Sec. 1231 gain and none of the gain is unrecaptured Sec. 1250 gain because the holding period is not more than one year. The $23,150 gain is ordinary taxed at 35%. If the holding period was more than one year, the Sec. 1231 gain of $23,150 becomes LTCG that is unrecaptured Sec. 1250 gain taxed at 25%. ◀

*does not consider the cost of land

The proper tax treatment for depreciable real estate depends on the method of depreciation, when the property was placed in service, and how the property is used. Section 1245 applies to a building placed in service after 1980 and before 1987 if accelerated cost recovery is allowed and the building is not used as residential rental property. Buildings used as residential rental property are never subject to the Sec. 1245 recapture rules.

For a building or structure to qualify as residential rental property, 80% or more of the gross rental income from the building or structure must be rental income from dwelling units. Residential rental property does not include any unit in a hotel, motel, inn, or other establishment if more than one-half of the units are used on a transient basis.[32]

When a building is sold at a gain, different tax rates may apply to portions of the gain:

Rate for ordinary income – Sec. 1250 due to recapture of excess depreciation or Sec. 1245 due to recapture of depreciation
25% – unrecaptured Sec. 1250 gain
20%, 15%, or zero – portion of Sec. 1231 gain that becomes ANCG

Depreciable Real Property Placed in Service Before 1981. Taxpayers who elected to use accelerated depreciation on real property placed in service before 1981 may have some or all of their gain treated as Sec. 1250 ordinary income. However, the likelihood that taxpayers will own depreciable property placed in service before 1981 is low. Furthermore, such property is probably fully depreciated, and Sec. 1250 will not apply for individual taxpayers. Gain due to excess depreciation allowed after 1963 is Sec. 1250 ordinary income unless the building is used as residential rental property where gain due to excess depreciation after 1975 is ordinary income. The Sec. 1250 recapture rules are the same for residential rental property and other real property placed in service after 1975.

EXAMPLE I:13-30 ▶ Buddy sells an apartment complex used as residential rental property and placed in service on January 1, 1977. The cost of the apartment complex is $900,000,* and the complex is sold on January 1, 2025, for $700,000. Depreciation claimed by Buddy on the property is as follows:

Time Period	*Depreciation Allowed*	*Straight-Line Depreciation*	*Excess Depreciation*
Jan. 1, 1977–Jan. 1, 2025	$800,000	$710,000	$90,000

On the date of sale, the adjusted basis of the apartment is $100,000 ($900,000 – $800,000) and the realized gain is $600,000 ($700,000 – $100,000). All $90,000 of excess depreciation allowed is recaptured as Sec. 1250 ordinary income because the excess depreciation is less than the realized gain. The remaining $510,000 ($600,000 – $90,000) of gain is a Sec. 1231 gain. The Sec. 1231 gain is LTCG if 1231 gains exceed 1231 losses and is taxed at 25% because it is unrecaptured Sec. 1250 gain. ◀

*does not consider the cost of land

ADDITIONAL COMMENT

If the selling price in Example I: 13-30 is $172,000, all of the gain is Sec. 1250 ordinary income.

Selling Price	$172,000
Adjusted Basis	100,000
Realized Gain	$ 72,000
Ordinary Gain	$ 72,000

---

[32] Reg. Sec. 1.167(j)-3(b)(1)(i).

EXAMPLE I:13-31 Assume the same facts as in Example I:13-30 except the building is nonresidential real estate such as a warehouse, manufacturing plant, or an office building. The tax treatment is the same for both examples. Buddy has $90,000 of ordinary income and Sec. 1231 gain of $510,000. The Sec. 1231 gain is LTCG if 1231 gains exceed 1231 losses and is taxed at 25% because it is unrecaptured Sec. 1250 gain.

There is no excess depreciation, and thus no Sec. 1250 ordinary income if the building is fully depreciated when sold or exchanged. As each year passes, noncorporate shareholders are increasingly less likely to have Sec. 1250 ordinary income.

EXAMPLE I:13-32 Assume the same facts as in Examples I:13-30 and I:13-31 except the buildings are fully depreciated and the selling price is $720,000. For both buildings, the realized gain of $720,000 is Sec. 1231 gain and is unrecaptured Sec. 1250 gain taxed at a maximum rate of 25%.

ADDITIONAL COMMENT

Real property placed in service before 1981 should be fully depreciated by 2025.

Depreciable Real Property Placed in Service After 1980 and Before 1987. Gain due to excess depreciation for buildings used as residential rental property placed in service after 1980 and before 1987 is Sec. 1250 ordinary income. Because the recovery period for buildings placed in service during this period is 15, 18, or 19 years, all such buildings will be fully depreciated if sold in 2025, thus there is no excess depreciation and no Sec. 1250 ordinary income.

The method of depreciation used for other buildings (not residential rental property) placed in service during this period is a critical factor in determining the tax treatment when sold. If accelerated cost recovery was used, the nonresidential real estate is Sec. 1245 property where all gain due to depreciation is ordinary income. If the straight-line method is used, the property is Sec. 1250 property and none of the gain is ordinary income for noncorporate taxpayers.

EXAMPLE I:13-33 Ford purchased three buildings (A, B, and C) in 1982 for $500,000 each*. The recovery period for each building is 15 years, so each building is fully depreciated when he sells the buildings during the current year for $400,000 each. He has no other transactions involving capital assets or Sec. 1231 property.

*does not consider the cost of land

Building	*Use of Property*	*Method of Cost Recovery (Depreciation)*
A	residential rental property	accelerated or straight-line
B	office building	accelerated
C	warehouse	straight-line

Building B is Sec. 1245 property, and the $400,000 gain is Sec. 1245 ordinary income. For buildings A and C, the $400,000 gain is Sec. 1231 gain and is unrecaptured Sec. 1250 gain because all of the gain is due to depreciation.

ADDITIONAL COMMENT

If the buildings in Example I:13-32 are sold for $943,000, the $943,000 realized gain is Sec. 1231, and $900,000 is unrecaptured Sec. 1250 gain. $43,000 is taxed at a maximum rate of 20%.

EXAMPLE I:13-34 Assume the same facts as in Example I:13-33 except the selling price is $570,000. For building B, Ford must recognize $500,000 of Sec. 1245 ordinary income and $70,000 of Sec. 1231 gain taxed at 15% or 20%. For buildings A and C, the $570,000 gain is Sec. 1231 gain with $500,000 taxed at 25% and $70,000 taxed at 15% or 20%.

Depreciable Real Property Placed in Service After 1986. The straight-line method of depreciation is the only method of depreciation allowed for buildings placed in service after 1986, and thus noncorporate taxpayers will not have any Sec. 1250 ordinary income when they sell or exchange buildings placed in service after 1986. Gain due to depreciation is unrecaptured Sec. 1250 gain subject to a maximum tax rate of 25%.

The tax treatment for residential rental property and other real property placed in service after 1986 is the same, but taxpayers may depreciate residential rental property over 27.5 years and other real property placed in service after May 12, 1993, over 39 years.

EXAMPLE I:13-35 Stella purchased an apartment complex on October 10, 2017, for $275,000 (exclusive of land) while Mack purchased an office building for $275,000 on the same day. Stella and Mack sell the

▼ TABLE I:13-1

Character of Gain on Sale or Exchange of Depreciable Real Property for Noncorporate Taxpayers

	Sec. 1245 Ordinary	Sec. 1250 Ordinary	Sec. 1231	Unrecaptured Sec. 1250 (Maximum rate of 25%)
RESIDENTIAL RENTAL				
Placed in Service Before 1981				
Use straight-line depreciation	No	No	Yes	Yes
Use accelerated depreciation	No	Yes*	Yes**	Yes
Placed in Service After 1980 & Before 1987				
Use straight-line depreciation	No	No	Yes	Yes
Use accelerated depreciation	No	Yes*	Yes**	Yes
Placed in Service After 1986				
Use straight-line depreciation	No	No	Yes	Yes
NONRESIDENTIAL				
Placed in Service Before 1981

Placed in Service After 1980 & Before 1987				
Use straight-line depreciation	No	No	Yes	Yes
Use accelerated depreciation	Yes	No	Yes***	No
Placed in Service After 1986				
Use straight-line depreciation	No	No	Yes	Yes

* Portion of gain due to excess depreciation
** To extent gain is greater than excess depreciation
*** To extent gain is greater than total depreciation

buildings on April 22, 2025, for $250,000. At the date of sale, Stella's adjusted basis in the apartment complex is $210,005 based on a 27.5-year recovery period and Mack's adjusted basis in the office building is $229,166 based on a 39-year recovery period. Stella has a Sec. 1231 gain of $39,995 [$250,000 – $210,005 adjusted basis], and all of the gain is unrecaptured Sec. 1250 gain. Mack has a Sec. 1231 gain of $20,834 [$250,000 – $229,166 adjusted basis], and all of the gain is unrecaptured Sec. 1250 gain. ◀

The character of gain that results from the sale of different types of real property is summarized in Table I:13-1.

LOW-INCOME HOUSING

Congress has provided incentives for the construction and rehabilitation of low-income housing. For tax years after 1986, a low-income housing credit is available to owners of qualified low-income housing projects.[33]

If the low-income housing unit is held for 16 years and 8 months, none of the additional depreciation is subject to recapture as ordinary income.[34] Thus noncorporate taxpayers will not have any Sec. 1250 ordinary income if the low-income housing is sold after 2002.

The Sec. 1250 recapture rules for noncorporate taxpayers are summarized in Topic Review I:13-2.

---

[33] Sec. 42.

[34] Secs. 1250(a)(1)(B)(i), (ii), (iii), and (iv).

TOPIC REVIEW I:13-2

Section 1250 Recapture for Noncorporate Taxpayers

- Section 1250 affects the character of the gain, not the amount of gain.
- Section 1250 does not apply to assets sold or exchanged at a loss.
- Section 1250 ordinary income is never more than the realized gain.
- Section 1250 ordinary income is never more than the *additional* (excess) depreciation allowed. (Note, that this statement is not true for corporate taxpayers.)
- Section 1250 property includes depreciable real property unless the real property is nonresidential real estate placed in service in 1980 and before 1987 under the ACRS rules and the straight-line method is not elected.
- Section 1250 ordinary income does not exist if the straight-line method of depreciation is used. (This statement is not true for corporate taxpayers because of the additional recapture requirements under Sec. 291.)

ADDITIONAL RECAPTURE FOR CORPORATIONS

OBJECTIVE 6

Understand recapture provisions for corporations

Corporations are subject to additional recapture rules under Sec. 291 if depreciable real estate is sold or otherwise disposed of. The additional ordinary income that is recaptured effectively reduces the amount of the Sec. 1231 gain.

The additional recapture amount under Sec. 291 is equal to 20% of the difference between the amount that would be recaptured if the property was Sec. 1245 property and actual recapture amount under Sec. 1250, which will almost always be zero.[35]

KEY POINT

Section 291 has no effect on Sec. 1245 property because gain is already recaptured to the extent of all depreciation.

EXAMPLE I:13-36 ▶

In 1993, Orlando Corporation purchased an office building for $500,000* for use in its business. The building is sold during the current year for $480,000. Total depreciation allowed for the building is $372,000. The realized and recognized gain is $352,000 ($480,000 − adjusted basis of $128,000), and all of the gain would be ordinary if the building were Sec. 1245 property.

Section 291 depreciation recapture applies because the taxpayer is a corporation, so $70,400 [20% × ($352,000 − $0)] of the gain is Sec. 1250 ordinary income, and $281,600 is Sec. 1231 gain.

*does not consider the cost of land; any gain or loss on the sale of land is Sec 1231 gain or loss

Except for Section 291, which applies only to corporate taxpayers, none of the gain in Example 13-36 would be Sec. 1250 ordinary income because there is no excess depreciation. The straight-line method of depreciation is the only method allowed for buildings placed in service after 1986. ◀

ADDITIONAL COMMENT

Corporations are subject to 20% depreciation recapture rule under Sec. 291 on sales of Sec. 1250 property.

SELF-STUDY QUESTION

If the taxpayer in Example I:13-36 is a noncorporate taxpayer, how much of the gain is Sec. 1250 ordinary income?

ANSWER

Zero.

EXAMPLE I:13-37 ▶

Pacific Corporation purchased an office building ten years ago for 700,000* for use in its business. The building is sold during the current year for $790,000. Total depreciation allowed for the building is $180,000. The realized and recognized gain is $270,000 ($790,000 − adjusted basis of $520,000), and $180,000 of the gain would be ordinary if the building were Sec. 1245 property.

Section 291 depreciation recapture applies, so $36,000 [20% × ($180,000 − $0)] of the gain is Sec. 1250 ordinary income, and $234,000 is Sec. 1231 gain. ◀

*does not consider the cost of land; any gain or loss on the sale of land is Sec 1231 gain or loss

For corporations, none of the Sec. 1231 gain is unrecaptured Sec. 1250 gain.

SELF-STUDY QUESTION

If the taxpayer in Example I:13-37 is a noncorporate taxpayer, how much of the gain is Sec. 1250 ordinary income?

ANSWER

Zero
The $270,000 gain is Sec. 1231 gain and $180,000 is unrecaptured Sec. 1250 gain subject to a maximum tax rate of 25%.

---

[35] Sec. 291(a)(1).

SUMMARY OF SECS. 1231, 1245, AND 1250 GAINS

Section 1231 property is depreciable property and nondepreciable real property used in one's trade or business and held for more than one year. Net Sec. 1231 gain, the excess of Sec. 1231 gain over Sec. 1231 loss, is LTCG unless the five-year lookback rule applies in which case the gain is ordinary to the extent of the nonrecaptured net Sec. 1231 loss. Net Sec. 1231 loss, the excess of Sec. 1231 loss over Sec. 1231 gain, is ordinary.

Section 1245 applies to depreciable personal property and amortizable intangible assets. It also applies to certain nonresidential real property placed in service during ACRS (after 1980 and before 1987) if accelerated cost recovery is used. Gain to the extent of depreciation is ordinary income. All of the gain resulting from the sale of Sec. 1245 property is ordinary income unless the asset is sold for more than its original basis.

Section 1250 property is depreciable real property, and gain is ordinary income to the extent of excess depreciation, the excess of accelerated depreciation over straight-line. After 1986, the straight-line method must be used for real property and thus noncorporate taxpayers will not have any Sec. 1250 ordinary income on the sale of depreciable real property placed in service after 1986. Unfortunately, Congress made the sale and exchange of buildings more complicated in 1997 when it created the concept of unrecaptured Sec. 1250 gain that is taxed at 25%. When a noncorporate taxpayer sells depreciated buildings at a gain, any gain to the extent of straight-line depreciation is Sec. 1231 gain but is taxed at a rate no higher than 25% because it is unrecaptured Sec. 1250 gain.

To further illustrate Sec. 1231, 1245, and 1250, refer to Topic Review I:13-3 where a noncorporate taxpayer with a 35% tax rate and a 15% rate for ANCG sells various assets during 2025. Each asset was purchased in 1997 and the selling price is $450,000 for each of the first three assets. All assets are used in a trade or business. There are no other gains and losses and no nonrecaptured net Sec. 1231 losses.

SELF-STUDY QUESTION

Refer back to Example I:13-36 and assume that the adjusted basis is zero when the building is sold. Will the Orlando Corporation still have to recognize any Sec. 1250 ordinary income?

ANSWER

Yes, 20% of the smaller of gain recognized or $500,000 depreciation. A noncorporate taxpayer will have no Sec. 1250 ordinary income.

SELF-STUDY QUESTION

If a corporation sells an office building purchased in 2002 at a gain, what is the maximum amount of Sec. 1250 ordinary income that might be recognized?

ANSWER

20% of depreciation.

TOPIC REVIEW I:13-3

Sections 1231, 1245, and 1250—Comparison of Various Assets

The taxpayer is a noncorporate taxpayer with a 35% tax rate who sells each of the first three assets for $450,000. Each asset was purchased in 1997 and is used in a trade or business. The difference between the original basis and the adjusted basis of the equipment and building is attributable to depreciation. There are no other gains and losses and no nonrecaptured net Sec. 1231 losses, thus the Sec. 1231 gain becomes LTCG.

	Original Basis	Adjusted Basis	Tax Treatment
1. Land	$400,000	$400,000	$50,000 Sec. 1231 gain taxed at 15%.*
2. Equipment	600,000	400,000	$50,000 Sec. 1245 ordinary income taxed at 35%. All gain is due to depreciation.
3. Building	500,000	400,000	$50,000 Sec. 1231 gain which is unrecaptured Sec. 1250 gain taxed at 25%.
For assets 4, 5, & 6, assume the selling price is $700,000.			
4. Land	$400,000	$400,000	$300,000 Sec. 1231 gain taxed at 15%.*
5. Equipment	600,000	400,000	$200,000 Sec. 1245 ordinary income taxed at 35% and $100,000 Sec. 1231 gain taxed at 15%.*
6. Building	500,000	400,000	$300,000 Sec. 1231 gain with $100,000 of unrecaptured Sec. 1250 gain taxed at 25% and $200,000 taxed at 15%.*

* 20% if single with taxable income above $533,400, head of household with taxable income above $566,700, or married filing joint return with taxable income above $600,050.

RECAPTURE PROVISIONS—OTHER APPLICATIONS

OBJECTIVE 7

Describe other recapture applications

Sections 1245 and 1250 recapture provisions take precedence over other provisions of the tax law.[36] Unless an exception or limitation is specifically stated in Secs. 1245 or 1250, gain is recognized under Secs. 1245 or 1250 despite the existence of provisions elsewhere in the IRC that allow nonrecognition of gain.[37]

GIFTS OF PROPERTY SUBJECT TO RECAPTURE

A gift of appreciated depreciable property does not result in the recapture of depreciation or cost-recovery deductions under Secs. 1245 or 1250.[38] However, the donee must consider the recapture potential when disposing of the property. The recapture amount for the donee is computed by including the recaptured amount attributable to the donor.[39]

EXAMPLE I:13-38 ▶ Ashley makes a gift of equipment with an $8,200 FMV to Helmut. Ashley paid $10,000 for the equipment and deducted $4,000 of depreciation before making the gift. Ashley does not have to recapture any depreciation when making the gift. Helmut's basis for the equipment is $6,000 and the potential depreciation recapture carries over to Helmut. ◀

EXAMPLE I:13-39 ▶ Assume the same facts as in Example I:13-38 except that Helmut uses the equipment in a trade or business, deducts $1,500 of depreciation, and sells the equipment for $7,100. When determining the amount of depreciation subject to recapture, Helmut must also consider the depreciation allowed to Ashley. The entire $2,600 [$7,100 − ($6,000 − $1,500)] gain is recaptured as ordinary income because it is less than the $5,500 ($4,000 + $1,500) of depreciation claimed. ◀

ADDITIONAL COMMENT

If the taxpayer in Topic Review I:13-3 is a corporation, the character of the gain is the same for assets 1, 2, 4, and 5. For asset 3, $10,000 of the gain is Sec. 1250 ordinary income because of Sec. 291 and $40,000 is Sec. 1231 gain. For asset 6, $20,000 is Sec. 1250 ordinary income because of Sec. 291 and $280,000 is Sec. 1231 gain.

TRANSFER OF PROPERTY SUBJECT TO RECAPTURE AT DEATH

The transfer of appreciated property at death does not cause a recapture of depreciation deductions to the decedent's estate under Secs. 1245 and 1250.[40] In addition, recapture potential does not carry over to the person who receives the property from the decedent.

EXAMPLE I:13-40 ▶ Jackie dies while owning a building with a $900,000 FMV. The building is Sec. 1245 property acquired in 1985 for $800,000* on which cost-recovery deductions of $800,000 have been claimed. Pam inherits the building from Jackie. Pam's basis for the building is $900,000, and the $800,000 of cost-recovery deductions are not recaptured. If Pam later sells the building, there is no depreciation recapture attributable to the $800,000 of cost-recovery deductions taken by Jackie, the decedent. ◀

*does not include cost of land

KEY POINT

Death is one of the few ways to avoid the recapture provisions.

CHARITABLE CONTRIBUTIONS

As discussed in Chapter I:8, the deduction for a charitable contribution of appreciated ordinary income property is generally limited to its adjusted basis (i.e., the amount of the contribution deduction is equal to the FMV of the property less the amount of gain that would not have been LTCG [or Sec. 1231 gain] if the contributed property had been sold by the taxpayer at its FMV).[41] Thus, the contribution deduction for recapture property is reduced to reflect the ordinary income that would be recognized if the property were sold rather than contributed to the charity.

EXAMPLE I:13-41 ▶ Ralph makes a gift of an organ to a church. The organ is used in Ralph's trade or business and has a $6,300 FMV. Ralph paid $10,000 for the organ, and $8,000 depreciation has been claimed. If the organ were sold for its $6,300 FMV, the realized and recognized gain would be $4,300 ($6,300 − $2,000) and all of the gain would be ordinary income due to the recapture of depreciation under Sec. 1245. The charitable contribution deduction is limited to $2,000 ($6,300 − $4,300), because none of the $4,300 gain would be taxed as a LTCG if the organ were sold. ◀

---

[36] Secs. 1245(d) and 1250(i).

[37] Reg. Secs. 1.1245-6(a) and 1.1250-1(c)(1).

[38] Secs. 1245(b)(1) and 1250(d)(1).

[39] Reg. Secs. 1.1245-2(a)(4) and 1.1250-2(d).

[40] Secs. 1245(b)(2) and 1250(d)(2).

[41] Sec. 170(e)(1)(A).

ADDITIONAL COMMENT

If the FMV of the organ in Example I:13-41 is $11,000, the charitable contribution deduction is limited to $3,000, the $11,000 FMV less $8,000. If the organ is sold for $11,000, $8,000 of the gain is ordinary income.

LIKE-KIND EXCHANGES

A taxpayer who receives boot (i.e., non–like-kind property) in a transaction that otherwise qualifies as a like-kind exchange recognizes gain equal to the lesser of the realized gain or the amount of boot received. If the property is Sec. 1245 or 1250 property, the gain is first considered to be ordinary income up to the maximum amount of the gain that is subject to the recapture provisions.

EXAMPLE I:13-42 ▶

The Krider Corporation owns a building used in its trade or business that cost $300,000 three years ago. During the current year, the building is exchanged when its adjusted basis is $280,000 for another building with a FMV of $287,000 and $36,000 of cash. Gain realized on the exchange is $43,000 [($287,000 + $36,000) − $280,000], and gain recognized is the lesser of $36,000 boot received or the $43,000 gain realized. $4,000 (20% × $20,000 depreciation) is Sec. 1250 ordinary income under Sec. 291, and $32,000 is Sec. 1231 gain. ◀

If gain is not recognized in a like-kind exchange, the recapture potential carries over to the replacement property (i.e., any recapture potential associated with the property exchanged attaches to the property received in the exchange).[42]

EXAMPLE I:13-43 ▶

Scarlet exchanged an apartment complex in Arizona for an apartment complex (FMV of $800,000) in Texas in 2019. The apartment complex in Arizona was purchased in 2012 for $500,000 and had an adjusted basis of $450,000. The $350,000 gain realized was not recognized because the exchange was a like-kind exchange. After deducting $42,000 of depreciation, Scarlet sells the apartment complex for $1,000,000 during the current year. Her Sec. 1231 gain is $592,000 ($1,000,000 − $408,000).

If the taxpayer is a corporation, $18,400 (20% × $92,000) is Sec. 1250 ordinary income and $573,600 is Sec. 1231 gain.[43] ◀

INVOLUNTARY CONVERSIONS

If an involuntary conversion of Sec. 1245 property occurs and all or a portion of the gain is not recognized,[44] the amount of gain considered to be Sec. 1245 ordinary income is limited and cannot be more than the recognized gain.[45] A similar provision exists for the involuntary conversion of Sec. 1250 property.[46]

EXAMPLE I:13-44 ▶

The Ryan Corporation's printing equipment with original cost of $600,000 and adjusted basis of $200,000 is destroyed by fire. Ryan, Inc. receives $550,000 of insurance proceeds and purchases $510,000 of printing equipment. If the corporation elects to defer gain, it must recognize a $40,000 gain which is Sec. 1245 ordinary income. The basis of the printing equipment acquired is $200,000. ◀

REAL-WORLD EXAMPLE

Taxpayer received insurance proceeds in excess of the adjusted basis of a business automobile upon the destruction of the auto in an accident. The taxpayer did not use Sec. 1033 to defer the gain and the court held that the gain was subject to recapture under Sec. 1245. *Anthony Astone*, 1983 PH T.C. Memo ¶83,747, 47 TCM 632.

INSTALLMENT SALES

As discussed in Chapter I:11, gain resulting from an installment sale is generally recognized as payments are received. Thus, the gain may be spread over more than one accounting period. However, an installment sale of depreciable property may result in all of the recaptured gain being taxed in the year of the sale.[47] Recapture income is "the aggregate amount which would be treated as ordinary income under Sec. 1245 or 1250 for the taxable year of the disposition if all payments to be received were received in the taxable year of disposition."[48] Recapture income must be recognized in the year of sale, even if no payments are received.

---

[42] Reg. Sec. 1.1245-2(c)(4).

[43] Sec. 291.

[44] As discussed in Chapter I:12, one may elect to defer recognition of the gain if the Sec. 1033 requirements are satisfied.

[45] Sec. 1245(b)(4) and Reg. Sec. 1.1245-4(d)(1).

[46] Sec. 1250(d)(4) and Reg. Sec. 1.1250-3(d).

[47] Sec. 453(i)(1).

[48] Sec. 453(i)(2).

EXAMPLE I:13-45

Pat owns equipment with a $100,000 acquisition cost and a $42,000 adjusted basis. During the current year, Pat sells the property for $30,000 cash and a $60,000 interest-bearing note to be paid over a ten-year period. The realized gain is $48,000 ($90,000 − $42,000), and the recapture income amount is $48,000 (the lesser of total depreciation deductions of $58,000 or the $48,000 realized gain). The $48,000 gain is all recognized as ordinary income in the current year, despite the fact that the transaction qualifies as an installment sale and only $30,000 of cash is received in the year of sale.

KEY POINT

In the case of an installment sale of Sec. 1245 or 1250 property, it is possible to report a large taxable gain even though the taxpayer has not yet received the cash to pay the tax on such gain.

If gain realized from the installment sale exceeds the recapture income, the excess gain is reported under the installment method.[49] The amount of recapture income recognized is added to the adjusted basis to determine the gross profit ratio.

EXAMPLE I:13-46

Bob owns an office building acquired for $700,000* in 1986 and subject to the Sec. 1245 recapture rules. After claiming $700,000 of cost recovery deductions, Bob sells the building to Janet in 2025 for $1 million. Bob receives $200,000 in cash and an $800,000 interest-bearing note. The note is to be paid with annual principal payments of $100,000 and interest on the unpaid balance beginning in 2026. The total amount of realized gain is $1 million ($1,000,000 − 0). In 2025, Bob recognizes $700,000 of Sec. 1245 ordinary income. The gross profit ratio is determined by adding $700,000 recapture income to the $0 basis. The gross profit ratio is 30% [($1,000,000 − $700,000) ÷ $1,000,000]. In addition to recognizing $700,000 of ordinary income, Bob recognizes $60,000 (0.30 × $200,000) Sec. 1231 gain in 2025 because a $200,000 cash down payment was received in the year of the sale. In 2026 and in each subsequent year, $30,000 (0.30 × $100,000) of Sec. 1231 gain is recognized as the cash payments on the principal are received.

*does not include cost of land

SELF-STUDY QUESTION

What method of cost recovery did Bob use in Example I:13-46?

ANSWER

Accelerated cost recovery. The office building is subject to Sec. 1245 recapture.

SECTION 179 EXPENSING ELECTION

In lieu of capitalizing the cost of new or used tangible personal business property, taxpayers may elect to expense up to $1,250,000 of the acquisition cost in 2025 (see Chapter I:10).[50] If the property is subsequently converted to nonbusiness use, previous tax benefits derived from the immediate expensing election must be recaptured and added to the taxpayer's gross income in the year of the conversion.[51] The recaptured amount equals the difference between the amount expensed under Sec. 179 and the total depreciation that would otherwise have been claimed for the period of business use.

EXAMPLE I:13-47

Behren purchased business equipment (a five-year recovery period) in 2024 for $18,100 and elected to expense the entire amount under Sec. 179. In 2025, he converts the equipment to nonbusiness use. Depreciation of $3,620 (0.20 × $18,100) under the MACRS rules would have been allowed during the period the equipment was held for business use if Behren had not elected to expense the $18,100 cost. Behren must recognize $14,480 ($18,100 − $3,620) of Sec. 1245 ordinary income in 2025.

SELF-STUDY QUESTION

If Behren in Example I:13-47 sells the equipment for $15,000 instead of converting it to a nonbusiness use, what is the character of the gain?

ANSWER

$15,000 of Sec. 1245 ordinary income

CONSERVATION AND LAND CLEARING EXPENDITURES

Taxpayers engaged in the business of farming may deduct expenditures paid or incurred during the taxable year for soil and water conservation or the prevention of erosion. The expenditures must be made with respect to land used in farming and would be capital expenditures except for this provision.[52]

The deductions for conservation expenditures may be partially or fully recaptured as ordinary income if the farmland is disposed of before the land is held for more than nine years.[53] The amount of deductions recaptured as ordinary income under Sec. 1252 is a percentage of the aggregate deductions allowed for conservation expenditures. The amount of ordinary income recognized under Sec. 1252 is limited to the lesser of the taxpayer's realized gain or the applicable recapture percentage times the total conservation expenditures.

---

[49] Sec. 453(i)(1)(B).0.

[50] Secs. 179(a) and (b)(1). In 2025, the maximum Sec. 179 deduction is $1,250,000 with a dollar for dollar reduction when the cost of qualifying property placed in service exceeds $3,130,000.

[51] Sec. 179(d)(10) and Reg. Sec. 1.179-1(e).

[52] Sec. 175(a).

[53] Sec. 1252(a)(1).

WHAT WOULD YOU DO IN THIS SITUATION?

You recently graduated with an advanced degree in taxation and have accepted a job with a CPA firm in the tax department. One of the firm's clients, a wealthy individual, was in need of cash and decided to sell some assets to raise the cash. The client asked the firm to advise him, from a tax standpoint, which assets he should sell. The client is in the 35% tax bracket. You suggested in a written memo that the client sell one of the client's jet airplanes. The plane you recommended to be sold had originally cost $16 million and now had an adjusted basis of $5 million. A buyer had offered to buy the plane for $12 million on the installment basis, paying $4 million per year for three years plus interest at 9%. The principal reason for selling that particular plane is that it would raise $12 million over three years, but the tax could be spread over three years by using the installment sale method. The client took your advice and sold the plane in the current year.

Later, when preparing the client's tax return, you realize that gain due to depreciation of the airplane must be recognized in the year of sale, even if the property is sold under the installment sale method. Thus, all of the gain on the sale of the plane must be recognized in the year of sale, not spread over three years. You go to your manager and tell him about your major mistake. Your manager, who reviewed your original memo, indicates that he thinks that the two of you should not tell anyone about the mistake as it will negatively impact both of your careers. The manager thinks that because the client has such a large amount of income, reporting the entire gain on the sale of the plane on the client's return might not be detected by the client. Thus, the manager instructs you to prepare the current year return with the entire $7 million of gain and not tell anyone about the mistake. What should you do in this situation?

KEY POINT

There is no recapture of conservation costs if the farmland is held for at least ten years.

The recapture percentage is 100% if the farmland is disposed of within five years after the date it is acquired. The percentage declines by 20 percentage points for each additional year the property is held. If the land is disposed of after being held for more than nine years, none of the expenses are recaptured.[54]

EXAMPLE I:13-48 ▶

Paula owns farmland with a $400,000 basis. She has deducted $50,000 for soil and water conservation expenditures. After farming the land for six years and five months, Paula sells the land for $520,000. The realized gain is $120,000 ($520,000 − $400,000) and the recapture percentage is 60%, because the farmland is disposed of within the seventh year after it was acquired. The amount of ordinary income due to recapture under Sec. 1252 is $30,000, the lesser of the $120,000 realized gain or the $30,000 (0.60 × $50,000) recapture amount. ◀

ADDITIONAL COMMENT

Intangible drilling and development costs represent the major cost of operations and can provide investors with working interests in oil and gas properties with a first-year write-off of substantially all of their investment.

INTANGIBLE DRILLING COSTS AND DEPLETION

Taxpayers may elect to either expense or capitalize intangible drilling and development costs (IDC).[55] If the election to expense is not made, the costs are capitalized and recovered through additional depletion deductions. Intangible drilling and development costs include "all expenditures made by an operator for wages, fuel, repairs, hauling, supplies, etc., incident to and necessary for the drilling of wells and the preparation of wells for the production of oil or gas."[56]

Part or all of the gain from the sale of oil and gas properties may be recaptured as ordinary income due to the recapture of the IDC deduction and the deduction for depletion. However, the amount of ordinary income recognized from the recapture of IDC and depletion is limited to the gain realized from disposition of the property.[57]

EXAMPLE I:13-49 ▶

In 2018, Marty purchased undeveloped property to drill for oil and gas. Intangible drilling and development costs of $400,000 were paid in 2018, and Marty elected to expense the IDC. During the current year, Marty sells the property and realizes a $900,000 gain. $300,000 of cost depletion was also allowed. Marty must recognize $700,000 of ordinary income because of the recapture of IDC ($400,000) and the recapture of depletion ($300,000). The remaining $200,000 ($900,000 − $700,000) gain is Sec. 1231 gain. ◀

---

[54] Sec. 1252(a)(3).

[55] Sec. 263(c).

[56] Reg. Sec. 1.612-4(a).

[57] Sec. 1254(a)(1).

EXAMPLE I:13-50 ▶ In 2017, Tina acquired oil and gas properties for $700,000 and paid $200,000 for intangible drilling costs. During 2017, she elected to expense the $200,000 of IDC. Total depletion allowed was $80,000. During the current year, Tina sells the property for $840,000 and realizes a $220,000 [$840,000 − ($700,000 − $80,000)] gain. The amount of ordinary income due to recapture is $220,000, because both IDC and depletion must be recaptured only to the extent of the gain. ◀

SELF-STUDY QUESTION

If Tina in Example I:13-50 sells the properties for $990,000, what is the character of her gain?

ANSWER

$280,000 of ordinary income and $90,000 of Sec. 1231 gain

GAIN ON SALE OF DEPRECIABLE PROPERTY BETWEEN RELATED PARTIES

All gain recognized on the sale or exchange of property between related parties is ordinary income if the property is subject to depreciation in the hands of the transferee (i.e., the person who purchases the property). The sale or exchange may be direct or indirect.[58]

EXAMPLE I:13-51 ▶ Phil owns a building with a $500,000 adjusted basis and $800,000 FMV. The building, which cost $700,000, is used in his business, and the straight-line method of depreciation is used. $200,000 of depreciation deductions were allowed. If the building is sold to Phil's 100%-owned corporation for $800,000, the $300,000 realized gain ($800,000 − $500,000) is treated as ordinary income under Sec. 1239, because the property is subject to depreciation in the hands of the transferee and the corporation and Phil are related parties. ◀

SELF-STUDY QUESTION

If Phil sells the building in Example I:13-51 to an unrelated party, what is the character of the gain?

ANSWER

$300,000 of Sec. 1231 gain. If the Sec. 1231 gain becomes LTCG, $200,000 of the gain is unrecaptured Sec. 1250 gain taxed at a maximum rate of 25%

A sale or exchange of property could be subject to depreciation recapture under Sec. 1245 or 1250 as well as the Sec. 1239 related party rules. If so, recapture under Sec. 1245 or 1250 is considered before recapture under Sec. 1239.[59]

EXAMPLE I:13-52 ▶ Assume the same facts as in Example I:13-51 except that Phil sells equipment to the corporation instead of a building. All of the $300,000 realized gain is treated as ordinary income. The recapture amount under Sec. 1245 is $200,000, and Sec. 1239 applies to the remaining $100,000 gain. ◀

Purpose of Sec. 1239. Without Sec. 1239, a taxpayer could transfer appreciated depreciable property to a related party and recognize a Sec. 1231 gain on the sale. Net Sec. 1231 gain is treated as LTCG. The related purchaser of the property would receive a step up in the depreciable basis of the property to its FMV and be able to claim a larger amount of depreciation. In Example I:13-51, Phil might prefer to recognize a $300,000 Sec. 1231 gain if the 100%-owned corporation was able to obtain a step-up in the property's basis to $800,000. Because Sec. 1239 applies, Phil must recognize $300,000 of ordinary income rather than Sec. 1231 gain. This rule prevents an individual taxpayer from receiving favorable Sec. 1231 gain treatment and prevents all taxpayers having large capital loss carryovers from using a related party to recognize a Sec. 1231 or capital gain which can be offset against their capital losses.

Related Parties. A person is related (1) to any corporation if the individual owns (directly or indirectly) more than 50% of the value of the outstanding stock and (2) to any partnership in which the person has a capital or profits interest of more than 50%.[60] Constructive ownership rules apply when determining whether the person owns more than 50% of the corporation or has more than a 50% interest in the partnership. Thus, an individual is considered to own stock owned by other family members and related entities (e.g., corporations, partnerships, estates, and trusts).

EXAMPLE I:13-53 ▶ Tony sells a truck used for nonbusiness purposes to the Able Corporation for $15,000 when its original cost basis is $12,000. Tony owns 30% of Able and his spouse owns 40% of Able. Tony and Able are related parties because Tony is deemed to own 70% of Able under the constructive ownership rules and $3,000 of ordinary income must be recognized under Sec. 1239. ◀

A person is related to any trust in which such a person or the person's spouse is a beneficiary.[61] Section 1239 also applies to a sale or exchange of depreciable property between two corporations if the same individual owns more than 50% of each corporation.[62]

---

[58] Sec. 1239(a).
[59] Reg. Sec. 1.1245-6(f).
[60] Sec. 1239(c).
[61] Sec. 1239(b)(2).
[62] Rev. Rul. 79-157, 1979-1 C.B. 281.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 8

Describe tax planning considerations for Sec. 1231 assets

For noncorporate taxpayers, net Sec. 1231 gains are generally preferable to ordinary gains because of the possible lower tax rate applicable to net capital gains. The tax rate could be zero, 15%, 20%, or 25%. For corporate taxpayers, however, after 1986 it usually does not make any difference whether a gain is classified as Sec. 1231 or ordinary unless the corporation has capital losses. Corporations do not have preferential tax rates on net capital gains.

EXAMPLE I:13-54 ▶ Western Corporation has taxable income of $550,000 without considering the sale of equipment for $400,000 during the current year. The equipment originally cost $500,000 and has a $350,000 adjusted basis after deducting depreciation. The corporation has no other gains and losses during the year or any capital loss carryovers from previous years. Western has $50,000 of ordinary income, but, it does not make any difference whether the gain is Sec. 1245 ordinary income or Sec. 1231 gain. The effect on the corporation's taxable income and tax liability is the same regardless of whether the gain is classified as capital or ordinary. ◀

SELF-STUDY QUESTION

If Western Corporation in Example I:13-54 also had a STCL of $32,000, would its taxable income be $600,000 or $568,000?

ANSWER

$600,000

The avoidance of the recapture provisions is important to both corporate and noncorporate taxpayers if capital loss carryovers exist. For example, if Western Corporation has a capital loss carryforward of $40,000 in Example I:13-54, the corporation's taxable income is increased by $10,000 ($50,000 – $40,000) if the $50,000 gain is Sec. 1231 gain. However, because the gain is Sec. 1245 ordinary income, the corporation's taxable income is increased by $50,000. The $40,000 capital loss carryforward is deductible only if Western has capital gain or net Sec. 1231 gain which becomes capital gain.

AVOIDING THE RECAPTURE PROVISIONS

In view of the pervasiveness of the recapture provisions discussed in this chapter, recapture is difficult to avoid. In some cases, recapture can be avoided by holding the property a specific length of time before disposing of it (e.g., the recapture of conservation and land clearing expenses can be avoided by holding the farmland for more than nine years).[63] Contributing appreciated property to a qualified charitable organization cannot be used to circumvent the recapture provisions because in such case the amount of the charitable contribution is reduced by the amount of the gain that would not be a LTCG if the property were sold by the taxpayer.[64]

SELF-STUDY QUESTION

Daniela donates a painting she painted to a qualified charity. Without considering AGI, determine her charitable contribution deduction if the painting has a basis of $400 and FMV of $20,000.

ANSWER

$400. If she sells the painting, none of the gain is LTCG.

SELF-STUDY QUESTION

If Daniela dies and her husband donates the inherited painting to a qualified charity when the FMV is $20,000, determine the charitable contribution deduction without considering AGI.

ANSWER

$20,000. His basis is FMV at time of Daniela's death. If the FMV is $23,000 when donated, he should be able to deduct $23,000 because the $3,000 gain if sold is LTCG.

Although it is often difficult to avoid the recapture provisions, taxpayers may dispose of the property and defer recapture if the disposition is a nontaxable exchange. In a like-kind exchange where no boot is received, the recapture potential is carried over to the property received in the exchange.

Proper timing of the asset's disposition may be advantageous. Disposition may be delayed until the taxpayer's tax rate is low or the property can be sold in the same year that the taxpayer has an NOL that is about to expire.

Taxpayers can shift the recapture potential to other taxpayers by making a gift of property subject to recapture. The recapture potential remains with the property and must be considered when the donee disposes of the property.

Transfer Property at Death. One way to avoid the recapture provisions is to transfer the property at death. No recapture occurs at the time of the transfer, and the basis of property received from a decedent is generally the FMV of the property at the date of the decedent's death.[65] The property's recapture potential does not carry over to the beneficiary as in the case of a gift made to a donee.

---

[63] Sec. 1252(a)(1).

[64] Sec. 170(e)(1)(A).

[65] Sec. 1014(a). For property inherited in 2010, it is possible that carryover basis rules might be used.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 9

Describe compliance and procedural considerations for Sec. 1231 assets

Form 4797, Supplemental Schedule of Gains and Losses, is used to report gains and losses from sales or exchanges of assets used in a trade or business (see Figures I:13-1 and I:13-2). The form is also used to report gains or losses resulting from involuntary conversions, other than casualties or thefts, of property used in the trade or business and capital assets held more than a year. If gains or losses due to casualties or thefts of property used in a trade or business or property held to produce income are recognized, they are reported on Form 4684, Casualties and Thefts. If such casualties or thefts occur, Form 4684 is prepared either before or at the same time as Form 4797.

ADDITIONAL COMMENT

Form 4797 has four major parts. In completing this form one should normally begin with Part III on page 2, where the recapture of depreciation is calculated. Note that the total amount recaptured from line 31 is carried forward to Part II, where it is combined with other ordinary gains and losses. Any unrecaptured gain from line 32 is carried forward to Part I, where it is netted with other Sec. 1231 gains and losses.

REPORTING SEC. 1231 GAINS AND LOSSES ON FORM 4797

Part I of Form 4797, which is reproduced in Figure I:13-1, is used to report gains and losses resulting from

- The sale or exchange of Sec. 1231 property
- An involuntary conversion, other than a casualty or theft, of Sec. 1231 property
- An involuntary conversion, other than a casualty or theft, of capital assets held more than one year and used to produce income.

As indicated on lines 3 through 6 in Part I of Form 4797, gains and losses recorded on other forms and in Part III of Form 4797 are reported in Part I. The netting of Sec. 1231 gains and losses occurs in Part I of Form 4797. All gains and losses are recorded in column (g). If line 7(g) has a loss, Sec. 1231 losses exceed Sec. 1231 gains and the net loss is reported on line 11 as ordinary loss. If there is no nonrecaptured net section 1231 losses, all gain reported on line 7(g) is transferred to Schedule D. If the taxpayer does have nonrecaptured net Sec. 1231 losses, that amount is reported on line 8. Gains reported on line 7(g) will be recharacterized as ordinary income to the extent of the nonrecaptured net Sec. 1231 losses and reported as ordinary income on line 12.

Ordinary gains and losses recognized including those recorded on other forms and in Parts I and III of Form 4797 are reported on lines 11 through 17 in Part II of Form 4797.

REPORTING GAINS RECAPTURED AS ORDINARY INCOME ON FORM 4797

Part III of Form 4797 for 2024, reproduced in Figure I:13-2, is completed before Parts I and II to determine and report ordinary income due to the recapture provisions of Secs. 1245, 1250, 1252, 1254, and 1255. To illustrate the use of Part III, assume an individual sells equipment (7-year recovery) used in a trade or business for $60,000 on April 30, 2024. The equipment cost $58,000 on March 10, 2022, and depreciation deductions through the date of sale of $27,565 were allowed. The $29,565 ($60,000 − $30,435) total gain is reported on line 24. On line 30, total gains resulting from the sale of all properties ($29,565 in this illustration) reported in Part III are combined. The total amount of ordinary income due to the recapture provisions ($27,565 in this illustration) is reported on line 31 and then reported as ordinary income on line 13 in Part II. The excess of the gain over the amount of ordinary income is reported on line 32. The portion of this gain not due to casualty or theft ($2,000 in this illustration) is a Sec. 1231 gain and is reported on line 6 of Part I of Form 4797. If any of the gain is due to casualty or theft, that portion of the gain is reported on Section B of Form 4684.

REPORTING CASUALTY OR THEFT GAIN OR LOSS ON FORM 4684

Section A of Form 4684 is used to report gains and losses resulting from a casualty or theft of personal-use property, but they are not Sec. 1231 transactions.

7	Combine lines 2 through 6. Enter the gain or (loss) here and on the appropriate line as follows	**7**	2,000
	Partnerships and S corporations. Report the gain or (loss) following the instructions for Form 1065, Schedule K, line 10, or Form 1120-S, Schedule K, line 9. Skip lines 8, 9, 11, and 12 below. **Individuals, partners, S corporation shareholders, and all others.** If line 7 is zero or a loss, enter the amount from line 7 on line 11 below and skip lines 8 and 9. If line 7 is a gain and you didn't have any prior year section 1231 losses, or they were recaptured in an earlier year, enter the gain from line 7 as a long-term capital gain on the Schedule D filed with your return and skip lines 8, 9, 11, and 12 below.		
8	Nonrecaptured net section 1231 losses from prior years. See instructions	**8**	
9	Subtract line 8 from line 7. If zero or less, enter -0-. If line 9 is zero, enter the gain from line 7 on line 12 below. If line 9 is more than zero, enter the amount from line 8 on line 12 below and enter the gain from line 9 as a long-term capital gain on the Schedule D filed with your return. See instructions	**9**	

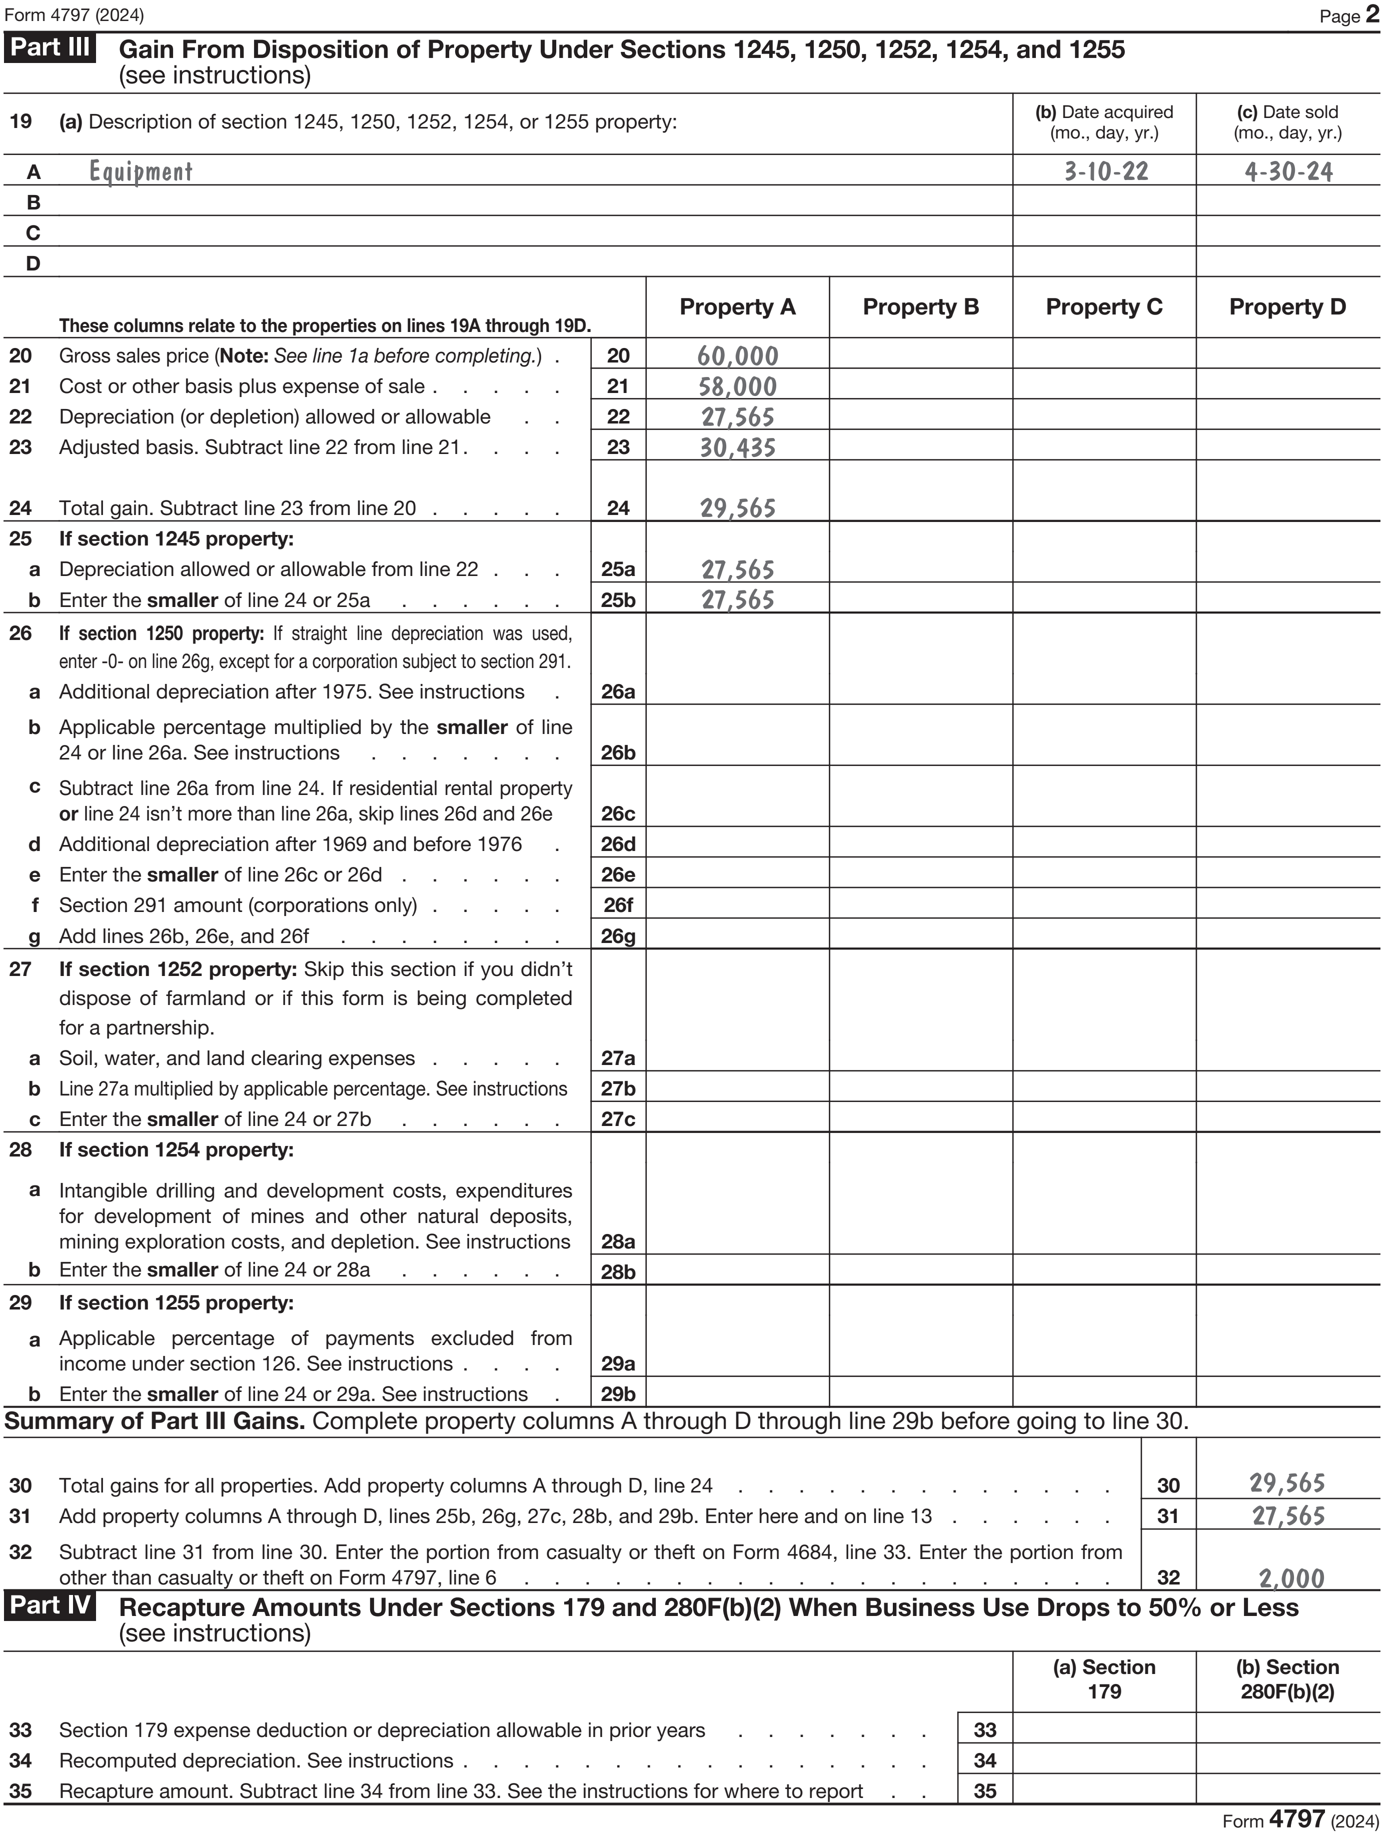
Part II **Ordinary Gains and Losses** (see instructions)

10 Ordinary gains and losses not included on lines 11 through 16 (include property held 1 year or less):

11	Loss, if any, from line 7	**11**	( )
12	Gain, if any, from line 7 or amount from line 8, if applicable	**12**	
13	Gain, if any, from line 31	**13**	27,565
14	Net gain or (loss) from Form 4684, lines 31 and 38a	**14**	
15	Ordinary gain from installment sales from Form 6252, line 25 or 36	**15**	
16	Ordinary gain or (loss) from like-kind exchanges from Form 8824	**16**	
17	Combine lines 10 through 16	**17**	27,565
18	For all except individual returns, enter the amount from line 17 on the appropriate line of your return and skip lines a and b below. For individual returns, complete lines a and b below.		
a	If the loss on line 11 includes a loss from Form 4684, line 35, column (b)(ii), enter that part of the loss here. Enter the loss from income-producing property on Schedule A (Form 1040), line 16. (Do not include any loss on property used as an employee.) Identify as from "Form 4797, line 18a." See instructions	**18a**	
b	Redetermine the gain or (loss) on line 17 excluding the loss, if any, on line 18a. Enter here and on Schedule 1 (Form 1040), Part I, line 4	**18b**	27,565

For Paperwork Reduction Act Notice, see separate instructions. Cat. No. 13086I Form **4797** (2024)

FIGURE I:13-1 ▶ Part I and Part II of Form 4797



Form 4797 (2024) Page 2

Part III **Gain From Disposition of Property Under Sections 1245, 1250, 1252, 1254, and 1255** (see instructions)

		(b) Date acquired (mo., day, yr.)	(c) Date sold (mo., day, yr.)
19	(a) Description of section 1245, 1250, 1252, 1254, or 1255 property:		
A	Equipment	3-10-22	4-30-24
B			
C			
D			

	These columns relate to the properties on lines 19A through 19D.		Property A	Property B	Property C	Property D
20	Gross sales price (**Note:** *See line 1a before completing.*)	20	60,000			
21	Cost or other basis plus expense of sale	21	58,000			
22	Depreciation (or depletion) allowed or allowable	22	27,565			
23	Adjusted basis. Subtract line 22 from line 21	23	30,435			
24	Total gain. Subtract line 23 from line 20	24	29,565			
25	**If section 1245 property:**					
a	Depreciation allowed or allowable from line 22	25a	27,565			
b	Enter the **smaller** of line 24 or 25a	25b	27,565			
26	**If section 1250 property:** If straight line depreciation was used, enter -0- on line 26g, except for a corporation subject to section 291.					
a	Additional depreciation after 1975. See instructions	26a				
b	Applicable percentage multiplied by the **smaller** of line 24 or line 26a. See instructions	26b				
c	Subtract line 26a from line 24. If residential rental property **or** line 24 isn't more than line 26a, skip lines 26d and 26e	26c				
d	Additional depreciation after 1969 and before 1976	26d				
e	Enter the **smaller** of line 26c or 26d	26e				
f	Section 291 amount (corporations only)	26f				
g	Add lines 26b, 26e, and 26f	26g				
27	**If section 1252 property:** Skip this section if you didn't dispose of farmland or if this form is being completed for a partnership.					
a	Soil, water, and land clearing expenses	27a				
b	Line 27a multiplied by applicable percentage. See instructions	27b				
c	Enter the **smaller** of line 24 or 27b	27c				
28	**If section 1254 property:**					
a	Intangible drilling and development costs, expenditures for development of mines and other natural deposits, mining exploration costs, and depletion. See instructions	28a				
b	Enter the **smaller** of line 24 or 28a	28b				
29	**If section 1255 property:**					
a	Applicable percentage of payments excluded from income under section 126. See instructions	29a				
b	Enter the **smaller** of line 24 or 29a. See instructions	29b				

Summary of Part III Gains. Complete property columns A through D through line 29b before going to line 30.

30	Total gains for all properties. Add property columns A through D, line 24	30	29,565
31	Add property columns A through D, lines 25b, 26g, 27c, 28b, and 29b. Enter here and on line 13	31	27,565
32	Subtract line 31 from line 30. Enter the portion from casualty or theft on Form 4684, line 33. Enter the portion from other than casualty or theft on Form 4797, line 6	32	2,000

Part IV **Recapture Amounts Under Sections 179 and 280F(b)(2) When Business Use Drops to 50% or Less** (see instructions)

			(a) Section 179	(b) Section 280F(b)(2)
33	Section 179 expense deduction or depreciation allowable in prior years	33		
34	Recomputed depreciation. See instructions	34		
35	Recapture amount. Subtract line 34 from line 33. See the instructions for where to report	35		

Form **4797** (2024)

FIGURE I:13-2 ▶ Part III of Form 4797

Section B of Form 4684, which is not reproduced, is used to report gains and losses resulting from a casualty or theft of property used in a trade or business or held for the production of income.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:13-1 Explain how the gain on the sale or exchange of land could be classified as either ordinary income, a Sec. 1231 gain, or a LTCG, depending on the facts and circumstances.

I:13-2 Why were taxpayers reluctant to sell appreciated business property between 1938 and 1942? What effect did this reluctance have on the tax law?

I:13-3 Alice owns timber, purchased six years ago, with an adjusted basis of $50,000. The timber is cut for use in her furniture business on October 1, when the FMV of the timber is $200,000. The FMV of the timber on January 1 is $190,000. May Alice treat any of the gain as Sec. 1231 gain? If so, how much?

I:13-4 Explain how the gain from an involuntary conversion of business property held more than one year is taxed if the involuntary conversion is the result of a condemnation. Explain the tax treatment if the involuntary conversion is due to a casualty.

I:13-5 When is livestock considered Sec. 1231 property?

I:13-6 When is a net Sec. 1231 gain treated as ordinary income?

I:13-7 Carlie who is single has a Sec. 1231 gain of $10,000 and no Sec. 1231 losses during the current year. Explain why the gain might be taxed at (a) 15%, (b) 37%, (c) 25%, (d) 20%, or (e) zero.

I:13-8 Why is it unlikely that gains due to the sale of equipment will be treated as Sec. 1231 gains?

I:13-9 Hank sells equipment used in a trade or business for $25,000. The equipment costs $30,000 and has an adjusted basis of $25,500. Why is it important to know the holding period?

I:13-10 Jackie purchases equipment during the current year for $800,000 that has a seven-year MACRS recovery period. She expects to sell the property after three years. Jackie anticipates that her marginal tax rate in the year of sale will be significantly higher than her current marginal tax rate. Why might it be advantageous for her to use the straight-line method of depreciation?

I:13-11 Karen purchased a computer three years ago for $15,300 to use exclusively in her business. She expensed the entire cost of the computer under Sec. 179. If she sells the computer during the current year for $3,721, what is the amount and character of her recognized gain?

I:13-12 Sheila owns a motel that is used in a trade or business. If she sells the motel, the gain will be Sec. 1245 ordinary income. During what period of time was the motel placed into service?

I:13-13 Will an individual taxpayer ever have to recognize Sec. 1250 ordinary income on the sale of a building used for business and placed in service after 1986? Explain.

I:13-14 Marty sells his fully depreciated building at a gain to an unrelated party. The building was purchased before 1981. Is any of the gain taxed as ordinary income?

I:13-15 Which of the following assets (assume all assets have a holding period of more than one year) do not qualify as Sec. 1231 property: inventory, a pig held for breeding, land used as a parking lot for customers, and marketable securities?

I:13-16 When is an office building subject to the depreciation recapture rules of Sec. 1245?

I:13-17 Does a building that is 60% rented for residential use and 40% for commercial use qualify as residential rental property?

I:13-18 Roger owns an apartment complex with a FMV of $2 million. If he sells the apartment complex, $700,000 of the gain is Sec. 1231 gain with $600,000 taxed at 25% because it is unrecaptured Sec. 1250 gain. If he dies before selling the apartment complex and his estate sells the property for $2 million, how much ordinary income must the estate recognize?

I:13-19 Rashad owns a duplex used 100% as residential rental property. Under what conditions, if any, will any gain that he recognizes be Sec. 1245 ordinary income?

I:13-20 John and Karen are unrelated individuals. John sold land that is Sec. 1231 property held for three years and recognized a $50,000 gain. Karen sold a building that is Sec. 1231 property held for three years and recognized a $50,000 gain. Straight-line depreciation was used. John and Karen both have a 32% tax rate, no other transactions involving capital assets or 1231 assets, and no nonrecaptured Sec. 1231 losses. Except for the sales of different assets, their tax situation is exactly the same. As a result of selling his Sec. 1231 property, will John pay more, less or the same amount of taxes than Karen as a result of selling her Sec. 1231 property? Explain.

I:13-21 Why may a corporation recognize a greater amount of ordinary income due to the sale of Sec. 1250 property than a noncorporate taxpayer?

I:13-22 Assume a taxpayer sells equipment used in a trade or business for a gain that is less than the depreciation allowed. If the taxpayer is a corporation, will a greater amount of Sec. 1245 income be recognized than if the taxpayer is an individual? Explain.

I:13-23 Dale owns business equipment with a $100,000 FMV and an adjusted basis of $60,000. The property was originally acquired for $150,000. Which one of the following transactions would result in recognition of $40,000 ordinary income by Dale due to the depreciation recapture rules of Sec. 1245?

a. He makes a gift of the property to a daughter.

b. He contributes the property to a qualified charitable organization.

c. He disposes of the equipment in an installment sale and receives $10,000 cash in the year of sale.

I:13-24 Carlos owns equipment with an $800,000 acquisition cost, a $270,000 adjusted basis, and a $500,000 FMV. Carlos makes a gift of the equipment to a charitable organization. The equipment is used by the charity in its exempt function. What is the amount of his charitable contribution deduction?

I:13-25 Ted owns a warehouse that cost $850,000 in 1984. It is subject to depreciation recapture under Sec. 1245 because the warehouse was placed in service after 1980 and before 1987 and accelerated depreciation was used. The warehouse, which has an adjusted basis of zero, is destroyed by a tornado and Ted receives $580,000 from the insurance company. Within nine months, he pays $500,000 for a new warehouse and an election is made to defer the gain under Sec. 1033. What is the amount and character of Ted's recognized gain?

I:13-26 When a taxpayer disposes of oil, gas, or geothermal property, part or all of the gain may be recaptured as ordinary income. Explain how the recapture amount is determined for oil and gas and geothermal properties.

I:13-27 William owns two appreciated assets, land and a building, which have been used in his trade or business since purchased in 1990. If he sells the two assets to his 100%-owned corporation, will William have to recognize any ordinary income? Explain.

ISSUE IDENTIFICATION QUESTIONS

I:13-28 Six years ago Joelle started raising chinchillas. She separates her chinchillas into two groups, a breeding group and a market group. During the year, she had the following sales of chinchillas from her market group: 400 to producers of fur products; 100 to pet stores; and 25 to individuals to use as pets. From her breeding stock, she sold six chinchillas to Rebecca, an individual who is starting a chinchilla ranch, and five to Fur Pelts, a producer of fur products. All 11 chinchillas from the breeding group have been held for at least 22 months, and the five sold to Fur Pelts were poor performers.

I:13-29 Green Acres, Inc., owns 1,400 acres adjacent to land owned by the U.S. government. The government, wanting to sell timber from its land, had to assure prospective bidders of access to the timber. The government entered into an agreement with Green Acres for a logging road easement across land owned by Green Acres. The government agreed to pay $2 per thousand board feet of timber removed up to a maximum of $130,000. Bidders for the rights to obtain the government's timber had to agree to pay the fee to Green Acres as part of their bids for the timber. Stanley Lumberyard, Inc. provided the highest bid and paid $80,000 to Green Acres during the first year of cutting and removing the timber and $50,000 during the second year. What tax issues should Green Acres and Stanley Lumberyard consider?

I:13-30 Sarah, who has been in the business of erecting, maintaining, and renting outdoor advertising displays for 18 years, has an offer to purchase her business. Two basic types of advertising displays are used in her business: structure X and structure Y. Structure X consists of a single sign face nailed to a wooden support frame and attached to wooden poles 30 feet long. Its structure is rather easy to dismantle and move from one location to another. In contrast, structure Y is a permanent sign that is designed to withstand winds of up to 100 miles per hour. None of the Structure Y signs have ever been moved. What tax issues should Sarah consider?

I:13-31 Sylvester owns and operates an unincorporated pizza business that delivers pizza to customers. Three years ago, he acquired an automobile for $30,000 to provide delivery service. Recently, Sylvester hired an employee who prefers to use his personal automobile to make the deliveries. Thus, Sylvester decided to permit his 18-year-old daughter to use the automobile for her personal use. The automobile's adjusted basis is $12,300 and its FMV is $15,200. What tax issues should Sylvester consider?

PROBLEMS

I:13-32 ***Secs. 1231, 1245, and 1250 Transactions.*** All assets listed below have been held for more than one year. Which assets might be classified as Sec. 1231, Sec. 1245, or Sec. 1250 property? An asset may be classified as more than one type of property.

a. Land on which a factory is located
b. Equipment used in the factory
c. Raw materials inventory
d. Patent purchased to allow use of a manufacturing process
e. Land held primarily for sale
f. Factory building acquired in 1986 (the straight-line ACRS recovery method is used)

I:13-33 ***Sec. 1231 Gains and Losses.*** Vivian's AGI is $40,000 without considering the gains and losses below. Determine her revised AGI after the inclusion of any applicable gains or losses for the following independent cases. Assume she has no nonrecaptured net Sec. 1231 losses at the beginning of the year.

	Case A	*Case B*	*Case C*	*Case D*
Sec. 1231 gain	$19,000	$10,000	$30,000	$ 5,000
Sec. 1231 loss	5,000	22,000	39,000	12,000
LTCG	–0–	–0–	6,300	–0–
LTCL	–0–	–0–	–0–	4,200

I:13-34 ***Sec. 1231 Gains and Losses.*** Edith, who has no other sales or exchanges and no nonrecaptured Sec. 1231 losses, sells three tracts of land that are used in her trade or business. Edith is single, and her taxable income is $120,000 without considering the following sales.

Asset #1—$15,000 gain and holding period of 20 months
Asset #2—$17,000 loss and holding period of 25 months
Asset #3—$ 5,000 gain and holding period of 13 months

a. What is the increase in her taxes as a result of the three sales?
b. If the holding period for Asset #2 is nine months, what is the decrease in her taxes as a result of the three sales?
c. Same as part a except her taxable income is $600,000.

I:13-35 ***Sec. 1231 Transactions.*** Which of the following transactions or events is treated as a Sec. 1231 gain or loss? All assets are held for more than one year.

a. Theft of uninsured diamond ring, with an $800 basis and a $1,000 FMV.
b. Gain due to condemnation of land used in business.
c. Loss on the sale of a warehouse.
d. Gain of $4,000 on the sale of equipment. Depreciation deductions allowed amount to $10,000.

I:13-36 ***Capital Loss Versus Sec. 1231 Loss.*** Vicki has an AGI of $70,000 without considering the sale of a nondepreciable asset for $23,000. The asset was acquired six years ago and has an adjusted basis of $35,000. She has no other sales or exchanges. Determine her AGI for the following independent situations when the asset is:

a. A capital asset.
b. Sec. 1231 property.

I:13-37 ***Ordinary Income Versus Sec. 1231 Gain.*** At the beginning of 2025, Silver Corporation has a $95,000 capital loss carryforward from 2024. During 2025, the corporation sells land, held for four years, and realizes an $80,000 gain. Silver has no unrecaptured net Sec. 1231 losses, and it made no other sales during the current year. Determine the amount of capital loss carryforward that Silver can use in 2025 if the land is:

a. Sec. 1231 property.
b. Not a capital asset or Sec. 1231 property.

I:13-38 ***Sec. 1231 Transactions.*** During the current year, Sean's office building is destroyed by fire. After collecting the insurance proceeds, Sean has a $50,000 recognized gain. The building was acquired in 1999, and the straight-line method of depreciation has been used. He does not plan to acquire a replacement building. In addition to the gain on the building, consider the following independent cases and determine his total net capital gain. For each case, include the $50,000 casualty gain described above.

a. Land used in his trade or business and held more than a year is condemned by the state. The recognized gain is $60,000.

b. Assume the same facts as in Part a, except the condemnation results in a $60,000 loss.
c. An apartment building used as residential rental property and held more than one year is destroyed by a sudden, unexpected mudslide. The building is not insured, and the loss amounts to $200,000.

I:13-39 ***Nonrecaptured Net Sec. 1231 Losses.*** Consider the following summary of Sec. 1231 gains and losses recognized by Janet during the period 2020–2025. Janet had no nonrecaptured Sec. 1231 losses at the beginning of 2020. If Janet has no capital gains and losses during the six-year period, determine her net capital gain and ordinary income/loss for each year.

	Sec. 1231 Gains	*Sec. 1231 Losses*
2020	$ 9,000	$ 7,000
2021	20,000	24,000
2022	12,000	19,000
2023	9,000	4,000
2024	25,000	13,200
2025	10,000	17,000

I:13-40 ***Nonrecaptured Net Sec. 1231 Losses.*** Dillion has taxable income of $400,000 without considering the $53,000 Sec. 1231 gain mentioned below, and he has a tax rate of 35%. He has $40,000 of net nonrecaptured Sec. 1231 losses at the start of the year. During the year, he recognizes a Sec. 1231 gain of $53,000 from the sale of land. As a result of the sale, how much does Dillion's tax liability increase?

I:13-41 ***Sec. 1245.*** The Pear Corporation owns equipment with a $300,000 adjusted basis. The equipment was purchased six years ago for $650,000. If Pear sells the equipment for the selling prices given in the three independent cases below, what are the amount and character of Pear's recognized gain or loss?

Case	*Selling Price*
A	$407,000
B	752,000
C	245,000

I:13-42 ***Sec. 1245.*** Elizabeth owns equipment that cost $500,000 and has an adjusted basis of $230,000. If the straight-line method of depreciation had been used, the adjusted basis would be $300,000.
a. What is the maximum selling price that she could sell the equipment for without having to recognize Sec. 1245 ordinary income?
b. If she sold the equipment and had to recognize $61,000 of Sec. 1245 ordinary income, what was the selling price?

I:13-43 ***Sale of Business and Personal-Use Property.*** Arnie, a college student, purchased a truck in 2023 for $6,000. He used the truck 70% of the time as a distributor for the local newspaper and 30% of the time for personal use. The truck has a five-year recovery period, and he claimed depreciation deductions of $840 in 2023 and $1,344 in 2024. Arnie sells the truck on June 20, 2025, for $3,000.
a. What is the amount of allowable depreciation in 2025?
b. Determine Arnie's realized and recognized gain or loss and its character.

I:13-44 ***Exchange of Sec. 1245 Property.*** General Corporation owns equipment which cost $70,000 and has a $44,000 adjusted basis. General exchanges the equipment in June of 2025 for other equipment ($52,000 FMV) and marketable securities ($30,000 FMV). Determine the following:
a. Realized gain
b. Recognized gain
c. Gain treated as ordinary income
d. Gain treated as Sec. 1231 gain
e. Basis of marketable securities received
f. Basis of equipment received

I:13-45 ***Exchange of Sec. 1245 Property Before 2018.*** Leroy owned a truck used in his trade or business that cost $50,000 and had an adjusted basis of $34,000 in 2017 when the truck was exchanged for a new truck that was like-kind property with a FMV of $40,000. Prior to selling the new truck in 2025, Leroy was allowed depreciation of $13,000 for the new truck. Determine:
a. Realized gain on the exchange in 2017
b. Recognized gain on the exchange that was a like-kind exchange in 2017

c. Basis of new truck received in 2017
d. Recognized gain, and the character of the gain in 2025, if the sales price of the truck is $41,000
e. Recognized gain, and the character of the gain in 2025, if the sale price of the truck is $52,000
f. If the exchange had occurred during the current year instead of 2017, determine the recognized gain and the basis of the new truck.

I:13-46 ***Purpose of Sec. 1245.*** Martin owns equipment used in his trade or business purchased four years ago for $200,000. Martin sells the equipment in the current year for $110,000 when its adjusted basis is $52,000. No other sales or exchanges are made this year or the preceding five years. His tax rate is 35% and 15% for ANCG for all years since the year of purchase.
a. Determine the increase in Martin's AGI for the current year as a result of the sale if Sec. 1245 did not exist.
b. Determine the increase in Martin's AGI for the current year as a result of the sale if Sec. 1245 does exist.
c. Given that Sec. 1245 does exist, how much higher is his tax in (b) than in (a)?

I:13-47 ***Secs. 1231 and 1250-Real Property Placed in Service Before 1981.*** Charles owns an office building and land that are used in his trade or business. The office building and land were acquired in 1978 for $800,000 and $100,000, respectively. During the current year, the properties are sold for $900,000 with 20% of the selling price being allocated to the land. The assets as shown on the taxpayer's books before their sale are as follows:

Building	$800,000	
Accumulated depreciation	690,000[a]	$110,000
Land		100,000

[a] If the straight-line method of depreciation had been used, the accumulated depreciation would be $560,000.

a. What is the recognized gain due to the sale of the building?
b. What is the character of the recognized gain due to the sale of the building?
c. What is the recognized gain and character of the gain due to the sale of the land?

I:13-48 Assume the same facts as in Problem I:13-47 except the taxpayer is a corporation and answer the same questions.

I:13-49 ***Secs. 1231, 1245, and Unrecaptured Sec. 1250.*** Brigham is single and is in the 32% marginal income tax bracket. He has the sales or exchanges below. At the beginning of the year, he has nonrecaptured net Sec. 1231 losses of $10,000. Determine the increase or decrease in Brigham's tax liability as a result of the following independent sales or exchanges.
a. Sells equipment used in his trade or business for $40,000. The equipment was purchased for $100,000 and depreciation allowed amounts to $72,000.
b. Sells land used in his trade or business for $80,000. The land was purchased four years ago for $61,000.
c. He sells a building used in his trade or business for $163,000. The building was purchased in 1997 for $250,000 and depreciation allowed amounts to $110,000.
d. Same as Part c except he sells the building for $127,000.

I:13-50 ***Secs. 1245 and 1231.*** The LaPoint Corporation placed in service $350,000 of used equipment (seven-year recovery property) on June 3, 2024 and elected to expense $250,000 as Sec. 179 depreciation expense but elected out of bonus depreciation. LaPoint sold the equipment for $150,000 on November 22, 2025. Determine the following:
a. Depreciation allowed in 2024
b. Depreciation allowed during 2025
c. Amount of gain or loss and character

I:13-51 ***Unrecaptured Sec. 1250 Gain and 1231.*** Mr. Briggs purchased an apartment complex on January 10, 2023, for $2 million with 10% of the price allocated to land. He sells the complex on October 22, 2025, for $2.5 million. Assume that 10% of the $2.5 million selling price is allocated to land and 90% is allocated to the building.
a. How much depreciation was allowed for 2023?
b. How much depreciation is allowed for 2025?
c. Will any of the gain be ordinary income?
d. What is the amount of gain and the character of the gain on the sale of the building?
e. What is the amount of gain and the character of the gain on the sale of the land?
f. Will any of the gain be taxed at 25%?

I:13-52 ***Sec. 1250 Residential Rental Property-Placed in Service After 1981 and Before 1987.*** Jesse owns a duplex used as residential rental property. The duplex cost $100,000 in

1986, and 10% of the cost was allocated to the land. Total cost-recovery deductions allowed amount to $90,000. The statutory percentages were used to compute cost-recovery deductions. If the straight-line method of cost recovery were used instead, $90,000 of cost-recovery deductions would have been allowed.

a. What is the amount of recognized gain and the character of the gain if Jesse sells the duplex for $125,000 with 10% of the price allocated to land?

b. Same as (a) except the building is an office building.

I:13-53 *Sec. 1250-Real Property Placed in Service Before 1981.* Rosemary owns an office building placed in service in 1980 that cost $625,000 and has an adjusted basis of $227,000. If the straight-line method of depreciation were used, the adjusted basis would be $300,000.

a. What is the maximum selling price that she could sell the building for without having to recognize Sec. 1250 ordinary income?

b. If she sold the building and had to recognize $51,000 of Sec. 1250 ordinary income, what was the selling price?

I:13-54 *Nonresidential Real Property-Noncorporate Taxpayer.* Consider three office buildings placed in service as shown below and answer the following true-false questions. Assume all assets are sold by a noncorporate taxpayer at a gain and there are no other sales or exchanges or nonrecaptured Sec. 1231 loss unless told otherwise. None of the buildings are fully depreciated when sold and the taxpayer's tax rate is 32% and 15% for ANCG.

	Placed in Service
Building #1	Before 1981
Building #2	After 1980 and before 1987
Building #3	After 1986

1. Some or all of the gain on sale of #1 is ordinary if accelerated depreciation was used.
2. If the straight-line method of depreciation was used for #1, some or all of the gain may be taxed at 25%.
3. Gain on the sale of #2 could be Sec. 1245 ordinary income.
4. Gain on the sale of #2 could be Sec. 1231 gain.
5. Part of the gain on the sale of #2 could be Sec. 1245 ordinary income and part could be Sec. 1231 gain.
6. If the straight-line method of depreciation was used for #2, some or all of the gain may be taxed at 25%.
7. Some or all of the gain on the sale of #3 could be Sec. 1245 ordinary income.
8. Some or all of the gain on the sale of #3 could be taxed at 25%.
9. Some of the gain on the sale of #3 could be Sec. 1250 ordinary income.
10. If the taxpayer has a nonrecaptured Sec. 1231 loss of $30,000 and the gain on the sale of #3 is $40,000, all $40,000 of the gain is taxed as ordinary income.

I:13-55 *Nonresidential Real Property-Corporate Taxpayer.* Assume the same facts as in Problem I:13-54 except the taxpayer is a corporate taxpayer with a 21% tax rate and answer the ten true-false questions.

I:13-56 *Secs. 1231 and 1250-Placed in Service After 1986.* Molly, whose tax rate is 37%, sells an apartment complex for $4.5 million with 10% of the price allocated to land. The apartment complex was purchased in 2007. She has no other sales or exchanges during the year and no nonrecaptured net Sec. 1231 losses. Information about the assets at the time of sale is:

	Building	*Land*
Original Cost	$2,700,000	$300,000
Accumulated Depreciation	1,000,000	0

a. What is the recognized gain on the sale of the building and the character of the gain?

b. What is the recognized gain on the sale of the land and the character of the gain?

c. How much of the Sec. 1231 gain is taxed at 25%?

d. If Molly has NSTCL of $50,000, will the capital loss reduce the Sec. 1231 gain taxed at 25% or 20%?

I:13-57 *Secs. 1231 and 1250 for Corporate Taxpayer.* Assume the same facts as in Problem I:13-56 except the taxpayer is a corporation instead of an individual.

a. What is the recognized gain on the sale of the building and the character of the gain?

b. What is the recognized gain on the sale of the land and the character of the gain?

c. How much of the Sec. 1231 gain is taxed at 25%?

I:13-58 ***Charitable Contribution of Sec. 1231 Property.*** Raquel (who has itemized deductions of $34,000 without considering charitable contributions) owns land used in her trade or business for more than one year. The basis is $10,000 and its FMV is $40,000. Her tax rate is 32% and her AGI is $250,000. She is single and makes no other charitable contributions except for the ones considered below.

a. If she gives the land to a university, determine her tax savings.

b. If she sells the land for $40,000, pays the tax and then contributes the remainder of the cash to the charity, determine her tax savings because of the contribution and the amount that the university receives. Assume that she has no other sales or exchanges during the year.

I:13-59 ***Secs. 1231, 1245, and 1250.*** Glen, whose tax rate is 32%, sells each of the following assets for $200,000. Each case is an independent case.

	Sec. 1231 Gain (Loss)	*Ordinary Income*	*Taxed at 32%*	*Taxed at 25%*	*Taxed at 20%*	*Taxed at 15%*
Building purchased in 2009 for $220,000 with adjusted basis of $165,000	______	______	______	______	______	______
Equipment purchased in 2021 for $300,000 with adjusted basis of $144,000	______	______	______	______	______	______
Land purchased in 2002 for $30,000 to use as a building site	______	______	______	______	______	______
Building purchased in 2008 for $150,000 with adjusted basis of $112,000	______	______	______	______	______	______
Equipment purchased in 2022 for $180,000 with adjusted basis of $140,000	______	______	______	______	______	______

I:13-60 ***Recapture of Soil and Water Conservation Expenditures.*** Bob owns farmland with a $600,000 basis, and he elects to expense $100,000 of expenditures incurred for soil and water conservation purposes. Bob sells the farmland after farming for seven years and four months. What is the amount of the recognized gain and the character of the gain if the selling price is

a. $825,000

b. $615,000

I:13-61 ***Recapture of Intangible Drilling Costs.*** Jeremy purchased undeveloped oil and gas property five years ago. He paid $300,000 for intangible drilling and development costs and elected to expense the $300,000. During the current year, Jeremy sells the property, which has an $800,000 adjusted basis, for $900,000. What is the amount of gain treated as ordinary income under Sec. 1254 because of the election to expense intangible drilling and development costs?

I:13-62 ***Recapture of Intangible Drilling Costs and Depletion.*** In 2019, Jack purchased undeveloped oil and gas property for $900,000 and paid $170,000 for intangible drilling and development costs. He elected to expense the intangible drilling and development costs. During the current year he sells the property for $950,000 when the property's adjusted basis is $700,000. Depletion of $200,000 was allowed on the property.

a. What is the realized gain and how much of the gain is ordinary income?

b. For Jack to have a Sec. 1231 gain, the selling price must exceed what amount?

I:13-63 ***Related Party Transactions.*** Ed operates a storage business as a sole proprietorship and owns the following assets acquired in 2006:

Warehouse	$400,000	
Minus: Accumulated depreciation	(230,000)	
Adjusted basis		$170,000
Land		65,000

The FMV of the warehouse and the land are $500,000 and $200,000, respectively. Ed owns 75% of the stock of the Crane Corporation. If he sells the two assets to Crane at a price equal to the FMV of the assets, determine the recognized gain and its character due to the sale of the:

a. Building
b. Land

COMPREHENSIVE PROBLEM

I:13-64 Betty, whose tax rate is 32%, is in the business of breeding and racing horses. Except for the transactions below, she has no other sales or exchanges and she has no unrecaptured net Sec. 1231 losses. Consider the following transactions that occur during the year:

- A building with an adjusted basis of $300,000 is destroyed by fire. Insurance proceeds of $500,000 are received, but Betty does not plan to replace the building. The building was built 12 years ago at a cost of $430,000 and used to provide lodging for her employees. Straight-line depreciation has been used.
- Four acres of the farm are condemned by the state to widen the highway and Betty receives $50,000. The land was inherited from her mother 15 years ago when its FMV was $15,000. Her mother purchased the land for $10,300. Betty does not plan to purchase additional land.
- A racehorse purchased four years ago for $200,000 was sold for $550,000. Total depreciation allowed using the straight-line method amounts to $160,000.
- Equipment purchased three years ago for $200,000 is exchanged for $100,000 of IBM common stock. The adjusted basis of the equipment is $120,000. If straight-line depreciation had been used, the adjusted basis would be $152,000.
- An uninsured pony, with an adjusted basis of $20,000 and FMV of $35,000, that her daughter uses only for personal use is injured while attempting a jump. Because of the injury, the uninsured pony has to be destroyed by a veterinarian.

a. What amount of Sec. 1245 ordinary income must be recognized?
b. What amount of Sec. 1250 ordinary income must be recognized?
c. Will the loss resulting from the destruction of her daughter's pony be used to determine net Sec. 1231 gains or losses?
d. What is the amount of the net Sec. 1231 gain or loss?
e. After all of the netting of gains or losses is completed, will the gain resulting from the involuntary conversion of the building be treated as LTCG?
f. What is the amount of her Sec. 1231 gain that is unrecaptured Sec. 1250 gain?

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:13-65 Russ has never recognized any Sec. 1231 gains or losses. In December 2025, Russ is considering the sale of two Sec. 1231 assets. The sale of one asset will result in a $20,000 Sec. 1231 gain while the sale of the other asset will result in a $20,000 Sec. 1231 loss. Russ has no other capital or Sec. 1231 gains and losses in 2025 and does not expect to have any other capital or Sec. 1231 gains and losses in 2025. He is aware that it might be advantageous to recognize the Sec. 1231 gain and the Sec. 1231 loss in different tax years. However, he does not know whether he should recognize the Sec. 1231 gain in 2025 and the Sec. 1231 loss in 2026 or vice versa. His marginal tax rate for each year is expected to be 32%. Advise the taxpayer with respect to these two alternatives:

a. Recognize the $20,000 Sec. 1231 loss in 2025 and the $20,000 Sec. 1231 gain in 2026.
b. Recognize the $20,000 Sec. 1231 gain in 2025 and the $20,000 Sec. 1231 loss in 2026.

I:13-66 Holly has recognized a $9,000 STCL. She has no other recognized capital gains and losses in 2025. She is considering the sale of a Sec. 1231 asset held for four years at a $5,000 gain in 2025. She had not recognized any Sec. 1231 losses during the previous five years and does not expect to have any other Sec. 1231 transactions in 2025. Her marginal tax rate for 2025 is 32%. What is the amount of increase in her 2025 taxes if Holly recognizes the $5,000 Sec. 1231 gain in 2025?

TAX FORM/RETURN PREPARATION PROBLEMS

I:13-67 ***Short Tax Form.*** George Buckner sells an apartment building on October 10 for $1.75 million. The building was purchased on January 1, 2004, for $2 million. Depreciation of $420,000 has been taken. The figures given above do not include the purchase price or the selling price of the land. Mr. Buckner's adjusted basis for the land is $200,000, and the sales price is $350,000. Mr. Buckner, who owns and operates a taxi business, sells one of the automobiles for $1,800 on November 14th. The automobile's adjusted basis is zero, and the original cost is $15,000. The automobile was purchased on April 25, 2015. Mr. Buckner has no other gains and losses during the year, and nonrecaptured net Sec. 1231 losses amount to $32,000. Prepare Form 4797.

I:13-68 Julie Hernandez is single and has no dependents. She operates a dairy farm and her Social Security number is 000-00-1111. She lives at 1325 Vermont Street in Costa, Florida, 44215. Consider the following information for the current year:

- Schedule C was prepared by her accountant and the net profit from the dairy operations is $48,000.
- Itemized deductions amount to $4,185.
- Dividend income (qualified dividend) amounts to $280. She had no transactions involving virtual currency during the year.
- State income tax refund received during the year is $125. She did not itemize last year.
- In June, a burglar broke into her house and stole the following two assets, which were acquired in 1990:

	Basis	*FMV*	*Insurance Proceeds Received*
Painting	$2,000	$10,000	$9,000
Sculpture	1,700	1,500	0

The following assets used in her business were sold during the year:

	Acquisition Date	*Original Cost*	*Depreciation to Date of Sale*	*Date of Sale*	*Selling Price*
Tractor	June 10, 2014	$25,000	$25,000	Oct. 20	$ 8,300
Barn	May 23, 2004	90,000	61,000	May 13	87,000
Land	May 23, 2004	15,000	–0–	May 13	27,000
Cows	Sept. 7, 2022	20,000	13,000	Nov. 8	21,000

In August, three acres of the farm were taken by the state under the right of eminent domain for the purpose of building a highway. The basis of the three acres is $1,500, and the state paid the FMV, $22,000, on February 10. The farm was purchased on August 12, 1990.

Nonrecaptured net Section 1231 losses from the five most recent tax years preceding the current year amount to $7,000. Estimated taxes paid during the year amount to $32,000.

Prepare Forms 1040, 4684 Section A, 4797, and Schedule D. (Do not consider the alternative minimum tax or self-employment taxes discussed in Chapter I:14.)

CASE STUDY PROBLEMS

I:13-69 Your client, Kent Earl, whose tax rate is 35%, owns a bowling alley and has indicated that he wants to sell the business for $1 million and purchase a minor league baseball franchise. His business consists of the following tangible assets:

	Acquisition Date	*Original Cost*	*Adjusted Basis*
Equipment	2013	$600,000	$150,000
Building	2013	900,000	494,000
Land	2008	100,000	100,000
Inventory	Current year	50,000	50,000

Because you have another client, Tom Quick, who is interested in purchasing a business, you informed Tom of Kent's interest in selling. Tom wants to purchase the bowling alley, and the price sounds right to him. The bowling alley business has been very profitable in the last few years because Kent has developed a loyal group of customers by promoting bowling leagues during the week days and a special Saturday afternoon session for children in the elementary school grades. Kent and Tom have come to you and want to know how the transaction should be handled for the best tax results. You know that the $1 million purchase price will have to be allocated among the assets and it will be necessary to estimate the FMV of all assets. Because FMV is often subjective, Kent and Tom recognize that some flexibility might exist in allocating the purchase price. For example, it might be just as easy to justify a FMV of $300,000 or $325,000 for the equipment.

a. What advice do you have for Kent with respect to the allocation (i.e., should he be interested in allocating more to some assets than others)? Explain the reasoning for your advice.

b. Would your advice to Kent be different if he had a large amount of capital losses and no nonrecaptured net Sec. 1231 losses?

c. What advice do you have for Tom with respect to the allocation (i.e., should he be interested in allocating more of the purchase price to some assets than to others)? Explain the reasoning for your advice.

d. What advantages might result from having Kent sign an agreement not to compete (i.e., operate a bowling alley)?

e. Should you have a concern about the ethical implications of advising both Kent and Tom?

I:13-70 Assume the same facts as in Case Study Problem I:13-69 except you have the following market values as a result of an appraisal:

Equipment	$ 250,000
Building	500,000
Land	140,000
Inventory	110,000
Total	$1,000,000

Tom insists that $150,000 of the purchase price should be allocated to inventory and $100,000 should be allocated to land. He refuses to complete the purchase unless the allocation is made as he requests. What action should you take with respect to Tom's request? (See Chapter I:10 for a discussion of valuation issues in the purchase and sale of a business.)

TAX RESEARCH PROBLEM

I:13-71 Berkeley Corporation has a policy of furnishing new automobiles to the athletic department of the local university. The automobiles are used for short periods of time by the extremely popular head basketball coach. When the automobiles are returned to Berkeley Corporation, they are sold to regular customers. The owner of Berkeley Corporation maintains that any such cars held for more than one year should qualify as Sec. 1231 property. Do you agree?

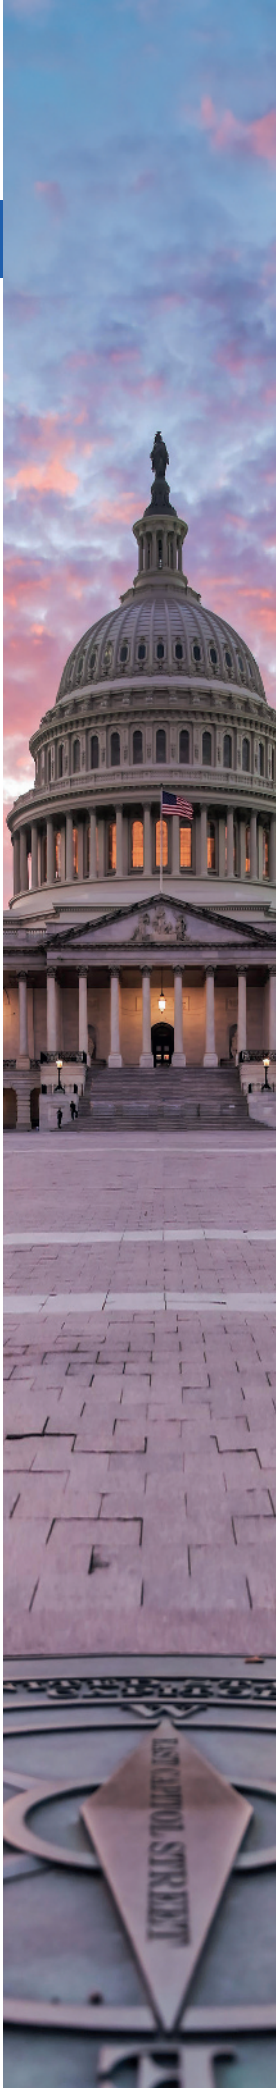
CHAPTER

14

SPECIAL TAX COMPUTATION METHODS, TAX CREDITS, AND PAYMENT OF TAX



James Byard/Zoonar GmbH/Alamy Stock Photo

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Calculate the alternative minimum tax
2. Describe self-employment income and compute the self-employment tax
3. Describe the various business and personal tax credits
4. Describe and compute the premium tax credit
5. Explain the mechanics of the federal withholding tax system and the requirements for making estimated tax payments
6. Describe tax planning considerations for AMT, tax credits, and payment of taxes
7. Describe compliance and procedural considerations for AMT, tax credits, and payment of taxes

CHAPTER OUTLINE

Alternative Minimum Tax ...14-2
Self-Employment Tax ...14-8
Personal and Business Tax Credits ...14-10
Provisions Related to Health Insurance ...14-24
Payment of Taxes ...14-26
Tax Planning Considerations ...14-30
Compliance and Procedural Considerations ...14-32

Chapter I:2 discussed the basic tax computation for individuals using the tax table and tax rate schedules. This chapter completes the discussion of the tax computation by examining three principal topics:

1. Two additional taxes: the alternative minimum tax and self-employment tax;
2. Various tax credits that reduce tax liability; and
3. Methods for prepayment of an individual's tax liability, including wage withholding and estimated tax payments.

ALTERNATIVE MINIMUM TAX

OBJECTIVE 1

Calculate the alternative minimum tax

Although its central purpose is to raise revenue to fund federal government operations, Congress has expanded the use of the federal income tax system to include provisions designed to promote economic and social goals. As the number of special tax provisions increased, some high-income individual taxpayers were able to plan their financial affairs to substantially reduce or eliminate their income tax liability. As a result, in 1969, Congress passed a new set of rules to ensure that all taxpayers would pay at least a minimum amount of income tax. The original "minimum tax" has evolved into a broad tax known today as the **alternative minimum tax** (**AMT**).

The present AMT applies to individuals, estates, and trusts.[1] The AMT system is structured as a separate tax system, but it operates in parallel with the regular income tax system. After taxpayers determine their regular taxable income and regular tax liability, they determine the AMT tax base by modifying regular taxable income for AMT preferences and adjustments and the AMT exemption. AMT tax rates are applied to compute the tax, which is known as the Tentative Minimum Tax (TMT). Taxpayers must pay the *greater* of the regular income tax or the TMT.

In aggregate, few individual taxpayers pay the AMT. Only about 0.12% of taxpayers were subject to the AMT in 2022, and the tax revenue from it exceeded $4.1 billion, or 0.19% of the combined total of regular income tax and AMT.[2]

ADDITIONAL COMMENT

The Tax Cuts and Jobs Act of 2017 significantly decreased the number of taxpayers subject to AMT starting in 2018. Due to increased exemption amounts and increases in the income level at which exemptions begin to phase out, the AMT is most likely to impact taxpayers at the top of the income scale.

EXAMPLE I:14-1 ▶ Ricardo and Sue are married and file a joint return for 2025 with regular taxable income of $90,000 and tax preferences and adjustments of $12,000. Their alternative minimum taxable income (AMTI) is $102,000 ($90,000 + $12,000), but the alternative minimum tax base is zero because of the $137,000 exemption. Thus, their tax liability is based on the regular tax computation, and they owe no AMT liability. ◀

EXAMPLE I:14-2 ▶ Assume the same facts for Ricardo and Sue as in Example I:14-1 except they have tax preferences and adjustments of $90,000. Their alternative minimum taxable income (AMTI) is $180,000. Their tentative minimum tax (TMT) is $11,180 [($180,000 − $137,000) = $43,000 × 26% = $11,180]. Regular tax on taxable income of $90,000 is $10,323. Ricardo and Sue must pay the TMT of $11,180 because it exceeds the regular tax of $10,323. ◀

---

[1] The AMT applicable to corporations is repealed by the Tax Cuts and Jobs Act of 2017 (P.L. 115-97).

[2] IRS, Statistics of Income, Individual Income Tax Returns, Line Item Estimates, 2022. Publication 4801, December 2024.

HISTORICAL NOTE

The original add-on minimum tax, enacted in 1969, was 10% of the taxpayer's tax preferences in excess of a $30,000 statutory exemption.

ADDITIONAL COMMENT

Some tax advisors recommend accelerating income into a year in which the taxpayer is subject to the AMT because the income will be taxed at a 26% or a 28% rate rather than a possibly higher rate in a later year.

AMT COMPUTATION

The individual AMT uses the approach outlined below to determine the AMT tax base and the amount of AMT imposed, if any.[3]

TAXABLE INCOME (determined under the regular income tax system)
Plus: AMT preference items
Plus or minus: AMT adjustments

=ALTERNATIVE MINIMUM TAXABLE INCOME (AMTI)
Minus: AMT exemption amount (see table below)

=ALTERNATIVE MINIMUM TAX BASE
Multiplied by AMT tax rates

=TENTATIVE MINIMUM TAX
Minus: Regular income tax

ALTERNATIVE MINIMUM TAX

In the American Taxpayer Relief Act of 2012, Congress provided for automatic annual inflation adjustments for the AMT exemption amount, the AMT exemption phase-out range, and the AMT tax brackets (Sec. 55(d)(4)). The inflation adjusted amounts for the 2025 AMT exemption and phase-out range appear in the table below.

AMT TAX RATES AND BRACKETS

The AMT for 2025 (2024) is imposed on the AMT base at 26% of the first $239,100 ($232,600) and at 28% on AMT base over $239,100 ($232,600).[4]

AMT EXEMPTION AMOUNT

The AMT exemption operates as a buffer to reduce the impact of AMT. The buffer is ineffective for high-income taxpayers both because of the limited amount of the basic exemption and because the exemption amount is disallowed (phased-out) as income rises over a threshold amount. The exemption is reduced by 25 cents per dollar of AMTI over the threshold: Exemption allowed = Basic exemption amount – 25% (AMTI – Threshold). The phase-out concludes when the amount of AMTI is sufficient to reduce the exemption allowed to $0.

Filling Status	*2025 Basic Exemption*	*2025 Phaseout Threshold*	*2024 Basic Exemption*	*2024 Phaseout Threshold*
Married filing joint	$137,000	$1,252,700	$133,300	$1,218,700
Married filing separate	$68,500	$626,350	$66,650	$609,350
Single, Head of household	$88,100	$626,350	$85,700	$609,350

---

[3] Sec. 55(b)(1).

[4] The AMT rate on net capital gains and qualified dividends depends on the taxpayer's taxable income. For 2025, a 0% rate applies to married filing joint taxpayers with taxable income below $96,700 (single $48,350). 15% rate applies to married filing joint taxpayers with taxable income between $96,700 and $600,050 (single $48,350–$533,400). 20% rate applies to married filing joint taxpayers with taxable income above $600,050 (single $533,400) (Sec. 1(h)(1)).

EXAMPLE I:14-3 ▶ Rita, an unmarried taxpayer filing single, has regular taxable income of $550,000 in 2025, a regular tax liability of $162,047, a positive AMT adjustment (due to limitations on itemized deductions) of $60,000, and tax preferences of $65,000. Rita's alternative minimum tax is calculated as follows:

Taxable income	$ 550,000
Plus: Tax preferences	65,000
Plus: AMT Adjustment for itemized deductions	60,000
Alternative minimum taxable income (AMTI)	$ 675,000
Minus: Exemption amount ($88,100 − $12,163)*	(75,937)
Alternative minimum tax base	$ 599,063
Tax on first $239,100: ($239,100 × 26%)	$ 62,166
Tax on excess over $239,100: ($359,963 × 28%)	100,790
Tentative minimum tax	$ 162,956
Minus: Regular tax	(162,047)
Alternative minimum tax (AMT)	$ 909

*Exemption phaseout: [25% × ($670,000 − $626,350)] = $12,163 ◀

AMT TAX PREFERENCE ITEMS

Certain provisions in the Internal Revenue Code grant favorable treatment to taxpayers. However, because of concern that some taxpayers may overuse these favorable provisions, Congress has classified them as tax preferences (IRC Sec. 57). For example, though the regular tax system allows deductions for depletion in excess of the property's basis, the AMT system limits depletion deductions to the property's basis. So, an AMT preference item (equal to depletion deducted in excess of basis) is a required addition. All AMT tax preference items are additions toward AMTI. However, only certain items receiving preferential regular tax treatment are tax preference items.

ADDITIONAL COMMENT

Over the years, tax preference items have diminished in importance while adjustments have increased their impact on AMT liabilities.

To compute the AMT tax base, the tax preferences designated in Sec. 57 must be added to regular taxable income. Some common tax preference items include:

- The excess of accelerated depreciation expense over a hypothetical straight-line depreciation amount for real property placed in service before 1987 (computed on an item-by-item basis).
- Tax-exempt interest on certain **private activity bonds**. In general, private activity bonds are state or local bonds that are issued to help finance a private business (e.g., professional sports fields).
- The excess of depletion expense over the adjusted basis of the underlying natural resource asset. The preference does not apply to independent oil and gas producers and royalty owners (Sec. 57(a)(1)).

ADDITIONAL COMMENT

Under the American Recovery and Reinvestment Act of 2009, interest on private activity bonds issued in 2009 or 2010 is not treated as a tax preference item.

EXAMPLE I:14-4 ▶ Richard, a single taxpayer, has the following tax preference items for the current year:

- $15,000 ACRS cost-recovery deduction on real property placed in service before 1987 and held for investment. The straight-line ACRS deduction would have been $10,000.
- $10,000 of tax-exempt interest on private activity bonds.

Richard's total tax preferences are $15,000, consisting of $5,000 excess cost recovery deductions and $10,000 tax-exempt interest on the private activity bonds. ◀

AMT ADJUSTMENTS

For most individual taxpayers, adjustments fall into three categories: (1) regular tax itemized deductions disallowed in computing AMTI, (2) the AMT system's disallowance of the standard deduction (if taken), and (3) timing differences relating to the deferral of income or the acceleration of deductions under the regular tax rules.

KEY POINT

For purposes of the alternative minimum tax, no deduction is allowed for the standard deduction.

Itemized Deductions. Only certain itemized deductions are allowed in computing AMTI. The more significant itemized deductions that *are not deductible* for the AMT include:

- State, local, and foreign income taxes, sales taxes, and real and personal property taxes.
- Home mortage interest expense that is *not* "qualified housing interest." Qualified housing interest includes only interest on debt incurred to acquire/build/improve taxpayers' principal residence or second home (e.g., interest on a home equity loan used to buy a car).

Standard Deduction. Although allowed for regular tax, a standard deduction is not allowed for AMTI.

EXAMPLE I:14-5 ▶ Robin, age 45, is a single taxpayer with no dependents. She has AGI of $100,000 and the following itemized deductions for the current tax year:

Charitable contributions	$ 4,000
Medical expenses, net of insurance	10,500
Mortgage interest (100% qualified housing interest)	18,400
Real estate taxes	4,000
State income taxes	6,000

From the information above, Robin's regular taxable income would be:

AGI			$100,000
Itemized deductions:			
Charitable contributions		$ 4,000	
Medical expenses	$10,500		
Less 7.5% of AGI	(7,500)	3,000	
Mortgage interest			
(100% qualified housing interest)		18,400	
Real estate taxes		4,000	
State income taxes		6,000	(35,400)
Taxable income			$64,600

Assume that Robin also has $20,000 of tax preferences. Her AMTI would be computed as follows:

Taxable income	$64,600
Tax preferences	20,000
AMT adjustments:	
Real estate and state income taxes (not allowed for AMTI)	10,000
AMTI	$94,600

◀

TAX AUTHORITY UPDATE

Prior to 2019, there was an AMT adjustment related to differences in the AGI floors for medical expenses for the regular tax (7.5%) and AMT (10%). Beginning in 2019, the IRC applies the same percentage limit to both, so there is no longer an AMT adjustment item.

Timing Differences. Other adjustments are required when the rules for calculating regular taxable income permit the taxpayer temporarily to defer the recognition of income or to accelerate deductions (timing differences). Common AMT adjustments for timing differences include:

- For personal property placed in service after 1998 and before 2016 in which the taxpayer elects out of taking bonus depreciation, the difference between the MACRS depreciation deduction and the hypothetical amount determined by using the 150% declining balance method over the recovery period used for regular tax purposes. Bonus depreciation, where applicable, is allowed in full for purposes of the AMT, and if bonus depreciation is taken or the property was simply eligible for bonus depreciation and placed in service after 2015, AMT depreciation and regular depreciation are calculated the same, and there will be no timing adjustment.
- For real property placed in service after 1986 and before January 1, 1999, the difference between the MACRS depreciation claimed using the property's actual recovery

period and a hypothetical straight-line depreciation amount calculated using a 40-year life (see Chapter I:10 for a discussion of the alternative depreciation system).[5]

- For incentive stock options, the excess of the option's fair market value over the price paid by the individual for the option. This adjustment is measured on the date the rights to the underlying stock are freely transferable or are not subject to a substantial risk of forfeiture.
- For research and experimental (R&E) expenditures, the difference between the regular tax deduction and the deduction that would have been allowed if the expenditures were capitalized and amortized over a ten-year period.

EXAMPLE I:14-6 ▶ Rob has the following AMT adjustments caused by timing differences in 2025:

- Depreciation of $3,636 on residential rental property costing $100,000 and placed in service in January 2024 (using the straight-line method and a 27.5-year recovery period under MACRS). Depreciation for AMT purposes is $2,500 (using the straight-line method and a 40-year recovery period under the alternative depreciation system). Thus, the positive AMT adjustment is $1,136 ($3,636 − $2,500).
- For 2025, depreciation is $2,498 on office furniture used in business costing $20,000 and placed in service in January 2022 based on MACRS rules. Depreciation for AMT purposes is $2,450 based on the alternative depreciation system (i.e., 150% DB method, half-year convention, and a seven-year recovery period). Thus, the positive AMT adjustment is $48 ($2,498 − $2,450). Had bonus depreciation been taken at the beginning of the asset's life, or the asset been placed in service after 2015 and was eligible for bonus depreciation, there would be no AMT depreciation adjustment.
- R&E expenditures amounting to $50,000 are expensed in the current year. For AMT purposes, the R&E deduction would be $5,000 ($50,000 ÷ 10 years) since the expenditures are capitalized and amortized over a ten-year period. Thus, the positive AMT adjustment is $45,000 ($50,000 − $5,000).[6]

Rob's total positive AMT adjustment to taxable income to arrive at AMTI is $46,184 ($1,136 + $48 + $45,000). ◀

AMT CREDITS

Credits That Reduce AMT. As discussed later in this chapter, a number of credits are allowed to reduce a taxpayer's regular tax liability. However, only the foreign tax credit and nonrefundable personal credits are allowed to reduce AMT. The foreign tax credit that applies to the AMT is a specially computed credit, called the "AMT foreign tax credit" and is beyond the scope of this text. Nonrefundable personal tax credits are allowed against both regular tax and the AMT. They are discussed beginning on page I:14-10 and are summarized in Topic Review I:14-2.

STOP & THINK

Question: What are the most common characteristics of taxpayers who are subject to the AMT?

Solution: While each situation is unique, certain taxpayers are more likely to be subject to the AMT. First, taxpayers who have materially invested in real estate before January 1, 1999 are likely candidates for the AMT because they will have a large positive adjustment caused from differences in depreciation. Second, higher-income taxpayers are more likely to face AMT because the AMT exemption amount phases out as taxpayer income increases.

ADDITIONAL COMMENT

The American Recovery and Reinvestment Act of 2009 allows taxpayers with deferred credits from tax years beginning before 2006 (deferred research credits or deferred AMT credits) to turn these into refundable credits in lieu of taking bonus and accelerated depreciation on qualified eligible property (see Chapter I:10).

Minimum Tax Credit (MTC). Under Sec. 53, individual taxpayers are allowed a credit for AMT paid in past years against future years' *regular tax liability*. The logic is as follows: the AMT may be caused by adjustments that will reverse in the future, and the taxpayer will actually pay a higher regular tax in those future years. Thus, the combination of a prior year AMT and current year regular tax essentially constitutes double taxation. A taxpayer who paid AMT in prior years but is not subject to AMT in the current year may be entitled to an MTC against his regular tax liability in the current year.[7]

---

[5] For real property being depreciated under the straight-line method and placed in service after 1998, the Taxpayer Relief Act of 1997 eliminates this adjustment.

[6] For years 2–10, the AMT adjustment will be negative, ($5,000), each year.

SUMMARY ILLUSTRATION OF THE AMT COMPUTATION

EXAMPLE I:14-7 ▶ **Roger and Kate are married, file a joint return, and have four dependent children. All the children are under age 17. Assume that the couple has $30,000 of AMT preference items. The following items were used to compute regular taxable income for 2025:**

Gross income:		
Salary		$ 227,000
Interest income		20,000
Business income		30,000[a]
AGI		$ 277,000
Itemized deductions:		
State and local taxes	$10,000	
Mortgage interest (100% qualified housing interest)	19,500	
Charitable contributions	5,500	(35,000)
Qualified business income deduction ($30,000 × 20%)		(6,000)
Taxable income		$ 236,000
Regular tax		$ 42,334
Child tax credit		(8,000)
Net regular tax		$ 34,334

[a] MACRS depreciation deductions of $75,000 on personal property placed in service after 1998 were claimed in arriving at business income. Only $50,000 of depreciation would be claimed under the alternative depreciation system using the 150% declining balance method.

Their AMT is computed as follows:

Taxable income		$ 236,000
AMT preferences and adjustments:		
Preferences	$30,000	
Excess depreciation ($75,000 − $50,000)	25,000	
State and local taxes	10,000	65,000
AMTI		$ 301,000
AMT exemption		(137,000)
Alternative Minimum Tax base		$ 164,000
Tax rate		× 0.26
Tentative minimum tax before credit		$ 42,640
Child tax credit		(8,000)
Tentative minimum tax		$ 34,640
Net regular tax after child tax credit		(34,334)
Alternative minimum tax		$ 306[b]

The total tax liability for Roger and Kate is $34,640 ($34,334 + $306).

[b] An AMT credit may be available in future years to offset regular tax. However, the AMT credit applies only to the AMT that results from timing differences (e.g., depreciation adjustments) and not from exclusions (e.g., taxes). ◀

---

[7] The Minimum Tax Credit applies to timing adjustments rather than permanent adjustments. A detailed discussion of the rules for computing this credit for individuals is beyond the scope of this book.

SELF-EMPLOYMENT TAX

OBJECTIVE 2

Describe self-employment income and compute the self-employment tax

An individual may work either as an employee or as an independent contractor. The distinction generally hinges on the degree of influence and control an individual has over his work.[8] The classification is important in determining the responsible party for employment taxes imposed under the Federal Insurance Contribution Act (FICA). FICA includes old-age, survivors, and disability insurance (OASDI, commonly referred to as Social Security) and hospital insurance (Medicare).

Individuals classified as *employees* pay the employee part of FICA on their earnings as they are earned through withholding, and their employers pay the employer part of employment taxes on the same earnings. Because employers report and remit both the withheld employee portion and the employer portion of FICA taxes to the U.S. Treasury, it is not necessary for employees to report employment taxes within their federal income tax returns.

ADDITIONAL COMMENT

The distinction between employees and contractors remains problematic. Congress recently repeated encouragement for the IRS to resolve pending taxpayer inquiries about worker classification. Recent high-profile cases have involved drivers for UPS, Inc., FedEx Inc., and Uber as well as Microsoft software programmers.

Individuals classified as *self-employed* are responsible for paying both the employee share and employer share of employment taxes. This tax is called the self-employment (SE) tax, and it is imposed on net earnings from self-employment (defined below). It is reported as part of the self-employed individual's federal income tax return.

A combined FICA rate of 15.3% applies for years after 2012. The rate includes the following:

- Social Security tax imposed at a rate of 12.4% on wages (6.2% by withholding for the employee portion and 6.2% for the employer portion) and on net earnings from self-employment (SE);[9] and
- Medicare tax imposed at a rate of 2.9% on wages (1.45% by withholding for the employee portion and 1.45% for the employer portion) and on net earnings from self-employment. (See next page for separate discussion of the Additional Medicare Tax.)

Social Security tax is imposed on wages and net earnings from SE up to a ceiling amount (adjusted for inflation annually). For 2025 (2024), the ceiling equals $176,100 ($168,600). The regular Medicare tax is imposed on all wages and net earnings from SE—without limit.

Net earnings from SE is defined as 92.35% of self-employment income The SE tax is imposed only if net earnings from SE equals or exceeds $400.

Self employed individuals are entitled to deduct—*for* AGI—50% of SE tax, which is effectively the employer portion of their SE tax.[10]

EXAMPLE I:14-8 ▶ Robert, a cabinet maker, works as a sole proprietor. For 2025, his self-employment earnings totaled $75,000. His net earnings from SE equal $69,263 ($75,000 × 0.9235). His SE tax of $10,598 includes Social Security tax and Medicare tax. His deduction for SE tax equals $5,299.

Social Security tax: 0.124 × ($69,263) = $8,589
Medicare tax: 0.029 × ($69,263) = $2,009
SE tax deduction: 0.50 × ($8,589 + $2,009) = $5,299 ◀

EXAMPLE I:14-9 ▶ The facts are identical to I:14-8 except Robert's self-employment earnings totaled $200,000. His net earnings from SE equal $184,700 ($200,000 × 0.9235).

His SE tax of $27,192 includes Social Security tax and Medicare tax. His deduction for SE tax equals $13,596.

Social Security tax: 0.124 ($176,100 ceiling) = $21,836
Medicare tax: 0.029 ($184,700) = $5,356
SE tax deduction: 0.50 ($21,836 + $5,356) = $13,596 ◀

Individuals who work as employees but also operate a business are subject to self-employment tax on net earnings from self-employment (SE). For Social Security tax, the tax base equals the lesser of (1) net earnings from self-employment or (2) the Social Security tax ceiling reduced by the individual's earnings as an employee. The Medicare tax is imposed on net earnings from SE (without limit).

---

[8] Rev. Rul. 87-41 provides a list of twenty factors to be considered in evaluating whether an employer-employee relationship exists.

[9] Sec. 1402 provides more detail on what constitutes net earnings from self-employment.

[10] As discussed later, no deduction is allowed for the Additional Medicare Tax on SE income.

EXAMPLE I:14-10 ▶

In 2025, Sandy earns $75,000 in employee wages. In addition, from her small consulting practice, she earns $10,000 of income from self-employment. The tax base for her Social Security tax equals the smaller of $9,235 (0.9235 × $10,000) or $101,100 ($176,100 − $75,000). Sandy's SE tax equals $1,413, including Social Security tax of $1,145 ($9,235 × 0.124), and Medicare tax of $268 ($9,235 × 0.029). Her deduction for SE tax equals $707 (0.50 × $1,413). ◀

EXAMPLE I:14-11 ▶

Assume the facts in Example 14-10 apply except that Sandy earns $180,000 in employee wages. The tax base for her Social Security tax equals $0 because her employee earnings exceed the Social Security tax ceiling (more precisely, the tax base equals the smaller of $9,235 [0.9235 × $10,000] or $0 [$176,100 − $180,000]). The Medicare tax (and the SE tax) totals $268 ($9,235 × 0.029). Her deduction for SE tax equals $134 (0.50 × $268). ◀

For tax years after 2012, a hospital insurance tax (Additional Medicare Tax) of 0.9% applies to self-employment income and to wages (Sec. 1401(b)(2) and Sec. 3101(b)(2)) of individuals whose earned income exceeds threshold amounts (table below). Unlike the regular Medicare Tax of 2.9%, the Additional Medicare Tax is *not* included in the "for AGI" deduction allowed to self-employed taxpayers for the employer portion of SE tax (Sec. 164(f)(1)).

Filing Status	*Threshold Amount*
Married Jointly	$250,000
Single	$200,000
Married Separately	$125,000

ADDITIONAL COMMENT

If an individual works for more than one employer during the year and earns (in total) more than the Social Security tax ceiling, the employers will have withheld more than the employee's required Social Security tax. The taxpayer is entitled to a credit (or refund) for the overpaid tax against his regular income tax liability.

Because the new tax applies to all earned income, in determining the amount of earned income subject to the new tax, the threshold amount is used first against employee compensation, and any remainder used against self-employment income.

EXAMPLE I:14-12 ▶

Henry, an unmarried taxpayer filing single for 2025, earns a salary of $180,000 plus self-employment income of $145,000 in consulting fees. His net earnings from SE is $133,908 ($145,000 × 0.9235).

For regular SE tax, Henry will not pay Social Security tax on his SE income from consulting (his salary subject to this tax exceeds the $176,100 ceiling). He will pay Medicare tax of $3,883 ($133,908 × 0.029). One-half of the Medicare tax, $1,942, is allowed as a deduction for AGI.

Henry will pay the Additional Medicare Tax because his earned income exceeds $200,000. The $200,000 threshold first will exempt his salary from the additional tax ($200,000 threshold − $180,000 = $20,000 remaining), and the remainder will exempt all but $113,908 of his self-employment income ($133,908 − $20,000 remaining threshold = $113,908).

The Additional Medicare tax imposed will equal $1,025 ($113,908 × 0.009). A deduction for AGI is not allowed for the Additional Medicare Tax. ◀

ADDITIONAL COMMENT

For some self-employed taxpayers, the amount of SE tax exceeds the amount of income tax for the year. For example, a married couple with two children and $17,000 of self-employment income would not owe any income tax, but would have a $2,402 (17,000 × .9235 × 15.3%) SE tax liability.

WHAT CONSTITUTES SELF-EMPLOYMENT INCOME

Individuals who carry on a trade or business as a proprietor or partnership are subject to the SE tax. If an individual has two separate self-employment activities, the *net* earnings from each activity are aggregated. However, where a husband and wife file a joint return and both have self-employment income, the SE tax must be computed for each individual separately.

EXAMPLE I:14-13 ▶

Bob and Ruth are married and file a joint return. Bob has $93,000 net earnings from a consulting business and a $4,000 net loss from a retail store that he operates as a sole proprietorship. Ruth has wages of $50,000 from her employer that are subject to FICA taxes. Bob's net earnings from self-employment are $82,192 ($89,000 × 0.9235). No reduction in Bob's SE tax base is allowed for Ruth's wages. The SE tax is computed separately for Bob and Ruth. ◀

KEY POINT

In the case of married taxpayers filing joint returns, it is important on Schedule SE of Form 1040 to fill in the name and Social Security number of the spouse with the self-employment income. This information is used to establish specific benefit eligibility.

Among the items that constitute earnings subject to the SE tax are:

- ▶ Net earnings from a sole proprietorship

- Director's fees[11]
- Taxable research grants
- Distributive share of partnership income plus guaranteed payments from the partnership[12, 13]

The self-employment tax is computed on Schedule SE of Form 1040 (see Appendix B). The rules for computing the SE tax are summarized in Topic Review I:14-1.

TOPIC REVIEW I:14-1

Self-Employment Tax Summary

- The tax base is generally net earnings from SE which equals 92.35% of self-employment income.
- The Social Security tax is imposed at 12.4% of net earnings from SE; the Medicare tax is imposed at 2.9% of net earnings from SE.
- For years after 2012, an Additional Medicare Tax is imposed on earnings from employment (employee wages and net earnings from SE). The tax is imposed at a rate of 0.9% on earnings in excess of a threshold amount.
- In 2025, a ceiling of $176,100 applies to the amount of SE earnings subject to Social Security tax. No ceiling applies to the Medicare portion of the tax.
- SE tax is computed separately for each spouse for married individuals filing joint returns.

PERSONAL AND BUSINESS TAX CREDITS

OBJECTIVE 3

Describe the various business and personal tax credits

USE AND IMPORTANCE OF TAX CREDITS

Tax credits are an important part of the income tax law. They may serve as incentives for activities supporting broader policy objectives. For example, tax credits may help to increase employment, encourage energy conservation and research and experimental activities, and provide tax relief for low-income taxpayers. Tax credits are also used to mitigate the effects of double taxation on income from foreign countries.

Credits are classified into two broad categories, *nonrefundable* and *refundable*. Nonrefundable credits only offset tax liability. Refundable credits, on the other hand, not only offset tax liability but if the credits exceed the tax liability, the excess will be paid (refunded) directly to the taxpayer. Two credits, the child tax credit and the American Opportunity tax credit, are partially refundable. At the end of the section, Topic Review I:14-2 provides a summary of selected tax credits and the rationale for their inclusion in the tax law. Taxes withheld from employee wages are prepayments of tax, but are also referred to as refundable credits.

VALUE OF A CREDIT VERSUS A DEDUCTION

As discussed in Chapter I:2, tax credits reduce tax liability on a dollar-for-dollar basis. This is in contrast to tax deductions, which reduce taxable income. The value of a tax deduction increases with the taxpayer's marginal tax rate, so tax deductions are more valuable to high-income taxpayers than to lower-income taxpayers. Tax credits, however, benefit all taxpayers in the same amount regardless of their marginal tax rate.

EXAMPLE I:14-14 ▶ Tasha and Sean are both single taxpayers. Each has an $800 expenditure that qualifies as either a tax deduction or a 20% credit. Tasha is in the 12% marginal tax bracket while Sean is in the 32% marginal tax bracket. If the $800 is claimed as a deduction, Tasha would receive a tax benefit of $96 ($800 × 12%) whereas Sean would receive a tax benefit of $256 ($800 × 32%). Conversely, if the credit is claimed, Tasha and Sean would benefit equally from a $160 credit ($800 × 20%). In this case, Tasha would prefer the credit while Sean would prefer the tax deduction. ◀

---

[11] Rev. Rul. 57-246, 1957-1 C.B. 338. It is a factual question whether an officer who also serves as a director is performing services as an employee or as an independent contractor. The courts have recognized that an individual can perform services as a director and also perform employment-related services, but the director fees may be recharacterized by the courts if the fees are in reality compensation for services rendered as an employee. (See *Peter H. Jacobs*, 1993 RIA T.C. Memo ¶93, 570, 66 TCM 1470.)

[12] A limited partner's share of partnership income is not considered SE income (Sec. 1402(a)(13)) given the inability of limited partners to participate in managing the partnership.

[13] LLCs developed as business entities after 1977, when Sec. 1402(a)(13) became law. Individuals are considered members of LLCs, and they participate in management (like general partners). But, their liability is limited. Determination of whether LLC earnings are SE income is unsettled. Prop. Reg. Sec. 1.1402(a)-2 was issued in 1997 but not yet finalized. In 2014 and in 2016, administrative guidance from the IRS was published on the issue of SE taxes and LLC member earnings (Chief Counsel Advice 201436049, May 20, 2014 and Chief Counsel Advice 201640014, June 15, 2016). Although not official authority, both reflect the IRS position of consistently treating members' shares of LLC earnings as SE income, because an LLC member who provides significant services to the LLC or manages the LLC cannot be treated as a limited partner in Sec. 1402(a)(13).

NONREFUNDABLE PERSONAL TAX CREDITS

As a result of tax legislation in the last few years, the number of personal tax credits for individual taxpayers has increased significantly. Nonrefundable personal credits may not exceed an individual's regular tax liability (minus foreign tax credit) and AMT (Sec. 26(a)). The more important nonrefundable personal tax credits are discussed below.

ADDITIONAL COMMENT

The dollar amount of the child and dependent care credit amounted to $3.4 billion in 2022.

Child and Dependent Care Credit. The child and dependent care credit provides tax savings for taxpayers who incur child and dependent care expenses because of employment activities. To be eligible for the credit, the taxpayer must incur qualifying expenses for the care of a qualifying individual to enable the taxpayer to be gainfully employed. A qualifying individual is either a qualifying child under age 13 or an incapacitated dependent or spouse who lived with the taxpayer for more than one-half of the year. The credit equals 35% of qualified expenditures.

EXAMPLE I:14-15 ▶ Tim and Tina are married and have two children under age 13. They incur child care expenses (e.g., a housekeeper and nurse) to enable both Tim and Tina to work on a full-time basis. These expenditures are eligible for the child and dependent care credit because Tim and Tina incurred them for qualifying individuals and to be gainfully employed. Alternatively, if Tina were not employed, but incurred the child care expenses to volunteer at the city library, the expenditures would not be eligible for the credit. ◀

ADDITIONAL COMMENT

Qualifying child care expenses include amounts spent to send a child to nursery school or kindergarten, but not first grade.

Qualifying Employment-Related Expenses. Qualifying expenses include amounts paid for care inside the home or outside the home for a qualifying individual. Payments to a relative are qualifying expenses unless the relative is a dependent or a child (under age 19) of the taxpayer.[14] If care is provided in the home, amounts paid for care and household maintenance (e.g., housekeeper who cares for the child, and serves as maid and cook) are qualifying expenses. If the care is provided outside the home by a dependent care facility (e.g., a day care facility), the amounts will be eligible expenses only if the dependent care facility operates in compliance with federal, state and local law.[15] Amounts paid for services outside of the taxpayer's household (e.g., adult day care) that are spent for the care of an incapacitated dependent or spouse qualify only if the individual lives in the taxpayer's home for at least eight hours a day.

EXAMPLE I:14-16 ▶ Tony is divorced and has two children under age 13. He is employed and incurs child care expenses at a preschool nursery for one of the children. He also relies on a live-in nanny who cares for both children and provides housekeeping services and a gardener to care for his yard. All of the expenditures for the preschool nursery and the nanny qualify because these services constitute eligible household services, and care of qualifying individuals. However, the payments to the gardener are not eligible because they do not constitute qualifying household services. ◀

ADDITIONAL COMMENT

A need for inflation adjustments? Although data from the U.S. Census Bureau suggests that the cost of child care increases annually, the Sec. 21(c) maximum amount of qualifying expenses was changed most recently in 2001.

The following additional limitations apply:

- Ceiling on qualifying expenses: The maximum amount of child and dependent care expenses that qualify for the credit equals $3,000 for one qualifying individual and $6,000 for two or more qualifying individuals. No carryover is permitted for expenses in excess of the maximum amounts.
- Earned income limit: Maximum qualifying expenses cannot exceed the taxpayer's earned income. For married individuals, the limitation is applied to the earned income of the spouse with the smaller earned income. Gratuitous services performed by the taxpayer for charitable organizations are not considered gainful employment.[16] A spouse who is a full-time student or incapacitated is deemed to have an earned income of $250 per month ($500 per month if there are two or more qualifying individuals in the household).[17]

The credit will not be allowed unless the qualifying individual's Social Security number and the dependent care provider's Social Security number (or employer ID number) are reported on the return on which the credit is claimed.

---

[14] Sec. 21(e)(6).

[15] Employment-related expenses do not include amounts paid for services outside of the taxpayer's household at an overnight-stay camp.

[16] Rev. Rul. 73-597, 1973-2 CB 69.

[17] Sec. 21(d)(2). To qualify as a full-time student, the individual must enroll in an educational institution on a full-time basis for at least five calendar months of the year (Reg. Sec. 1.44A-2(b)(3)(B)(ii)).

EXAMPLE I:14-17 ▶

Troy and Tracy are married and incur qualifying child care expenses of $4,000 to take care of their two children, ages 1 and 3. Tracy's earned income is $20,000, and Troy's earned income from a part-time job is $3,500. Although their expenses do not exceed the overall qualifying expense limitation of $6,000, the earned income limitation applies because Troy's earned income ($3,500) is less than the child care expenses ($4,000). Therefore, the amount of child care expenses eligible for the credit is limited to $3,500. ◀

KEY POINT

The percentage used to calculate the credit varies from 20% to 35% depending on the taxpayer's AGI.

Credit Rate and Amount. Generally, the credit equals 35% of qualifying expenses. However, the credit rate is reduced by one percentage point for each $2,000 (or fraction thereof) of adjusted gross income in excess of $15,000. The rate goes no lower than 20%.

Credit rates for the child care credit across AGI levels

Adjusted Gross Income	Applicable Percentage	Adjusted Gross Income	Applicable Percentage
$ 0 to $15,000	35%	29,001 to 31,000	27%
15,001 to 17,000	34	31,001 to 33,000	26
17,001 to 19,000	33	33,001 to 35,000	25
19,001 to 21,000	32	35,001 to 37,000	24
21,001 to 23,000	31	37,001 to 39,000	23
23,001 to 25,000	30	39,001 to 41,000	22
25,001 to 27,000	29	41,001 to 43,000	21
27,001 to 29,000	28	43,001 and above	20

EXAMPLE I:14-18 ▶

Mark and Vicki are married, file a joint return, and have three children under age 13. Mark and Vicki's employment-related earnings are $25,000 and $10,000, respectively. Including all sources of income, their AGI is $36,000. They incur $8,000 of child care expenses during the year. First, their eligible child care expenses are limited to $6,000 because Mark and Vicki have more than one qualifying child. Second, the credit rate equals 24%, computed as follows:

Adjusted gross income (AGI)	$36,000
Base amount	(15,000)
Excess	$21,000
Divided by $2,000	10.5
Rounded up to	11
Applicable credit (35% − 11%)	24%

Mark and Vicki's child and dependent care credit for the year is $1,440 ($6,000 × 24%). ◀

Other Sources of Tax Benefits for Dependent Care. Employees may be eligible for two types of employer supported dependent care assistance that exclude from employees' gross income payments made by their employer for the provision for dependent care. The assistance is through dependent care assistance programs (IRC Section 129)[18] and employee funding of flexible spending arrangement (IRC Section 125). Qualifying employment-related expenses for purposes of the child and dependent care credit are reduced to the extent dependent care costs are funded through either of these types of plans.

EXAMPLE I:14-19 ▶

Assume the same facts as in Example I:14-18 except assume that Mark was reimbursed $4,100 by his employer under a qualified dependent care assistance program and assume that this amount was excluded from his gross income. Thus, expenses eligible for the child and dependent care credit are reduced to $1,900 ($6,000 − $4,100) and the child care credit is $456 ($1,900 × 24%). ◀

ADDITIONAL COMMENT

The tax credit for the elderly or disabled amounted to $5.3 million in 2022.

Tax Credit for the Elderly and Disabled. A limited credit is provided for certain low-income individuals who have attained age 65 before the end of the tax year or who retired because of a permanent and total disability.

---

[18] Sec. 129. (See Chapter I:4 for a discussion of the requirements for exclusion.)

The maximum credit is 15% of an initial amount of $5,000 ($7,500 for married individuals filing jointly if both spouses qualify).[19] This initial amount is reduced by:

- Nontaxable benefits from Social Security, railroad retirement, or Veterans Administration pension or annuity, and
- One-half of AGI in excess of $7,500 for a single individual ($10,000 (MFJ)).[20]

Few elderly or disabled taxpayers benefit from the credit because they either receive Social Security benefits in excess of ceiling limitations or they have AGI amounts in excess of the limitations, which effectively reduces or eliminates the allowable credit.

EXAMPLE I:14-20 ▶ Wayne and Tammy are both 67 years old and file a joint return. They have AGI of $11,000 and receive nontaxable Social Security benefits of $3,000 during the current year. Their tax credit for the elderly is computed as follows:

Initial ceiling amount			$7,500
Minus:	Nontaxable social security benefits	$3,000	
	One-half of excess AGI (0.50 × [$11,000 − $10,000])	500	(3,500)
Total credit base			$4,000
			× 0.15
Tax credit			$ 600

◀

Adoption Credit. A nonrefundable credit of up to $17,280 is allowed for qualified adoption expenses in 2025 ($16,810 in 2024).[21] The credit generally is allowable in the year the adoption is finalized. If adoption expenses are paid prior to the year in which the adoption is finalized, such expenses are not eligible for the credit until the year the adoption is finalized. If expenses are paid during or after the year the adoption is finalized, the credit is allowable in the year the expenses are paid or incurred.

The credit is phased out (ratably over a $40,000 range) for high income taxpayers. The 2025 phaseout begins at AGI of $259,190 ($252,150 in 2024).[22]

Qualified adoption expenses include reasonable and necessary adoption fees, court costs, attorney fees, and other expenses that are directly related to the legal adoption of an eligible child. Qualified adoption expenses are reduced by any reimbursements from an employer plan. An eligible child is defined as a child who has not reached 18 years old when the adoption takes place, or one who is physically or mentally incapable of self-care.

Taxpayers adopting a special needs child are treated as having incurred qualified adoption expenses of the maximum credit amount even if actual expenses are less.

EXAMPLE I:14-21 ▶ Oscar and Betty began proceedings in June 2024 to adopt a child. In 2024, they incurred $10,000 of attorney fees and adoption agency fees. In 2025, they incurred an additional $8,000 of qualified adoption expenses, and the adoption became final. Oscar and Betty's AGI in 2025 equals $275,000. The adoption credit is allowable in 2025, computed as follows:

Total qualified adoption expenses	$18,000
Maximum credit (lesser of $18,000 or $17,280)	17,280
Phase-out percentage [($275,000 − $259,100)/$40,000] = 39.53%	
Amount of credit disallowed ($17,280 × 39.53%)	(6,831)
Amount of credit allowed	$10,449

Oscar and Betty can take a credit for $10,449 of expenses and must claim the credit in 2025, the year the adoption becomes final. ◀

---

[19] Sec. 22(c)(2).

[20] The Social Security Administration reports that the average retiree will receive around $23,712 in Social Security benefits in 2025. Even a single taxpayer with no other income who receives this level of benefits would see the credit of $750 reduced to $0.

[21] Sec. 23.

[22] For purposes of the phase-out, AGI is modified and determined without regard to the exclusions from gross income for foreign earned income, after the application of the rules relating to the taxation of Social Security, and other items. (See Sec. 36B(2).)

Child Tax Credit. Taxpayers are allowed a credit of $2,000 for each qualifying child. The definition of qualifying child for the child tax credit requires that the child is the taxpayer's dependent based on the category "qualifying child" under section 152 (the dependent qualification rules),[23] and that the child is under age 17. The Tax Cuts and Jobs Act of 2017 also added an additional $500 nonrefundable credit for "qualifying relatives" under section 152.

The credit begins to phase out when modified AGI[24] reaches a threshold amount ($400,000 (MFJ) or $200,000 (all other taxpayers)). The credit lost to phaseout is determined by the following.

$$[(\text{Modified AGI} - \text{Threshold})/\$1{,}000]^{*} \times \$50$$

*rounded up to the next whole number

Thus, a married couple filing jointly with one qualifying child and modified AGI of $405,500 will have a tentative child tax credit of $2,000. The credit will be subject to a phaseout of $300 [($405,500 − $400,000) ÷ $1,000 = 5.5 and 6 × $50 = $300]. Their allowable credit will be $1,700.

ADDITIONAL COMMENT

For taxpayers with three or more qualifying children, the refundable child tax credit equals the lesser of (1) the unclaimed portion of the credit, (2) the greater of a) 15% of the taxpayers earned income in excess of $2,500 or b) the taxpayer's social security taxes in excess of the taxpayer's earned income credit, or (3) $1,700 per qualifying child (2025).

The child tax credit is generally *nonrefundable*. However, for tax years after 2015, if a taxpayer's tentative child tax credit is greater than the total tax liability, part of the credit (the "additional" child tax credit) is *refundable*. The refundable portion is the lesser of (1) the unclaimed portion of the credit, (2) 15% of taxpayer's earned income in excess of $2,500, or (3) $1,700 per qualifying child (2025). Form 8812 is used to compute the refundable portion of the child tax credit.

Higher Education Costs Tax Credits. Two credits are available to taxpayers who incur higher education expenses. The two credits are the "American Opportunity Tax Credit (AOTC)" and the "Lifetime Learning Credit (LLC)."[25]

American Opportunity Tax Credit.[26] Under the AOTC, taxpayers are allowed a credit for up to $2,500 for qualified tuition and related expenses paid during the taxable year for each eligible student. The credit allowed equals 100% of the first $2,000 of qualified expenses plus 25% of up to $2,000 of qualified expenses in excess of the first $2,000 ($2,000 + 25%($2,000) = $2,500, maximum credit amount). The AOTC can be taken for each eligible student. Thus, parents who have two children in their first four years of college may claim up to $2,500 for each child.

ADDITIONAL COMMENT

In addition to the AOTC and Lifetime Learning credits, other tax laws that encourage education include:
(1) Sec. 529 plans;
(2) Improved student loan interest deduction rules;
(3) Increased limits for Coverdell Education IRAs.

To qualify, expenses must meet several criteria. First, eligible expenses include payments to enroll in and attend courses. Included are tuition and fees required for enrollment and course materials (including textbooks) but not payments for room & board, activity fees, or other expenses unrelated to academic coursework. Second, qualifying expenses are limited to those paid for the first four years of postsecondary education. This limit applies in years measured by time (the AOTC may be used only four times for a student), and by academic progress (the student is an undergraduate). The student's standing is evaluated at the beginning of the tax year based on the student's standing as assigned by the educational institution. Third, the expenses must be paid for an eligible student. An eligible student is one who is enrolled in an eligible institution, carrying at least a one-half time course load for at least one academic term. Eligible students include the taxpayer, taxpayer's spouse, and taxpayer's dependent(s), but exclude any student with a felony drug conviction. Eligible institutions are generally accredited post-secondary schools eligible to participate in U.S. federal financial aid programs.

Other requirements include the following items.

- ▶ If a taxpayer pays qualified expenses in one year but the expenses relate to an academic period that begins during January, February, or March of the next taxable year, the academic period is treated as beginning during the taxable year in which the payment is made. Thus, a payment of tuition in December 2025 for the Spring Semester, 2026 (which begins in January 2026) would be eligible for the AOTC in 2025.

---

[23] Under IRC Section 152(c) for the dependency rules, a qualifying child must 1) be a relative of the taxpayer (descendent, sibling, or descendent of a sibling), 2) reside in the taxpayer's household for more than one-half of the year, 3) be supported by the taxpayer, 4) not file a joint return with a spouse, and 5) be younger than the taxpayer and under age 19 (or a student under age 24). For the child tax credit, the age requirement in the dependency rules is modified to under age 17.

[24] Modified AGI means AGI increased by any amount excluded from gross income under Secs. 911, 931, or 933. Secs. 911, 931, and 933 are special exclusions in the international tax area.

[25] Sec. 25A.

[26] The provisions discussed for the AOTC represent those of the "expanded" Hope Scholarship credit.

- ▶ Qualified tuition and related expenses eligible for the AOTC must be reduced by amounts received as scholarships (Sec. 117), employer-sponsored educational reimbursement plans (Sec. 127), education IRAs (Sec. 530), or other provisions of the tax law.

The allowable credit is phased out for high income taxpayers. The phase-out occurs over a $20,000 range (for married filing joint taxpayers) and begins when modified AGI exceeds $160,000 as follows:

$$\text{Tentative AOTC} \times \frac{\text{Modified AGI} - \$160{,}000}{\$20{,}000} = \text{Phaseout for MFJ taxpayers}$$

For taxpayers other than joint filers, phase-out occurs over a $10,000 range, beginning at $80,000 of modified AGI. Modified AGI is AGI before exclusions for foreign earned income and foreign housing costs.

Although it is a nonrefundable credit, up to 40% of the allowable AOTC is refundable.

Lifetime Learning Credit. The LLC allowed equals 20% of qualified education expenses of up to $10,000 per year. The credit is allowed for an unlimited number of tax years. The $10,000 annual limit applies at the "family level" or to the collected qualified expenses incurred for the taxpayer, taxpayer's spouse, and taxpayer's dependents. The LLC is nonrefundable.

Expenses must meet three criteria to be qualified education expenses. First, they must be paid during the year for tuition and academic fees (not course materials). Second, the expenses must be paid for postsecondary academic coursework or courses to obtain or improve job skills. Finally, the expenses must be paid for the taxpayer, taxpayer's spouse, or taxpayer's dependent(s). Unlike the AOTC, the LLC definition of eligible students does not exclude students with felony drug convictions. Consistent with the AOTC conditions, any tax-preferred amounts received (scholarships, etc.) reduce the amount of qualified education expenses.

Eligible expenses for LLC are reduced to effectively phase out the credit for high income taxpayers. The LLC is phased-out proportionately over a $20,000 range beginning at modified AGI of $160,000 for married filing joint taxpayers. For non-married taxpayers, the phase-out occurs over a $10,000 range, beginning at $80,000.[27]

Qualified education expenses of a student eligible for both the AOTC and the LLC may be used either for the AOTC or the LLC—but not both. If any of a student's expenses are used for AOTC, none of the expenses for that student are eligible for LLC in that year.

EXAMPLE I:14-22 ▶ Mark and Jane Green are married, file a joint return, and have three dependent children in college, Ron, Susan, and Bill. Ron and Susan attend State University and Bill attends Private University. The Greens' modified AGI in 2025 is $164,000. Details are as follows:

	Spring Semester 2025 (Paid in January 2025)	*Fall Semester 2025 (Paid in August 2025)*	*AOTC Eligible* ***Expenses***
Ron:	Senior	5th year Senior	
Tuition and fees	$1,500	$1,550	$3,050
Course materials (books)	300	300	600
Room and board	3,500	3,700	—
Susan:	Junior	Senior	
Tuition and fees	$1,500	$1,550	$3,050
Course materials (books)	300	300	600
Room and board	3,500	3,700	—
Bill:		Freshman	
Tuition and fees	—	$3,700	$3,700
Course materials (books)	—	400	400
Room and board	—	3,700	—

---

[27] For years beginning after December 31, 2020, the phase outs for the LLC and the AOTC are the same and not indexed for inflation.

The Greens can claim education tax credits as follows:

Ron has not completed four years of postsecondary education at the beginning of 2025, so for the AOTC, he qualifies as an eligible student for both semesters. Assuming the AOTC has not been used for Ron in four prior tax years, his 2025 qualifying education expenses include his tuition and fees and course materials, totaling $3,650 ($1,500 + $1,550 + $300 + $300).

Ron's tentative AOTC equals $2,413 ((100% × $2,000) + (25% × $1,650)).

As a junior at the beginning of the year, Susan qualified as an eligible student for the AOTC in both semesters.

Susan's tentative AOTC equals $2,413 ((100% × $2,000) + (25% × $1,650)).

Bill qualified as an eligible student for AOTC in Fall 2025, when he began post-secondary coursework. Bill's qualifying educational expenses total $4,100 ($3,700 + $400), but only the first $4,000 may be used to generate this credit.

Bill's tentative AOTC equals $2,500 ((100% × $2,000) + (25% × $2,000)).

The AOTC allowed for the Greens for 2025 equals $5,861, determined as below.

Tentative AOTC = $2,413 Ron + $2,413 Susan + $2,500 Bill = $7,326
Phase-out = $7,326 × [($164,000 − $160,000)/$20,000] = $1,465
Allowed AOTC = $7,326 − $1,465 = $5,861

Note: If the facts were changed to indicate the AOTC had been used already for Ron in four previous tax years, the Greens could not claim the AOTC for Ron, but they may claim the LLC. In this case, their combined education credit (AOTC + LLC) equals $4,418, determined as below.

Tentative AOTC = $0 Ron + $2,413 Susan + $2,500 Bill = $4,913
Phase-out = $4,913 × [($164,000 − $160,000)/$20,000] = $983
Allowed AOTC = $4,913 − $983 = $3,930

Tentative LLC = 20% × $3,050 = $610 (LLC qualifying expenses exclude course materials)
Phase-out = $610 × [($164,000 − $160,000)/$20,000] = $122
Allowed LLC = $610 − $122 = $488 ◀

Residential Energy Credits. Congress has enacted a range of incentives for both individuals and businesses to promote domestic energy production and conservation. Most of these incentives are in the form of tax credits. For individual taxpayers, the residential energy efficient property credit is the primary credit.

Residential Clean Energy Property Credit. For tax years through 2034, the credit is allowed for several types of energy efficient property installed on a taxpayer's principal residence.[28] Eligible residential energy efficiency property includes non-solar property (fuel cell, wind energy, biomass stoves and geothermal heat pump) and solar property (solar water heating and solar electric generating). For property placed in service before 2023, the credit allowed equals 30% of the cost of eligible residential property. After 2023, the credit is no longer allowed for biomass stoves, but battery storage property becomes eligible.[29] The credit rate remains at 30% for solar property placed in service through 2031. But, the credit is phased out after 2031, with the credit rate falling to 26% for property placed in service in 2032 and 2033. The rate will fall to 22% for property placed in service in 2034 and expire thereafter.

Other features of the credit are:

---

[28] Sec. 25D, as amended by the 2015 PATH Act and the Inflation Reduction Act of 2022.

[29] Sec. 25D(h).

- Labor costs to install the property are included in the qualified cost of the property.
- Second homes or vacation homes do not qualify for some parts of the credit.
- If less than 80% of the use of the dwelling is for nonbusiness use, then only the percentage of nonbusiness use can be taken into account.
- The taxpayer's basis in the property is reduced by the amount of the credit.
- The credit is not available for use with swimming pools or hot tubs.
- Credits are nonrefundable, but credits earned but not used in the current year can be carried forward to the next year.

Qualified Retirement Savings Contributions Credit ("Saver's Credit"). The Saver's Credit is designed to encourage low and middle income taxpayers to save for retirement. The credit is based on contributions or deferrals to qualified retirement plans.[30] The saver's credit is allowed *in addition* to otherwise allowable exclusions or deductions from gross income for retirement plan contributions or deferrals.

ADDITIONAL COMMENT

Although its availability and amount are constrained by its structure to favor modest income taxpayers, in 2004, almost 5.2 million taxpayers reported saver's credits of just over $1 billion. By 2020, 9.4 million taxpayers reported this credit in amounts totaling almost $1.75 billion.

To be eligible for the credit, a taxpayer must be at least 18 years of age as of the close of the tax year, must not be claimed as a dependent on another taxpayer's tax return, and must not be a full-time student[31] for purposes of the dependency exemption.

The saver's credit is computed by multiplying the amount contributed (maximum $2,000 per eligible individual per year) by an applicable percentage. The percentage for 2025 depends on the taxpayer's adjusted gross income, as shown in the following table:

Filing Status	*50% Credit Rate AGI Range*	*20% Credit Rate AGI Range*	*10% Credit Rate AGI Range*
Married Filing Joint	$0–$47,500	$47,501–$51,000	$51,001–$79,000
Head of Household	$0–$35,625	$35,626–$38,250	$38,251–$59,250
Other	$0–$23,750	$23,751–$25,500	$25,501–$39,500

Qualified retirement savings contributions equal the sum of contributions or deferrals by the taxpayer to specified retirement plans, including IRAs (Roth and Traditional), 401(k) plans, 403(b) plans, and certain other plans, reduced by any distributions from such plans.

EXAMPLE I:14-23 ▶ Steve is 20 years old, has no dependents, is filing as a single taxpayer and has AGI of $17,000 in 2025. During the year, he contributes $2,000 to his Roth IRA. Steve is eligible for a Qualified Retirement Savings Contributions Credit in the amount of $1,000 ($2,000 × 50%). The credit amount would be the same if he contributed $2,000 to a traditional IRA, but in addition to the $1,000 credit, Steve would be permitted to deduct the $2,000 contribution to the traditional IRA on his individual return. ◀

KEY POINT

The foreign tax credit is available only on income, war profits, and excess profits taxes or taxes paid in lieu of such taxes. It is sometimes difficult to determine whether a particular foreign tax falls into the qualifying category.

FOREIGN TAX CREDIT

U.S. citizens, resident aliens, and U.S. corporations are subject to U.S. taxation on their worldwide income.[32] The foreign-source portion of worldwide income is also subject to taxation by the foreign country. To reduce possible double taxation, U.S. tax law provides a foreign tax credit (FTC) for income taxes paid or accrued to a foreign country or a U.S. possession.

---

[30] Sec. 25B. The Pension Protection Act of 2006 made the credit permanent.

[31] Sec. 152(f)(2).

[32] Certain exceptions are provided by treaty agreements between the United States and foreign countries whereby certain types of foreign-source income may be exempt from taxation or taxed at a reduced tax rate in the foreign country.

ADDITIONAL COMMENT

In 2022, 11.3 million individual tax returns showed claims for $32.9 billion in foreign tax credits.

In lieu of the FTC, taxpayers may elect to take a deduction for foreign taxes paid or accrued.[33] In general, the FTC results in a greater tax benefit because (as previously discussed) a credit is fully offset against the tax liability, while a deduction merely reduces the tax base (taxable income). Finally, in lieu of the FTC, taxpayers may elect to exclude foreign earned income from U.S. gross income (Sec. 911). (See Chapter I:4 for more information.)

Allowable FTC. The **FTC** equals the lesser of (1) foreign tax paid or accrued, or (2) the portion of U.S. income tax liability attributable to income earned in all foreign countries (FTC limitation).[34] This limitation restricts claiming the benefit from foreign tax credit if the effective foreign tax rate on foreign earnings exceeds the effective U.S. tax rate on these earnings. The FTC limitation is computed using the following formula:

$$\frac{\text{Foreign source taxable income}}{\text{Worldwide taxable income}} \times \text{U.S. income tax before credits} = \text{FTC limitation}$$

EXAMPLE I:14-24 ▶

In 2025, Robert Albertson, single, has $200,000 of U.S. source taxable income and $100,000 of foreign source taxable income from country A. Robert's worldwide taxable income is $300,000 ($200,000 + $100,000). Country A levies $40,000 in foreign income taxes on the foreign source taxable income (i.e., a 40% effective tax rate). His U.S. tax before credits is $74,547 on the $300,000 of worldwide taxable income. Using the formula given above, the overall FTC limitation is computed as follows:[35]

$$\frac{\$100{,}000}{\$300{,}000} \times \$74{,}547 = \$24{,}849$$

Because the foreign tax payments ($40,000) exceed the U.S. tax attributable to the foreign source income ($24,849), the limitation applies. Thus, Robert's net U.S. tax equals $49,698 ($74,547 − $24,849), and $15,151 ($40,000 − $24,849) of FTC cannot be used in the current year. ◀

STOP & THINK

Question: Since a credit is generally more valuable than a deduction, under what circumstances would it be beneficial for a taxpayer to take a deduction for foreign taxes in lieu of the foreign tax credit?

Solution: If a taxpayer has foreign source taxable income from one country and an equal loss from another foreign country, the foreign tax credit limitation is zero because the net foreign-source taxable income is zero. Because none of the taxes paid in the foreign country in which taxable income was produced can be claimed as a credit, the taxpayer may choose to deduct them (unless the unused credits can be carried back or forward).

Treatment of Unused Credits. Unused foreign tax credits may be carried back one year and then forward for ten years to tax years where the limitation is not exceeded (i.e., the foreign tax payment is lower than the U.S. taxes attributable to the foreign-source income in the carryback or carryover years). Unused credits are lost if they are not used by the end of the ten-year carryover period.

---

[33] Sec. 164(a)(3).

[34] Sec. 904.

[35] Two types of income have a separate foreign tax credit limitation: passive income and all other income.

BUSINESS RELATED TAX CREDITS

General Business Credits. The tax credits commonly available to businesses are grouped into a special category called **general business credits**. These credits are combined for the purpose of computing an overall dollar limitation based on the taxpayer's tax liability (discussed in more detail on page I:14-23). If the general business credits earned in the current year exceed the limitation, the excess may be carried back one year and carried forward 20 years. The credits are used in order of time generated with carryforward credits used first, current year credits next, and then carryback credits.[36]

EXAMPLE I:14-25 ▶ Eastern Corporation had unused general business tax credits of $10,000 at the end of last year that are carried forward. In the current year, Eastern earns $5,000 of additional credits and computes an overall credit limitation of $12,000 for the year. The allowable $12,000 credit consists of the $10,000 carryforward and $2,000 from the current year. The $3,000 of unused credit ($5,000 − $2,000) is carried forward. ◀

The more important general business credits are discussed below. All are nonrefundable.

Tax Credit for Rehabilitation Expenditures. Congress provides a credit for investments in the rehabilitation of older industrial and commercial buildings and certified historic structures.[37]

REAL-WORLD EXAMPLE

Taxpayers incurred substantial rehabilitation expenditures on an old factory building, but the tax credit was not allowed because the taxpayers did not use the straight-line depreciation method. *Frank DeMarco,* 87 T.C. 518 (1986).

The credit equals 20% of qualified rehabilitation expenditures (QRE) for certified historic structures, with the credit allowed ratably over a five-year period. The credit applies only to depreciable trade or business property and depreciable property held for investment. Residential rental property does not qualify unless the building is a certified historic structure. Rehabilitation includes renovation, restoration, or construction of a building, but not an enlargement or new construction. For buildings other than certified historic structures, a rehabilitation project must meet certain structural tests and must be substantial (QRE exceed the greater of $5,000 or the building's adjusted basis).[38]

The following additional provisions apply.

- For certified historic structures, the total rehabilitation must be certified by the Department of the Interior as being consistent with the historic character of the building.
- Straight-line depreciation generally must be used with the applicable Sec. 168 recovery periods with respect to rehabilitation expenditures. The regular MACRS depreciation rules apply to the portion of the property's basis that is not eligible for the credit.
- The basis of the property for depreciation is reduced by the full amount of the credit taken.
- The rehabilitation credit is recaptured at a rate of 20% per year if the property is disposed of within five years of the date placed in service.

EXAMPLE I:14-26 ▶ During the current year, Ted incurs $40,000 of qualified rehabilitation expenditures (QRE) in connection with a certified historic structure used in his business. The adjusted basis of the certified historic structure was $38,000 at the time the rehabilitation began. The property qualifies for the rehabilitation credit because:

- It is used in Ted's trade or business and is depreciable.
- The property is a certified historic structure.
- The amount of the QRE exceeds the greater of the property's $38,000 adjusted basis or the $5,000 statutory minimum.

Thus, the total credit is $8,000 (20% × $40,000), but Ted will take $1,600 ($8,000/5) for each of the next five years. The building's depreciable basis attributable to the $40,000 of QRE rehabilitation expenditures is reduced by the full amount of the credit to $32,000 ($40,000 − $8,000). If the property is disposed of after one year, $6,400 of the credit ($8,000 − $1,600) is recaptured. ◀

---

[36] Sec. 38(d).

[37] Secs. 47(a)(1) and (2). A certified historic structure must be certified by the Department of the Interior and must be located in a registered historic district or listed in the *National Register.*

[38] Sec. 47(c)(1)(A).

Business Energy Tax Credits. To encourage energy conservation measures, credits are available to businesses that invest in energy-conserving properties.[39] Construction, reconstruction, or erection of the property must be completed by the taxpayer, or if purchased, its original use must begin with the taxpayer. The credit rate is 30% of property basis for energy properties that produce solar energy or hybrid solar light, qualified fuel cell property, and qualified small wind energy property. The credit rate is 10% of property basis for energy properties that are stationary microturbines, combined heat and power systems, geothermal heat pump systems, and others.

Only for solar energy properties, the credit is available if the property is acquired or construction began by 2019. If acquired or construction began in 2020, the credit rate is reduced to 26%; however, the credit was increased back to 30% for 2022–2033. In 2034 the rate is scheduled to reduce to 22.5%, then to 15% in 2035, and expiring thereafter. For all other energy sources, the credit is available for property acquired and placed in service before 2017.

Recent tax law changes have set up a complex interaction among the energy credit, renewable energy grants, and an electricity production credit. Details are beyond the scope of this text, but essentially, taxpayers may choose to receive grants or take credits, but not both.

Work Opportunity Credit. For the years before 2026, employers who hire individuals belonging to targeted groups (defined below) may elect the work opportunity credit (WOTC). This credit is designed to provide incentives to hire veterans and individuals who may face economic disadvantages.

The credit equals 40% of qualified first year wages up to $6,000 for individuals in targeted group A, up to $12,000 for individuals in targeted group C, up to $14,000 for individuals in targeted group D, and up to $24,000 for individuals in targeted group E. For individuals in group B, the credit rate is 40% of up to $10,000 of first year wages, and the credit rate is 50% of up to $10,000 of second year wages.

- Group A: qualified veterans, ex-felons, designated community residents, vocational rehabilitation referrals, and summer youth employees; recipients of benefits from programs including temporary assistance for needy families, supplemental nutrition assistance, Social Security supplemental security income, unemployment compensation (if employment extended 27 weeks or more), and veterans whose families received supplemental nutrition assistance for at least three months and who were unemployed from four weeks to six months in the year before hire.
- Group B: recipients of benefits under long-term family assistance.
- Group C: veterans with a service-related disability, hired within 1 year of discharge from active duty.
- Group D: veterans with 6 months or more of unemployment in the year before hire.
- Group E: veterans with a service-related disability, hired within 1 year of discharge from active duty or with more than 6 months of unemployment in the year before hire.

Employer-Provided Child Care Credit. The employer-provided child care credit is an incentive for businesses to provide child care for their employees. The credit is the *sum* of the following two amounts (but may not exceed $150,000 for a tax year):

- 25% of qualified child care expenses. These expenses are amounts paid to acquire, construct, rehabilitate, expand, and operate a qualified child care facility or paid under contract to a qualified child care facility for services to employees; plus
- 10% of qualified child care resources and referral expenditures. These are expenses paid or incurred by a taxpayer under a contract to provide child care resource and referral services to employees.

These are several special rules with regard to the credit, including:[40]

- Employers claiming this credit cannot claim a deduction for child care expenses and also claim the credit. Expenses that would be otherwise deductible must be reduced by the amount of the credit claimed.

---

[39] Sec. 48(a)(2).

[40] Sec. 45F(d).

- If, within ten years of the year in which a child care facility is placed in service, an employer terminates its use as a qualified child care facility, the credit must be recaptured. The recapture rate begins at 100% (terminate within the first three years), and declines steadily as the years of facility use increase.

This credit is part of, and is subject to, the limitations of the general business credit.

EXAMPLE I:14-27 ▶ Gamechicken Partnership began a child care facility for its employees during the current year. The business incurred the following expenses:

Rent on facility	$ 25,000
Leasehold improvements	60,000
Equipment, toys, etc.	18,000
Salaries of child care employees	30,000
Other operating expenses of facility	12,000
Qualified child care referral fees*	8,000
Total expenses	$153,000

*Fees paid to a firm to place children in other facilities.

Gamechicken's credit for the year would be $37,050 [($145,000 × 25%) + ($8,000 × 10%)]. All of the above amounts are also deductible after reduction by the amount of the credit. So, the rent, salaries, and operating expenses of $67,000 ($25,000 + $30,000 + $12,000) must be reduced by a total of $16,750 ($67,000 × 25%), the referral fees must be reduced by $800 ($8,000 × 10%), and the depreciable basis of the leasehold improvements and equipment must be reduced by $19,500 ($78,000 × 25%). ◀

Disabled Access Credit. A nonrefundable tax credit is available to eligible small businesses for expenditures incurred to make existing business facilities accessible to disabled individuals. The disabled access credit is allowed at a 50% rate of eligible expenditures that exceed $250 but do not exceed $10,250.[41] Thus, the annual credit limitation is $5,000 [50% × ($10,250 − $250)]. The allowed credit reduces the deduction for eligible expenses.

Eligible expenditures include payments for removing architectural, communication, physical, or transportation barriers that prevent a business from being accessible. Expenditures made in connection with *new facility* construction are not eligible for the credit. An eligible small business is any business that either (1) had gross receipts of $1 million or less in the preceding year, or (2) in the case of a business failing the first test, had no more than 30 full-time employees in the preceding year. To elect the credit, the taxpayer reports eligible expenditures on IRS Form 8826.

EXAMPLE I:14-28 ▶ In the previous year, Crane Corporation (an S Corp) had 14 employees and $2 million of gross receipts. During the current year, Crane installed concrete access ramps at a total cost of $14,000. Crane is an eligible small business because the company had 30 or fewer full-time employees during the preceding year. Only $10,000 of eligible expenditures qualify for the credit, thereby limiting the credit to $5,000 ($10,000 × 0.50). The depreciable basis of the property must be reduced by the credit amount to $9,000 ($14,000 − $5,000). ◀

Credit for Increased Research Activities. To encourage businesses to conduct research and experimentation, a credit is allowed. The research credit equals the sum of the regular research credit, the university basic research credit, and the energy research consortium credit. The last two are beyond the scope of this book.

This credit is allowed for increased research expenses and at a rate of 20% of the excess of qualified research expenses over the base amount.[42] Qualified research expenses (QRE) are defined as internal and external research expenses that are incident to the development or improvement of a product or component. Only incremental expenditures (the excess over a base amount) are eligible for the credit. Research conducted after the start of commercial production does not qualify for the credit, nor do marketing, advertising, or production expenses.

---

[41] Sec. 44.

[42] For many years, Sec. 41 limited eligible expenses to those incurred by a given date, requiring annual (and often retroactive) extension of the credit. The PATH Act of 2015 removed the annual expiration for expenses incurred after 2014.

The base amount equals the greater of (1) the product of the taxpayer's fixed-base percentage and average annual gross receipts over the four years prior to the credit year, and (2) 50% of credit year qualified research expenditures. The fixed-base percentage is the historical ratio of qualified research expenditures to gross receipts and is limited to 16%. The table below specifies the historical period used based on the years in which the taxpayer incurred qualified research expenses, assuming the taxpayer is considered a start-up company.

History of Incurred QREs	*Fixed base percentage*
First year through fifth year	3%
Sixth year	1/6*(QRE/gross receipts for years 4 & 5)
Seventh year	1/3*(QRE/gross receipts for years 5 & 6)
Eighth year	1/2*(QRE/gross receipts for years 5, 6, & 7)
Ninth year	2/3*(QRE/gross receipts for years 5, 6, 7, & 8)
Tenth year	5/6*(QRE/gross receipts for years 5, 6, 7, 8, & 9)

After the tenth year in which the taxpayer incurs QREs, the fixed base percentage equals the ratio of QRE accumulated across any five years in the year five to year ten range divided by the gross receipts for the same five year range.

EXAMPLE I:14-29 ▶ Northern Inc. (an S Corp) began operations in 2021 and had the following gross receipts for the previous four-year period.

2021	$4,500,000
2022	7,000,000
2023	8,000,000
2024	8,500,000

Northern's average annual gross receipts for the four-year prior period is $7,000,000. In 2025, Northern incurred $400,000 of qualified research expenditures. Assuming Northern Inc. uses a fixed-base percentage of 3%, the corporation's base amount equals $210,000, the greater of (1) $210,000 ($7,000,000 × 3%) or (2) $200,000 ($400,000 × 50%). The regular research credit equals $38,000 [20% rate × ($400,000 – $210,000)]. ◀

Taxpayers may elect a simplified credit in lieu of the regular credit. This simplified credit is not based on historical gross receipts, thus opening the research credit to businesses with less than five years of history. The base and credit percentage is computed as follows:

- 14% of the excess of qualified research expenses of the current year over 50% of the average qualified research expenses for the three preceding taxable years; or
- 6% of qualified research expenses of the current year if the taxpayer does not have qualified research expenses in each of the three preceding taxable years.

EXAMPLE I:14-30 ▶ Howell Company is a calendar year taxpayer. In the current year, it incurs $175,000 of qualified research expenses. Howell incurred qualified research expenses in each of the three prior years (year 1 $25,000, year 2 $38,000, and year 3 $57,000; average of $40,000 over the period). Howell can elect the simplified credit using a base equal to 50% of qualified research expenses averaged over the three prior years. The base amount equals $20,000 (50% × $40,000), and the current year credit equals $21,700 [14% × ($175,000 – $20,000)]. The deductible expenses equal $153,300 ($175,000 × $21,700).

Instead, if the facts were changed to indicate Howell did not incur research expenses in each one of the prior three years, the current year credit equals $10,500, based on 6% of current year qualified research expenses (6% × $175,000). The deductible expenses equal $164,500 ($175,000 – $10,500). ◀

The business deduction allowed for research and experimentation expenditures under Sec. 174 must be reduced by the amount of the research credit.[43]

General Business Credit Overall Limitation. As noted at the beginning of this section, business credits are summed to an amount called the general business credit. The general business

---

[43] Sec. 280(c)(2).

ADDITIONAL COMMENT

The general business credit overall limitation is less complicated for C corporations. C corporations have no nonrefundable personal credits (but may have a foreign tax credit), and the AMT does not apply for C corporations for 2018 and later years.

credit claimed is limited based on tax liability. The general business credit may not exceed the smaller of:[44]

1. Net income tax − tentative minimum tax, and
2. Net income tax − 0.25 (Net regular tax − $25,000)

Net income tax means the sum of the net regular tax liability and the AMT, reduced by the nonrefundable personal credits and the foreign tax credit. *Net regular tax liability* means the regular tax reduced by nonrefundable personal credits and the foreign tax credit. The limitation also prevents a taxpayer from claiming a general business credit in the same tax year that the taxpayer has alternative minimum tax. The overall credit limitation is demonstrated in the example below.

EXAMPLE I:14-31 ▶ Steve's general business tax credit before limitation is $50,000 (a $50,000 research credit). Steve's regular tax liability (before credits) is $45,000, and his tentative minimum tax is $10,000. His nonrefundable tax credits also include a $1,200 child and dependent care credit and an $1,800 foreign tax credit. Steve's general business tax credit is initially limited to the smaller of (A) and (B) below. Thus, the limitation on the $50,000 of general business tax credit is $32,000, and Steve's general business credit is limited to $32,000. This credit reduces his tax liability to $10,000 ($45,000 − $1,200 − $1,800 − $32,000)

A) Net income tax − Tentative AMT
[($45,000 − $1,200 − $1,800) − ($10,000)] = $32,000

B) Net income tax − $25% (Net regular tax − $25,000)
{($45,000 − $1,200 − $1,800) − 25% [($45,000 − $1,200 − $1,800) − $25,000] = $37,750}

Note that the limit on the general business credit must be evaluated separately for certain credits listed in Sec. 38(c). ◀

REFUNDABLE PERSONAL CREDITS

As mentioned earlier, refundable credits not only offset a taxpayer's income tax liability but can create a refund. If the refundable credits exceed the tax liability, the excess will be refunded to the taxpayer.

HISTORICAL NOTE

The earned income credit was claimed on 24.1 million tax returns in 2022 and amounted to $60.1 billion. This compares with 19.4 million returns and $32.5 billion in 2000.

Earned Income Credit. The **earned income credit** (EIC) is a special type of "negative income tax" designed to encourage individuals to become employed or to continue work despite low earnings.[45] The credit is based on earned income, which includes wages, salaries, tips, and other employee compensation plus net earnings from self-employment. Earned income does not include any form of employee compensation that is not includible in the taxpayer's income for the year.

The EIC is not available to taxpayers whose "disqualified income" exceeds $11,950 in 2025 ($11,600 in 2024). Disqualified income includes taxable interest income and dividends, tax-exempt interest income, net income from nonbusiness rents or royalties, net capital gains, and net passive activity income.

The credit is available to individuals with qualifying children[46] (see Chapter I:2 for the uniform definition of a qualifying child) and to individuals without children.[47] Individuals without children are eligible only if the following requirements are met:

- The individual's principal place of abode is in the United States for more than one-half of the tax year.
- The individual (or spouse if married) is at least age 25 and not more than age 64 at the end of the tax year.
- The individual is not a dependent or qualifying child of another taxpayer for the tax year.[48]

Married taxpayers must file a joint return to be eligible for the credit. Earned income credit percentages and the maximum amount of earned income allowed for the credit in

---

[44] The PATH Act of 2015 also added an election (Sec. 41(h)) to permit eligible small businesses to choose to use the research credit to reduce employer payroll taxes in up to six tax years.

[45] (See Chapter I:2 for a discussion of the relationship between the child tax credit and the earned income credit.)

[46] Any qualifying child's name, age, and taxpayer identification number must be reported on the tax return.

[47] Sec. 32(c).

[48] Sec. 32(c)(1)(A), as amended by the 2008 Adoption Act.

2025 are summarized in Table I:14-1. The allowable credit is reduced when the taxpayer's AGI or earned income (whichever is greater) exceeds a threshold (Table I:14-1).[49]

EXAMPLE I:14-32 Vivian is not married, has one qualifying child, and is eligible for the earned income credit in 2025. Vivian's AGI is $25,000 ($21,400 of wages and $3,600 of unearned income, but not "disqualified income"). The wages are considered earned income.

Tentative EIC = 34% × $12,730 = $4,328
Phase-out amount = 15.98% × ($25,000 − $23,350) = $264
Allowed EIC = $4,328 − $264 = $4,064

TABLE I:14-1
2025 Earned Income Credit Amounts

Number of Qualifying Children	Credit Rate	Credit Base (Maximum Earned Income)	Maximum Credit Amount	Phase-out Rate[a]	Phase-out Threshold for Married Filing Joint (Not Married Filing Joint)
0	7.65%	$8,490	$649	7.65%	$17,730 ($10,620)
1	34%	$12,730	$4,328	15.98%	$30,470 ($23,350)
2	40%	$17,880	$7,152	21.06%	$30,470 ($23,350)
3 or more	45%	$17,880	$8,046	21.06%	$30,470 ($23,350)

[a] Applied to the excess of Earned Income (or AGI if larger) over the threshold amount.

PROVISIONS RELATED TO HEALTH INSURANCE

OBJECTIVE 4

Describe and compute the premium tax credit

HEALTH INSURANCE PREMIUM ASSISTANCE CREDIT (ALSO KNOWN AS PREMIUM TAX CREDIT)

For years after 2013, a credit is allowed for a portion of taxpayers' qualifying health insurance premiums (Sec. 36B). The credit allowed equals the excess of qualifying premiums over the premium amount deemed affordable based on the taxpayer's household income. Qualifying premiums are based on the purchase of health insurance through a state American Health Benefit exchange or a federal exchange. Plans are categorized by the portion of cost of benefits covered by the plan, and they range from Bronze to Silver to Gold to Platinum. Premium amounts are reported by state and family characteristics on the federal website HealthCare.gov (https://www.healthcare.gov/health-plan-information/).

A credit-eligible taxpayer must meet the following four conditions:

1. Does not have access to minimum affordable essential coverage through an employer or government sponsored plan,
2. Files as married filing joint status if married,
3. Is not eligible to be a dependent of another taxpayer, and
4. Has household income in the range between 100% and 400% of the Federal Poverty Guidelines (FPG).[50]

Affordable coverage (condition 1 above) is defined as premiums costing no more than 9.69% of household income, and essential coverage is provided in a plan covering 60% or more of the cost of allowed plan benefits. Household income (condition 4 above) is defined as modified AGI of the taxpayer and the taxpayer's dependent family members required to file a federal income tax return. Modified AGI is AGI plus nontaxable Social Security benefits, tax-exempt interest income, and excluded foreign earned income.[51] The FPG minimums for the 48 contiguous U.S. states are outlined in the following pages.

---

[49] The percentages are adjusted annually for inflation.

[50] The Federal Poverty Guidelines are defined in Sec. 36B(d)(3) based on its definition in the Social Security Act (42 USC 1397jj(c)(5)). The U.S. Department of Health and Human Services publishes these guidelines annually.

[51] Section 36B(d)(2).

▼ TABLE I:14-2
2024 Federal Poverty Guidelines (FPG) Used to Calculate the 2025 Premium Tax Credit[52]

People in Family/Household	Poverty Guideline (100%)	People in Family/Household	Poverty Guideline (100%)
1	$15,060	5	$36,580
2	$20,440	6	$41,960
3	$25,820	7	$47,340
4	$31,200	8	$52,720

Add $5,380 per person beyond 8.

▼ TABLE I:14-3
2025 Affordable Premium Levels as a Percent of Household Income

Categories of Household Income Relative to the FPG	Affordable Premium as a Percent of Household Income	
	Initial %	Final %
Less than 150% FPL	0.00%	0.00%
At least 150% but less than 200% FPL	0.00%	2.00%
At least 200% but less than 250% FPL	2.00%	4.00%
At least 250% but less than 300% FPL	4.00%	6.00%
At least 300% but less than 400% FPL	6.00%	8.50%
At least 400% and higher FPL	8.50%	8.50%

Table I:14-3 outlines the rate of affordable premiums relative to household income across the six categories of income relevant for the credit. Application of this rate to a taxpayer's household income provides a measure of the premiums considered affordable (also known as personal share). The **premium tax credit** is determined by comparing this affordable premium amount to a benchmark—the actual premium amount for a Silver level insurance plan (second lowest in cost)—that matches the location of the taxpayer's home and family size. The premium tax credit allowed is the excess of the benchmark Silver plan premiums over the affordable premium amount.

EXAMPLE I:14-33 ▶ In 2025, Bryan and Heather Delane (27 and 26 years old, respectively) are eligible taxpayers and have household income of $34,400. Their income and household size put them at 168% ($34,400/$20,440) of the FPG.

Neither has available coverage from an employer. For 2025, the Delanes enroll in the second-lowest-cost Silver plan available through their state's health care exchange, for which total premiums will cost $5,500. The amount of the Delanes' health insurance premium tax credit will be determined as follows.

1st: Affordable premiums = Affordable% based on FPG × annual premiums for 2nd-lowest-cost Silver plan

The Delanes' household income relative to the FPG equals 168%, placing them in the 150%–200% category of affordable premium levels. Their share of the affordable premiums must be based on the initial rate in the category plus a prorated portion of the range between the final and initial rates in the category.

Delanes' affordable premiums:

FPG range = 200% − 150% = 50%; Distance from initial rate = 168% − 150% = 18%
Range of rates within Delanes' FPG category: 2.00% − 0.00% = 2.00%
Delanes' rate = initial rate + prorated portion of rate range
= 0.00% + 18/50 (2.00%) = 0.72%

Delanes' affordable premiums = 0.72% × $34,400 household income = $248
2nd Premium tax credit = cost of coverage − personal share (affordable premiums)
Delanes' premium tax credit = $5,500 − $248 = $5,252

---

[52] The 2024 Federal Poverty Guidelines included in Table I:14-2 can be found at https://www.healthcare.gov/glossary/federal-poverty-level-fpl/. The 2025 Affordable Premium Levels in Table I:14-3 can be found in Rev. Proc. 2024-35.

This credit may be available as an advance payment directly from the U.S. Treasury to the issuer of the health insurance plan. This approach reduces the taxpayer's periodic payment required for the personal share of the total premiums. The tax credit reported on the taxpayer's individual income tax return reflects the computed credit reduced by advance payments of the credit (Sec. 36B(f)). Any excess of the credit over advance payments represents an additional credit. Any shortfall is an additional tax liability.

TAX AUTHORITY UPDATE

The Tax Cuts and Jobs Act of 2017 reduced the Shared Responsibility payment to $0 for 2019 and thereafter. The payment was an excise tax imposed on individuals without the required minimum essential health insurance coverage in years 2014–2018.

TOPIC REVIEW I:14-2

Summary of Selected Tax Credits Discussed in Chapter 14

Tax Credit Item	Rationale for Inclusion in Tax Law
NONREFUNDABLE PERSONAL CREDITS:	
Adoption credit (Sec. 23)	Provides relief for taxpayers who incur expenses in the adoption of children
Child tax credit (Sec. 24) Child and dependent care credit (Sec. 21)	Reduces the tax burden on families with dependent children Provides relief for employed parents and other individuals who incur expenses for dependent care
Elderly and disabled credit (Sec. 22)	Provides relief for elderly taxpayers who are not substantially covered by Social Security
American opportunity tax credit and lifetime learning credit (Sec. 25A)	Assists students and families with the cost of post-secondary education
Qualified retirement savings contributions credit (Sec. 25B)	Encourages low- and middle-income taxpayers to save for retirement
Residential energy efficient property credit (Sec. 25 D)	Encourages energy conservation measures on principal residences
MISCELLANEOUS CREDITS:	
Foreign tax credit (Sec. 27)	Mitigates the effects of double taxation on foreign-source income
GENERAL BUSINESS CREDITS:	
Business energy credits (Sec. 48)	Encourages energy conservation measures
Disabled access credit (Sec. 44)	Encourages small businesses to provide access for disabled persons
Work Opportunity Credit (Sec. 51)	Provides incentive for employers to hire veterans and the economically disadvantaged
Employer-provided child care credit (Sec. 45F)	Provides incentive for businesses to provide child care for employees
Rehabilitation expenditures credit (Sec. 21)	Encourages the rehabilitation of older buildings
Research credit (Sec. 41)	Encourages research and experimental activities
REFUNDABLE PERSONAL CREDITS:	
Earned income credit (Sec. 32)	Provides incentive for low-income individuals to work
Overpayment of social security taxes (Sec. 31)	Provides a credit or refund for social security taxes overpaid when a taxpayer has multiple employers
Taxes withheld from wages and other income (Sec. 31)	Recognizes taxpayer's prepayment of tax
Premium tax credit (Sec. 36B)	Reduces the cost of health insurance for households with low and modest incomes.

PAYMENT OF TAXES

OBJECTIVE 5

Explain the mechanics of the federal withholding tax system and the requirements for making estimated tax payments

The IRS collects federal income taxes during the year ("pay as you go") through withholding on wages and quarterly estimated tax payments. If the total of withholdings and estimated taxes is less than the amount of tax liability, the taxpayer must pay the balance of the tax due when the tax return is filed. If there has been an overpayment of tax, the taxpayer may either request a refund or apply the overpayment to the following year's estimated tax.

Substantial penalties are imposed if an employer fails to withhold federal income tax and pay such amounts to the IRS.[53] In addition, taxpayers may be subject to penalties for underpayment of estimated tax.[54]

WITHHOLDING OF TAXES

Employers must withhold federal income taxes and FICA taxes from an employee's wages. No withholdings are required if an employer-employee relationship does not exist (e.g., an individual who performs services as an independent contractor). Generally, unless a specific exemption is provided, withholding is required on all forms of employee compensation (salaries, fees, bonuses, dismissal payments, commissions, vacation pay, and taxable fringe benefits).[55] Below are some special rules relating to withholding of federal taxes:

REAL-WORLD EXAMPLE

A teacher claimed a credit for Social Security taxes that had been withheld from his salary. He believed that the Social Security tax was illegally withheld because he did not authorize the collection of the tax. The Tax Court held that the Social Security tax is mandatory for designated employees and does not allow a person to elect not to contribute. *Richard L. Feldman,* 1967 PH T.C. Memo ¶67,091, 26 TCM 444.

HISTORICAL NOTE

The withholding of federal income taxes by employers began in the early 1940s in response to revenue needs for World War II.

- *More than one employer during the same year.* Each employer must withhold FICA and federal income taxes without regard to the fact that the employee has more than one employer. As mentioned on page I:14-9, this may cause an overwithholding of FICA taxes if the employee's wages exceed the ceiling amount on the OASDI portion of the tax. In the event of overwithholding of FICA taxes, the employee may credit the excess amount as an additional payment of tax. However, the matching employer excess FICA contributions are not refundable or creditable against the tax liabilities of either employer or employee.
- *Overall exemption.* Taxpayers are exempt from income tax withholding in the current year if they (1) had no tax liability in the prior year; (2) expect no tax liability in the current year; and (3) can be claimed as dependent by another taxpayer and report no more than $1,350 (2025) total income, no more than $450 of which is unearned. The earnings of such individuals are still fully taxable, and an employer may be liable for FICA tax payments on these earnings.
- *Exemption for certain employment activities.* Certain employees, such as agricultural laborers, ministers, household employees, newspaper carriers under age 18, and those earning tips of less than $20 per month from an employer, are exempt from withholding. The earnings of such individuals are still fully taxable, and an employer may be liable for matching FICA tax payments on these earnings.[56]
- *Backup withholding.* **Backup withholding** rules were enacted to prevent abusive noncompliance situations, such as not providing the payor of a dividend with the payee's Social Security number. A 24% withholding rate is required on most types of payments that are reported on Form 1099 (e.g., interest, dividends, and royalties) where a proper taxpayer identification number is not provided.
- *Other special rules.* There are many other special rules on withholding in certain circumstances, such as for fringe benefits, pension, and annuity payments that are beyond the scope of this text.

REAL-WORLD EXAMPLE

It has been held that the employer's withholding of federal income taxes is not an improper taking of property without due process in violation of the Fifth Amendment. *Michael O. Campbell v. Amax Coal Co.,* 610 F.2d 701, 45 AFTR 2d 80-564, 80-1 USTC ¶9185 (10th Cir., 1980).

Withholding Methods. On beginning a new job, each employee must file with his/her employer an Employee's Withholding Certificate (Form W-4). The W-4 provides the employer with the information needed to determine the amount of federal income tax to be withheld from the employee's earnings, including marital status. If an employee's circumstances change (e.g., a married taxpayer is divorced during the year), an amended Form W-4 must be provided to the employer within 10 days.

---

[53] Sec. 3403. Employers are liable for payment of the full amount that must be withheld and paid to the IRS. In addition, responsible individuals (e.g., corporate officers, directors, and consultants) may be held personally liable for payment of the tax. (See *Renate Schiff v. U.S.*, 69 AFTR 2d 92-804 (D.C. NV, 1992), *Ted E. Tsouprake v. U.S.*, 69 AFTR 2d 92-821 (D.C. FL, 1992), and *Ralph M. Guito, Jr. v. U.S.*, 67 AFTR 2d 91-1066 (D.C. FL, 1991).)

[54] Sec. 6654.

[55] Reg. Sec. 31.3401(a)-1(a)(2).

[56] Sec. 3510. An employer is liable for FICA tax payments for domestic servants if $2,300 (2021) or more is paid to an individual in any calendar year. See IRS Publication 926 (2021).

Employers will use the information on Form W-4 to calculate the amount of employee withholdings each pay period. This information typically includes the taxpayer's filing status and the number of qualifying children eligible for the child tax credit. Additional withholdings may result depending upon the number of jobs the taxpayer has and the employment status of the taxpayer's spouse.[57] Further withholding adjustments depend on 1) if an individual has deductions, losses, or credits from a wide variety of sources, including itemized deductions and losses from a trade or business, rental property, or a farm, or 2) if an individual anticipates tax savings from credits in Sec. 21-41. Form W-4 contains tables and a worksheet to help employees provide employers with the pertinent information to accurately withhold.[58]

EXAMPLE I:14-34 ▶ Sam and Sally are married and have three dependent children (Adam, age 9, and twins Jack and Joe, age 18). They file a joint tax return. Sally is not employed. Owen is single with no children and is not eligible for any credits. While Sam and Owen begin their employment making similar salaries, Sam's W-4 will indicate a need for less withholdings than Owen because of their personal situations. This will result in lower withholdings from Sam's paycheck, which reflects Sam and Sally having a lower gross tax for the year because their gross tax is reduced by an increased standard deduction and child tax credits. ◀

STOP & THINK

Question: Many taxpayers believe that the amount of withholdings is simply based on the taxpayer's marital status, the number of dependents, and income. Why is this not correct?

Solution: While the starting point for determining withholding amounts is the taxpayer's marital status and the child tax credit, taxpayers are allowed to adjust the number of withholdings based on their individual situation. Taxpayers may adjust their withholdings for two principal reasons: (1) a taxpayer has high deductions, losses, or credits; or (2) the taxpayer would like to request extra withholdings. The withholding tables are constructed assuming that the taxpayer will use the standard deduction. Therefore, if a taxpayer has much higher itemized deductions than the standard deduction, the withholding tables may prescribe too much withholding, and the taxpayer would have a large refund at the end of the year. To alleviate this situation, taxpayers are allowed to provide further information to ensure appropriate withholding amounts. Similarly, the withholding tables may not capture all a taxpayer's income (e.g., investment income, self-employment income). By increasing the withholding amounts, the taxpayer may be able to avoid under-withholding their tax liability.

Computation of Federal Income Tax Withheld. Employers use either the 2025 Wage Bracket Method Tables or the 2025 Percentage Method Tables found in Publication 15-T to compute the actual amount of withholding. The two methods produce approximately the same results. Wage bracket tables are available for weekly, biweekly, and monthly payroll periods. Separate tables are used for single, head-of-household, and married individuals. Partial 2025 Wage Bracket Method Tables for using a monthly payroll period for wages are located in the Tax Tables and Rate Schedules in the Tables beginning on page T-16.

EXAMPLE I:14-35 ▶ Henry is single with no dependents. His monthly adjusted wage amount is $5,000. The federal income tax withheld per month for 2025 using the 2025 Wage Bracket Method Table on page T-17 is $427. An additional $382.50 (7.65% × $5,000) will also be withheld for Social Security tax and Medicare tax. ◀

ESTIMATED TAX PAYMENTS

Certain types of income are not subject to withholding (e.g., investment income, rents, income from self-employment, and capital gains). Taxpayers who earn this type of income must prepay their income tax by making quarterly estimated tax payments.

ADDITIONAL COMMENT

The IRS does not mail reminder statements for the required quarterly estimated payments.

---

[57] Sec. 3402(f)(1)(E).

[58] Married taxpayers who are both employed may allocate withholding allowances between them as they see fit as long as the same allowance is not claimed more than once.

The purpose of the estimated tax payment system is to ensure that all taxpayers have pre-paid enough tax by the end of the tax year to cover most of their tax liability. Thus, estimated tax payments may also be required if insufficient tax is being withheld from an individual's salary, pension, or other income (although many taxpayers prefer to file an amended Form W-4 to adjust withholdings). The amount of estimated tax is the taxpayer's estimated tax liability (including self-employment tax and alternative minimum tax) reduced by withholdings and tax credits.

Required Estimated Tax Payments. For calendar-year individuals, required quarterly payments are due by April 15, June 15, September 15 of the current year, and January 15 of the following year. To avoid an underpayment penalty,[59] total estimated tax payments must equal or exceed any of the following three "safe harbor" amounts:

1) 90% of current year tax liability;
2) 100% of the prior year tax liability if the taxpayer's AGI in the prior year was $150,000 or less.
   110% of the prior year tax liability if the taxpayer's AGI in the prior year was more than $150,000.
3) 90% of current year tax liability computed on an annualized basis (helpful for taxpayers who do not earn taxable income evenly through the year).

In addition, no penalty is imposed if (1) the estimated tax for the current year is less than $1,000 or (2) the individual had no tax liability for the prior year.

WHAT WOULD YOU DO IN THIS SITUATION?

You are a CPA engaged in tax practice, and one of your clients is Mr. Throckmorton D. Princeton, J.D. He is a senior partner in the prestigious employment litigation firm of Huey, Dewey and Fooey. Mr. Princeton is known for his ruthless litigation style.

Things were rosy for Mr. Princeton until last week, when there was some speculation in the press about his being appointed to a cabinet-level position by the President. A TV news magazine show looked into Mr. Princeton's domestic worker situation. It appears that Mr. Princeton has long engaged in the practice of hiring part-time workers in his household to clean his house, tend to his gardens, walk his dogs, cook his meals, service his car, and nurse him when he is ill. All told, he used over twenty-five people at one time or another in the past year. These workers were paid as little as possible, and all were asked to sign a contract with Mr. Princeton stating that they were to be classified as independent contractors. The total amount paid to these workers was $50,000. Mr. Princeton paid no payroll taxes, although he did file Forms 1099 with the IRS. What tax and ethical issues should be considered?

EXAMPLE I:14-36 ▶ Sarah does not make quarterly estimated tax payments for 2025, even though she has a substantial amount of income not subject to withholding. Her taxable income is $140,000. Her actual tax liability (including self-employment taxes and the alternative minimum tax) for 2025 is $40,000. Federal income tax withheld from her salary equals $30,000. She pays the $10,000 balance due to the IRS when she files her return in April of 2026. Sarah's tax liability for the prior year was $28,000.

No underpayment penalty is imposed because she meets the second exception: the federal income tax withheld of $30,000 in 2025 is more than 100% of her $28,000 prior year tax liability. ◀

---

[59] Sec. 6654.

EXAMPLE I:14-37 Assume the same facts in Example I:14-36 except Sarah's AGI in the prior year was $180,000. Since her AGI exceeded $150,000, the second safe harbor amount is 110% (instead of 100%) of the prior year's tax or $30,800 ($28,000 × 1.10). Because the $30,000 of federal income tax withheld in 2025 is less than 110% of her previous year tax liability, Sarah would not meet either exception and would be subject to the underpayment penalty.

Form 2210 (see Appendix B) should be completed and submitted with the tax return if a possible underpayment of tax is indicated. This form is used to determine whether one of the exceptions applies and, if not, to compute the amount of the underpayment penalty. Topic Review I:14-3 summarizes the withholding tax and estimated payment requirements.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 6

Describe tax planning considerations for AMT, tax credits, and payment of taxes

AVOIDING THE ALTERNATIVE MINIMUM TAX

Taxpayers with substantial amounts of tax preference items and/or positive AMT adjustments and a correspondingly low regular tax liability may be subject to the AMT. These taxpayers need to engage in tax planning to minimize or avoid the AMT.

A generous AMT exemption is provided for most individuals, so taxpayers can plan for full use of the exemption by timing certain income and deduction items each year. For example, the AMT may be avoided by delaying payment of certain itemized deductions (e.g., state and local taxes) that reduce the regular income tax but do not reduce the AMT. A cash method taxpayer who defers payment of state income taxes into the following year, triggers an increase in the regular tax for the current year. This increase can eliminate the AMT liability. However, it is necessary to consider tax effects for both the current and following years, because state income taxes are deductible for purposes of the regular tax calculation when payment is made in the following year. This reduction may affect the AMT calculation in the following year and increase the amount of tax owed then.

KEY POINT

The alternative minimum tax can be avoided or its impact lessened by various tax strategies.

TOPIC REVIEW I:14-3

Withholding Taxes and Estimated Payments

EMPLOYER WITHHOLDING OF TAXES:

	FICA	*Income Tax*
Subject to withholding:	For Social Security tax, all employee earnings up to $176,100 in 2025 per employer. No ceiling applies to Medicare portion.	All employee compensation including wages, salaries, fees, bonuses, commissions, taxable fringe benefits.[a]
Withholding amounts:	7.65% of FICA wages including 6.2% on Social Security earnings and 1.45% on Medicare earnings.	Determined using withholding tables or the percentage method based on an individual's filing status and other information reported on Form W-4.

[a] Exceptions are provided for certain nontaxable fringe benefits.

ESTIMATED TAX PAYMENTS:

- To avoid an underpayment penalty, estimated tax payments and withholdings for the year must equal or exceed: 90% of the current year tax liability; or 100% of the prior year tax liability (110% if prior year AGI exceeds $150,000); or 90% of the current year tax liability computed on an annualized basis.
- The underpayment penalty is not deductible for income tax purposes.
- Form 2210 is used to determine the underpayment penalty amount.

Certain tax-exempt investments, such as interest on private activity bonds, generate additional tax preferences for the investor. Before acquiring such investments, an investor should determine the potential AMT impact.

AVOIDING THE UNDERPAYMENT PENALTY FOR ESTIMATED TAX

Many taxpayers find it difficult to estimate their taxes for the purposes of making quarterly estimated payments and are uncertain whether their withholdings and estimated tax will equal or exceed 90% or more of their actual tax liability for the year. A common planning technique to avoid a possible underpayment tax penalty is to make estimated tax payments and withholdings in an amount that is at least 100% (or 110% if AGI was in excess of $150,000 for the prior year) of the actual tax liability for the prior year, thereby meeting one of the exceptions that prevents the underpayment penalty from being imposed.

EXAMPLE I:14-38 ▶ For 2025, Yong expects his federal income tax withholdings to total $14,000 and estimates that his income tax liability will be $24,000. Yong's actual federal income taxes in the prior year totaled $20,000. If estimated taxes of at least $6,000 are paid during 2025, Yong's estimated taxes plus withholding will be at least 100% of his prior year's tax liability ($14,000 + $6,000 = $20,000), and no underpayment penalty will be imposed, despite the $4,000 ($24,000 − $20,000) balance due on the 2025 return.

If Yong's prior year AGI exceeded $150,000, his estimated taxes plus withholding must be at least 110% of his prior year tax liability or $22,000 (1.10 × $20,000) to avoid the underpayment penalty. Thus, his estimated tax payments must total at least $8,000. ◀

KEY POINT

A taxpayer should avoid making estimated payments that exceed the actual tax liability because the taxpayer is making an interest-free loan to the IRS. Nevertheless, many taxpayers deliberately have excess amounts withheld from their wages or make excessive estimated payments to receive a refund. These taxpayers view this strategy as a forced saving plan.

CASH-FLOW CONSIDERATIONS

Assuming that the underpayment penalty can be avoided, it is generally preferable to have a balance due to the government at the time for filing the return rather than to receive a refund of an overpayment of tax. No interest is paid on a refund if the IRS pays the refund within 45 days from the later of the due date of the return or its filing date.[60] In addition, the IRS has, in effect, received an interest-free loan from the taxpayer during the period such overpayment exists. To avoid an overpayment, a taxpayer may file an amended W-4 form and claim additional withholding allowances if the requirements are met (e.g., the taxpayer has unusually large itemized deductions, tax credits, and alimony payments).

If an individual anticipates that her combined estimated tax payments and withholdings will be insufficient to avoid the underpayment penalty, it may be preferable to increase amounts withheld near the end of the tax year rather than increase the estimated tax payments.[61] This technique may be advantageous because the penalty's quarterly calculation treats withholdings as made evenly over the year, even when withholding amounts are increased near the end of the year. Another way to avoid the underpayment penalty is to accelerate certain deductions (e.g., real estate taxes on a personal residence) by paying such amounts before the end of the current tax year. Additionally, otherwise deductible contributions to an IRA made after the end of the tax year but by the due date for the tax return may be treated as a deduction for the prior year, thereby avoiding the underpayment penalty (see Chapter I:7).

USE OF GENERAL BUSINESS TAX CREDITS

Taxpayers must consider the priority and interrelated aspects of credits to ensure that a particular credit is fully used. For example, an individual's nonrefundable personal tax credits reduce tax liability before the foreign tax credit limitation is applied. Then, the nonrefundable personal tax credits and foreign tax credit are deducted from the individual's tax liability before limitations are applied to the general business tax credit.

---

[60] Sec. 6611(e).

[61] To completely avoid the underpayment penalty, the tax law generally requires the estimated payments to be made equally on the four installment dates.

FOREIGN TAX CREDITS AND THE FOREIGN EARNED INCOME EXCLUSION

Individuals who accept foreign job assignments should consider federal income tax implications, because U.S. citizens are subject to U.S. tax on their worldwide income. Assuming that certain requirements and limitations are met, an individual may elect to take either a foreign tax credit or a foreign-earned income exclusion of $130,000 in 2025 ($126,500 in 2024) with respect to salaries, allowances, and other forms of earned income that are earned while on extended non-U.S. assignments.[62] Any taxes paid or accrued with respect to the excluded income are not available as a foreign tax credit. In general, when the effective foreign tax rate is less than the effective U.S. tax rate, the exclusion is preferable because the foreign tax credit that can be claimed does not equal the gross U.S. tax owed on the income. When the effective foreign tax rate exceeds the effective U.S. tax rate, U.S. taxpayers ordinarily elect not to use the exclusion. Instead, the excess tax credits on earned income are used to offset the U.S. taxes owed on other types of foreign income.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 7

Describe compliance and procedural considerations for AMT, tax credits, and payment of taxes

ALTERNATIVE MINIMUM TAX (AMT) FILING PROCEDURES

Individual taxpayers use Form 6251 to compute the AMT (see Appendix B for this form). Form 6251 must be completed and attached to an individual's income tax return in any of the following situations:

- An AMT tax liability actually exists.
- The taxpayer has tax credits that are limited by the tentative minimum tax.
- The AMT base exceeds the AMT exemption amounts, and the individual has AMT adjustment or tax preference items.

WITHHOLDINGS AND ESTIMATED TAX PAYMENTS

Taxpayers who have income taxes withheld from wages, pensions, and other income should receive a Form W-2 (or Form 1099-R for pensions) from the employer by January 31. These forms should be attached to the individual's tax return to substantiate the amount of withholdings.

Married individuals may make either joint or separate estimated tax payments. If joint estimated tax payments are made and the married individuals subsequently file separate returns (e.g., in the case of a divorce that is pending or a divorce completed before the end of the year), the joint estimated tax payments are divided in proportion to each spouse's individual tax if no agreement is reached concerning an appropriate division.

EXAMPLE I:14-39 ▶ George and Alice are married and make joint estimated tax payments of $10,000 during 2025. George and Alice are separated in February 2026 and Alice refuses to file a joint return with George. George's 2025 tax liability on his separate return is $20,000 and Alice's tax liability on her separate return is $5,000. If no agreement is reached concerning the allocation of the joint estimated payments of $10,000, Alice is entitled to claim $2,000 of the estimated tax payments on her return [$5,000/($20,000 + $5,000) × $10,000]. The remaining $8,000 is apportioned to George. ◀

---

[62] Sec. 911(a). The foreign income exclusion requirements are discussed in Chapter I:4.

GENERAL BUSINESS TAX CREDITS

The computation of the business energy credit is made on Form 3468. Form 3800 must be filed if any other general business credits are claimed.

NONREFUNDABLE PERSONAL TAX CREDITS

Nonrefundable personal tax credits are deducted from the taxpayer's tax liability before other credits. The child tax credit and the credit for other dependents are reported on page 2 of the Form 1040 while the other nonrefundable personal tax credits are reported on Schedule 3 of the Form 1040. The credits section on page 2 of Form 1040 then limits the deduction for nonrefundable personal tax credits to the amount of tax due. Form 2441 (see Appendix B) must be filed to claim the child and dependent care credit. Taxpayers who claim the child and dependent care credit must also include the care provider's name, address, and taxpayer identification number on their tax return. If the caregiver will not provide the required information, the taxpayer has the option to supply the name and address of the caregiver on Form 2441 and attach a statement explaining that the caregiver has refused to provide his or her taxpayer identification number (TIN). Schedule R of Form 1040 is filed to claim the credit for the elderly and disabled.[63]

The earned income tax credit is refundable to an individual even if no income tax is owed. The IRS will automatically compute the credit amount.[64] However, helpful tax tables are included in the IRS instructions to Form 1040. Schedule EIC is filed if the taxpayer has a qualifying child for the earned income credit.

The foreign tax credit for individuals is computed on Form 1116.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:14-1 Why are most taxpayers not subject to the alternative minimum tax (AMT)?

I:14-2 Does the AMT apply if an individual's tax liability as computed under the AMT rules is less than his or her regular tax amount?

I:14-3 Which of the following are tax preference items for purposes of computing the individual AMT?
- **a.** Net long-term capital gain
- **b.** Excess depreciation for real property placed in service before 1987
- **c.** Straight-line depreciation on residential real estate acquired in 1992
- **d.** Appreciated portion of the value of capital gain real property contributed to charity

I:14-4 Which of the following are individual AMT adjustments?
- **a.** Itemized deductions that are allowed for regular tax purposes but not allowed in computing AMTI.
- **b.** Excess of MACRS depreciation over depreciation computed under the alternative depreciation system for real property placed in service after 1986 and before 1999.
- **c.** Excess of MACRS depreciation over depreciation computed under the alternative depreciation system for personal property placed in service after 1986.
- **d.** Tax-exempt interest earned on State of Michigan bonds.

I:14-5 Which of the following itemized deductions are deductible when computing the alternative minimum tax for individuals?
- **a.** Charitable contributions
- **b.** Mortgage interest on a loan used to acquire a personal residence
- **c.** State and local income taxes
- **d.** Interest related to an investment in undeveloped land where the individual has no investment income
- **e.** Medical expenses in excess of 7.5% of AGI

I:14-6 Why are most individuals not subject to the self-employment tax?

I:14-7 For 2025, Tony, who is single and 58 years old, is considering early retirement from his salaried job. He currently has $90,000 salary and also earns $60,000 profit from a consulting business. What advice would you give Tony relative to the need to make Social Security tax payments if he retires and continues to be actively engaged as a consultant during his retirement?

---

[63] Sec. 6014. (See Form 1040 instructions for more reporting details.)

[64] Sec. 6695(g) requires preparers to meet due diligence requirements with respect to the earned income tax credit (EIC). If the EIC is incorrectly computed or overlooked, the *preparer* could be subject to a $100 penalty.

I:14-8 Theresa is a college professor who wants to work for a consulting firm during the summer. She will be working on special projects relating to professional development programs. What advantages might accrue to the consulting firm if the engagement is set up as a consulting arrangement rather than an employment contract?

I:14-9 For 2025, Brian and Jennifer are a married couple who believe they may be subject to the AMT this year. Currently, they calculate their alternative minimum taxable income (AMTI) to be $900,000.

- **a.** What is their AMT exemption amount?
- **b.** They are considering an opportunity that would allow them to earn additional income this year. As a result of this additional income, they believe that their AMTI will increase by $400,000. What will their AMT exemption be if they recognize the additional income?

I:14-10 Discuss the underlying rationale for the following tax credit items:

- **a.** Foreign tax credit
- **b.** Research credit
- **c.** Business energy credit
- **d.** Premium tax credit
- **e.** Dependent care credit
- **f.** Earned income credit
- **g.** American Opportunity credit
- **h.** Adoption credit

I:14-11 If Congress is considering a tax credit or deduction as an incentive to encourage certain activities, is a $40 tax credit more valuable than a $200 tax deduction for a taxpayer with a 12% marginal rate? A 22% marginal rate?

I:14-12 What are the more significant tax credit items included in the computation of the general business tax credit?

I:14-13 Discuss the limitations that have been imposed on the general business tax credit, including the following:

- **a.** Overall ceiling limitation based on the tax liability
- **b.** Priority of general business and personal credits
- **c.** Carryback and carryover of unused credits (including the application of the FIFO method)

I:14-14 Sarah, a married taxpayer who files a joint return, is considering a foreign assignment for two years. In 2025, she will earn $138,000 in the foreign country. Sarah has no other income. She will be eligible for either the foreign tax credit or the foreign-earned income exclusion. The average tax rate on Sarah's earnings if fully taxable under U.S. law would be 24%. The average tax rate for the foreign salary is 20% under the foreign country's laws.

- **a.** Discuss in general terms the computation of the foreign tax credit and its limitation.
- **b.** Would Sarah be better off electing the foreign tax credit or the foreign earned income exclusion? Explain.

I:14-15 Queen Corporation has been in business since 1989. During the preceding year, the company had 25 full-time employees and gross receipts of $8,000,000. During the current year, Queen spent $15,000 to install access ramps for disabled individuals. Is Queen Corporation eligible for the disabled access credit? If so, what is the credit amount and the basis reduction (if any) for the depreciable property?

I:14-16 Discuss the special tax rules that apply to the tax credit for rehabilitation expenditures including the following:

- **a.** Types of eligible expenditures
- **b.** Applicable tax credit rates
- **c.** Calculation of basis for expenditures
- **d.** Restrictions on depreciation methods
- **e.** Potential recapture of the credit

I:14-17 What types of business property qualify for the business energy credit?

I:14-18 What are the underlying reasons for enactment of many of the personal tax credits?

I:14-19 Discuss the difference between a refundable tax credit and a nonrefundable tax credit. Give at least one example of each type of credit.

I:14-20 If an individual is not employed and has no earned income, is it possible to take a child and dependent care credit for otherwise qualifying child and dependent care expenses? Explain.

I:14-21 Discuss the major differences between the American Opportunity credit and the Lifetime Learning credit. Include in your discussion the type of taxpayers who would likely qualify for each of the credits.

I:14-22 What is the maximum child and dependent care credit available to an employed individual who has $8,000 of qualifying child care expenses and two or more qualifying dependents?

I:14-23 Vivian is a single taxpayer with two children who qualify for the child and dependent care credit. She incurred $7,000 of qualifying child care expenses during the current year. She also received $4,000 in reimbursements from her employer from a qualified employee dependent care assistance program. What is the maximum child and dependent care credit available to Vivian if her AGI is $24,500?

I:14-24 The adoption credit is intended to assist taxpayers with the financial burden of adopting children.

- **a.** Discuss how the credit is computed.
- **b.** Why did Congress impose a phase-out of the credit for taxpayers based on AGI?

I:14-25 Alice is a single mother, 37 years old, and has two qualifying children, ages 3 and 6. In 2025, she earns $25,000 in wages resulting in $25,000 of AGI. Is Alice eligible for the earned income credit?

I:14-26 Why are most elderly people unable to qualify for the tax credit for the elderly?

I:14-27 If an employer fails to withhold federal income taxes and FICA taxes on wages or fails to make payment to the IRS, what adverse tax consequences may result? May corporate officers or other corporate officials be held responsible for the underpayment?

I:14-28 Taxpayers are permitted to contribute money to qualified retirement plans and receive very favorable tax benefits. Congress has provided further incentives to contribute money to such plans by enacting the Qualified Retirement Savings Contributions Credit.

a. Why did Congress enact this credit when such contributions already receive favorable tax treatment?

b. Briefly describe how the credit is computed.

I:14-29 The credit for employer-provided child care has two major components, a credit for qualified child care expenses and a credit for qualified child care resources and referral expenditures.

a. Discuss each of the two components. What type of expenses are included in each component?

b. The two components are combined to compute the credit for employer-provided child care. Discuss the rates for each component, the limitation for the credit, and the tax result if the employer ceases to offer child care operations within the first three years after claiming the credit.

I:14-30 A credit is allowed to encourage businesses to conduct research and experimentation. One feature of the research credit is that only incremental expenditures are eligible. Explain the concept that the credit is allowed for *increasing* research activities.

I:14-31 On Form W-4, Virginia decided to request her employer withhold more taxes than she generally would have withheld.

a. Is it permissible to request greater withholdings than an individual is entitled to?

b. Why would an individual request additional withholdings?

c. Is it possible for Virginia to request lower withholdings?

I:14-32 Mario is a college student who had no income tax liability in the prior year and expects to have no tax liability for the current year.

a. What steps should Mario take to avoid having amounts withheld from his summer employment wages?

b. What are the cash-flow implications to Mario if the employer withholds federal income taxes?

I:14-33 What is backup withholding? What is its purpose?

I:14-34 Vincent anticipates that his actual tax liability for the tax year will be $12,000 and that federal income taxes withheld from his salary will be $9,000. Thus, when he files his current year income tax return, he will have a $3,000 balance due. In the previous year, his actual federal income tax liability was $8,000 and his AGI was less than $150,000.

a. Is Vincent required to make estimated tax payments in the current year? Explain.

b. Will Vincent be subject to an underpayment penalty if his prior year AGI was $175,000? Why?

I:14-35 An individual has increasing levels of income each year and is uncertain regarding the amount of his estimated taxable income for any given year. What tax planning strategy can be used to avoid the penalty for underpayment of estimated tax?

I:14-36 From a cash-flow perspective, why is it generally preferable to have an underpayment of tax (assuming no underpayment penalty is imposed) rather than an overpayment of tax?

I:14-37 Why do many taxpayers intentionally overpay their tax through withholdings to obtain a tax refund?

ISSUE IDENTIFICATION QUESTIONS

I:14-38 Daryl is an executive who has an annual salary of $120,000. He is considering early retirement so he can pursue a career as a management consultant. Daryl estimates that he could earn approximately $80,000 annually from his consulting business. What tax issues should Daryl consider?

I:14-39 Jennifer recently gave a check for $30,000 and securities with a fair market value of $200,000 to her former husband pursuant to a divorce. The $30,000 represents alimony and the securities were transferred pursuant to the property settlement. The property settlement is nontaxable to her former husband. What tax issues should Jennifer consider?

PROBLEMS

I:14-40 *AMT Computation.* William and Maria Smith are a married couple filing jointly. They have no children and report the following items in 2025:

Taxable income	$100,000
Tax preferences	20,000
AMT adjustments related to itemized deductions	40,000
Regular tax liability	11,828

a. What is the Smith's AMT liability?

b. What would be William's AMT liability if he were an unmarried taxpayer filing single with a regular tax liability of $16,914?

I:14-41 *AMT Computation.* Jose, an unmarried taxpayer filing single with no dependents, has AGI of $600,000 and reports the following items in 2025:

Taxable income	$550,000
Tax preferences	75,000
AMT adjustments related to itemized deductions	50,000
Regular tax liability	162,047

What is Jose's AMT liability for 2025?

I:14-42 *AMT Computation.* Dylan is a single taxpayer with $600,000 of taxable income, which results in a regular tax liability of $179,547 in 2025. Dylan is extremely cautious about being subject to AMT and wants to know how much AMT preferences or adjustments she can afford without being subject to AMT.

a. Compute the amount of preference and adjustments it would take for Dylan to have an AMT.

b. Comment on why it takes so many adjustments for Dylan to enter AMT.

I:14-43 *AMT Adjustments and Computation of Tax.* Allen, an unmarried taxpayer filing single, has no dependents and reports the following items on his 2025 federal income tax return:

Taxable income	$150,000
Regular tax liability	28,847
Tax preferences	40,000
Itemized deductions including:	
Charitable contributions	7,500
Medical expenses (before AGI floor)	10,000
Mortgage interest on principal residence	10,000
State income taxes	5,000
Real estate taxes (before limitations)	8,000

a. What is the amount of Allen's AMT adjustments related to itemized deductions?

b. What is Allen's AMT liability for 2025?

I:14-44 *Self-Employment Tax.* Amelia has wages of $45,000 and net income from a small unincorporated business of $70,000 for 2025.

a. What is the amount of Amelia's self-employment (SE) tax and deduction *for* AGI for her SE tax?

b. How would your answer to Part a change if Amelia's wages were $180,000 rather than $45,000?

I:14-45 *Self-Employment Tax.* Arnie and Angela are married and file a joint return in 2025. Arnie is a partner in a public accounting firm. His share of the partnership's income in the current year is $40,000, and he receives guaranteed payments of $35,000. Angela receives wages of $50,000 from a large corporation. What is each taxpayer's self-employment tax amount? (Hint: Guaranteed payments received from a partnership are considered self-employment income.)

I:14-46 ***Self-Employment Tax.*** Anita, a single taxpayer, reports the following items for 2025:

Salary	$20,000
Income for serving on the Board of Directors for XYZ Corporation	11,000
Consulting gross income	9,000
Expenses related to consulting practice	(15,000)

a. What is the amount of Anita's self-employment tax?
b. How would your answer to Part a change if Anita's salary were $180,000?

I:14-47 ***Computation of Tax Credits.*** During the current year, Becky has personal credits (P) as well as business credits (B) related to her sole proprietorship. Her tentative tax credits for the current year include the following:

Child tax credit	$ 2,000 P
Disabled access credit	$ 900 B
Child and dependent care credit	1,200 P
Business energy credit	600 B

Becky's regular tax liability before credits is $4,000. Her tentative alternative minimum tax is $0.

a. What is the amount of allowable personal tax credits?
b. What is the amount of allowable business tax credits?
c. What treatment is accorded to the unused tax credits for the current year?

I:14-48 ***Child and Dependent Care Credit.*** In each of the following independent situations, determine the amount of the child and dependent care tax credit. (Assume that both taxpayers are employed.)

a. Brad and Bonnie are married and file a joint return, with earned income of $40,000 and $14,000, respectively. Their combined AGI is $52,000. They have two children, ages 10 and 12, and employ a live-in nanny at an annual cost of $9,000.
b. Assume the same facts as in Part a, except that Brad and Bonnie employ Bonnie's mother, who is not their dependent, as the live-in nanny.
c. Bruce is divorced and has two children, ages 10 and 16. He has AGI and earned income of $35,000. Bruce incurs qualifying child care expenses of $8,000 during the year, incurred equally for both children. Bruce's employer maintains an employee dependent care assistance program. $1,000 was paid to Bruce from this program and excluded from Bruce's gross income.
d. Buddy and Candice are married and file a joint return. Their combined AGI is $50,000. Buddy earns $46,000, and Candice's salary from a part-time job is $4,000. They incur $5,000 of qualifying child care expenses for a day-care facility for their two children, ages 2 and 4.
e. Ben and Bunny are married and file a joint return. Their AGI is $75,000, all earned by Bunny. Ben was a full-time student for two semesters (10 months) at State University during the year. They incur $7,000 of qualifying child care expenses for their two children, ages 6 and 4.

I:14-49 ***Adoption Credit.*** Brad and Valerie decided to adopt a child and contacted an adoption agency in August 2024. After extensive interviews and other requirements (such as financial status), Brad and Valerie were approved as eligible parents to adopt a child. The agency indicated that it might take up to two years to find a proper match. In March 2025, the adoption became final, and Brad and Valerie adopted an infant daughter (not a special needs child). Below is a list of expenses that they incurred:

2024:	Agency fees (first installment)	$5,000
	Travel expenses for interviews, etc.	1,500
	Publications for prospective adoptive parents	300
	Legal fees connected with the adoption	1,000
	Kennel fees for dog while on adoption trips	250
2025:	Agency fees (final installment)	$4,000
	Travel expenses	400
	Court costs for adoption	1,500
	Kennel fees	100
	Legal fees connected with the adoption	1,000
	Nursery furniture (baby's room) and supplies	2,000

Brad and Valerie's AGI in 2024 was $70,000, and in 2025 was $90,000.

a. Compute Brad and Valerie's qualified adoption expenses for each year.

b. Compute Brad and Valerie's adoption credit. In which year(s) may the credit be taken?

c. Would your answer to Part b change if the adopted child was a special needs child and if a grant covered all adoption cost except for legal fees?

I:14-50 ***American Opportunity Tax Credit and Lifetime Learning Credit.*** Lou and Stella North are married, file a joint return, and have two dependent children in college, Phil and Jaci. Phil attends a State University in a neighboring state, and Jaci attends a State University in their home state. Neither receives any type of financial assistance. The Norths' modified AGI in 2025 is $122,000. The children's classifications and expenses are as follows:

	Spring Semester 2025 (paid in January 2025)	*Fall Semester 2025 (paid in July 2025)*
Phil:	Senior	Master's candidate
Tuition	$7,500	$8,000
Laboratory fees	500	500
Student activity fees	100	100
Course materials (books)	400	450
Room and board	3,200	3,200
Jaci:	Sophomore	Junior
Tuition	$1,600	$1,750
Student activity fees	100	100
Course materials (books)	250	300
Room and board	3,500	3,700

a. Compute any education credits that the Norths may claim in 2025.

b. How would your answer in Part a change if Phil received an academic scholarship of $3,000 (excluded from gross income) for each semester?

c. How would your answer in Part a change if Lou and Stella's modified AGI was $175,000?

d. How would your answer in Part a change if Phil had been a junior during Spring semester and a senior during Fall semester?

I:14-51 ***Tax Credit for the Elderly.*** Caroline, age 66 and filing single as a dependent of another, received the following income items for the current year:

Social Security benefits (nontaxable)	$ 3,000
Pension benefits (taxable)	6,450
Interest income (taxable)	2,050
Total	$11,500

Caroline's tax liability (before credits) is $540.

a. What is Caroline's tentative tax credit for the elderly (before the tax liability limitation is applied)?

b. What is Caroline's allowable tax credit?

I:14-52 ***General Business Tax Credit Limitation.*** During the current year, Joule Company, a sole proprietorship, earned general business tax credits of $30,000 for energy conservation and rehabilitation expenditures. The owner, Mark Joule, knows that the overall credit will be limited. He provides you with the following information for the current year: regular tax (before credits) = $37,500; tentative minimum tax = $20,200; alternative minimum tax = $0; foreign tax credit = $4,500; other nonrefundable credits = $6,100. Mark also has a $3,000 carryforward of general business credit from the prior year.

a. What is the current year limitation on Mark's general business credit?

b. What is Mark's allowable general business credit in the current year and where does it come from?

c. What is Mark's general business credit carryover?

I:14-53 ***Foreign Tax Credit.*** Laser Corporation, a U.S. corporation, has a foreign office that conducts business in France. Laser pays foreign taxes of $74,000 on foreign-source taxable income of $185,000. Its U.S.-source taxable income is $320,000, total U.S. taxable income (worldwide) of $505,000, and U.S. tax liability (before reductions for the foreign tax credit) is $106,050. What is Laser's foreign tax credit? What is Laser's foreign tax credit carryback or carryover?

I:14-54 ***Premium Tax Credit.*** Randall and Dianne Wall live in St. Louis, Missouri. Randall and Dianne are each 30 years old, neither smokes, and they have no children or other dependents.

Randall is attending law school full time and working part time (2025 earnings = $9,000). Dianne works full time (2025 earnings = $38,200). Their 2025 household income is more than 250% of the FPG (but not more than 300% of the FPG).

Dianne's employer does not offer employee health insurance coverage. The Walls choose to purchase insurance through the federal exchange operating in Missouri. They are credit eligible for all 12 months in 2025.

Their premiums for coverage vary by the type of plan.

a. Under a Gold plan, monthly premiums are $585 (covers 2) per month, so the annual cost of coverage is $7,020.
b. The second-least-expensive Silver plan (the benchmark plan) involves premiums of $468 per month (covers 2), or $5,616 per year.
c. Under a Bronze plan, monthly premiums are $390 (covers 2) per month, so the annual cost of coverage is $4,680.

What is the after-tax-credit cost of health insurance for the Walls under each of the plans described above?

I:14-55 ***Rehabilitation Tax Credit.*** Bob acquired a certified historic structure and placed it in service August of the current year, as an office for his business. He paid $20,000 for the building (exclusive of the land) and spent $40,000 for renovation costs.

a. What is the rehabilitation tax credit (before limitations)?
b. What is the basis of the building for MACRS depreciation purposes?
c. Compute the depreciation that Bob can take on the building for the current year.

I:14-56 ***Research Credit.*** Pharm Inc. is a small pharmaceutical company (organized four years ago) that is heavily involved in drug research. During the current year, Pharm Inc. incurred the following expenditures related to the company's research efforts:

Salaries of research scientists and technicians	$180,000
Supplies and materials	162,000
Depreciation on research equipment	30,000

For the previous four years, Pharm Inc. had average gross receipts of $5,000,000. The company's fixed-base percentage is 3%. Compute Pharm Inc.'s current year credit for research activities. Is Pharm Inc. entitled to claim any deduction for research and experimentation expenses for the current year?

I:14-57 ***Earned Income Credit.*** Carolyn is unmarried and has one dependent child, age 6, who lived with her for the entire year. In 2025, she has income of $18,000 in wages and $6,000 of unearned income (none of which was "disqualified income"). Her AGI is $24,000.

a. What is Carolyn's tentative earned income credit (before phaseout)?
b. What is Carolyn's allowable earned income credit?
c. If Carolyn has no income tax liability (before the earned income credit is subtracted), is she entitled to a refund in the current year?
d. How will your answers to Parts a and b change if Carolyn is married filing a joint return?

I:14-58 ***Earned Income Credit.*** Jose is unmarried with no qualifying children. He has $13,000 of 2025 wages and is otherwise eligible for the earned income credit. Jose has $200 of interest income and no *for* AGI deductions.

a. What is Jose's tentative earned income credit before phaseout?
b. What is Jose's allowable earned income credit?
c. If Jose has no income tax liability (before the earned income credit is subtracted), is he entitled to a refund for the current year?
d. Would your answer to Part b change if Jose had dividend and interest income of $15,000 during the taxable year?

I:14-59 ***Refundable Credits.*** Latisha is an unmarried taxpayer, filing head of household. She has two dependent children (7-year-old twins) who lived with her all year. Her 2025 earned income was $20,600, her AGI was $24,700, and she uses the standard deduction. Determine her:

1. Taxable income and regular tax before credits.
2. Earned income credit (EIC).
3. Balance due or refund.

I:14-60 ***Penalties for Nonpayment of Withholding and FICA Taxes.*** Lake Corporation has severe cash-flow problems. You are the company's financial and tax consultant. The treasurer of the company informed you that the company has failed to make FICA and federal income tax withholding payments to the IRS (both the employer and employee contributions) for a period of approximately six months.

a. What advice can you give to the company treasurer regarding the nonpayment of taxes?
b. Can the liability for payment of the taxes extend to parties other than the corporation? Explain.

I:14-61 ***Exemptions from Withholding.*** Which of the following categories of individuals or income are exempt from the federal income tax withholding requirements?

a. Household employees
b. Independent contractors
c. Newspaper carriers over age 18
d. Bonuses
e. Commissions
f. Vacation pay
g. Tips under $20 per month from a single employer

I:14-62 ***Withholding Exemptions.*** Barry is a college student who is employed as a waiter during the summer. He earns approximately $1,500 during the summer and estimates that he will not be required to file a tax return and will have no federal income tax liability. Last year, however, he made $6,000 and was required to file a return and pay $400 in taxes. Barry is unmarried and is supported by his parents. He has no dependents and does not have any other sources of income or deductions.

a. Can Barry claim exempt status on Form W-4 for withholding purposes?
b. Can Barry claim more than one exemption on Form W-4 (e.g., additional withholding allowances or the standard deduction allowance) to minimize the amount withheld? Explain.

I:14-63 ***Withholding.*** Bart and Jane Lee are married, file a joint return and have one dependent child (age 9). Bart begins a new job and is asked to fill out a Form W-4. What are the important pieces of information that will be included on Form W-4?

I:14-64 ***Estimated Tax Requirements.*** Anna does not make quarterly estimated tax payments even though she has substantial amounts of income that are not subject to withholding. In the previous year, Anna's tax liability was $18,000 and her AGI was $ 135,000. In the current year, Anna's actual tax liability is $30,000, and $18,200 was withheld from her salary.

a. Is Anna subject to the underpayment penalty? Why?
b. If Anna's withholdings were only $15,000, would she be subject to the underpayment penalty? Why?
c. If Anna is subject to an underpayment penalty, can she deduct this amount as interest? Explain.

I:14-65 ***Estimated Tax Underpayment Penalty.*** Jane's estimated tax payments for the current year total $14,000, and federal income taxes withheld from her salary amount to $12,000. Jane's actual tax liability for the current year is $30,000. Her income was earned evenly throughout the current year. Jane's AGI for the prior year was $160,000 and her tax liability was $25,000. Is Jane subject to the underpayment penalty? Explain.

COMPREHENSIVE PROBLEM

I:14-66 Mike Webb, married to Nancy Webb, is employed by a large pharmaceutical company and earns a salary. In addition, Mike is an entrepreneur and has two small businesses on the side, both of which operate as sole proprietorships. One is a profitable consulting business where Mike provides financial and retirement advice to pharmacists. The other involves the manufacture of Christmas novelties in China, selling the products in gift shops in the U.S. This business is struggling. However, Mike feels the Christmas novelty business has great potential. Mike reports the following for 2025:

Salary			$175,000
Consulting practice:	Revenues	$65,000	
	Ordinary expenses	12,000	53,000
Sole proprietorship:	Revenues	$22,000	
	Ordinary Expenses	40,000	(18,000)
Interest (none tax-exempt)			3,000
Dividends, qualified			9,000
LTCG		$24,000	
STCL		(4,000)	20,000
Itemized deductions:			
State and local taxes (before limitations)		$14,000	
Real estate taxes (before limitations)		8,000	
Mortgage interest on personal residence		9,000	
Charitable contributions		15,000	46,000

Child care expenses:

The Webbs have two dependent children, ages 13 and 11, and pay child care expenses of $4,000 per year for each child. Nancy is not employed, but is a full-time student (all of 2025) at State University, majoring in Accounting.

Federal income tax withheld from salary	$21,000
Estimated taxes paid for 2025	12,000

For 2024, Mike and Nancy's AGI was $185,000 and their actual federal income tax liability was $29,000.

a. Compute the Webbs regular federal income tax liability for 2025, including self-employment taxes.

b. Are the Webbs subject to AMT in 2025, assuming they have additional AMT preferences of $70,000?

c. Are the Webbs due a refund for 2025?

d. Are the Webbs subject to any underpayment penalties for 2025?

TAX STRATEGY AND CRITICAL THINKING PROBLEM

I:14-67 Jeff and Linda Foley are married and file a joint income tax return. Jeff is a lawyer and a partner in the firm of Foley & Looby, Attorneys at Law. Jeff is a 50% partner in the firm along with his partner, John Looby who is the other 50% partner. Foley & Looby (F&L) currently rent office space in a prestigious building and pay rent of $6,000 per month or $72,000 per year for their 4,000 square foot office. Thus, the firm pays $18 per square foot per year. As no equity is being generated by paying rent, Jeff and John are considering buying an office building. They have two buildings under consideration, as follows:

Building #1

Building #1 is a relatively new building and has 10,000 square feet of space. The new building can be purchased for a total price of $1,000,000. F&L would only use 4,000 square feet of the space and have other businesses that would rent the other 6,000 square feet from F&L for $15 per square foot per year, a total of $90,000 per year. Maintenance costs would amount to approximately $10 per square foot per year. The building is in excellent condition and is ready to be moved into immediately and would require very few other outlays by F&L.

Building #2

Building #2 is located in the downtown area in a certified historic district and would qualify as a certified historic structure. This building, nearly 80 years old, also has 10,000 square feet and, like Building #1, the other 6,000 square feet can be rented to other tenants at $15 per square foot per year, a total of $90,000 per year. However, Building #2 is not in as good condition as Building #1. The purchase price of the building would be

$400,000, and Jeff and John estimate that approximately $600,000 would have to be invested in capital expenditures to make the building suitable for their business. After the significant capital expenditures, F&L estimates the maintenance costs to be similar to Building #1, or $10 per square foot per year.

Both buildings can be 100% financed at 8% annual interest rate for 15 years. The annual cash payment on the $1,000,000 mortgage would be $117,000. Assume both buildings will appreciate at a rate of 8% per year.

Jeff and John have come to you as their financial and tax advisor to help them make the decision as to which building to purchase. If the buildings are equally desirable from a non-financial and non-tax standpoint, what is the best decision for them? That is, should they stay where they are and rent, or purchase one of the two buildings? Assume both Jeff and John are in the 35% marginal tax bracket.

TAX FORM/RETURN PREPARATION PROBLEMS

I:14-68 Len and Christy Vole, ages 42 and 39 respectively, are married and file jointly in 2024. Len is a contractor operating as a sole proprietorship (EIN 11-1111111). Christy is employed, earning $24,000 as a part-time paralegal. They have two dependent children, Jill, age 8 and Lee, age 5. They received $4,550 from Good Bank in taxable interest income.

Their allowable itemized deductions include state income tax $3,700; home mortgage interest $6,000; and charity $5,000. Federal income tax withholding was $7,500 and estimated tax payments were $13,000. The Voles also incurred $7,000 of qualifying child care expenses to enable them to work ($3,500 for each child). It was paid to HiTop Daycare, 327 Fowler St., Indianapolis, IN 46802 (EIN 22-2222222).

Len earns $105,000 in profit in a sole proprietorship. He incurred the following expenses that qualify for the general business credit: $6,000 for disabled access. No adjustments are required to this credit and there are no carrybacks or carryforwards.

Social security numbers are: Len, 100-11-1111; Christy, 200-22-2222; Jill, 300-33-3333; Lee, 400-44-4444.

Complete the Voles' Form 1040 for 2023, along with supporting Schedules 1, 2, 3, A, B, C, and SE (short form), Form 2441 (child and dependent care credit), Form 3800 (general business credit), and Form 8826 (disabled access credit). Assume the couple had no transactions involving virtual currency during the year. Show detail of the child tax credit computation (with any phaseout) at the bottom of Form 1040, page 2.

I:14-69 Harold J. Milton (SSN 111-22-1111) is 66 years old and unmarried, filing single with no dependents. He had no transactions involving any virtual currency during the year. He had the following income and deductions for 2024:

Salary	$180,000	State income taxes	$18,000
Interest income from State Bank	12,000	Mortgage interest expense on residence (100% acquisition debt)	19,000
Dividend income (qualified)	18,000	Interest expense on car loan	3,000
Deductible IRA contribution	5,000	Real estate taxes on residence	2,000
Tax-exempt interest income from municipal bonds	24,000	Miscellaneous deductions—other (before the floor)	12,000
Charitable contributions	27,000	Income taxes withheld	20,000
Medical expenses (before the floor)	18,000	Estimated tax payments ($2,500 per quarter)	10,000

Complete Milton's 2024 Form 1040-SR, Schedules 1, 2, A, B and Form 8960. In 2023, Milton had AGI of $200,000 and his income tax liability was $46,000.

I:14-70 ***Child Tax Credit Short Tax Form.*** Reagan and Grady Wade are married with three qualifying children under the age of 17. In 2024, Reagan and Grady had earned income of $50,000 and no adjustments. Line 11 of their 1040 reports AGI of $50,000. Reagan and Grady take the standard deduction for 2024 ($29,200) and as a result have taxable income of $20,800. The Wades' tax liability before considering the child tax credit is $2,083. Assuming the Wades have no other tax credits, complete the 2024 Schedule 8812 Credit for Qualifying Children and Other Dependents as well as the associated Line 5 worksheet for Schedule 8812.

I:14-71 ***Self Employment Tax Calculation Short Tax Form.*** Doug is a single taxpayer. In 2024, he had wage income of $120,000 from his employer. In addition to his wage income, Doug was a consultant in which he made an additional $77,000 of net income from self-employment (Schedule C, line 31). Complete the 2024 Schedule SE to determine the amount of tax Doug will incur from his consulting business. Note: You will need to complete Section B – Long Schedule SE.

CASE STUDY PROBLEMS

I:14-72 Barbara was divorced two years ago. However, the final property settlement and determination of alimony payments was not made until February 2025 because of extended litigation. Barbara received a $20,000 payment of back alimony in March 2025 and will receive monthly alimony payments of $2,000 for the period April through December 2025. Last year, Barbara's income consisted of $15,000 salary and $2,000 of taxable interest income, and her tax liability was $1,900. She expects to continue working at an annual salary of $15,000 and will have $2,000 of interest income. Federal income taxes withheld from her salary will be $1,500. Her monthly alimony payments of $2,000 are also expected to continue for an indefinite period.

In early April 2025 Barbara requests your advice regarding the payment of 2025 quarterly estimated taxes. Prepare a memo to your client that discusses these requirements, including any possible penalties for not making quarterly payments and nontax issues such as cash-flow and investment income decisions.

I:14-73 Chips-R-Us is a computer technology corporation that designs hardware and software for use in large businesses. The corporation regularly pays individuals to install programs and give advice to companies that buy their software. In the current year, Simone, a computer expert, was sent to a customer of Chips-R-Us to perform computer services. Simone is not a regular employee of the corporation and the corporation did not train Simone for the task. Simone keeps track of the time spent on the job at the customer and reports to the corporation, which pays Simone for her services. The corporation specifies the work to be done for their client. The corporation can also replace Simone with another individual if her work is not satisfactory. Chips-R-Us treats Simone as an independent contractor for employment tax purposes.

In the current year the IRS challenges the corporation that it has failed to remit FICA taxes and income taxes that should have been withheld with respect to Simone's employment. Chips-R-Us refuses to pay the amount, stating that it is not required to do so because Simone is not an employee of the corporation. What will be the likely outcome of the IRS's challenge concerning Simone's status as an employee or independent contractor? Who may be liable for payment of the employment taxes, interest, and penalties to the government? What ethical responsibilities should be followed in the remittance of withheld employee taxes?

TAX RESEARCH PROBLEM

I:14-74 Lean Corporation was incorporated in 2018 by Bruce Smith, who has served as an officer and member of the Board of Directors. Carl Jones has served as the secretary-treasurer of the company as a convenience to his friend Bruce. Carl acted as a part-time bookkeeper but did not run the everyday business affairs and paid only the bills he was instructed to pay. Carl was an authorized signatory for the corporate bank accounts but had no final control over expenditures.

Beginning in the last quarter of 2023, the company failed to pay all of the taxes withheld from employees and the employer's share of FICA taxes to the IRS. Despite this delinquency, the corporation continued to pay other creditors, including its employees, in preference to the IRS.

In January 2025, Lean Corporation entered into an installment agreement with the IRS to stay current on its withholding tax deposits and to make payments on the past due balance until paid in full. The company subsequently defaulted on the agreement in April 2024. During this period, Bruce Smith was serving as chief financial officer and was a member of the board of directors. He had the authority to make policy decisions. He was responsible for negotiating the installment agreement with the IRS and the decision to default on the agreement.

Who is liable for the penalty for the nonpayment of the payroll tax withholdings?

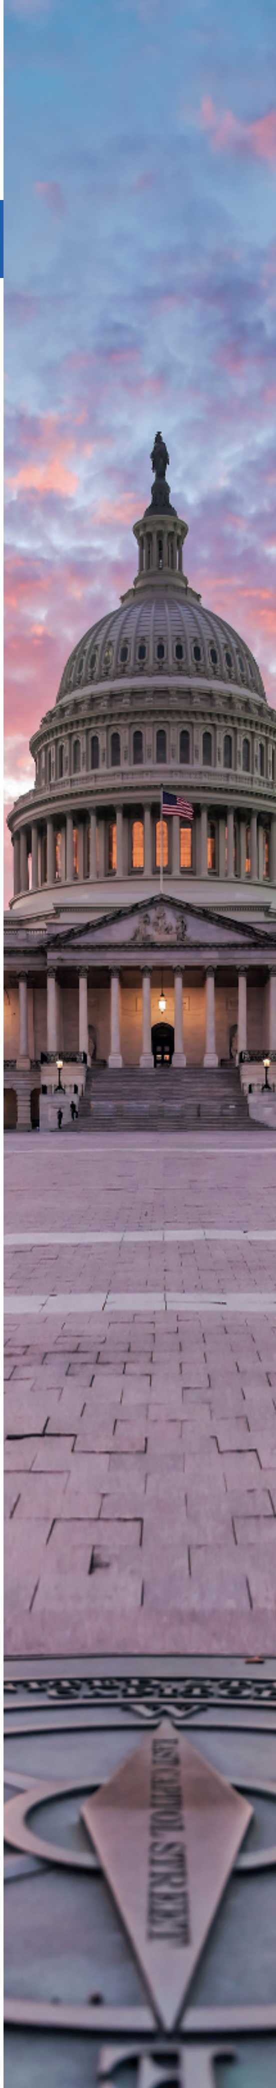
TAX RESEARCH



James Byard/Zoonar GmbH/Alamy Stock Photo

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Distinguish between closed fact and open fact tax situations
2. Describe the steps in the tax research process
3. Explain how the facts influence tax consequences
4. Identify the sources of tax law and assess the authoritative value of each
5. Consult tax services to research an issue
6. Apply the basics of Internet-based tax research
7. Use a citator to assess tax authorities
8. Describe the professional guidelines that CPAs in tax practice should follow
9. Prepare work papers and communicate to clients

CHAPTER OUTLINE

Overview of Tax Research...15-2
Steps in the Tax Research Process...15-3
Importance of the Facts to the Tax Consequences...15-5
The Sources of Tax Law...15-7
Tax Services...15-25
The Internet as a Research Tool...15-26
Citators...15-28
Professional Guidelines for Tax Services...15-30
Sample Work Papers and Client Letter...15-34

This chapter introduces the reader to the tax research process. Its major focus is the sources of the tax law (i.e., the Internal Revenue Code and other tax authorities) and the relative weight given to each source. The chapter describes the steps in the tax research process and places particular emphasis on the importance of the facts to the tax consequences. It also describes the features of frequently used tax services and computer-based tax research resources. Finally, it explains how to use a citator.

The end product of the tax research process—the communication of results to the client—also is discussed. This text uses a hypothetical set of facts to provide a comprehensive illustration of the process. Sample work papers demonstrating how to document the results of research are included in Appendix A. The text also discusses two types of professional guidelines for CPAs in tax practice: the American Institute of Certified Public Accountants' (AICPA's) *Statements on Standards for Tax Services* (referenced in Appendix E) and Treasury Department *Circular 230*.

OVERVIEW OF TAX RESEARCH

OBJECTIVE 1

Distinguish between closed fact and open fact tax situations

Tax research is the process of solving tax-related problems by applying tax law to specific sets of facts. Sometimes it involves researching several issues and often is conducted to formulate tax policy. For example, policy-oriented research would determine how far the level of charitable contributions might decline if such contributions were no longer deductible. Economists usually conduct this type of tax research to assess the effects of government policy.

Tax research also is conducted to determine the tax consequences of transactions to specific taxpayers. For example, client-oriented research would determine whether Smith Corporation could deduct a particular expenditure as a trade or business expense. Accounting and law firms generally engage in this type of research on behalf of their clients.

ADDITIONAL COMMENT

Closed-fact situations afford the tax advisor the least amount of flexibility. Because the facts are already established, the tax advisor must develop the best solution possible within certain predetermined constraints.

This chapter deals only with client-oriented tax research, which occurs in two contexts:

1. **Closed fact or tax compliance situations:** The client contacts the tax advisor after completing a transaction or while preparing a tax return. In such situations, the tax consequences are fairly straightforward because the facts cannot be modified to obtain different results. Consequently, tax saving opportunities may be lost.

EXAMPLE I:15-1 ▶ Tom informs Carol, his tax advisor, that on November 4 of the current year, he sold land held as an investment for $500,000 cash. His basis in the land was $50,000. On November 9, Tom reinvested the sales proceeds in another plot of investment property costing $500,000. This is a closed fact situation. Tom wants to know the amount and the character of the gain (if any) he must recognize. Because Tom solicits the tax advisor's advice after the sale and reinvestment, the opportunity for tax planning is limited. For example, the possibility of deferring taxes by using a like-kind exchange or an installment sale is lost. ◀

ADDITIONAL COMMENT

Open-fact or tax-planning situations give a tax advisor flexibility to structure transactions to accomplish the client's objectives. In this type of situation, a creative tax advisor can save taxpayers dollars through effective tax planning.

2. **Open fact or tax planning situations:** Before structuring or concluding a transaction, the client contacts the tax advisor to discuss tax planning opportunities. Tax-planning situations generally are more difficult and challenging because the tax advisor must consider the client's tax and nontax objectives. Most clients will not engage in a transaction if it is inconsistent with their nontax objectives, even though it produces tax savings.

EXAMPLE I:15-2 ▶ Diane is a widow with three children and five grandchildren and at present owns property valued at $30 million. She seeks advice from Carol, her tax advisor, about how to minimize her estate taxes and convey the greatest value of property to her descendants. This is an open-fact situation. Carol could advise Diane to leave all but $13.99 million of her property to a charitable organization so that her estate would owe no estate taxes. Although this recommendation would eliminate Diane's estate taxes, Diane is likely to reject it because she wants her children or grandchildren to be her primary beneficiaries. Thus, reducing estate taxes to zero is inconsistent with her objective of allowing her descendants to receive as much after-tax wealth as possible. ◀

TAX STRATEGY TIP

Taxpayers should make investment decisions based on after-tax rates of return or after-tax cash flows.

When conducting research in a tax planning context, the tax professional should keep a number of points in mind. First, the objective is not to minimize taxes per se but rather to maximize a taxpayer's after-tax return. For example, if the federal income tax rate is a constant 30%, an investor should not buy a tax-exempt bond yielding 5% when he or she could buy a corporate bond of equal risk that yields 9% before tax and 6.3% after tax. This is the case even though his or her explicit taxes (actual tax liability) would be minimized by investing in the tax-exempt bond.[1] Second, taxpayers typically do not engage in unilateral or self-dealing transactions; thus, the tax ramifications for all parties to the transaction should be considered. For example, in the executive compensation context, employees may prefer to receive incentive stock options (because they will not recognize income until they sell the stock), but the employer may prefer to grant a different type of option (because the employer cannot deduct the value of incentive stock options upon issuance). Thus, the employer might grant a different number of options if it uses one type of stock option versus another type as compensation. Third, taxes are but one cost of doing business. In deciding where to locate a manufacturing plant, for example, factors more important to some businesses than the amount of state and local taxes paid might be the proximity to raw materials, good transportation systems, the cost of labor, the quantity of available skilled labor, and the quality of life in the area. Fourth, the time for tax planning is not restricted to the beginning date of an investment, contract, or other arrangement. Instead, the time extends throughout the duration of the activity. As tax rules change or as business and economic environments change, the tax advisor must reevaluate whether the taxpayer should hold onto an investment and must consider the transaction costs of any alternatives.

ADDITIONAL COMMENT

It is important to consider nontax as well as tax objectives. In many situations, the nontax considerations outweigh the tax considerations. Thus, the plan eventually adopted by a taxpayer may not always be the best when viewed strictly from a tax perspective.

One final note: the tax advisor should always bear in mind the financial accounting implications of proposed transactions. An answer that may be desirable from a tax perspective may not always be desirable from a financial accounting perspective. Though interrelated, the two fields of accounting have different orientations and different objectives. Tax accounting is oriented primarily to the Internal Revenue Service (IRS). Its objectives include calculating, reporting, and predicting one's tax liability according to legal principles. Financial accounting is oriented primarily to shareholders, creditors, managers, and employees. Its objectives include determining, reporting, and predicting a business's financial position and operating results according to Generally Accepted Accounting Principles. Because tax and financial accounting objectives may differ, planning conflicts could arise. For example, management might be reluctant to engage in tax reduction strategies that also reduce book income and reported earnings per share. Success in any tax practice, especially at the managerial level, requires consideration of both sets of objectives and orientations.

STEPS IN THE TAX RESEARCH PROCESS

OBJECTIVE 2

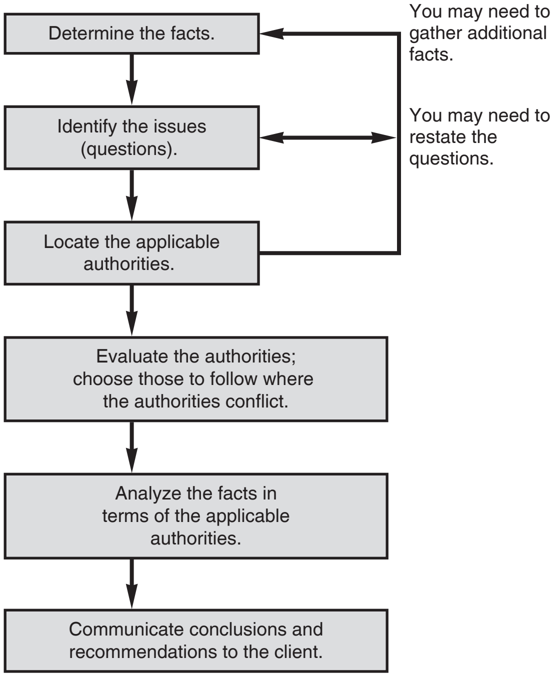
Describe the steps in the tax research process

In both open- and closed-fact situations, the tax research process involves six basic steps:

1. Determine the facts.
2. Identify the issues (questions).
3. Locate the applicable authorities.
4. Evaluate the authorities and choose those to follow where the authorities conflict.
5. Analyze the facts in terms of the applicable authorities.
6. Communicate conclusions and recommendations to the client.

---

[1] For an excellent discussion of explicit and implicit taxes and tax planning see M. M. Erickson, M. L. Hanlon, E. L. Maydew, and T. J. Shevlin, *Scholes & Wolfson's Taxes and Business Strategy* (Cambridge Business Publishers, 2020). Also see *Pearson's Federal Taxation: Individuals*, Chapter I:18. An example of an implicit tax is the excess of the before-tax earnings on a taxable bond over the risk-adjusted before-tax earnings on a tax-favored investment (e.g., a municipal bond).



Determine the facts.
Identify the issues (questions).
Locate the applicable authorities.
Evaluate the authorities; choose those to follow where the authorities conflict.
Analyze the facts in terms of the applicable authorities.
Communicate conclusions and recommendations to the client.
You may need to gather additional facts.
You may need to restate the questions.

FIGURE I:15-1 ▶ Steps in the Tax Research Process

ADDITIONAL COMMENT

The steps of tax research provide an excellent format for a written tax communication. For example, a good format for a client memo includes (1) statement of facts, (2) list of issues, (3) discussion of relevant authority, (4) analysis, and (5) recommendations to the client of appropriate actions based on the research results.

Although the above outline suggests a linear approach, the tax research process often is circular. That is, it does not always proceed step-by-step. Figure I:15-1 illustrates a more accurate process, and Appendix A provides a comprehensive example of this process.

In a closed-fact situation, the facts have already occurred, and the tax advisor's task is to analyze them to determine the appropriate tax treatment. In an open-fact situation, by contrast, the facts have not yet occurred, and the tax advisor's task is to plan for them or shape them so as to produce a favorable tax result. The tax advisor performs the latter task by reviewing the relevant legal authorities, particularly court cases and IRS rulings, all the while bearing in mind the facts of those cases or rulings that produced favorable results compared with those that produced unfavorable results. For example, if a client wants to realize an ordinary loss (as opposed to a capital loss) on the sale of several plots of land, the tax advisor might consult cases involving similar land sales. The advisor might attempt to distinguish the facts of those cases in which the taxpayer realized an ordinary loss from the facts of those cases in which the taxpayer realized a capital loss. The advisor then might recommend that the client structure the transaction based on the fact pattern in the ordinary loss cases.

TYPICAL MISCONCEPTION

Many taxpayers think the tax law is all black and white. However, most tax research deals with gray areas. Ultimately, when confronted with tough issues, the ability to develop strategies that favor the taxpayer and then to find relevant authority to support those strategies will make a successful tax advisor. Thus, recognizing planning opportunities and avoiding potential traps is often the real value added by a tax advisor.

Often, tax research involves a question to which no clearcut, unequivocally correct answer exists. In such situations, probing a related issue might lead to a solution pertinent to the central question. For example, in researching whether the taxpayer may deduct a loss as ordinary instead of capital, the tax advisor might research the related issue of whether the presence of an investment motive precludes classifying a loss as ordinary. The solution to that issue might be relevant to the central question of whether the taxpayer may deduct the loss as ordinary.

Identifying the issue(s) to be researched often is the most difficult step in the tax research process. In some instances, the client defines the issue(s) for the tax advisor, such as where the client asks, "May I deduct the costs of a winter trip to Florida recommended by my physician?" In other instances, the tax advisor, after reviewing the documents submitted to him or her by the client, identifies and defines the issue(s) himself or herself. Doing so presupposes a firm grounding in tax law.[2]

---

[2] Often, in an employment context, supervisors define the questions to be researched and the authorities that might be relevant to the tax consequences.

Once the tax advisor locates the applicable legal authorities, he or she might have to obtain additional information from the client. Example I:15-3 illustrates the point. The example assumes that all relevant tax authorities are in agreement.

EXAMPLE I:15-3 ▶ Mark calls his tax advisor, Al, and states that he (1) incurred a loss on renting his beach cottage during the current year and (2) wonders whether he may deduct the loss. He also states that he, his wife, and their minor child occupied the cottage only eight days during the current year.

This is the first time Al has dealt with the Sec. 280A vacation home rules. On reading Sec. 280A(d), Al learns that a loss is *not* deductible if the taxpayer used the residence for personal purposes for longer than the greater of (1) 14 days or (2) 10% of the number of days the unit was rented at a fair rental value. He also learns that the property is *deemed* to be used by the taxpayer for personal purposes on any days on which it is used by any member of his or her family (as defined in Sec. 267(c)(4)). The Sec. 267(c)(4) definition of family members includes brothers, sisters, spouse, ancestors (e.g., parents and grandparents), or lineal descendants (e.g., children and grandchildren).

Mark's eight-day use is not long enough to make the rental loss nondeductible. However, Al must inquire about the number of days, if any, Mark's brothers, sisters, or parents used the property. (He already knows about use by Mark, his spouse, and his lineal descendants.) In addition, Al must find out how many days the cottage was rented to other persons at a fair rental value. Upon obtaining the additional information, Al proceeds to determine how to calculate the deductible expenses. Al then derives his conclusion concerning the deductible loss, if any, and communicates it to Mark. (This example assumes the passive activity and at-risk rules restricting a taxpayer's ability to deduct losses from real estate activities will not pose a problem for Mark. See *Pearson's Federal Taxation: Individuals*, Chapter I:9 for a comprehensive discussion of these topics.) ◀

Many firms require that a researcher's conclusions be communicated to the client in writing. Members or employees of such firms may answer questions orally, but their oral conclusions should be followed by a written communication. According to the AICPA's *Statements on Standards for Tax Services* (referenced in Appendix E),

> Although oral advice may serve a taxpayer's needs appropriately in routine matters or in well-defined areas, written communications are recommended in important, unusual, substantial dollar value, or complicated transactions. The member may use professional judgment about whether, subsequently, to document oral advice.[3]

In addition, Treasury Department *Circular 230* covers all written advice communicated to clients. These requirements are more fully discussed at the end of this chapter and in Chapter I:15.

IMPORTANCE OF THE FACTS TO THE TAX CONSEQUENCES

OBJECTIVE 3

Explain how the facts influence tax consequences

Many terms and phrases used in the Internal Revenue Code (IRC) and other tax authorities are vague or ambiguous. Some provisions conflict with others or are difficult to reconcile, creating for the researcher the dilemma of deciding which rules are applicable and which tax results are proper. For example, as a condition to claiming another person as a dependent, the taxpayer must provide a certain level of support for such person.[4] Neither the IRC nor the Treasury Regulations define "support." This lack of definition could be problematic. For example, if the taxpayer purchased a used automobile costing $8,000 for an elderly parent whose only source of income is $7,800 in Social Security benefits, the question of whether the expenditure constitutes support would arise. The tax advisor would have to consult court opinions, revenue rulings, and other IRS pronouncements to ascertain the legal meaning of the term "support." Only after thorough research would the meaning of the term become clear.

[3] AICPA, *Statement on Standards for Tax Services*, No. 3, "Standards for Members Providing Tax Consulting Services," 2024, para 3.1.7.

[4] Sec. 152(e)(1)(A) and Sec. 152(d)(1)(C).

In other instances, the legal language is quite clear, but a question arises as to whether the taxpayer's transaction conforms to a specific pattern of facts that gives rise to a particular tax result. Ultimately, the peculiar facts of a transaction or event determine its tax consequences. A change in the facts can significantly change the consequences. Consider the following illustrations:

Illustration One
Facts: A holds stock, a capital asset, that he purchased two years ago at a cost of $1,000. He sells the stock to B for $920. What are the tax consequences to A?
Result: Under Sec. 1001, A realizes an $80 capital loss. He recognizes this loss in the current year. A must offset the loss against any capital gains recognized during the year. Any excess loss is deductible from ordinary income up to a $3,000 annual limit.
Change of Facts: A is B's son.
New Result: Under Sec. 267, A and B are related parties. Therefore, A may not recognize the realized loss. However, B may use the loss if she subsequently sells the stock at a gain.

Illustration Two
Facts: C donates to State University ten acres of land that she purchased two years ago for $10,000. The fair market value (FMV) of the land on the date of the donation is $25,000. C's adjusted gross income is $100,000. What is C's charitable contribution deduction?
Result: Under Sec. 170, C is entitled to a $25,000 charitable contribution deduction (i.e., the FMV of the property unreduced by the unrealized long-term gain).
Change of Facts: C purchased the land 11 months ago.
New Result: Under the same IRC section, C is entitled to only a $10,000 charitable contribution deduction (i.e., the FMV of the property reduced by the unrealized short-term gain).

Illustration Three
Facts: Acquiring Corporation pays Target Corporation's shareholders one million shares of Acquiring voting stock. In return, Target's shareholders tender 98% of their Target voting stock. The acquisition is for a bona fide business purpose. Acquiring continues Target's business. What are the tax consequences of the exchange to Target's shareholders?
Result: Because the transaction qualifies as a reorganization under Sec. 368(a)(1)(B), Target's shareholders are not taxed on the exchange, which is solely for Acquiring voting stock.
Change of Facts: In the transaction, Acquiring purchases the remaining 2% of Target's shares with cash.
New Result: Under the same IRC provision, Target's shareholders are now taxed on the exchange, which is not solely for Acquiring voting stock.

CREATING A FACTUAL SITUATION FAVORABLE TO THE TAXPAYER

TYPICAL MISCONCEPTION

Many taxpayers believe tax practitioners spend most of their time preparing tax returns. In reality, providing tax advice that accomplishes the taxpayer's objectives is one of the most important responsibilities of a tax advisor. This latter activity is tax consulting as compared to tax compliance.

Based on his or her research, a tax advisor might recommend to a taxpayer how to structure a transaction or plan an event so as to increase the likelihood that related expenses will be deductible. For example, suppose a taxpayer is assigned a temporary task in a location (City Y) different from the location (City X) of his or her permanent employment. Suppose also that the taxpayer wants to deduct the meal and lodging expenses incurred in City Y as well as the cost of transportation thereto. To do so, the taxpayer must establish that City X is his or her tax home and that he or she temporarily works in City Y. (Section 162 provides that a taxpayer may deduct travel expenses while "away from home" on business. A taxpayer is deemed to be "away from home" if his or her employment at the new location does not exceed one year, i.e., it is "temporary.") Suppose the taxpayer wants to know the tax consequences of his or her working in City Y for ten months and then, within that ten-month period, finding permanent employment in City Y. What is tax research likely to reveal?

Tax research will lead to an IRS ruling stating that, in such circumstances, the employment will be deemed to be temporary until the date on which the realistic expectation about the temporary nature of the assignment changes.[5] After this date, the employment will be deemed to be permanent, and travel expenses relating to it will be nondeductible. Based on this finding, the tax advisor might advise the taxpayer to postpone his or her permanent job search in City Y until the end of the ten-month period and simply treat his or her assignment as temporary. So doing would lengthen the time he or she is deemed to be "away from home" on business and thus increase the amount of meal, lodging, and transportation costs deductible as travel expenses. The taxpayer should compare the tax savings to any additional personal costs of maintaining two residences.

THE SOURCES OF TAX LAW

OBJECTIVE 4

Identify the sources of tax law and assess the authoritative value of each

The language of the IRC is general; that is, it prescribes the tax treatment of broad categories of transactions and events. The reason for the generality is that Congress can neither foresee nor provide for every conceivable transaction or event. Even if it could, doing so would render the statute narrow in scope and inflexible in application. Accordingly, interpretations of the IRC—both administrative and judicial—are necessary. Administrative interpretations are provided in Treasury Regulations, revenue rulings, revenue procedures, and several other pronouncements discussed later in this chapter. Judicial interpretations are presented in court opinions. The term *tax law* as used by most tax advisors encompasses administrative and judicial interpretations in addition to the IRC. It also includes the meaning conveyed in reports issued by Congressional committees involved in the legislative process.

THE LEGISLATIVE PROCESS

Tax legislation begins in the House of Representatives. Initially, a tax proposal is incorporated in a bill. The bill is referred to the House Ways and Means Committee, which is charged with reviewing all tax legislation. The Ways and Means Committee holds hearings in which interested parties, such as the Treasury Secretary and IRS Commissioner, testify. At the conclusion of the hearings, the Ways and Means Committee votes to approve or reject the measure. If approved, the bill goes to the House floor where it is debated by the full membership. If the House approves the measure, the bill moves to the Senate where it is taken up by the Senate Finance Committee. Like Ways and Means, the Finance Committee holds hearings in which Treasury officials, tax experts, and other interested parties testify. If the committee approves the measure, the bill goes to the Senate floor where it is debated by the full membership. Upon approval by the Senate, it is submitted to the President for his or her signature. If the President signs the measure, the bill becomes public law. If the President vetoes it, Congress can override the veto by at least a two-thirds majority vote in each chamber.

Generally, at each stage of the legislative process, the bill is subject to amendment. If amended, and if the House version differs from the Senate version, the bill is referred to a House-Senate conference committee.[6] This committee attempts to resolve the differences between the House and Senate versions. Ultimately, it submits a compromise version of the measure to each chamber for its approval. Such referrals are common. For example, in 1998 the House and Senate disagreed over what the taxpayer must do to shift the burden of proof to the IRS. The House proposed that the taxpayer assert a "reasonable dispute" regarding a taxable item. The Senate proposed that the taxpayer introduce "credible evidence" regarding the item. A conference committee was appointed to resolve the differences. This committee ultimately adopted the Senate proposal, which was later approved by both chambers.

ADDITIONAL COMMENT

Committee reports can be helpful in interpreting new legislation because they indicate the intent of Congress. With the proliferation of tax legislation, committee reports have become especially important because the Treasury Department often is unable to draft the needed regulations in a timely manner.

After approving major legislation, the Ways and Means Committee and Senate Finance Committee usually issue official reports. These reports, published by the U.S. Government Printing Office (GPO) as part of the *Cumulative Bulletin* and as separate documents, explain the committees' reasoning for approving (and/or amending) the legislation.[7] In addition, the GPO publishes records of both the committee hearings and transcripts of the floor debates. The records are published as separate House or Senate documents. The transcripts are incorporated in the *Congressional Record* for the day of the debate. In tax research, these records, reports, and transcripts are useful in deciphering the meaning of the statutory language. Where this language is ambiguous or vague, and the courts have not interpreted it, the documents can shed light on **Congressional intent**, i.e., what Congress *intended* by a particular term, phrase, or provision.

---

[6] The size of a conference committee can vary. It is made up of an equal number of members from the House and the Senate.

[7] The *Cumulative Bulletin* is described in the discussion of revenue rulings on page I:15-12.

EXAMPLE I:15-4 ▶ In 1998, Congress passed legislation concerning shifting the burden of proof to the IRS. This legislation was codified in Sec. 7491. The question arises as to what constitutes "credible evidence" because the taxpayer must introduce such evidence to shift the burden of proof to the IRS. Section 7491 does not define the term. Because the provision was relatively new, few courts had an opportunity to interpret what "credible evidence" means. In the absence of relevant statutory or judicial authority, the researcher might have looked to the committee reports to ascertain what Congress intended by the term. Senate Report No. 105-174 states that "credible evidence" means evidence of a quality, which, "after critical analysis, the court would find sufficient upon which to base a decision on the issue if no contrary evidence were submitted."[8] This language suggests that Congress intended the term to mean evidence of a kind sufficient to withstand judicial scrutiny. Such a meaning should be regarded as conclusive in the absence of other authority. ◀

THE INTERNAL REVENUE CODE

ADDITIONAL COMMENT

The various tax services, discussed later in this chapter, provide IRC histories for researchers who need to work with prior years' tax law.

The IRC, which comprises Title 26 of the United States Code, is the foundation of all tax law. First codified (i.e., organized into a single compilation of revenue statutes) in 1939, the tax law was recodified in 1954. The IRC was known as the Internal Revenue Code of 1954 until 1986, when its name was changed to the Internal Revenue Code of 1986. Whenever changes to the IRC are approved, the old language is deleted and new language added. Thus, the IRC is organized as an integrated document, and a researcher need not read through the relevant parts of all previous tax bills to find the current version of the law. Nevertheless, a researcher must be sure that he or she is working with the law in effect when a particular transaction occurred.

The IRC contains provisions dealing with income taxes, estate and gift taxes, employment taxes, alcohol and tobacco taxes, and other excise taxes. Organizationally, the IRC is divided into subtitles, chapters, subchapters, parts, subparts, sections, subsections, paragraphs, subparagraphs, and clauses. Subtitle A contains rules relating to income taxes, and Subtitle B deals with estate and gift taxes. A set of provisions concerned with one general area constitutes a subchapter. For example, the topics of corporate distributions and adjustments appear in Subchapter C, and topics relating to partners and partnerships appear in Subchapter K. Figure I:15-2 presents the organizational scheme of the IRC.

An IRC section contains the operative provisions to which tax advisors most often refer. For example, they speak of "Sec. 351 transactions," "Sec. 306 stock," and "Sec. 1231 gains and losses." Although a tax advisor need not know all the IRC sections, paragraphs, and parts, he or she must be familiar with the IRC's organizational scheme to read and interpret it correctly. The language of the IRC is replete with cross-references to titles, paragraphs, subparagraphs, and so on.

EXAMPLE I:15-5 ▶ Section 7701, a definitional section, begins, "When used in this title. . ." and then provides a series of definitions. Because of this broad reference, a Sec. 7701 definition applies for all of Title 26; that is, it applies for purposes of the income tax, estate and gift tax, excise tax, and other taxes governed by Title 26. ◀

EXAMPLE I:15-6 ▶ Section 302(b)(3) allows taxpayers whose stock holdings are completely terminated in a redemption (a corporation's purchase of its stock from one or more of its shareholders) to receive capital gain treatment on the excess of the redemption proceeds over the stock's basis instead of ordinary income treatment on the entire proceeds. Section 302(c)(2)(A) states, "In the case of a distribution described in subsection (b)(3), section 318(a)(1) shall not apply if. . . ." Further, Sec. 302(c)(2)(C)(i) indicates "Subparagraph (A) shall not apply to a distribution to any entity unless. . . ." Thus, in determining whether a taxpayer will receive capital gain treatment in a stock redemption, a tax advisor must be able to locate and interpret various cross-referenced IRC sections, subsections, paragraphs, subparagraphs, and clauses. ◀

TREASURY REGULATIONS

The Treasury Department issues regulations that expound upon the IRC. **Treasury Regulations** often provide examples with computations that assist the reader in understanding how IRC provisions apply. Treasury Regulations are formulated on the basis of Treasury Decisions (T.D.s). The numbers of the Treasury Decisions that form the basis of a Treasury Regulation usually are found in the notes at the end of the regulation.

Because of frequent IRC changes, the Treasury Department does not always update the regulations in a timely manner. Consequently, when consulting a regulation, a tax advisor should check its introductory or end note to determine when the regulation was adopted. If the regulation was adopted before the most recent revision of the applicable IRC section, the regulation should be treated as authoritative to the extent consistent with the revision. Thus, for example, if a regulation issued before the passage of an IRC amendment specifies a dollar amount, and the amendment changed the dollar amount, the regulation should be regarded as authoritative in all respects except for the dollar amount.

Proposed, Temporary, and Final Regulations. A Treasury Regulation is first issued in proposed form to the public, which is given an opportunity to comment on it. Parties most likely to comment are individual tax practitioners and representatives of organizations such as the American Bar Association, the Tax Division of the AICPA, and the American Taxation Association. The comments may suggest that the proposed rules could affect taxpayers more adversely than Congress had anticipated. In drafting a final regulation, the Treasury Department generally considers the comments and may modify the rules accordingly. If the comments are favorable, the Treasury Department usually finalizes the regulation with minor revisions. If the comments are unfavorable, it usually finalizes the regulation with major revisions or allows the proposed regulation to expire.

Proposed regulations are just that—proposed. Consequently, they carry no more authoritative weight than do the arguments of the IRS in a court brief. Nevertheless, they represent the Treasury Department's official interpretation of the IRC. By contrast, **temporary regulations** are binding on the taxpayer. Effective as of the date of their publication, they often are issued immediately after passage of a major tax act to guide taxpayers and their advisors on procedural or computational matters. Regulations issued as temporary are concurrently issued as proposed. Because their issuance is not preceded by a public comment period, they are regarded as somewhat less authoritative than final regulations.

Once finalized, regulations can be effective the earliest of (1) the date they were filed with the *Federal Register,* a daily publication that contains federal government pronouncements; (2) the date temporary regulations preceding them were first published in the *Federal Register*; or (3) the date on which a notice describing the expected contents of the regulation was issued to the public.[9] For changes to the IRC enacted after July 29, 1996, the Treasury Department generally cannot issue regulations with retroactive effect.

Interpretative and Legislative Regulations. In addition to being officially classified as proposed, temporary, or final, Treasury Regulations are unofficially classified as interpretative or legislative. **Interpretative regulations** are issued under the general authority of Sec. 7805 and, as the name implies, merely make the IRC's statutory language easier to understand and apply. In addition, they often illustrate various computations. **Legislative regulations**, by contrast, arise where Congress delegates its rule-making authority to the Treasury Department. When Congress believes it lacks the expertise necessary to deal with a highly technical matter, it instructs the Treasury Department to set forth substantive tax rules relating to the matter.

Whenever the IRC contains language such as "The Secretary shall prescribe such regulations as he may deem necessary" or "under regulations prescribed by the Secretary," the regulations interpreting the IRC provision are legislative. The consolidated tax return regulations are an example of legislative regulations. In Sec. 1502, Congress delegated to the Treasury Department authority to issue regulations that determine the tax liability of a group of affiliated corporations filing a consolidated tax return. As a precondition to filing such a return, the corporations must consent to follow the consolidated return regulations.[10] Such consent generally precludes the corporations from later arguing in court that the regulatory provisions are invalid.

Authoritative Weight. Final Treasury Regulations are presumed to be valid and have almost the same authoritative weight as the IRC. Despite this presumption, taxpayers occasionally argue that a regulation is invalid and, consequently, should not be followed.

Prior to 2011, courts held interpretive and legislative regulations to different standards, giving more authority to legislative regulations that Congress specifically delegated to the Treasury Department to draft. The difference in authoritative weight largely disappeared, however, in 2011 with the Supreme Court decision in *Mayo Foundation.*[11] Going forward, both types of regulations will have the same authoritative weight and will be overturned only in very limited cases such as when, in the Court's opinion, the regulations exceed the scope of power delegated to the Treasury Department,[12] are contrary to the IRC,[13] or are unreasonable.[14]

KEY POINT

The older a Treasury Regulation becomes, the less likely a court is to invalidate the regulation. The legislative reenactment doctrine holds that if a regulation did not reflect the intent of Congress, lawmakers would have changed the statute in subsequent legislation to obtain their desired objectives.

In assessing the validity of long-standing Treasury Regulations, some courts apply the **legislative reenactment doctrine**. Under this doctrine, a regulation is deemed to receive congressional approval whenever the IRC provision under which the regulation was issued is reenacted without amendment.[15] Underlying this doctrine is the rationale that, if Congress believed that the regulation offered an erroneous interpretation of the IRC, it would have amended the IRC to conform to its belief. Congress's failure to amend the IRC signifies approval of the regulation.[16] This doctrine is predicated on Congress's constitutional authority to levy taxes. This authority implies that, if Congress is dissatisfied with the manner in which either the executive or the judiciary has interpreted the IRC, it can invalidate these interpretations through new legislation.

STOP & THINK

Question: You are researching the manner in which a deduction is calculated. You consult Treasury Regulations for guidance because the IRC states that the calculation is to be done "in a manner prescribed by the Secretary." After reviewing these authorities, you conclude that another way of doing the calculation arguably is correct under an intuitive approach. This approach would result in a lower tax liability for the client. Should you follow the Treasury Regulations, or should you use the intuitive approach and argue that the regulations are invalid?

---

[9] Sec. 7805(b).

[10] Sec. 1501.

[11] *Mayo Foundation for Medical Education & Research, et al. v. U.S.*, 107 AFTR 2d 2011-341, 131 S.Ct. 704 (2011).

[12] *McDonald v. CIR*, 56 AFTR 2d 85-5318, 85-2 USTC ¶9494 (5th Cir., 1985).

[13] *Jeanese, Inc. v. U.S.*, 15 AFTR 2d 429, 65-1 USTC ¶9259 (9th Cir., 1965).

[14] *United States v. Vogel Fertilizer Co.*, 49 AFTR 2d 82-491, 82-1 USTC ¶9134 (USSC, 1982).

[15] *United States v. Homer O. Correll*, 20 AFTR 2d 5845, 68-1 USTC ¶9101 (USSC, 1967).

[16] One can rebut the presumption that Congress approved of the regulation by showing that Congress was unaware of the regulation when it reenacted the statute.

Solution: Because of the language "in a manner prescribed by the Secretary," the Treasury Regulations dealing with the calculation are legislative. Whenever Congress calls for legislative regulations, it explicitly authorizes (directs) the Treasury Department to write the "rules." Thus, a challenge based on the existence of a reasonable alternative method is unlikely to succeed in court. Under the *Mayo Foundation* decision, you should reach the same conclusion even if dealing with an interpretive Treasury Regulation.

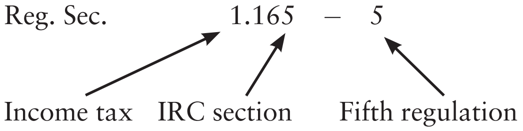
ADDITIONAL COMMENT

Citations serve two purposes in tax research: first, they substantiate propositions; second, they enable the reader to locate underlying authority.

Citations. Citations to Treasury Regulations are relatively easy to understand. One or more numbers appear before a decimal place, and several numbers follow the decimal place. The numbers immediately following the decimal place indicate the IRC section being interpreted. The numbers preceding the decimal place indicate the general subject of the regulation. Numbers that often appear before the decimal place and their general subjects are as follows:

Number	*General Subject Matter*
1	Income tax
20	Estate tax
25	Gift tax
301	Administrative and procedural matters
601	Procedural rules

The number following the IRC section number indicates the numerical sequence of the regulation, such as the fifth regulation. No relationship exists between this number and the subsection of the IRC being interpreted. An example of a citation to a final regulation is as follows:



Citations to proposed or temporary regulations follow the same format. They are referenced as Prop. Reg. Sec. or Temp. Reg. Sec. For temporary regulations the numbering system following the IRC section number always begins with the number of the regulation and an upper case T (e.g., -1T).

Section 165 addresses the broad topic of losses and is interpreted by several regulations. According to its caption, the topic of Reg. Sec. 1.165-5 is worthless securities, which also is addressed in subsection (g) of IRC Sec. 165. Parenthetical information following the text of the Treasury Regulation indicates that the regulation was last revised on March 11, 2008, by Treasury Decision (T.D.) 9386. Section 165(g) was last amended in 2000. A researcher must always check when the regulations were last amended and be aware that an IRC change may have occurred after the most recent regulation amendment, potentially making the regulation inapplicable.

When referencing a regulation, the researcher should fine-tune the citation to indicate the precise passage that supports his or her conclusion. An example of such a detailed citation is Reg. Sec. 1.165-5(j), Ex. 2(i), which refers to paragraph (i) of Example 2, found in paragraph (j) of the fifth regulation interpreting Sec. 165.

ADMINISTRATIVE PRONOUNCEMENTS

The IRS interprets the IRC through **administrative pronouncements**, the most important of which are discussed below. After consulting the IRC and Treasury Regulations, tax advisors are likely next to consult these pronouncements.

TYPICAL MISCONCEPTION

Even though revenue rulings do not have the same weight as Treasury Regulations or court cases, one should not underestimate their importance. Because a revenue ruling is the official published position of the IRS, in audits the examining agent will place considerable weight on any applicable revenue rulings.

Revenue Rulings. In **revenue rulings**, the IRS indicates the tax consequences of specific transactions encountered in practice. For example, in a revenue ruling, the IRS might indicate whether the exchange of stock for stock derivatives in a corporate acquisition is tax-free.

The IRS issues dozens of revenue rulings a year, although the number of rulings issued varies widely from year to year. These rulings do not rank as high in the hierarchy of authorities as do Treasury Regulations or federal court cases. They simply represent the IRS's view of the tax law. Taxpayers who do not follow a revenue ruling will not incur a substantial understatement penalty if they have substantial authority for different treatment.[17] Nonetheless, the IRS presumes that the tax treatment specified in a revenue ruling is correct. Consequently, if an examining agent discovers in an audit that a taxpayer did not adopt the position prescribed in a revenue ruling, the agent will contend that the taxpayer's tax liability should be adjusted to reflect that position.

A revenue ruling appears in the weekly *Internal Revenue Bulletin* (cited as I.R.B.), published by the U.S. Government Printing Office (GPO). Prior to 2009, revenue rulings appeared in the *Cumulative Bulletin* (cited as C.B.), a bound volume issued semiannually by the GPO. An example of a citation to a revenue ruling appearing in the *Cumulative Bulletin* is as follows:

Rev. Rul. 97-4, 1997-1 C.B. 5.

This is the fourth ruling issued in 1997, and it appears on page 5 of Volume 1 of the 1997 *Cumulative Bulletin*. For rulings after 2008, researchers should use citations to the *Internal Revenue Bulletin*. An example of such a citation follows:

Rev. Rul. 2013-8, 2013-15 I.R.B. 763.

For revenue rulings (and other IRS pronouncements) issued after 1999, the full four digits of the year of issuance are set forth in the title. For revenue rulings (and other IRS pronouncements) issued before 2000, only the last two digits of the year of issuance are set forth in the title. The above citation represents the eighth ruling for 2013. This ruling is located on page 763 of the *Internal Revenue Bulletin* for the fifteenth week of 2013. Once a revenue ruling is published in the *Cumulative Bulletin*, only the citation to the *Cumulative Bulletin* should be used. Thus, a citation to the I.R.B. is temporary.

Revenue Procedures. As the name suggests, **revenue procedures** are IRS pronouncements that usually deal with the procedural aspects of tax practice. For example, one revenue procedure deals with the manner in which tip income should be reported. Another revenue procedure describes the requirements for reproducing paper substitutes for informational returns such as Form 1099.

As with revenue rulings, revenue procedures are published in the *Internal Revenue Bulletin* and, prior to 2009, in the *Cumulative Bulletin*. For revenue procedures issued after 2008, the I.R.B. is the final reference. An example of a citation to a revenue procedure appearing in the *Internal Revenue Bulletin* is as follows:

Rev. Proc. 2017-4, 2017-1 I.R.B. 146.

This pronouncement is found in the first issue of the *Internal Revenue Bulletin* on page 146. It is the fourth revenue procedure issued in 2017.

In addition to revenue rulings and revenue procedures, the *Cumulative Bulletin* contains IRS notices, as well as the texts of proposed regulations, tax treaties, committee reports, and U.S. Supreme Court decisions.

SELF-STUDY QUESTION

Are letter rulings of precedential value for third parties?

ANSWER

No. A letter ruling is binding only on the taxpayer to whom the ruling was issued. Nevertheless, letter rulings can be very useful to third parties because they provide insight as to the IRS's opinion about the tax consequences of various transactions.

Letter Rulings. Letter rulings are initiated by taxpayers who ask the IRS to explain the tax consequences of a particular transaction.[18] The IRS provides its explanation in the form of a letter ruling, a response personal to the taxpayer requesting an answer. Only the taxpayer to whom the ruling is addressed may rely on it as authority. Nevertheless, letter rulings are relevant for other taxpayers and tax advisors because they offer insight into the IRS's position on the tax treatment of particular transactions.

---

[17] Chapter I:15 discusses the authoritative support taxpayers and tax advisors should have for positions they adopt on a tax return.

[18] Chapter I:15 further discusses letter rulings.

Originally the public did not have access to letter rulings issued to other taxpayers. As a result of Sec. 6110, enacted in 1976, letter rulings (with confidential information deleted) are accessible to the general public and have been reproduced by major tax services. An example of a citation to a letter ruling appears below:

> Ltr. Rul. 200130006 (July 30, 2001).

The first four digits (two if issued before 2000) indicate the year in which the ruling was made public, in this case, 2001.[19] The next two digits denote the week in which the ruling was made public, here the thirtieth. The last three numbers indicate the numerical sequence of the ruling for the week, here the sixth. The date in parentheses denotes the date of the ruling.

ADDITIONAL COMMENT

A technical advice memorandum is published as a letter ruling. Whereas a taxpayer-requested letter ruling deals with prospective transactions, a technical advice memorandum deals with past or consummated transactions.

Other Interpretations

Technical Advice Memoranda. When the IRS audits a taxpayer's return, the IRS agent might ask the IRS national office for advice on a complicated, technical matter. The national office will provide its advice in a **technical advice memorandum**, released to the public in the form of a letter ruling.[20] Researchers can identify which letter rulings are technical advice memoranda by introductory language such as, "In response to a request for technical advice. . . ." An example of a citation to a technical advice memorandum is as follows:

> T.A.M. 9801001 (January 2, 1998).

This citation refers to the first technical advice memorandum issued in the first week of 1998. The memorandum is dated January 2, 1998.

News Releases. If the IRS wants to disseminate information to the general public, it will issue a **news release**. News releases are written in lay terms and are dispatched to thousands of newspapers throughout the country. The IRS, for example, may issue a news release to announce the standard mileage rate for business travel. An example of a citation to a news release is as follows:

> I.R. News Release 2012-25 (February 17, 2012).

This citation is to the twenty-fifth news release issued in 2012. The release is dated February 17, 2012.

ADDITIONAL COMMENT

Announcements are used to summarize new tax legislation or publicize procedural matters. Announcements generally are aimed at tax practitioners and are considered to be "substantial authority" [Rev. Rul. 90-91, 1990-2 C.B. 262].

Announcements and Notices. The IRS also disseminates information to tax practitioners in the form of **announcements** and **notices**. These pronouncements generally are more technical than information releases and frequently address current tax developments. After passage of a major tax act, and before the Treasury Department has had an opportunity to issue proposed or temporary regulations, the IRS may issue an announcement or notice to clarify the legislation. The IRS is bound to follow the announcement or notice just as it is bound to follow a revenue procedure or revenue ruling. Examples of citations to announcements and notices are as follows:

> Announcement 2007-3, 2007-1 C.B. 376.
> Notice 2007-9, 2007-1 C.B. 401.

The first citation is to the third announcement issued in 2007. It can be found on page 376 of the first *Cumulative Bulletin* for 2007. The second citation is to the ninth notice issued in 2007. It can be found on page 401 of the first *Cumulative Bulletin* for 2007. Notices and announcements issued prior to 2009 appear in both the *Internal Revenue Bulletin* and the *Cumulative Bulletin,* but after 2008 they appear only in the *Internal Revenue Bulletin.*

---

[19] Sometimes a letter ruling is cited as PLR (private letter ruling) instead of Ltr. Rul.

[20] Technical advice memoranda are discussed further in Chapter I:15.

JUDICIAL DECISIONS

Judicial decisions are an important source of tax law. Judges are reputed to be unbiased individuals who decide questions of fact (the existence of a fact or the occurrence of an event) or questions of law (the applicability of a legal principle or the proper interpretation of a legal term or provision). Judges do not always agree on the tax consequences of a particular transaction or event. Therefore, tax advisors often must derive conclusions against a background of conflicting judicial authorities. For example, a U.S. district court might disagree with the Tax Court on the deductibility of an expense. Likewise, one circuit court might disagree with another circuit court on the same issue.

Overview of the Court System. A taxpayer may begin tax litigation in any of three courts: the U.S. Tax Court, the U.S. Court of Federal Claims (formerly the U.S. Claims Court), or U.S. district courts. Court precedents are important in deciding where to begin such litigation (see page I:15-21 for a discussion of precedent). Also important is when the taxpayer must pay the deficiency the IRS contends is due. A taxpayer who wants to litigate either in a U.S. district court or in the U.S. Court of Federal Claims must first pay the deficiency. The taxpayer then files a claim for refund, which the IRS is likely to deny. Following this denial, the taxpayer must petition the court for a refund. If the court grants the taxpayer's petition, he or she receives a refund of the taxes in question plus accrued interest. If the taxpayer begins litigation in the Tax Court, on the other hand, he or she need not pay the deficiency unless and until the court decides the case against him or her. In that event, the taxpayer also must pay interest and penalties.[21] A taxpayer who believes that a jury would be sympathetic to his or her case should litigate in a U.S. district court, the only forum where a jury trial is possible.

SELF-STUDY QUESTION

What are some of the factors that a taxpayer should consider when deciding in which court to file a tax-related claim?

ANSWER

(1) Each court's published precedent pertaining to the issue,
(2) desirability of a jury trial,
(3) tax expertise of each court,
and (4) when the deficiency must be paid.

If a party loses at the trial court level, it can appeal the decision to a higher court. Appeals of Tax Court and U.S. district court decisions are made to the court of appeals for the taxpayer's circuit. The appeals court system is comprised of 11 geographical circuits designated by numbers, the District of Columbia Circuit, and the Federal Circuit.[22] Table I:15-1 shows the states that lie in the various circuits. California, for example, lies in the Ninth Circuit. When referring to these appellate courts, instead of saying, for example, "the Court of Appeals for the Ninth Circuit," one generally says "the Ninth Circuit." All decisions of the U.S. Court of Federal Claims are appealable to one court—the Court of Appeals for the Federal Circuit—irrespective of where the taxpayer resides or does business.[23] The only cases the Federal Circuit hears are those that originate in the U.S. Court of Federal Claims.

The party losing at the appellate level can petition the U.S. Supreme Court to review the case under a **writ of certiorari**. If the Supreme Court agrees to hear the case, it grants **certiorari.**[24] If it refuses to hear the case, it denies certiorari. In recent years, the Court has granted certiorari in only about six to ten tax cases per year. Figure I:15-3 and Table I:15-2 provide an overview and summary of the court system with respect to tax matters.

ADDITIONAL COMMENT

Because the Tax Court deals only with tax cases, it presumably has a higher level of tax expertise than do other courts. Tax Court judges are appointed by the President, in part, due to their considerable tax experience. The Tax Court typically maintains a large backlog of tax cases, sometimes numbering in the tens of thousands.

The U.S. Tax Court. The U.S. Tax Court was created in 1942 as a successor to the Board of Tax Appeals. It is a court of national jurisdiction that hears only tax-related cases. All taxpayers, regardless of their state of residence or place of business, may litigate in the Tax Court. It has 19 judges, including one chief judge.[25] The President, with the consent of the Senate, appoints the judges for a 15-year term and may reappoint them for an additional

---

[21] Revenue Procedure 2005-18, 2005-1 C.B. 798, provides procedures for taxpayers to make remittances or apply overpayments to stop the accrual of interest on deficiencies.

[22] The Federal Circuit has nationwide jurisdiction to hear appeals in specialized cases, such as those involving patent laws.

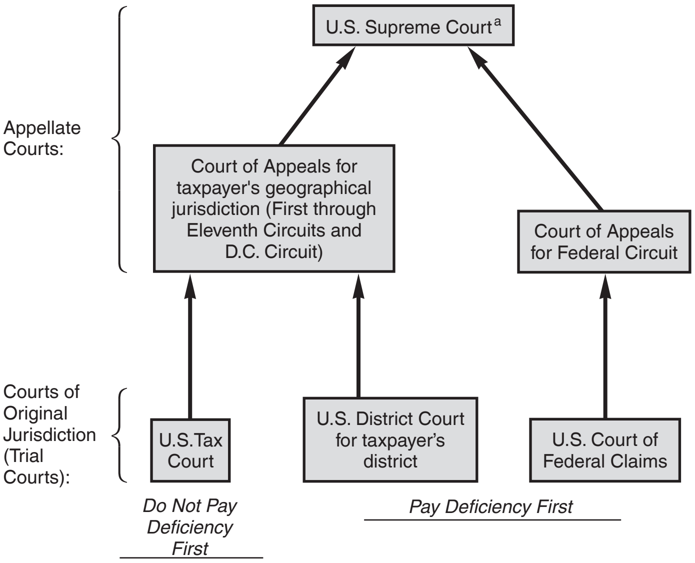
[23] The Court of Claims was reconstituted as the United States Court of Claims in 1982. In 1992, this court was renamed the U.S. Court of Federal Claims.

[24] The granting of certiorari signifies that the Supreme Court is granting an appellate review. The denial of certiorari does not necessarily mean that the Supreme Court endorses the lower court's decision. It simply means the court has decided not to hear the case.

[25] The Tax Court also periodically appoints, depending on budgetary constraints, a number of trial judges and senior judges who hear cases and render decisions with the same authority as the regular Tax Court judges.

▼ TABLE I:15-1
Federal Judicial Circuits

Circuit	States Included in Circuit
First	Maine, Massachusetts, New Hampshire, Rhode Island, Puerto Rico
Second	Connecticut, New York, Vermont
Third	Delaware, New Jersey, Pennsylvania, Virgin Islands
Fourth	Maryland, North Carolina, South Carolina, Virginia, West Virginia
Fifth	Louisiana, Mississippi, Texas
Sixth	Kentucky, Michigan, Ohio, Tennessee
Seventh	Illinois, Indiana, Wisconsin
Eighth	Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota
Ninth	Alaska, Arizona, California, Hawaii, Idaho, Montana, Nevada, Oregon, Washington, Guam, Northern Marina Islands
Tenth	Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming
Eleventh	Alabama, Florida, Georgia
D.C.	District of Columbia
Federal	All jurisdictions (for taxpayers appealing from the U.S. Court of Federal Claims)



U.S. Supreme Court[a]
Appellate Courts:
Court of Appeals for taxpayer's geographical jurisdiction (First through Eleventh Circuits and D.C. Circuit)
Court of Appeals for Federal Circuit
Courts of Original Jurisdiction (Trial Courts):
U.S. Tax Court
U.S. District Court for taxpayer's district
U.S. Court of Federal Claims
Do Not Pay Deficiency First
Pay Deficiency First

[a] Cases are heard only if the Supreme Court grants certiorari.

FIGURE I:15-3 ▶ Overview of Court System—Tax Matters

term. The judges, specialists in tax-related matters, periodically travel to roughly 100 cities throughout the country to hear cases. In most instances, only one judge hears a case.

The Tax Court issues both regular and memorandum (memo) decisions. Generally, the first time the Tax Court decides a legal issue, its decision appears as a **regular decision**. **Memorandum (memo) decisions**, on the other hand, usually deal with factual variations of previously decided cases. Nevertheless, regular and memo decisions carry the same authoritative weight.

At times, the chief judge determines that a particular case concerns an important issue that the entire Tax Court should consider. In such a situation, the words *reviewed by the court* appear at the end of the majority opinion. Any concurring or dissenting opinions follow the majority opinion. A judge who issues a concurring opinion agrees with the basic outcome of the majority's decision but not with its rationale. A judge who issues a dissenting opinion believes the majority reached an erroneous conclusion.

▼ TABLE I:15-2
Summary of Court System—Tax Matters

Court(s) (Number of)	Number of Judges on Each	Personal Jurisdiction	Subject Matter Jurisdiction	Determines Questions of Fact	Trial by Jury	Precedents Followed	Where Opinions Published
U.S. district courts (over 95)	1–28*	Local	General	Yes	Yes	Same court Court for circuit where situated U.S. Supreme Court	*Federal Supplement* *American Federal Tax Reports* *United States Tax Cases*
U.S. Tax Court (1)	19	National	Tax	Yes	No	Same court Court for taxpayer's circuit U.S. Supreme Court	*Tax Court of the U.S. Reports* *CCH Tax Court Memorandum Decisions* *RIA Tax Court Memorandum Decisions*
U.S. Court of Federal Claims (1)	16	National	Claims against U.S. Government	Yes	No	Same court Federal Circuit Court U.S. Supreme Court	*Federal Reporter (pre-1982)* *U.S. Court of Federal Claims* *American Federal Tax Reports* *United States Tax Cases*
U.S. Courts of Appeals (13)	About 20	Regional	General	No	No	Same court U.S. Supreme Court	*Federal Reporter* *American Federal Tax Reports* *United States Tax Cases*
U.S. Supreme Court (1)	9	National	General	No	No	Same court	*U.S. Supreme Court Reports* *Supreme Court Reporter* *United States Reports, Lawyers' Edition* *American Federal Tax Reports* *United States Tax Cases*

*Although the number of judges assigned to each court varies, only one judge hears a case.

Another phrase sometimes appearing at the end of a Tax Court opinion is *Entered under Rule 155*. This phrase signifies that the court has reached a decision concerning the tax treatment of an item but has left computation of the deficiency to the two litigating parties.

SELF-STUDY QUESTION

What are some of the considerations for litigating under the small cases procedure of the Tax Court?

ANSWER

The small cases procedure gives the taxpayer the advantage of having his or her "day in court" without the expense of an attorney. But if the taxpayer loses, the decision cannot be appealed. On the other hand, the IRS also cannot appeal if *it* loses.

Small Cases Procedure. Taxpayers have the option of having their cases heard under the **small cases procedure** of the Tax Court if the amount in controversy on an annual basis does not exceed $50,000.[26] This procedure is less formal than the regular Tax Court procedure, and taxpayers can represent themselves without an attorney.[27] The cases are heard by special commissioners instead of by one of the 19 Tax Court judges. A disadvantage of the small cases procedure for the losing party is that the decision cannot be appealed. The opinions of the commissioners generally are not published and have no precedential value.

Acquiescence Policy. The IRS has adopted a policy of announcing whether, in future cases involving similar facts and similar issues, it will follow federal court decisions that are adverse to it. This policy is known as the IRS **acquiescence policy**. If the IRS wants taxpayers to know that it will follow an adverse decision in future cases involving similar facts and issues, it will announce its "acquiescence" in the decision. Conversely, if it wants taxpayers to know that it will not follow the decision in such future cases, it will announce its "nonacquiescence." The IRS does not announce its acquiescence or nonacquiescence in every decision it loses.

ADDITIONAL COMMENT

The only cases with respect to which the IRS will acquiesce or nonacquiesce are decisions that the government loses. Because the majority of cases, particularly Tax Court cases, are won by the government, the IRS will potentially acquiesce in only a small number of cases.

The IRS publishes its acquiescences and nonacquiescences as "Actions on Decision" first in the *Internal Revenue Bulletin*, then in the *Cumulative Bulletin*. Before 1991, the IRS acquiesced or nonacquiesced in regular Tax Court decisions only. In 1991, it broadened the scope of its policy to include adverse U.S. Claims Court, U.S. district court, and U.S. circuit court decisions.

In cases involving multiple issues, the IRS may acquiesce in some issues but not others. In decisions supported by extensive reasoning, it may acquiesce in the result but not the rationale (*acq. in result*). Furthermore, it may retroactively revoke an acquiescence or nonacquiescence. The footnotes to the relevant announcement in the *Internal Revenue Bulletin* and *Cumulative Bulletin* indicate the nature and extent of IRS acquiescences and nonacquiescences.

These acquiescences and nonacquiescences have important implications for taxpayers. If a taxpayer bases his or her position on a decision in which the IRS has nonacquiesced, he or she can expect an IRS challenge in the event of an audit. In such circumstances, the taxpayer's only recourse may be litigation. On the other hand, if the taxpayer bases his or her position on a decision in which the IRS has acquiesced, he or she can expect little or no challenge. In either case, the examining agent will be bound by the IRS position.

ADDITIONAL COMMENT

If a particular case is important, the chief judge will instruct the other judges to review the case. If a case is reviewed by the entire court, the phrase *reviewed by the court* is inserted immediately after the text of the majority opinion. A reviewed decision provides an opportunity for Tax Court judges to express their dissenting opinions.

Published Opinions and Citations. Regular Tax Court decisions are published by the U.S. Government Printing Office in a bound volume known as the *Tax Court of the United States Reports*. Soon after a decision is made public, Research Institute of America (RIA) and Commerce Clearing House (CCH) each publish the decision in its respective reporter of Tax Court decisions. An official citation to a Tax Court decision is as follows:[28]

> *MedChem Products, Inc.*, 116 T.C. 308 (2001).

The citation indicates that this case appears on page 308 in Volume 116 of *Tax Court of the United States Reports* and that the case was decided in 2001.

---

[26] Sec. 7463. The $50,000 amount includes penalties and additional taxes but excludes interest.

[27] Taxpayers also can represent themselves in regular Tax Court proceedings even though they are not attorneys. Where taxpayers represent themselves, the words *pro se* appear in the opinion after the taxpayer's name. The Tax Court is the only federal court before which non-attorneys, including CPAs, may practice.

[28] In a citation to a case decided by the Tax Court, only the name of the plaintiff (taxpayer) is listed. The defendant is understood to be the Commissioner of Internal Revenue whose name usually is not shown in the citation. In cases decided by other courts, the name of the plaintiff is listed first and the name of the defendant second. For non-Tax Court cases, the Commissioner of Internal Revenue is referred to as *CIR* in our footnotes and text.

From 1924 to 1942, regular decisions of the Board of Tax Appeals (predecessor of the Tax Court) were published by the U.S. Government Printing Office in the *United States Board of Tax Appeals Reports*. An example of a citation to a Board of Tax Appeals case is as follows:

> *J.W. Wells Lumber Co. Trust A.,* 44 B.T.A. 551 (1941).

This case is found in Volume 44 of the *United States Board of Tax Appeals Reports* on page 551. It is a 1941 decision.

If the IRS has acquiesced or nonacquiesced in a federal court decision, the IRS's action should be denoted in the citation. At times, the IRS will not announce its acquiescence or nonacquiescence until several years after the date of the decision. An example of a citation to a decision in which the IRS has acquiesced is as follows:

> *Security State Bank,* 85 AFTR 2d 2000-1980, *acq.* 2001-001.

The case appears on page 2000-1980 of Volume 85 of the AFTR, Second Series. In 2001, the IRS acquiesced in this decision. A citation to a decision in which the IRS has nonacquiesced is as follows:

> *Estate of Algerine Allen Smith,* 108 T.C. 412 (1997), *nonacq.* A.O.D. 2000-1.

The case appears on page 412 of Volume 108 of the *Tax Court of the United States Reports*. In 2000, the IRS nonacquiesced in this 1997 decision.

Tax Court memo decisions are not published by the U.S. Government Printing Office. They are, however, published by RIA in *RIA T.C. Memorandum Decisions* and by CCH in *CCH Tax Court Memorandum Decisions*. In addition, shortly after its issuance, an opinion is made available electronically and in loose-leaf form by RIA and CCH in their respective tax services. The following citation is to a Tax Court memo decision:

> *Edith G. McKinney,* 1981 PH T.C. Memo ¶81,181 (T.C. Memo 1981-181), 41 TCM 1272.

McKinney is found at Paragraph 81,181 of Prentice Hall's (now RIA's)[29] 1981 *PH T.C. Memorandum Decisions* reporter, and in Volume 41, page 1272, of CCH's *Tax Court Memorandum Decisions*. The 181 in the PH citation indicates that the case is the Tax Court's 181st memo decision of the year. A more recent citation is formatted in the same way but refers to RIA memo decisions.

> *Paul F. Belloff,* 1992 RIA T.C. Memo ¶92,346 (T.C. Memo 1992-346), 63 TCM 3150.

ADDITIONAL COMMENT

Once the IRS has acquiesced in a federal court decision, other taxpayers generally will not need to litigate the same issue. However, the IRS can change its mind and revoke a previous acquiescence or nonacquiescence. References to acquiescences or nonacquiescences in federal court decisions can be found in the citators.

KEY POINT

To access all Tax Court cases, a tax advisor must refer to two different publications. The regular opinions appear in the *Tax Court of the United States Reports,* published by the U.S. Government Printing Office, and the memo decisions are published by both RIA (formerly PH) and CCH in their own court reporters.

ADDITIONAL COMMENT

In its Internet-based tax service (see page I:15-26), RIA uses a different format for its Tax Court Memorandum Decisions, which in this text appear in parentheses after the "official" RIA citation.

U.S. District Courts. Each state has at least one U.S. district court, and more populous states have more than one. Each district court is independent of the others and is thus free to issue its own decisions, subject to the precedential constraints discussed later in this chapter. Different types of cases—not just tax-related—are adjudicated in this forum. A district court is the only forum in which the taxpayer may have a jury decide questions of fact. Depending on the circumstances, a jury trial might be advantageous for the taxpayer.[30]

District court decisions are officially reported in the *Federal Supplement* (cited as F. Supp.) published by West®. Some decisions are not officially reported and are referred to as **unreported decisions**. Decisions by U.S. district courts on the topic of taxation also are published by RIA and CCH in secondary reporters that contain only tax-related opinions. RIA's reporter is *American Federal Tax Reports* (cited as AFTR).[31] CCH's reporter is *U.S. Tax Cases* (cited as USTC). A case not officially reported nevertheless might be published in the AFTR and USTC. An example of a complete citation to a U.S. district court decision is as follows:

---

[29] Several ownership changes have occurred for publishers of tax service materials. Thomson Reuters added the former Prentice Hall tax materials to the product line of its RIA tax publishing division. RIA and West® are members of Thomson Reuters, Tax and Accounting Division, and CCH is a member of the Wolters Kluwer Tax, Accounting and Legal Division.

[30] Taxpayers might prefer to have a jury trial if they believe a jury will be sympathetic to their case.

> *Alfred Abdo, Jr. v. IRS,* 234 F. Supp. 2d 533, 90 AFTR 2d 2002-7484, 2003-1 USTC ¶50,107 (DC North Carolina, 2002).

ADDITIONAL COMMENT

A citation, at a minimum, should contain the following information: (1) the name of the case, (2) the reporter that publishes the case along with both a volume and page (or paragraph) number, (3) the year the case was decided, and (4) the court that decided the case.

In the example above, the **primary citation** is to the *Federal Supplement*. The case appears on page 533 of Volume 234 of the second series of this reporter. **Secondary citations** are to *American Federal Tax Reports* and *U.S. Tax Cases*. The same case is found in Volume 90 of the second series of the AFTR, page 2002-7484 (meaning page 7484 in the volume containing 2002 cases) and in Volume 1 of the 2003 USTC at Paragraph 50,107. The parenthetical information indicates that the case was decided in 2002 by the U.S. District Court for North Carolina. Because some judicial decisions have greater precedential weight than others (e.g., a Supreme Court decision versus a district court decision), information relating to the identity of the adjudicating court is useful in evaluating the authoritative value of the decision.

ADDITIONAL COMMENT

The U.S. Court of Federal Claims adjudicates claims (including suits to recover federal income taxes) against the U.S. Government. This court usually hears cases in Washington, D.C., but will hold sessions in other locations as the court deems necessary.

U.S. Court of Federal Claims. The U.S. Court of Federal Claims, another court of first instance that addresses tax matters, has nationwide jurisdiction. Originally, this court was called the U.S. Court of Claims (cited as Ct. Cl.), and its decisions were appealable to the U.S. Supreme Court only. In a reorganization, effective October 1, 1982, the reconstituted court was named the U.S. Claims Court (cited as Cl. Ct.), and its decisions became appealable to the Circuit Court of Appeals for the Federal Circuit. In October 1992, the court's name was again changed to the U.S. Court of Federal Claims (cited as Fed. Cl.).

Beginning in 1982, U.S. Claims Court decisions were reported officially in the *Claims Court Reporter,* published by West® from 1982 to 1992.[32] An example of a citation to a U.S. Claims Court decision appears below:

> *Benjamin Raphan v. U.S.,* 3 Cl. Ct. 457, 52 AFTR 2d 83-5987, 83-2 USTC ¶9613 (1983).

The *Raphan* case appears on page 457 of Volume 3 of the *Claims Court Reporter*. Secondary citations are to Volume 52, page 83-5987 of the AFTR, Second Series, and to Volume 2 of the 1983 USTC at Paragraph 9613.

Effective with the 1992 reorganization, decisions of the U.S. Court of Federal Claims are now reported in the *Federal Claims Reporter.* An example of a citation to an opinion published in this reporter is presented below:

> *Jeffrey G. Sharp v. U.S.,* 27 Fed. Cl. 52, 70 AFTR 2d 92-6040, 92-2 USTC ¶50,561 (1992).

The *Sharp* case appears on page 52 of Volume 27 of the *Federal Claims Reporter,* on page 6040 of the 70th volume of the AFTR, Second Series, and at Paragraph 50,561 of Volume 2 of the 1992 USTC reporter. Note that, even though the name of the reporter published by West® has changed, the volume numbers continue in sequence as if no name change had occurred.

---

[31] The *American Federal Tax Reports* (AFTR) is published in two series. The first series, which includes opinions issued up to 1957, is cited as AFTR. The second series, which includes opinions issued after 1957, is cited as AFTR 2d. The *Alfred Abdo, Jr.* decision cited as an illustration of a U.S. district court decision appears in the second *American Federal Tax Reports* series.

[32] Before the creation in 1982 of the U.S. Claims Court (and the *Claims Court Reporter*), the opinions of the U.S. Court of Claims were reported in either the *Federal Supplement* (F. Supp.) or the *Federal Reporter, Second Series* (F.2d). The *Federal Supplement* is the primary source of U.S. Court of Claims opinions from 1932 through January 19, 1960. Opinions issued from January 20, 1960 to October 1982 are reported in the *Federal Reporter, Second Series*.

Circuit Courts of Appeals. Lower court decisions are appealable by the losing party to the court of appeals for the circuit in which the litigation originated. Generally, if the case began in the Tax Court or a U.S. district court, the case is appealable to the circuit for the individual's residence as of the appeal date. For a corporation, the case is appealable to the circuit for the corporation's principal place of business. The Federal Circuit hears all appeals of cases originating in the U.S. Court of Federal Claims.

As mentioned earlier, there are 11 geographical circuits designated by numbers, the District of Columbia Circuit, and the Federal Circuit. In October 1981, the Eleventh Circuit was created by moving Alabama, Georgia, and Florida from the Fifth to a new geographical circuit. The Eleventh Circuit has adopted the policy of following as precedent all decisions of the Fifth Circuit during the time the states currently constituting the Eleventh Circuit were part of the Fifth Circuit.[33]

EXAMPLE I:15-7 ▶ In the current year, the Eleventh Circuit first considered an issue in a case involving a Florida taxpayer. In 1980, the Fifth Circuit had ruled on the same issue in a case involving a Louisiana taxpayer. Because Florida was part of the Fifth Circuit in 1980, under the policy adopted by the Eleventh Circuit, it will follow the Fifth Circuit's earlier decision. Had the Fifth Circuit's decision been rendered in 1982—after the creation of the Eleventh Circuit—the Eleventh Circuit would not have been bound by the Fifth Circuit's decision. ◀

As the later discussion of precedent points out, different circuits may reach different conclusions concerning similar facts and issues.

Circuit court decisions—regardless of topic (e.g., civil rights, securities law, and taxation)—are now reported officially in the *Federal Reporter, Third Series* (cited as F.3d), published by West®. The third series was created in October 1993 after the volume number for the second series reached 999. The primary citation to a circuit court opinion should be to the *Federal Reporter*. Tax decisions of the circuit courts also appear in the *American Federal Tax Reports* and *U.S. Tax Cases*. Below is an example of a citation to a 1994 circuit court decision:

> *Greene v. U.S.*, 185 F. 3d 67, 84 AFTR 2d 99-5415, 99-2 USTC ¶50,701 (3rd Cir., 1999).

The *Greene* case appears on page 67 of Volume 185 of the *Federal Reporter, Third Series*. It also is published in Volume 84, page 99-5415 of the AFTR, Second Series, and in Volume 2, Paragraph 50,701, of the 1999 USTC. The parenthetical information indicates that the Third Circuit decided the case in 1999. (A *Federal Reporter, Second Series* reference is found in footnote 33 of this chapter.)

ADDITIONAL COMMENT

A judge is not required to follow judicial precedent beyond his or her jurisdiction. Thus, the Tax Court, the U.S. district courts, and the U.S. Court of Federal Claims are not required to follow the others' decisions, nor is a circuit court required to follow the decision of a different circuit court.

U.S. Supreme Court. Whichever party loses at the appellate level can request that the U.S. Supreme Court hear the case. The Supreme Court, however, hears very few tax cases. Unless the circuits are divided on the tax treatment of an item, or the issue is deemed to be of great significance, the Supreme Court probably will not hear the case.[34] Supreme Court decisions are the law of the land and take precedence over all other court decisions, including the Supreme Court's earlier decisions. As a practical matter, a Supreme Court interpretation of the IRC is almost as authoritative as an act of Congress. If Congress does not agree with the Court's interpretation, it can amend the IRC to achieve a different result and has in fact done so on a number of occasions. If the Supreme Court declares a tax statute to be unconstitutional, the statute is invalid.

All Supreme Court decisions, regardless of subject, are published in the *United States Supreme Court Reports* (cited as U.S.) by the U.S. Government Printing Office, the *Supreme Court Reporter* (cited as S. Ct.) by West®, and the *United States Reports, Lawyers' Edition* (cited as L. Ed.) by LexisNexis®. In addition, the AFTR and USTC reporters published by RIA and CCH, respectively, contain Supreme Court decisions concerned with taxation. An example of a citation to a Supreme Court opinion appears below:

---

[33] *Bonner v. City of Prichard*, 661 F.2d 1206 (11th Cir., 1981).

[34] *Vogel Fertilizer Co. v. U.S.*, 49 AFTR 2d 82-491, 82-1 USTC ¶9134 (USSC, 1982), is an example of a case the Supreme Court heard to settle a split in judicial authority. The Fifth Circuit, the Tax Court, and the Court of Claims had reached one conclusion on an issue, while the Second, Fourth, and Eighth Circuits had reached another.

> *Boeing Company v. U.S.*, 537 U.S. 437, 91 AFTR 2d 2003-1088, 2003-1 USTC ¶50,273 (USSC, 2003).

According to the primary citation, this case appears in Volume 537, page 437, of the *United States Supreme Court Reports*. According to the secondary citation, it also appears in Volume 91, page 2003-1088, of the AFTR, Second Series, and in Volume 1, Paragraph 50,273, of the 2003 USTC.

Table I:15-3 provides a summary of how the IRC, court decisions, revenue rulings, revenue procedures, and other administrative pronouncements should be cited. Primary citations are to the reporters published by West® or the U.S. Government Printing Office, and secondary citations are to the AFTR and USTC.

SELF-STUDY QUESTION

Is it possible for the Tax Court to intentionally issue conflicting decisions?

ANSWER

Yes. If the Tax Court issues two decisions that are appealable to different circuit courts and these courts have previously reached different conclusions on the issue, the Tax Court follows the respective precedent in each circuit and issues conflicting decisions. This is a result of the *Golsen* Rule.

Precedential Value of Various Decisions

Tax Court. The Tax Court is a court of national jurisdiction. Consequently, it generally rules uniformly for all taxpayers, regardless of their residence or place of business. It follows U.S. Supreme Court decisions and its own earlier decisions. It is not bound by cases decided by the U.S. Court of Federal Claims or a U.S. district court, even if the district court has jurisdiction over the taxpayer.

In 1970, the Tax Court adopted what is known as the *Golsen* Rule.[35] Under this rule, the Tax Court departs from its general policy of adjudicating uniformly for all taxpayers and instead follows the decisions of the court of appeals to which the case in question is appealable. Stated differently, the *Golsen* Rule mandates that the Tax Court rule consistently with decisions of the court for the circuit where the taxpayer resides or does business.

EXAMPLE I:15-8 ▶ In the year in which an issue was first litigated, the Tax Court decided that an expenditure was deductible. The government appealed the decision to the Tenth Circuit Court of Appeals and won a reversal. This is the only appellate decision regarding the issue. If and when the Tax Court addresses this issue again, it will hold, with one exception, that the expenditure is deductible. The exception applies to taxpayers in the Tenth Circuit. Under the *Golsen* Rule, these taxpayers will be denied the deduction. ◀

U.S. District Court. Because each U.S. district court is independent of the other district courts, the decisions of each have precedential value only within its own jurisdiction (i.e., only with respect to subsequent cases brought before that court). District courts must follow decisions of the U.S. Supreme Court, the circuit court to which the case is appealable, and the district court's own earlier decisions regarding similar facts and issues.

EXAMPLE I:15-9 ▶ The U.S. District Court for Rhode Island, the Tax Court, and the Eleventh Circuit have decided cases involving similar facts and issues. Any U.S. district court within the Eleventh Circuit must follow that circuit's decision in future cases involving similar facts and issues. Likewise, the U.S. District Court for Rhode Island must decide such cases consistently with its previous decision. Tax Court decisions are not binding on the district courts. Thus, all district courts other than the one for Rhode Island and those within the Eleventh Circuit are free to decide such cases independently. ◀

U.S. Court of Federal Claims. In adjudicating a case, the U.S. Court of Federal Claims must rule consistently with U.S. Supreme Court decisions, decisions of the Circuit Court of Appeals for the Federal Circuit, and its own earlier decisions, including those rendered when the court had a different name. It need not follow decisions of other circuit courts, the Tax Court, or U.S. district courts.

---

[35] The *Golsen* Rule is based on the decision in *Jack E. Golsen*, 54 T.C. 742 (1970).

EXAMPLE I:15-10 ▶ Assume the same facts as in Example I:15-9. In a later year, a case involving similar facts and issues is heard by the U.S. Court of Federal Claims. This court is not bound by precedents set by any of the other courts. Thus, it may reach a conclusion independently of the other courts. ◀

Circuit Courts of Appeals. A circuit court is bound by U.S. Supreme Court decisions and its own earlier decisions. If neither the Supreme Court nor the circuit in question has already decided an issue, the circuit court has no precedent that it must follow, regardless of whether other circuits have ruled on the issue. In such circumstances, the circuit court is said to be writing on a clean slate. In rendering a decision, the judges of that court may adopt another circuit's view, which they are likely to regard as relevant.

EXAMPLE I:15-11 ▶ Assume the same facts as in Example I:15-9. Any circuit other than the Eleventh would be writing on a clean slate if it adjudicated a case involving similar facts and issues. After reviewing the Eleventh Circuit's decision, another circuit might find it relevant and rule in the same way. ◀

In such a case of "first impression," when the court has had no precedent on which to base a decision, a tax practitioner might look at past opinions of the court to see which other judicial authority the court has found to be "persuasive."

Forum Shopping. Not surprisingly, courts often disagree on the tax treatment of the same item. This disagreement gives rise to differing precedents within the various jurisdictions (what is called a "split in judicial authority"). Because taxpayers have the flexibility of choosing where to file a lawsuit, these circumstances afford them the opportunity to **forum shop**. Forum shopping involves choosing where among the courts to file a lawsuit based on differing precedents.

An example of a split in judicial authority concerned the issue of when it became too late for the IRS to question the tax treatment of items that "flowed through" an S corporation's return to a shareholder's return. The key question was this: if the time for assessing a deficiency (limitations period) with respect to the corporation's, but not the shareholder's, return had expired, was the IRS precluded from collecting additional taxes from the shareholder? In *Kelley*,[36] the Ninth Circuit Court of Appeals ruled that the IRS would be barred from collecting additional taxes from the shareholder if the limitations period for the *S corporation's* return had expired. In *Bufferd*,[37] *Fehlhaber*,[38] and *Green*,[39] three other circuit courts ruled that the IRS would be barred from collecting additional taxes from the shareholder if the limitations period for the *shareholder's* return had expired. The Supreme Court affirmed the *Bufferd* decision,[40] establishing that the statute of limitations for the shareholder's return governed. This action brought about certainty and uniformity within the judicial system.

Dictum. At times, a court may comment on an issue or a set of facts not central to the case under review. A court's remark not essential to the determination of a disputed issue, and therefore not binding authority, is called *dictum*. An example of dictum is found in *Central Illinois Public Service Co.*[41] In this case, the U.S. Supreme Court addressed whether lunch reimbursements received by employees constitute wages subject to withholding. Justice Blackman remarked in passing that earnings in the form of interest, rents, and dividends are not wages. This remark is dictum because it is not essential to the determination of whether lunch reimbursements are wages subject to withholding. Although not authoritative, dictum may be cited by taxpayers to bolster an argument in favor of a particular tax result.

STOP & THINK

Question: You have been researching whether an amount received by your new client can be excluded from her gross income. The IRS is auditing the client's prior year tax return, which another firm prepared. In a similar case decided a few years ago, the Tax Court allowed an exclusion, but the IRS nonacquiesced in the decision. The case involved a taxpayer in the Fourth Circuit. Your client is a resident of Maine, which is in the First Circuit. Twelve years ago, in a case involving another taxpayer, the federal court for the client's district ruled that this type of receipt is not excludable. No other precedent exists. To sustain an exclusion, must your client litigate? Explain. If your client litigates, in which court of first instance should she begin her litigation?

Solution: Because of its nonacquiescence, the IRS is likely to challenge your client's tax treatment. Thus, she may be compelled to litigate. She would not want to litigate in her U.S. district court because it would be bound by its earlier decision, which is unfavorable to taxpayers generally. A good place to begin would be the Tax Court because it is bound by appellate court, but not district court, decisions and because of its earlier pro-taxpayer position. No one can predict how the U.S. Court of Federal Claims would rule because no precedent that it must follow exists.

ADDITIONAL COMMENT

A tax treaty carries the same authoritative weight as a federal statute (IRC). A tax advisor should be aware of provisions in tax treaties that will affect a taxpayer's worldwide tax liability.

TAX TREATIES

The United States has concluded **tax treaties** with numerous foreign countries. These treaties address the alleviation of double taxation and other matters. A tax advisor exploring the U.S. tax consequences of a U.S. corporation's operations in another country should determine whether a treaty between that country and the United States exists. If one does, the tax advisor should ascertain the applicable provisions of the treaty.

KEY POINT

Tax articles can be used to help *find* answers to tax questions. Where possible, the underlying statutory, administrative, or judicial sources referenced in the tax article should be cited as authority and not the author of the article. The courts and the IRS will place little, if any, reliance on mere editorial opinion.

TAX PERIODICALS

Tax periodicals assist the researcher in tracing the development of, and analyzing tax law. These periodicals are especially useful when they discuss the legislative history of a recently enacted IRC statute that has little or no administrative or judicial authority on point.

Tax experts write articles on landmark court decisions, proposed regulations, new tax legislation, and other matters. Frequently, those who write articles of a highly technical nature are attorneys, accountants, or professors. Among the periodicals that provide in-depth coverage of tax-related matters are the following:

Journal of Taxation
The Tax Adviser
Practical Tax Strategies
Taxes—The Tax Magazine
Tax Law Review
Tax Notes
Corporate Taxation
PPC's Guide to Buying or Selling a Business
PPC's Guide to Real Estate Taxation
Estate Planning

The first six journals are generalized; that is, they deal with a variety of topics. As their titles suggest, the next four are specialized; they deal with specific subjects. All these publications (other than *Tax Notes,* which is published weekly) are published monthly, bi-monthly, or quarterly. Daily newsletters, such as the *Daily Tax Report,* published by Bloomberg BNA in print and electronic formats, are used by tax professionals when they need updates more timely than can be provided by monthly or quarterly publications.

Tax periodicals and tax services are secondary authorities. The IRC, Treasury Regulations, IRS pronouncements, and court opinions are primary authorities. In presenting research results, the tax advisor should always cite primary authorities.

TAX SERVICES

OBJECTIVE 5

Consult tax services to research an issue

Various publishers provide multivolume commentaries on the tax law in what are familiarly referred to as **tax services**. Researchers often consult tax services at the beginning of the research process because a tax service helps identify the tax authorities pertaining to a particular tax issue. The actual tax authorities (e.g., IRC, Treasury Regulations, IRS pronouncements, and court cases), and not the tax services, are generally cited as support for a particular tax position. The services are available in print form via the publishers and electronic form via the Internet. (See further discussion at "The Internet as a Research Tool" later in this chapter.) Although each major tax service is an outstanding resource, significant differences exist in the content and organizational scheme from one publisher to the next. For example, each service has its own special features and editorial approach to tax issues along with a great deal of proprietary content. The best way to acquaint oneself with the various tax services and the advantages and disadvantages of each is to use them in researching hypothetical or actual problems.

Organizationally, tax services fall into two types: annotated and topical (although this distinction has become somewhat blurred in the Internet version of these services). An **annotated tax service** is organized by IRC section. The IRC-arranged subdivisions of this service are likely to encompass several topics. The annotations accompany editorial commentaries and include digests or summaries of IRS pronouncements and court opinions that interpret a particular IRC section. They are classified by subtopic and cite pertinent primary authorities. A **topical tax service**, on the other hand, is organized by broad topic, including income taxes, estate and gift taxes, and excise taxes. The topically arranged subdivisions of this service are likely to encompass several IRC sections.

Annotated tax services include the *United States Tax Reporter* and the *Standard Federal Tax Reporter* services, both of which are organized by IRC section. Many tax advisors find these reporters easy to use because of their extensive indexing system. Topical tax services include RIA's *Federal Tax Coordinator Analysis* and Bloomberg BNA's *Tax Management Portfolios*. *Tax Management Portfolios* are popular with many tax advisors because they are very readable yet still provide a comprehensive discussion of a broad range of tax issues. Each portfolio (e.g., Passive Loss Rules, Portfolio 549) covers a particular topic in great detail. However, because the published portfolios do not cover all areas of the tax law, another service may be necessary to supplement the gaps in a portfolio's coverage. Table I:15-4 summarizes the organization and key features of the major tax services.

▼ **TABLE I:15-4**

Summary of Key Features of Tax Services

Name	Publisher	Organization	Key Features
United States Tax Reporter	Thomson Reuters/RIA	IRC section number	• Editorial commentary • Index and findings list • Annotations
Standard Federal Tax Reporter	Wolters Kluwer/CCH	IRC section number	• Editorial commentary • Index and findings list • Annotations
Federal Tax Coordinator Analysis	Thomson Reuters/RIA	Tax topic (income tax by topic, estate and gift taxes, excise taxes)	• Commentary organized by topic with references to primary authority and tabbed access to IRC and Treasury Regulations.
Tax Management Portfolios	Bloomberg BNA	U.S. income, foreign income, state tax, estate and gift tax	• Over 400 specialized booklets with extensive commentary by topic, heavily footnoted and referenced to primary authority.

THE INTERNET AS A RESEARCH TOOL

OBJECTIVE 6

Apply the basics of Internet-based tax research

Internet databases are rapidly replacing print-based services as the principal source of tax related information. These databases encompass not only the IRC, Treasury Regulations, court cases, state laws, and other primary authorities, but also citators and secondary sources such as tax service reporters, treatises, journals, and newsletters. The principal advantages of using Internet-based tax services are ease and speed of access. These services eliminate the need for searching through several volumes of text, the need for consulting numerous cumulative supplements, and the time required to regularly update a print-based library. In addition, Internet based research tools put a vast amount of information in the hands of a tax practitioner without the cost and space requirements of a well equipped print-based tax library.

ADDITIONAL COMMENT

To apply the online research tools discussed in this chapter, users must have access to the described Internet-based tax services at their institution.

Because of these advantages, the Internet has become the principal medium for conveying tax related information to professionals. The most widely used Internet-based research services are RIA's Checkpoint™ (hereafter CHECKPOINT) and CCH IntelliConnect™/AnswerConnect™; Westlaw®[42] and LexisNexus are online legal research services that are predominately used by legal professionals.[43] This chapter discusses the use of internet-based tax services in general and uses CHECKPOINT for illustrative purposes. Similar features will exist for other major tax services.

The tax services include a variety of libraries that will vary by vendor (e.g., CCH or RIA) and by subscription type (limited or comprehensive). The core of any tax service covers federal taxes but also can cover state and local taxes, estate planning, payroll taxes, pensions, international tax, and financial planning. The federal libraries will include text of the IRC, Treasury Regulations, IRS pronouncements, court opinions, and other primary sources. In addition, the Internet services will include a section containing daily updates for important tax developments in the subscribed practice areas as well as the annotated and/or topical tax services discussed previously, such as the *United States Tax Reporter* (CCH) and the *Federal Tax Coordinator Analysis* (RIA). State and local libraries will include tax reporters for all 50 states as well as various multi-state tax guides that provide useful state-by-state comparisons for selected state tax topics (e.g., combined reporting and apportionment methods). Other libraries, such as those covering estate and gift taxes, pensions, and payroll taxes, provide detailed information for professionals heavily engaged in these specialized areas of tax practice.

Libraries and databases in Internet services can be searched in three basic ways:

- By keyword
- By citation
- By index

EXAMPLE I:15-12 ▶ Rhonda Researcher's client is a real estate developer and wants to exchange an office building for a residential condominium in the same town. The client wants to know if he can structure the transaction in a tax advantaged way. Rhonda immediately recognizes the situation as a potential like-kind exchange of real property. Therefore, she undertakes a keyword search using the term *like-kind exchange* to quickly uncover potentially applicable documents. She also knows that Sec. 1031 is the relevant IRC section and can search the IRC or Treasury Regulations by citation. On the other hand, if she were unfamiliar with the topic, she could employ several other options. For example, she may browse the index, which is arranged alphabetically by topic. The index entries under "like-kind exchange" direct Rhonda to a number of entries potentially applicable to the transaction. ◀

Most tax professionals conduct tax research using the keyword and citation methods. We discuss these two methods in more detail below.

---

[42] Westlaw® is owned by Thomson Reuters.

[43] The research products discussed in this section (e.g., CHECKPOINT Edge (RIA), CCH IntelliConnect™/AnswerConnect™, Westlaw®, and LexisNexus) generally are available only to paid subscribers.

KEYWORD SEARCHES

Searching tax services by keyword is relatively simple, particularly if the researcher is familiar with the Internet. The first step is to select which source (e.g., IRC or editorial materials) to search, perform an initial keyword search, and refine the results after the initial query. The researcher can choose to search across any combination of the available databases. The CHECKPOINT Federal databases include primary sources such as the Internal Revenue Code, Treasury Regulations, and Federal Tax Cases along with editorial databases such as RIA's *Federal Tax Coordinator Analysis*. Deciding which database to include in the search depends partly on the expected complexity of the research question and on the researcher's familiarity with the topic.

The search engines within the services look for the terms selected and many variations of the terms. For example, the search for *auto* will return documents with auto, car, automobile, motor vehicle, passenger vehicle, sedan, and others.[44] Searches will include both singular and plural variations. Any document with the term or terms is returned and ranked by best match according to the search. If two terms are used, the best matches generally are documents where the terms are close together. Choosing effective search terms is critical to success. The search must be broad enough to include relevant documents but not so broad to include hundreds or thousands of documents unlikely to be on point.

For example, if the researcher selects the database containing court cases, the term *property exchange* returns thousands of results that have both the words *property* and *exchange* somewhere in the document. Clearly, this outcome is too broad for a researcher just beginning his or her research. Fortunately, several methods of narrowing the search exist. For example, the keyword search "property exchange" that uses quotation marks around the search phrase will return documents only with that exact phrase. Thus, quotation marks should be used sparingly and only when the researcher knows the precise phrase. Using Boolean connectors is helpful as well. These connectors force the search engine to narrow the search based on the parameters set. Table I:15-5 provides a partial list of connectors available in CHECKPOINT.

Another way to narrow a search is to focus on terms unique to the research question at hand. The goal is to identify tax related terms likely to appear only in relevant tax

▼ TABLE I:15-5
Connectors Used in CHECKPOINT

Connector	Description	Examples
&, and	Retrieves documents with both terms.	property & exchange
|, or	Retrieves documents with either term.	property | exchange
^, not	Retrieves documents with one term but not the other.	property ^ exchange
/n	Retrieves documents in which the first term is separated from the second term by no more than n number of words.	property /5 exchange Locates property within 5 words of exchange
/s	Retrieves documents that contain the first term within 20 words of the second term (or within the same sentence for RIA).	property /s exchange
/p	Retrieves documents that contain the first term within 80 words of the second term (or within the same paragraph for RIA).	property /p exchange
" "	Exact phrase.	"property exchange"
*	Keyword variation.	Deprecia* returns depreciation, depreciate, depreciated, depreciating
?	Keyword variation.	Advis?r returns advisor and adviser

---

[44] Tax services provide a thesaurus tool, which can identify synonyms and suggest alternative terms related to search terms used by the researcher. The search engine automatically searches for synonyms unless the researcher restricts the search to specific terms using Boolean connectors or quotation marks. For example, a search for the specific phrase "automobile depreciation" will not return documents that refer to *auto*, *car*, or *vehicle*.

authorities. For example, stamps are a type of collectible, but the term also will appear in documents discussing taxation of distilled spirits, food stamps, and store stamps and coupons. The researcher should begin the search with limiting terms such as *collectible* rather than the broader term *stamps*. Also, researchers with a good working knowledge of the IRC quickly learn that using IRC sections in search terms is a great way to obtain relevant documents. Browsing the index containing editorial content can identify helpful keywords.

Searching using key words is a skill that improves with practice. Researchers becoming familiar with using the databases will learn to craft search terms that include the most relevant elements of the question at hand. Once the researcher finds a document on point, the information within that document often can be used to narrow future searches. The search can be repeated by adding terms, or the documents returned originally can be searched using a new set of terms. Also, the "search within results" feature offered by major tax services is helpful when the search returns too many documents. However, if searches by keyword search do not return the desired results, other options exist.

SEARCH BY CITATION

Often the desired document is a specific IRC section, Treasury Regulation, court case, IRS pronouncement, or other document. If so, tax services offer searches by specific citation. Researchers must be careful to use exact citations using this tool because close matches will not return the desired document.

Within tax services, the citation search tools provide dedicated boxes in which to type the specific type of document requested. For example, to search for IRC Sec. 267, the researcher simply types 267 in the box labeled Current Code in CHECKPOINT under the "Find by Citation" link. Specific boxes also exist for various Treasury Regulations, court decisions, revenue rulings, revenue procedures, and other IRS pronouncements.

NONCOMMERCIAL INTERNET SERVICES

Many noncommercial institutions, such as governments and universities, allow access to their tax-related databases via the Internet. In "tax-surfing" the Internet, the researcher might first visit the IRS site located at *www.irs.gov*. Although oriented to the layperson, this site contains a wealth of information useful to the tax professional. Such information includes guidelines for electronic filing, IRS forms and instructions, the full text of Treasury Regulations, and recent issues of the *Internal Revenue Bulletin*. Other useful sites include those maintained by the Library of Congress at *www.loc.gov* and the U.S. Government Publishing Office Federal Digital System at *www.govinfo.gov*. From these sites, the researcher can retrieve the text of recent court opinions, tax legislation, committee reports, state and federal tax laws, and much more.

Cornell Law School offers free access to the entire U.S. Code and Code of Federal Regulations, including the Internal Revenue Code and applicable Treasury Regulations, at *law.cornell.edu*. From the same link users can also access a wealth of state law resources, including state constitutions, statutes, and regulations. Instrumental in financial accounting searches is the Electronic Data Gathering, Analysis, and Retrieval (EDGAR) site at *www.sec.gov/search-filings*. EDGAR is a document filing and retrieval service sponsored by the U.S. Securities and Exchange Commission (SEC). It provides access to the full text of documents filed with the SEC by publicly traded companies. These documents include annual financial statements on Form 10-K, quarterly financial statements on Form 10-Q, proxy statements, and prospectuses. The EDGAR database extends from January 1994 to the present and is accessible by company name, central index key, document file number, and keyword.

CITATORS

OBJECTIVE 7

Use a citator to assess tax authorities

Citators serve two functions. First, they trace the judicial history of a particular case (e.g., if the case under analysis is an appeals court decision, the citator indicates the lower court that heard the case and whether the Supreme Court reviewed the case). Second, they list other authorities (e.g., cases and IRS pronouncements) that cite the case or authority in question. These listed authorities are called *citing cases* or *citing rulings*. The judicial history also indicates whether the case is affirmed, reversed or remanded.[45]

Because tax law relies heavily on precedent, the citator provides an index of citing cases and rulings that help the researcher determine the strength of the case or ruling he or she is evaluating. The citator gives full citations for the citing case and lists where the citing cases can be found. It is important to note that the same case may have as many as three decisions (i.e., lower court, court of appeals, and Supreme Court) with each listing having its own list of citing cases. Therefore, if a citing case cites only the Supreme Court decision, the citator will list it only under the Supreme Court cite. The citator allows the researcher to enter case names or case citations. The discussion in this section focuses on the electronic version of the citators, although print versions also exist.

The basic function of a citator is to provide the history of each authority and list cases and pronouncements that have cited the authority. Also, the citator often provides additional information about the citing case, showing whether the citing authorities comment favorably or unfavorably on the cited case or whether they can be distinguished from the cited case.[46]

In addition to tax cases, the citator evaluates revenue rulings and other IRS pronouncements and lists any status changes. Before relying on a revenue ruling or pronouncement, a researcher must confirm that the pronouncement reflects the current position of the IRS. For example, a revoked ruling is one in which the ruling is no longer correct and the correct position is being stated in the new ruling. The IRS does not remove the old ruling from the *Internal Revenue Bulletin* or *Cumulative Bulletin*, but the old ruling does not have authority regarding a transaction occurring after the revocation. Thus, failure to confirm its status could result in an incorrect conclusion. Table I:15-6 provides a list of terms the IRS uses to describe changes in the status of a ruling.

▼ TABLE I:15-6
Terms to Describe Status Changes to IRS Rulings

Term	Description of Term
Amplified	No change in the prior published position has occurred, but the prior position is extended to cover a variation of the fact situation previously addressed.
Clarified	Language used in a prior published position is being made clear because the previous language has caused or could cause confusion.
Distinguished	The ruling mentions a prior ruling but points out an essential difference between the two rulings.
Modified	The substance of a previously published ruling is being changed, but the prior ruling remains in effect.
Obsoleted	A previously published ruling is no longer determinative with respect to future transactions, e.g., because laws or regulations have changed, or the substance of the ruling has been adopted into regulations.
Revoked	A previously published ruling has been determined to be incorrect, and the correct position is being stated in the new ruling.
Superseded	The new ruling merely restates the substance of a previously published ruling or series of rulings.
Supplemented	The ruling expands a previous ruling, e.g., by adding items to a list.
Suspended	The previously published ruling will not be applied pending some future action, such as the issuance of new or amended regulations.

Source: Appendices in IRS Internal Revenue Bulletins.

---

[45] If a case is *affirmed*, the decision of the lower court is upheld. *Reversed* means the higher court invalidated the decision of the lower court because it reached a conclusion different from that derived by the lower court. *Remanded* signifies that the higher court sent the case back to the lower court with instructions to address matters consistent with the higher court's ruling.

[46] When a court distinguishes the facts of one case from those of an earlier case, it suggests that its departure from the earlier decision is justified because the facts of the two cases are different.

USING THE CITATOR

Internet-based versions of the citators are easier to use than print-based citators. For example, assume the researcher is currently reading *Leonarda C. Diaz v. Commissioner of Internal Revenue*, 70 TC 1067 (1978). The researcher can click on the citator, and the service opens up a new tab with a summary of activity of the case. The information provided indicates that the *Diaz* case was first decided by the Tax Court (i.e., TC), and then by the Second Circuit Court of Appeals (i.e., CA-2). It shows that the Second Circuit affirmed (upheld) the Tax Court's decision. Cases underneath the Second Circuit decision cite the *Diaz* decision and might be useful for the researcher to better understand the impact of the case. Cases listed beneath the Tax Court decision cite the Tax Court's opinion.

PROFESSIONAL GUIDELINES FOR TAX SERVICES

OBJECTIVE 8

Describe the professional guidelines that CPAs in tax practice should follow

Professional guidelines for tax services are contained in both government-imposed and professional-imposed tax standards. The following sections briefly describe two types of guidelines—Treasury Department ***Circular 230*** (Rev. 6-2014) and the American Institute of Certified Public Accountants (AICPA) ***Statements on Standards for Tax Services (SSTSs)***. A fuller discussion of these standards appears in Chapter I:15. Monitor updates related to proposed regulations issued in December 2024. See https://www.federalregister.gov/documents/2024/12/26/2024-29371/regulations-governing-practice-before-the-internal-revenue-service.

TREASURY DEPARTMENT *CIRCULAR 230*

Circular 230 sets forth rules to practice before the Internal Revenue Service and pertains to certified public accountants, attorneys, enrolled agents, and other persons representing taxpayers before the IRS. It presents the duties and restrictions relating to such practice and prescribes sanctions and disciplinary proceedings for violating these regulations.

Circular 230 rules, however, are not ethical standards. Instead, the document focuses on the right to represent clients before the IRS. These standards differ from the AICPA's SSTSs in the following ways:

- They apply only to federal tax issues and not state authorities.
- They generally apply only to federal income tax practice.
- They do not provide the depth of guidance found in the SSTSs.
- They give the government the authority to impose monetary penalties for violations of the rules.

Circular 230 provides guidelines for written advice to taxpayers. In June 2014, the IRS substantially revised and simplified the rules and eliminated the distinction between covered opinions and other written advice. Under the new rules, all written advice is held to a "reasonable practitioner standard" that will vary based on the nature and extent of the advice. An email to a client answering a routine tax question will be held to a different standard than will an opinion on the tax effects of a complex transaction. The written advice rules do not apply to training or educational presentations but do apply to marketing and sales presentations.

For all written advice, the practitioner is expected to base the advice on reasonable assumptions, consider relevant facts and circumstances, identify the facts relevant to the advice, be properly skeptical of representations by the taxpayer and others, relate applicable law and authority to the facts, and not base an opinion on the chances that a transaction will or will not be identified by IRS and subject to audit. The revised Section 10.37 of *Circular 230* does note that the IRS representative will consider the "additional risk" associated with opinions related to tax shelters.

AICPA'S STATEMENTS ON STANDARDS FOR TAX SERVICES

Tax advisors confronted with ethical issues frequently turn to a professional organization for guidance. Although the guidelines set forth by such organizations are not *legally* enforceable, they carry significant moral weight, and may be cited in a negligence lawsuit as the proper "standard of care" for tax practitioners. They also may provide grounds for the termination or suspension of one's professional license. One such set of guidelines is the *Statements on Standards for Tax Services* (SSTSs),[47] issued by the American Institute of Certified Public Accountants (AICPA) and referenced in Appendix E.

The SSTSs provide an ethical framework to govern the normative relationship between a tax advisor and his or her client, where, unlike an auditor, a tax advisor acts as the client's advocate. Thus, his or her primary duty is to the client, not the IRS. In fulfilling this duty, the advisor is bound by the highest standards of care.

The AICPA issued a major revision to the SSTSs, effective January 1, 2024. While much of the guidance is unchanged, the revised SSTSs reorganize the standards by area of practice and provide significant new advice relating to safeguarding privacy and the use of modern tax tools. The most recent version of the SSTSs includes four standards that provide guidance for AICPA members in their professional tax practice.

SSTS NO. 1 – *GENERAL STANDARDS FOR MEMBERS PROVIDING TAX SERVICES*

ADDITIONAL COMMENT

SSTS No. 1 states that tax advisors have the right to be an advocate for the taxpayer with respect to any position that otherwise meets the standard.

Advising on Tax Positions. SSTS No. 1 applies to any tax service provided by AICPA members in which the member is required to recommend or advance a tax position. The statement defines a tax position as:

> *a conclusion reached when applicable tax law, regulations, case law, or other regulatory or recognized guidance is applied to a particular transaction, a specific set of facts and circumstances, or a controversy.*

Practitioners take tax positions when preparing tax returns, advising a client during tax consulting engagements, or when representing a client during a tax audit. When the member is acting under the authority of any regulatory authority, such as the IRS or a state taxing authority, the member's primary responsibility is to comply with the standards imposed by the applicable authority. The IRS, for example, outlines these obligations in Circular 230 discussed elsewhere in this chapter. When those standards do not exist or do not apply to a particular service, AICPA members must follow the ethical and professional guidelines established by the SSTS.

Tax professionals provide tax advice in situations where the authority is unclear or evolving. Frequently this advice involves recommending positions that could be challenged or reversed upon audit. This statement describes the minimum level of confidence a member must achieve to advise the taxpayer. Members must have a "good-faith belief" that the position has a "realistic possibility of being sustained" administratively or judicially on its merits if challenged. However, if allowed by a taxing authority (such as the IRS), the member can advise a client to take a position supported by the lower "reasonable basis" standard, if the position is properly disclosed to the taxing authorities. Members are not permitted to take the probability of audit into account when formulating tax positions. A member should, when relevant, advise the taxpayer regarding potential penalty consequences and the opportunity to avoid such penalties through disclosure. The taxpayer has the responsibility to decide whether and how to disclose any position.

The standard highlights the dual responsibility of the member. The U.S. tax system can function only when taxpayers file "true, correct, and complete" returns, but taxpayers also have no obligation to pay more in tax than they legally owe. The tax professional's duty is to meet his or her responsibilities to both the tax system and the taxpayer client.

Knowledge of Errors. An error is any material position, omission, or method of accounting that fails to meet the applicable standards binding on the member. Members have an affirmative duty to promptly inform the taxpayer of any error, regardless of whether the member prepared or signed the return containing the error. The member must notify the client, orally or in writing, about the existence of the error and any corrective action that should be taken. It is then the taxpayer's responsibility to correct or disclose an error or allow the member to do so on the taxpayer's behalf. If the taxpayer fails to make or allow for the proper notification of authorities, the member should consider resigning from the engagement.

---

[47] AICPA, *Statements on Standards for Tax Services*, effective January 1, 2024 (referenced in Appendix E).

Data Protection. The increasing use of technology in business and the growing awareness of data breaches has resulted in a growing sensitivity toward the need to protect taxpayer data. In general, members should make diligent efforts to protect taxpayer data, including any data stored or transmitted electronically. Recommended measures include using commercial security software to prevent unauthorized access to information, encrypting data sent electronically, having strong password policies and firewalls, and using secure internal networks. If members use outside sources involving sensitive taxpayer data, such as commercial data sharing or collaboration platforms, tax return preparation software, and services to convert paper records to electronic data, members should take reasonable steps to confirm these third parties appropriately protect taxpayer data.

Members should collect and store only the minimum sensitive taxpayer information that is necessary to complete the task at hand, and the member should consider steps to take in the event of a data breach. Such steps might include promptly notifying appropriate governmental authorities and any taxpayers potentially impacted by the breach.

Reliance on Tools. Tax professionals are encouraged to use the many effective tools available to them, such as tax research services and tax return preparation software, but the member should exercise appropriate professional judgement when relying on a tool. A member should use a tool to enhance efficiency or understanding of a tax issue, but tools should not replace professional judgement.

SSTS NO. 2 – *STANDARDS FOR MEMBERS PROVIDING TAX COMPLIANCE SERVICES*

Tax Return Positions. Tax compliance services include preparation of original returns, amended returns, claims for refund, and information returns. A tax return position for purposes of this section includes any tax position reflected on the tax return prepared by a member or that the member signs as preparer. The tax return may contain positions proposed by others, but the member must be satisfied the position meets the applicable standards. In providing any compliance services, the member's primary responsibility is to comply with any standard imposed by an applicable taxing authority. If the taxing authority does not specify a standard or the standards are lower than those contained in the SSTSs, members are obligated to comply with the ethical and professional guidelines established by the SSTSs. In general, this standard requires members to have a "good-faith belief" that the tax position has at least a "realistic possibility of being sustained" if challenged. In addition, a member can prepare or sign a return if there is a "reasonable basis" for the position and the position is properly disclosed.

Members should advise clients about penalty exposure of a suggested tax position, and, if applicable, the opportunity to avoid penalties with disclosure. However, a member cannot take a position that exploits the audit selection process of the taxing authority, or that is only an effort to gain negotiating leverage in the event of an audit.

Tax Return Questions. Return preparers often must sign a declaration that the return is "true, correct, and complete." A member should make reasonable effort to obtain from the taxpayer the information necessary to provide appropriate answers to all questions on a tax return before signing as preparer. A member should determine whether omission of an answer to a question affects the completeness of a tax return and whether disclosure is necessary for a complete return.

In certain circumstances, questions or information applicable to the taxpayer may be omitted. Reasonable grounds include the following situations:

- The omitted information is not readily available or is immaterial.
- The meaning of the question as it relates to the taxpayer is uncertain.
- The requested information is voluminous.

Reliance on Information from Others. Tax returns are based on information provided by the taxpayer. When preparing a tax return, members have no obligation to audit or otherwise verify information provided by the client or others. However, members are obligated to use their professional judgment to evaluate the information provided to them and make reasonable inquiries if the information appears incorrect, incomplete, or inconsistent. If the tax law or regulations impose specific record keeping requirements for taxpayers, such as requiring written receipts from the donee organization for any charitable contribution deduction, members should specifically take reasonable steps to satisfy themselves that the condition has been met. Members are specifically encouraged to make use of a taxpayer's returns for one or more prior years in preparing the current tax return, whenever feasible. The practice should help avoid the omission or duplication of items and provide a basis for the treatment of similar or related transactions.

In addition, preparers may seek the advice of other professionals with specialized expertise. A member may in good faith rely on tax positions provided by others but only if the member is satisfied that the tax return position meets the standards described above.

Use of Estimates. For various reasons, precise information about an amount required on a tax return might not be available at the time the return is prepared. If using estimates, the standard does not require members to specifically disclose the use of estimates, but members must not present the information in a way that implies greater accuracy than exists. However, disclosure that estimates were used should be made in some unusual situations, including the death of the taxpayer, the taxpayer has not received a Schedule K-1 by the tax return due date, pending litigation, or instances in which technology failures, fire or other natural disaster has destroyed the relevant records.

Departure from Previous Positions. In most cases, a member will advise clients to adopt tax positions agreed to in a previous administrative proceeding such as an audit, or court decision. However, the member can advise their client to adopt a tax position that departs from a previous position if the tax position otherwise meets the applicable standards.

SSTS NO. 3 – *STANDARDS FOR MEMBERS PROVIDING TAX CONSULTING SERVICES*

General Standard. Members should use professional judgment to ensure their advice is competent and based on applicable standards. Taxpayers should be advised that any tax position or advice is based on the member's understanding of the facts and the law on the date the advice is communicated.

Oral or Written Advice. Members can provide advice orally or in writing. The member should use professional judgment about documenting advice in writing and consider factors, including:

- Importance of the transaction and the amounts involved
- Tax sophistication of the taxpayer
- Specific or general nature of the inquiry

- Technical complexity involved
- Potential penalty consequences, and possibility to avoid penalties through disclosure

The decision to disclose, if appropriate, remains with the taxpayer.

Subsequent Developments. Changes in tax law, judicial precedent, or IRS guidance may impact tax positions previously communicated to the client. Unless specified in the engagement agreement, a member is not responsible for informing the taxpayer of subsequent developments.

SSTS NO. 4 – *STANDARDS FOR MEMBERS PROVIDING TAX REPRESENTATION SERVICES*

General Standard. Members should obtain technical competence in the subject matter involved, including the specific tax area involved, as well as the practices and procedures of the taxing authority. As in all matters, those providing tax representation services should act with integrity and professionalism. If the member becomes aware of taxpayer conduct that might be fraudulent or criminal, the member should consider resigning from the engagement or recommending that the client engage legal counsel.

STOP & THINK

Question: As described in the Stop & Think box on pages I:15-10 and I:15-11, you are researching the manner in which a deduction is calculated. The IRC states that the calculation is to be made "in a manner prescribed by the Secretary." After studying the IRC, Treasury Regulations, and committee reports, you conclude that another way of doing the calculation is arguably correct under an intuitive approach. This approach would result in a lower tax liability for the client. According to the *Statements on Standards for Tax Services,* may you take a position contrary to final Treasury Regulations based on the argument that the regulations are not valid?

Solution: You should not take a position contrary to the Treasury Regulations unless you have a "good-faith belief that the position has a realistic possibility of being sustained administratively or judicially on its merits." However, you can take a position that does not meet the above standard, provided you adequately disclose the position, and the position has a reasonable basis. Whether or not you have met the standard depends on all the facts and circumstances. Chapter I:15 discusses tax return preparer positions contrary to Treasury Regulations.

WHAT WOULD YOU DO IN THIS SITUATION?

Regal Enterprises and Macon Industries, unaffiliated corporations, have hired you to prepare their respective income tax returns. In preparing Regal's return, you notice that Regal has claimed a depreciation deduction for equipment purchased from Macon on February 22 at a cost of $2 million. In preparing Macon's return, you notice that Macon has reported sales proceeds of $1.5 million from the sale of equipment to Regal on February 22. One of the two figures must be incorrect. How do you proceed to correct it? Hint: See SSTS No. 2 in Appendix E.

SAMPLE WORK PAPERS AND CLIENT LETTER

OBJECTIVE 9

Prepare work papers and communicate to clients

Appendix A presents a set of sample work papers, including a draft of a client letter and a memo to the file. The work papers indicate the issues to be researched, the authorities addressing the issues, and the researcher's conclusions concerning the appropriate tax treatment, with rationale therefor.

The format and other details of work papers differ from firm to firm. The sample in this text offers general guidance concerning the content of work papers. In practice, work papers may include less detail.

PROBLEM MATERIALS

Note: To complete the online research problems for this chapter, users must have access to an Internet-based service.

DISCUSSION QUESTIONS

I:15-1 Explain the difference between closed-fact and open-fact situations.

I:15-2 According to the AICPA's *Statement on Standards for Tax Services No. 1,* what is the tax advisor obligated to do when he/she discovers an error?

I:15-3 Explain what is encompassed by the term *tax law* as used by tax advisors.

I:15-4 The U.S. Government Printing Office publishes both hearings on proposed legislation and committee reports. Distinguish between the two.

I:15-5 Explain how committee reports can be used in tax research. What do they indicate?

I:15-6 A friend notices that you are reading the Internal Revenue Code of 1986. Your friend inquires why you are consulting a 1986 publication, especially when tax laws change so frequently. What is your response?

I:15-7 Does Title 26 contain statutory provisions dealing only with income taxation? Explain.

I:15-8 Refer to IRC Sec. 301.
a. Which subsection discusses the general rule for the tax treatment of a property distribution?
b. Where should one look for exceptions to the general rule?
c. What type of Treasury Regulations would relate to subsection (e)?

I:15-9 Why should tax researchers note the date on which a Treasury Regulation was adopted?

I:15-10 **a.** Distinguish between proposed, temporary, and final Treasury Regulations.
b. Distinguish between interpretative and legislative Treasury Regulations.

I:15-11 In 2011, there was a change in the authoritative weight of interpretive versus legislative regulations. Briefly explain what changed and why.

I:15-12 Explain the legislative reenactment doctrine.

I:15-13 **a.** Discuss the authoritative weight of revenue rulings.
b. As a practical matter, what consequences are likely to ensue if a taxpayer does not follow a revenue ruling and the IRS audits his or her return?

I:15-14 **a.** In which courts may litigation dealing with tax matters begin?
b. Discuss the factors that might be considered in deciding where to litigate.
c. Describe the appeals process in tax litigation.

I:15-15 May a taxpayer appeal a case litigated under the Small Cases Procedure of the Tax Court?

I:15-16 Explain whether the following decisions are of the same precedential value: (1) Tax Court regular decisions, (2) Tax Court memo decisions, and (3) decisions under the Small Cases Procedures of the Tax Court.

I:15-17 Does the IRS acquiesce in decisions of U.S. district courts?

I:15-18 The decisions of which courts are reported in the AFTR? In the USTC?

I:15-19 Why do some revenue ruling citations refer to the *Internal Revenue Bulletin* (I.R.B.) and others to a *Cumulative Bulletin* (C.B.)?

I:15-20 Explain the *Golsen* Rule. Give an example of its application.

I:15-21 Assume that the only precedents relating to a particular issue are as follows:

- Tax Court—decided for the taxpayer
- Eighth Circuit Court of Appeals—decided for the taxpayer (affirming the Tax Court)
- U.S. District Court for Eastern Louisiana—decided for the taxpayer
- Fifth Circuit Court of Appeals—decided for the government (reversing the U.S. District Court of Eastern Louisiana)

a. Discuss the precedential value of the foregoing decisions for your client, who is a California resident.
b. If your client, a Texas resident, litigates in the Tax Court, how will the court rule? Explain.

I:15-22 Which official publication(s) contain(s) the following:
a. Transcripts of Senate floor debates
b. IRS announcements
c. Tax Court regular opinions
d. Treasury decisions
e. U.S. district court opinions
f. Technical advice memoranda

I:15-23 Under what circumstances might a tax advisor find the provisions of a tax treaty useful?

I:15-24 What two functions does a citator serve?

I:15-25 Name three primary sources of authority that tax professionals should check against the citator before relying on those sources for important matters.

I:15-26 List three methods of searching the major tax service databases.

I:15-27 Use any major tax service to answer the following questions:
a. What are the principal primary sources?
b. What are the principal secondary sources?

I:15-28 Compare the features of the computerized tax services with those of Internet sites maintained by noncommercial institutions. What are the relative advantages and disadvantages of each? Could the latter sites serve as a substitute for a commercial tax service?

I:15-29 According to the AICPA's *Statements on Standards for Tax Services*, what belief should a member have before taking a pro-taxpayer position on a tax return?

I:15-30 List a member's duties that are excluded under the AICPA's *Statements on Standards for Tax Services*.

I:15-31 List three requirements that apply to written advice under Treasury Department *Circular 230*.

I:15-32 Explain how Treasury Department *Circular 230* differs from the AICPA's *Statements on Standards for Tax Services*.

PROBLEMS

I:15-33 ***Interpreting the IRC.*** Under a divorce agreement executed in 2017, an ex-wife receives from her former husband cash of $25,000 per year for eight years. The agreement does not explicitly state that the payments are excludable from gross income.

a. Does the ex-wife have gross income? If so, how much?

b. Is the former husband entitled to a deduction? If so, is it for or from AGI? Refer only to the IRC in answering this question. Start with Sec. 71.

c. How did the Tax Cuts and Jobs Act of 2017 change the alimony rules?

I:15-34 ***Interpreting the IRC.*** Refer to Sec. 385 and answer the questions below.

a. Whenever Treasury Regulations are issued under this section, what type are they likely to be: legislative or interpretative? Explain.

b. Assume Treasury Regulations under Sec. 385 have been finalized. Will they be relevant to estate tax matters? Explain.

I:15-35 ***Using IRS Rulings.*** Locate PLR 8733007 and Rev. Rul. 81-219.

a. Briefly summarize the tax issue and conclusion of each ruling.

b. Under what circumstances can a researcher rely on the private letter ruling?

c. Under what circumstances can a researcher rely on the revenue ruling?

I:15-36 ***Using Treasury Pronouncements.*** Which IRC section(s) does Rev. Rul. 2001-29 interpret? Hint: consult the official pronouncement of the IRS.

I:15-37 ***Using a Major Tax Service for a Keyword Search.*** The objective is to locate a general overview of available home office deductions. On the main research tab, select the *Federal Tax Coordinator Analysis*. How many results does the search return for each search term if the terms and connectors option is selected?

a. Search term: home office deduction.

b. Search term: "home office" deduction.

c. Search term: "home office" /5 deduction.

I:15-38 ***Using a Major Tax Service for a Citation Search.*** The objective is to locate a general overview of available home office deductions. You have previously researched the issue and know that Sec. 280A is the primary authority for this issue. In the Keyword Search box, enter 280A and check the IRS Rulings and Releases database and answer the following questions.

a. How many results for Revenue Rulings does the search return for the search term: 280A?

b. Using the search within results function at the Tools and Settings tab, use the new term: home office. How many results does the search return?

c. Does using the search within results function improve your results? Explain why.

I:15-39 ***Determining Acquiescence.***

a. What official action (acquiescence or nonacquiescence) did the IRS Commissioner take regarding the 1985 Tax Court decision in *John McIntosh*, 85 T.C. 31 (1985)? Hint: Consult Actions on Decisions (AOD).

b. Did this action concern *all* issues in the case? If not, explain. (Before answering this question, consult the headnote to the court opinion.)

I:15-40 ***Determining Acquiescence.***

a. What 2015 action (acquiescence or nonacquiescence) did the IRS Commissioner take regarding the 9th Circuit decision in *Voss v. Commissioner*, 116 AFTR 2d 2015-5529? Hint: Consult Actions on Decisions (AOD).

b. What issue did the AOD address?

I:15-41 ***Determining Acquiescence.***

a. What original action (acquiescence or nonacquiescence) did the IRS Commissioner take regarding the 1982 Tax Court decision in *Doyle, Dane, Bernbach, Inc.*, 79 T.C. 101 (1982)? Hint: Consult Actions on Decisions (AOD).

b. Did the IRS Commissioner subsequently change his mind? If so, when?

I:15-42 ***Evaluating a Case.*** Look up *James E. Threlkeld*, 87 T.C. 1294 (1988) and answer the questions below.

a. Was the case reviewed by the court? If so, was the decision unanimous? Explain.

b. Was the decision entered under Rule 155?

c. Consult a citator. Was the case reviewed by an appellate court? If so, which one?

I:15-43 ***Evaluating a Case.*** Look up *Bush Brothers & Co.*, 73 T.C. 424 (1979) and answer the questions below.

a. Was the case reviewed by the court? If so, was the decision unanimous? Explain.

b. Was the decision entered under Rule 155?

c. Consult a citator. Was the case reviewed by an appellate court? If so, which one?

I:15-44 ***Writing Citations.*** Provide the proper citations (including both primary and secondary citations where applicable) for the authorities listed below. (For secondary citations, reference both the AFTR and USTC.)

a. *National Cash Register Co.*, a 6th Circuit Court decision

b. *Thomas M. Dragoun v. CIR*, a Tax Court memo decision

c. *John M. Grabinski v. U.S.*, a U.S. district court decision

d. *John M. Grabinski v. U.S.*, an Eighth Circuit Court decision

e. *Rebekah Harkness*, a 1972 Court of Claims decision

f. *Hillsboro National Bank v. CIR*, a Supreme Court decision

g. Rev. Rul. 78-129

I:15-45 ***Writing Citations.*** Provide the proper citations (including both primary and secondary citations where applicable) for the authorities listed below. (For secondary citations, reference both the AFTR and USTC.)

a. Rev. Rul. 99-7

b. *Frank H. Sullivan*, a Board of Tax Appeals decision

c. *Tate & Lyle, Inc.*, a 1994 Tax Court decision

d. *Ralph L. Rogers v. U.S.*, a U.S. district court decision

e. *Norman Rodman v. CIR*, a Second Circuit Court decision

I:15-46 ***Interpreting Citations.*** Indicate which courts decided the cases cited below. Also indicate on which pages and in which publications the authority is reported.

a. *Lloyd M. Shumaker v. CIR*, 648 F.2d 1198, 48 AFTR 2d 81-5353 (9th Cir., 1981)

b. *Xerox Corp. v. U.S.*, 14 Cl. Ct. 455, 88-1 USTC ¶9231 (1988)

c. *Real Estate Land Title & Trust Co. v. U.S.*, 309 U.S. 13, 23 AFTR 816 (USSC, 1940)

d. *J. B. Morris v. U.S.*, 441 F. Supp. 76, 41 AFTR 2d 78-335 (DC TX, 1977)

e. Rev. Rul. 83-3, 1983-1 C.B. 72

f. *Malone & Hyde, Inc. v. U.S.*, 568 F.2d 474, 78-1 USTC ¶9199 (6th Cir., 1978)

I:15-47 ***Using a Tax Service.*** Use the index of any tax service to locate authorities dealing with the deductibility of the cost of a facelift.

a. Cite the authority you find.

b. List the primary IRC section cited as authority.

c. May a taxpayer deduct the cost of a facelift paid in the current year? Explain.

I:15-48 ***Using a Tax Service.*** Using any tax service, locate Reg. Sec. 1.302-1. Does this Treasury Regulation reflect recent amendments to the IRC? Explain.

I:15-49 ***Using a Tax Service.*** Using the index of any tax service, search the editorial materials to locate authorities addressing whether termite damage constitutes a casualty loss.

a. Cite the authority you found.

b. Cite at least two primary authorities.

I:15-50 ***Using a Tax Service.***

a. Using any tax service, locate Sec. 303. This section states that Sec. 303(a) applies only if the stock in question meets a certain percentage test. What is the applicable percentage?

b. Locate Reg. Sec. 1.303-2(a) in the same service. Does this Treasury Regulation reflect recent amendments to the IRC with respect to the percentage test addressed in Part a? Explain.

I:15-51 *Using a Tax Service.* Using the BNA tax service, identify the number of the BNA portfolio for the following subjects.
a. Innocent spouse relief.
b. Accounting methods.
c. Involuntary conversions.
d. IRAs.
e. Deductibility of legal and accounting fees, bribes, and illegal payments.

I:15-52 *Using a Keyword Search.* Using a keyword search of editorial materials in any tax service, locate authorities dealing with the deductibility of the cost of work clothing by a firefighter. List a revenue ruling addressing this question.

I:15-53 *Using a Citator.* Trace *Biltmore Homes, Inc.,* a 1960 Tax Court memo decision, in the citator.
a. According to the citator, how many times has the Tax Court decision been cited by other courts?
b. How many issues did the lower court address in its opinion? Hint: Refer to the case headnote numbers.
c. Did an appellate court review the case? If so, which one?

I:15-54 *Using a Citator.* Trace *Stephen Bolaris,* 776 F.2d 1428, in the citator.
a. According to the citator, how many times has the Ninth Circuit's decision been cited?
b. Did the decision address more than one issue? Explain.
c. Was the decision ever cited unfavorably? Explain.

I:15-55 *Interpreting a Case.* Using any tax service, refer to the *Holden Fuel Oil Company,* RIA T.C. Memo ¶72,045 (T.C. Memo 1972-45), 31 TCM 184.
a. In which year was the case decided?
b. What controversy was litigated?
c. Who won the case?
d. Was the decision reviewed at the lower court level?
e. Was the decision appealed?
f. Has the decision been cited in other cases?

I:15-56 *Internet Research.* Access the IRS Internet site at *www.irs.gov* and answer the following questions:
a. How does one file a tax return electronically?
b. How can the taxpayer transmit funds electronically?
c. What are the advantages of electronic filing?

I:15-57 *Internet Research.* Access the IRS Internet site at *www.irs.gov* and indicate the titles of the following IRS forms:
a. Form 4506
b. Form 973
c. Form 8725

I:15-58 *Internet Research.* Access the Federation of Tax Administrators Internet site at *www.taxadmin.org/state-tax-forms* and indicate the titles of the following state tax forms and publications:
a. Minnesota Form M-100
b. Oklahoma Form 512
c. North Carolina Form D-403

I:15-59 *Internet Research.* Access the Urban Institute and Brookings Institution Tax Policy Center at *taxpolicycenter.org*. On the home page, search for *state individual income tax rates* and locate the Tax Policy Center's latest summary of each state's rates. Search for the 2022 tax year, which was the most recent available at the time of this publication. Researchers also can locate the file by looking under the *Statistics* tab and then the *State* tab, *Main Features of State Tax Systems*.
a. How many states do not have a state individual income tax?
b. How many states tax only interest and dividends for individuals?
c. What is the top marginal individual income tax rate in Oregon?
d. Of those that do impose an income tax, which state's top marginal rate is lowest?

COMPREHENSIVE PROBLEM

I:15-60 Your client, Mr. Stench, is in the garbage business. He purchased an old excavation site because it has a large hole in which he can dump garbage. Mr. Stench paid $30,000 for the site and, based on appraisals, estimates that the land site will be worth $10,000 when filled. He also estimates that, when filled to capacity, the hole will hold 50,000 "dump-units," and he expects to deposit somewhere between 9,000 and 11,000 dump-units per year. He has asked you if he can depreciate the cost of the site he will use as a garbage dump. In search of your answer, consult the editorial materials in any tax service. Explain the steps to find your answer.

TAX STRATEGY AND CRITICAL THINKING PROBLEM

I:15-61 Your client, Home Products Universal (HPU), distributes home improvement products to independent retailers throughout the country. Its management wants to explore the possibility of opening its own home improvement centers. Accordingly, it commissions a consulting firm to conduct a feasibility study, which ultimately persuades HPU to expand into retail sales. The consulting firm bills HPU $150,000, which HPU deducts on its current year tax return. The IRS disputes the deduction, contending that, because the cost relates to entering a new business, it should be capitalized. HPU's management, on the other hand, firmly believes that, because the cost relates to expanding HPU's existing business, it should be deducted. In contemplating legal action against the IRS, HPU's management considers the state of judicial precedent: The federal court for HPU's district has ruled that the cost of expanding from distribution into retail sales should be capitalized. The appellate court for HPU's circuit has stated in *dictum* that, although in some circumstances switching from product distribution to product sales entails entering a new trade or business, improving customer access to one's existing products generally does not. The Federal Circuit Court has ruled that wholesale distribution and retail sales, even of the same product, constitute distinct businesses. In a case involving a taxpayer from another circuit, the Tax Court has ruled that such costs invariably should be capitalized. HPU's Chief Financial Officer approaches you with the question, "In which judicial forum should HPU file a lawsuit against the IRS: (1) U.S. district court, (2) the Tax Court, or (3) the U.S. Court of Federal Claims?" What do you tell her?

CASE STUDY PROBLEM

I:15-62 A client, Mal Manley, fills out his client questionnaire for the previous year and on it provides information for the preparation of his individual income tax return. The IRS has never audited Mal's returns. Mal reports that he made over 100 relatively small cash contributions totaling $24,785 to charitable organizations. In the last few years, Mal's charitable contributions have averaged about $15,000 per year. For the previous year, Mal's adjusted gross income was roughly $350,000, about a 10% increase from the year before.

Required: Applying *Statements on Standards for Tax Services* No. 2, determine whether you can accept at face value Mal's information concerning his charitable contributions. Now assume that the IRS recently audited Mal's tax return for two years ago and denied 75% of that year's charitable contribution deduction because the deduction was not substantiated. Assume also that Mal indicates that, in the previous year, he contributed $25,000 (instead of $24,785). How do these changes of fact affect your earlier decision?

TAX RESEARCH PROBLEMS

I:15-63 The purpose of this problem is to enhance your skills in interpreting the authorities that you locate in your research. In answering the questions that follow, refer only to *Thomas A. Curtis, M.D., Inc.*, 1994 RIA TC Memo ¶94,015 (T.C. Memo 1994-15), 67 TCM 1958.

a. What was the principal controversy litigated in this case?
b. Which party—the taxpayer or the IRS—won?
c. Why is the corporation instead of Dr. and/or Ms. Curtis listed as the plaintiff?
d. What is the relationship between Ellen Barnert Curtis and Dr. Thomas A. Curtis?
e. Approximately how many hours a week did Ms. Curtis work, and what were her credentials?
f. For the fiscal year ending in 1989, what salary did the corporation pay Ms. Curtis? What amount did the court decide was reasonable?
g. What dividends did the corporation pay for its fiscal years ending in 1988 and 1989?
h. To which circuit would this decision be appealable?
i. According to *Curtis*, what five factors did the Ninth Circuit mention in *Elliotts, Inc.* as relevant in determining reasonable compensation?

I:15-64 Josh contributes $5,000 toward the support of his widowed mother, aged 69, a U.S. citizen and resident. She earns gross income of $2,000 and spends it all for her own support. In addition, Medicare pays $3,200 of her medical expenses. She does not receive financial support from sources other than those described above. Must the Medicare payments be included in the support that Josh's mother is deemed to provide for herself?

Prepare work papers and a client letter (to Josh) dealing with the issue.

I:15-65 Amy owns a vacation cottage in Maine. She predicts that the time during which the cottage will be used in the current year is as follows:

By Amy, solely for vacation	12 days
By Amy, making repairs ten hours per day and vacationing the rest of the day	2 days
By her sister, who paid fair rental value	8 days
By her cousin, who paid fair rental value	4 days
By her friend, who paid a token amount of rent	2 days
By three families from the Northeast, who paid fair rental value for 40 days each	120 days
Not used	217 days

Calculate the ratio for allocating the following expenses to the rental income expected to be received from the cottage: interest, taxes, repairs, insurance, and depreciation. The ratio will be used to determine the amount of expenses that are deductible and, thus, Amy's taxable income for the year.

For the tax manager to whom you report, prepare work papers in which you discuss the calculation method. Also, draft a memo to the file dealing with the results of your research.

I:15-66 Look up *Summit Publishing Company*, 1990 PH T.C. Memo ¶90,288 (T.C. Memo 1990-288), 59 TCM 833, and *J.B.S. Enterprises*, 1991 PH T.C. Memo ¶91,254 (T.C. Memo 1991-254), 61 TCM 2829, and answer the following questions:

a. What was the principal issue in these cases?
b. What factors did the Tax Court consider in resolving the central issue?
c. How are the facts of these cases similar? How are they dissimilar?

I:15-67 Your supervisor would like to set up a single Sec. 401(k) plan exclusively for the managers of your organization. Concerned that this arrangement might not meet the requirements for a qualified plan, he has asked you to request a determination letter from the IRS. In a brief memorandum, address the following issues:

a. What IRS pronouncements govern requests for determination letters?
b. What IRS forms must be filed with the request?
c. What information must be provided in the request?
d. What actions must accompany the filing?

CHAPTER

16

CORPORATIONS

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Define the types of entities that can be classified as a corporation for federal income tax purposes
2. Examine specific rules that apply to corporations
3. Calculate the corporate income tax liability
4. Apply the nonrecognition of gain or loss rules for corporate capitalizations
5. Understand the significance of earnings and profits
6. Determine the tax consequences of noncash distributions and stock redemptions
7. Understand the tax implications of a corporate liquidation for the liquidating corporation and its shareholders
8. Describe tax planning considerations for corporations
9. Describe compliance and procedural considerations for corporations

CHAPTER OUTLINE

Definition of a Corporation... 16-2
Specific Rules Applicable to Corporations... 16-4
Computation of Tax... 16-9
Transfers of Property to Controlled Corporations... 16-18
Earnings and Profits... 16-22
Noncash Distributions... 16-25
Corporate Distributions in Complete Liquidation... 16-29
Tax Planning Considerations... 16-31
Compliance and Procedural Considerations... 16-33

A business may be organized and operated as a **sole proprietorship**, *C corporation, S corporation, partnership,* **limited liability company** (LLC), or **limited liability partnership** (**LLP**). These business forms fall into two major categories: taxable entities and flow-through entities. The latter category also is referred to as tax conduits or pass-through entities. Sole proprietorships and C corporations fall into the taxable entity category although sole proprietorships are subject to a single level of tax, while C corporations are subject to two levels of tax. A sole proprietorship is not taxed directly because it is not considered to be a separate legal entity. Rather, the individual owner is taxed directly and reports the sole proprietorship's business income and expenses on Schedule C of Form 1040 (U.S. Individual Income Tax Return).

The C corporation also is taxed directly, reporting its tax results on Form 1120 (U.S. Corporation Income Tax Return). In addition, the corporation's shareholders are taxed if the C corporation pays dividends to them or if the shareholders sell their stock at a gain. In this way, the C corporation organizational form results in two levels of taxation: once at the corporate level when income is earned and again at the shareholder level when income is distributed. The second part of this double taxation, however, is mitigated by the reduced tax rates on an individual's qualified dividends and net capital gain (i.e., 0%, 15%, and 20%; see Chapter I:5).[1]

ADDITIONAL COMMENT

In 2023, total federal tax collections were $4.7 trillion. Corporate income taxes accounted for 9.7% of federal tax revenues. Noncorporate (individual, trust, estate, etc.) income taxes accounted for 54.6% of federal tax revenues.

Despite its double taxation and sometimes complicated legal form, the corporation has the dual advantages of facilitating external financing and limiting the shareholders' legal liability. Some tax analysts question whether the burden of corporate taxation is borne directly by the corporate enterprise. These analysts argue that, depending on market conditions and terms of trade, the corporate enterprise might be able to shift the burden to consumers in the form of higher prices, employees in the form of lower salaries and wages, tenants in the form of higher rents, and shareholders in the form of lower dividends and stock values.

Flow-through entities, such as S corporations, partnerships, and limited liability companies, entail only one level of taxation at the ownership level. Accordingly, the entities themselves are not taxed, and the income and losses pass through to the shareholders of the S corporation, the partners of the partnership, or the members of the limited liability company. The owners then report the pass-through items on their separate tax returns and may offset a pro rata share of entity losses against their separate income. Some of these entities, such as S corporations and limited liability companies, offer the advantage of limiting all of their owners' legal liability. Such a feature is advantageous, especially where the business incurs extraordinary liability. Nevertheless, flow-through entities involve certain legal complexities and restrictions, which is one disadvantage of this form of organization. Table I:16-1 compares the number of tax returns filed by various types of entities in recent years.

This chapter explores the tax consequences of forming, operating, and liquidating a C corporation. Chapter I:17 discusses the basic tax rules pertaining to flow-through entities, and Table I:17-2 at the end of that chapter compares the alternative forms of business organizations. Detailed coverage of these two areas of taxation are reserved for this text's companion volume titled *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*.

DEFINITION OF A CORPORATION

OBJECTIVE 1

Define the types of entities that can be classified as a corporation for federal income tax purposes

Under Treasury Regulations,[2] a business entity with two or more owners may be classified as either a corporation or a partnership. An entity having only one owner may be classified as a corporation or a disregarded entity (e.g., sole proprietorship). A business entity is a corporation if it is organized under a federal or state statute that refers to the entity as incorporated or as a corporation, body corporate, body politic, joint-stock company, or joint-stock association. Corporations also include insurance companies, state-chartered banks, and business entities wholly owned by a state or political subdivision. In general, with rare exceptions if a business entity incorporates, it is taxed as a corporation.

---

[1] The second part of the double taxation of a C corporation's income sometimes does not occur, such as when shares are held by a Roth IRA or tax-exempt organization and when the stock's sale qualifies for the Sec. 1202 exclusion.

[2] Reg. Secs. 301.7701-1, -2, and -3.

▼ TABLE I:16-1
Comparison—Types of Returns

	Number of Returns Filed (in millions)				
Taxpayer Class	**2019**	**2020**	**2021**	**2022**	**2023**
Individuals	154.095	157.195	167.915	160.571	163.147
Partnerships	3.946	4.470	4.710	4.583	5.118
S corporations	5.187	5.044	5.355	5.584	5.882
C corporations*	2.147	1.819	2.144	2.261	2.465
Estates and trusts	3.116	2.820	3.241	2.973	3.370
Tax-exempt organizations	1.590	1.361	1.723	1.752	1.790

IRS, *Data Book*, 2019–2023.

*The number shown includes returns for various types of domestic and foreign corporations and associations.

On the other hand, if the business entity has two or more owners and is organized as a partnership, limited liability company, or limited liability partnership, the entity can elect to be *taxed* as either a partnership or corporation. The "check-the-box" regulations replace prior entity classification rules that involved subjective judgment and opened the door to manipulation.

EXAMPLE I:16-1 ▶ Al and Jane form Oak as a limited liability company (LLC). Because it is an unincorporated entity with two or more owners, Oak may elect to be classified as either a partnership or corporation for federal income tax purposes. If Jane instead owns all of the LLC, Oak may elect to be classified as a disregarded entity or corporation (if it elects disregarded entity classification, Oak is treated as Jane's sole proprietorship because she is an individual). If Oak instead were formed as a corporation, it would be classified as a corporation; it cannot elect to be classified as a partnership or disregarded entity. ◀

SIMILARITIES AND DIFFERENCES BETWEEN THE TAXATION OF CORPORATIONS AND INDIVIDUALS

Similarities. The computation of corporate taxable income is similar to that of sole proprietorship income. For example, under Sec. 162 corporations can deduct ordinary and necessary business expenses. They also may exclude from gross income items such as tax-exempt interest and life insurance proceeds. Corporations also can deduct interest (subject to limitations), depreciation, and other business-related expenses in a manner similar to that of unincorporated businesses.

In general, the IRC authorizes all taxpayers to use one of three methods of accounting—the accrual method, the cash method, and the hybrid method.[3] However, a corporation generally must use the accrual method if its average annual gross receipts for the preceding three tax years exceeds $31 million (for 2025).[4]

---

[3] For a more complete discussion of accounting methods, see Chapter I:11.

[4] Sec. 448(b).

Corporations are entitled to many of the tax benefits available to sole proprietorships. Corporations can elect to claim the Sec. 179 expensing deduction that is available to sole proprietorships and partnerships. They also are eligible to claim the first-year bonus depreciation when available.

ADDITIONAL COMMENT

Because C corporations are taxable entities but S corporations are flow-through entities, many of the rules discussed in this chapter pertain to C corporations but not S corporations (Sec. 1363).

Differences. One principal difference in computing a C corporation's income tax liability compared to that for an individual is that personal, consumption-type expenditure write-offs apply solely to individuals. A few differences are worth noting:

- Computation of *adjusted gross income* (AGI) applies only to individuals.
- Corporations are not entitled to the standard deduction.[5]
- The corporate income tax rate is 21% of taxable income. Unlike the progressive tax rate schedules that apply for individuals, the corporate income tax rate is a flat 21%.
- Unlike individuals, the qualified dividends a corporation receives are not taxed at preferential rates. Such income is taxed at the same 21% rate as ordinary income. However, a corporation generally can deduct 50%, 65%, or 100% of the dividends it receives from another corporation (the dividends-received deduction is discussed later in the chapter).
- A corporation's net capital gain is taxed at a 21% rate. Unlike individuals, it is not taxed at a preferential rate.
- A corporation is not allowed to deduct any net capital loss against ordinary income. An individual may deduct up to $3,000 of net capital loss against ordinary income each year (see Chapter I:5).
- Like individuals, a corporation can deduct charitable contributions. A corporation's charitable contributions deduction, however, is limited to 10% of a modified version of taxable income (this limitation is discussed later in the chapter). This differs from the deduction's limitation for individuals, which is 20%, 30%, 50%, or 60% of AGI, depending on the type of contribution and type of donee (see Chapter I:8).

ADDITIONAL COMMENT

An individual's total tax rate on qualified dividends could be 23.8% because of the 3.8% net investment income tax that is imposed on higher-income individuals (see Chapter I:5).

SPECIFIC RULES APPLICABLE TO CORPORATIONS

OBJECTIVE 2

Examine specific rules that apply to corporations

CAPITAL GAINS AND LOSSES

The rules for netting long- and short-term capital gains and losses, netting Sec. 1231 (i.e., business fixed assets) gains and losses, and capital gain and loss holding periods are the same for both corporations and individuals. The netting process can be summarized as follows (see Schedule D of Form 1120–Capital Gains and Losses available on the IRS website):

- Long-term capital gains (LTCGs) are netted against long-term capital losses (LTCLs).
- Short-term capital gains (STCGs) are netted against short-term capital losses (STCLs).
- A net long-term capital gain (NLTCG) is then offset against a net short-term capital loss (NSTCL).
- A net long-term capital loss (NLTCL) is then offset against a net short-term capital gain (NSTCG).
- Following this initial netting process, if a corporation reports both a NLTCG and a NSTCG, both of them are taxed at a 21% rate.
- NSTCGs are netted against NLTCLs, and any excess is taxed at 21%.
- NLTCLs and NSTCLs may not be deducted from ordinary income.

---

[5] Corporations also are not entitled to itemized deductions or the qualified business income deduction.

EXAMPLE I:16-2 ▶ Gulf Corporation realizes the following capital gains and losses during the current year:

LTCG	$15,000
LTCL	5,000
STCG	3,000
STCL	8,000

Gulf has a $10,000 NLTCG and a $5,000 NSTCL. The NLTCG is offset against the NSTCL, resulting in a $5,000 capital gain net income that is taxed at 21%. ◀

EXAMPLE I:16-3 ▶ High Corporation realizes the following capital gains and losses during the current year:

LTCG	$15,000
LTCL	5,000
STCG	10,000
STCL	8,000

High has a $10,000 NLTCG and a $2,000 NSTCG. High's $12,000 capital gain net income is taxed at 21%. ◀

EXAMPLE I:16-4 ▶ Huge Corporation realizes the following capital gains and losses during the current year:

LTCG	$ 5,000
LTCL	15,000
STCG	8,000
STCL	10,000

Huge Corporation has a $10,000 NLTCL and a $2,000 NSTCL. In computing its current year taxable income, Huge may not deduct either net loss against its ordinary income. ◀

Corporate Capital Loss Limitations. For corporations, neither a NLTCL nor a NSTCL is deductible against ordinary income in the year it is incurred. Instead, it is eligible for a 3-year carryback and 5-year carryforward and may be offset against capital gains in those years.[6] Both the NSTCL and the NLTCL are treated as STCLs for purposes of the carryback and carryforward. The corporate capital loss limitations and carryback-carryforward rules differ from those applicable to noncorporate taxpayers (see the discussion in Chapter I:5).[7]

SELF-STUDY QUESTION

What are the major differences in the taxation of the capital gains and losses of individuals and corporations?

EXAMPLE I:16-5 ▶ Assume the same facts as in Example I:16-4. The $10,000 NLTCL and the $2,000 NSTCL are nondeductible in the current year. The $12,000 ($10,000 + $2,000) is carried back as a STCL to the third previous year. If the net gains in the carryback years are insufficient to absorb the $12,000 STCL, the excess is carried over up to 5 years. ◀

ANSWER

First, an individual can offset $3,000 of net capital loss against ordinary income. Second, an individual has an indefinite carryforward instead of a 3-year carryback and a 5-year carryforward that applies to corporations. Third, all corporate capital loss carrybacks and carryforwards are treated as STCLs. Finally, individuals receive a preferential tax rate on most net capital gains. This preferential tax rate is 0%, 15%, or 20%, depending on the individual's taxable income, but the 3.8% net investment income tax also applies for higher-income individuals. See Chapter I:5.

DIVIDENDS-RECEIVED DEDUCTION

Corporations may deduct 65% of dividends received from a domestic corporation if the recipient corporation owns 20% or more of the voting power and value of the dividend-paying corporation's stock.[8] If a corporation owns less than 20% of the dividend-paying corporation's stock, the deduction is 50% of dividends received. The percentage increases to 100% if the dividend is received from an 80%-or-more-owned corporation for which a consolidated tax return election has not been made. This deduction mitigates the onerous effects of triple taxation, where one corporation (a subsidiary) pays dividends to a corporate shareholder (its parent corporation), which in turn distributes an equal amount to its shareholders.

The following table sets forth the dividends-received deduction percentages.

Percentage of Stock Owned	*Dividends-Received Deduction*
Less than 20%	50%
20% through 79.99%	65%
80% or more	100%

---

[6] Secs. 1211(a) and 1212(a).

[7] Noncorporate taxpayers (e.g., individuals) can deduct up to $3,000 of net capital losses against ordinary income annually. Unused capital losses of a noncorporate taxpayer are carried over (but not carried back) for an indefinite time period and retain their character as long- or short-term.

[8] The dividends-received deduction rules are set forth in Secs. 243 and 246.

The 65% and 50% **dividends-received deductions** are subject to the following limitations:

- The dividends-received deduction is limited to 65% (or 50%) of taxable income computed without regard to the net operating loss (NOL) deduction, the dividends-received deduction, or capital loss carrybacks to the limitation year.
- The limitation does not apply if the corporation generates an NOL in the current year after taking the dividends-received deduction determined under the general rules.
- The dividends-received deduction is not available if the distributing corporation's stock is held by the distributee for 45 or fewer days within the 90-day period that commences 45 days before the ex-dividend date.

SELF-STUDY QUESTION

Calculate the effective tax rate on dividends received by a corporation from a second corporation that is less than 20%-owned.

ANSWER

The maximum effective tax rate is 10.5% (50% dividend inclusion times the corporate tax rate of 21%).

EXAMPLE I:16-6 ▶ King Corporation reports the following income and expense items during the current year:

Net income from operations	$ 50,000
Dividends from two 20%-owned corporations	200,000

The dividends-received deduction determined under the general rule is $130,000 (0.65 × $200,000 dividends). The deduction limitation is $162,500 (0.65 × $250,000 of taxable income before the dividends-received deduction). Because the limitation ($162,500) exceeds the dividends-received deduction determined under the general rule ($130,000), the entire $130,000 dividends-received deduction is allowed. ◀

EXAMPLE I:16-7 ▶ Assume the same facts as in Example I:16-6, except that the corporation incurred a $10,000 net loss from operations. The dividends-received deduction determined under the general rule is $130,000 (0.65 × $200,000 dividends). The limitation under the general rule is based on taxable income before the dividends-received deduction of $190,000 ($200,000 − $10,000). The limitation is $123,500 (0.65 × $190,000). As illustrated below, no NOL results after deducting the entire 65% dividends-received deduction determined under the general rule:

Net loss from operations	$ (10,000)
Plus: Dividends received from 20% (or more) owned corporations	200,000
Minus: Dividends-received deduction (0.65 × $200,000)	(130,000)
Taxable income as determined under the general rule	$ 60,000

Because the dividends-received deduction is limited to $123,500, the recognized taxable income for the year is $66,500 ($190,000 − $123,500). ◀

BOOK-TAX ACCOUNTING COMPARISON

When computing its financial accounting net income, a corporation adds dividends received but does not subtract a dividends-received deduction. This deduction thus creates a permanent book-tax difference that affects the corporation's effective tax rate but not its deferred taxes.

EXAMPLE I:16-8 ▶ Assume the same facts as in Example I:16-7, except that the loss from operations is $80,000. The dividends-received deduction determined under the general rule is $130,000 (0.65 × $200,000 dividends). The limitation is $78,000 (0.65 × $120,000 of taxable income before the dividends-received deduction). The limitation, however, does not apply because a $10,000 NOL results after taking the entire dividends-received deduction determined under the general rule.

Net loss from operations	$ (80,000)
Plus: Dividends received	200,000
Minus: Dividends-received deduction (0.65 × $200,000)	(130,000)
Taxable income	$ (10,000)

Therefore, the entire $130,000 dividends-received deduction is allowed. ◀

ADDITIONAL COMMENT

Even though the dividends-received deduction creates (or increases) an NOL, the corporation gets the full benefit of the deduction because it can carry over the NOL.

EXAMPLE I:16-9 ▶ On June 1, Lean Corporation acquires 5% of Madison Corporation stock. Madison pays a cash dividend to all shareholders of record on June 15. Lean receives the dividend on June 20. On July 1, Lean sells its Madison stock. A dividends-received deduction is not allowed because Lean does not own the Madison stock for the required 46 days within the 90-day period that commences 45 days before the ex-dividend date (June 15). ◀

The rules discussed in the preceding paragraphs pertain to the deduction for dividends received from a domestic corporation. Sec. 245A generally allows a 100% deduction for dividends received from a foreign corporation if the recipient corporation is a domestic corporation that owns at least 10% of the foreign corporation's stock (e.g., a dividend that a U.S. parent corporation receives from its foreign subsidiary). Other details of the Sec. 245A deduction, as well as other aspects of the federal income tax treatment of foreign income, are beyond the scope of this text.

NET OPERATING LOSSES

Unlike the computation of individual NOLs, the computation of a corporate *net operating loss (NOL)* does not involve adjusting nonbusiness deductions and capital gains and losses. (See Chapter I:9 for a discussion of these adjustments for individuals.[9]) In the corporate NOL computation, the full dividends-received deduction is allowed. However, no deduction for an NOL carryover or carryback from a preceding or succeeding year is allowed.

EXAMPLE I:16-10 ▶ The computation of Maine Corporation's NOL for the current year is based on the following taxable items:

Operating income	$ 400,000
Plus: Dividends received from 20% (or more) owned corporations	300,000
Gross income	$ 700,000
Minus: Business operating expenses	(600,000)
Dividends-received deduction (0.65 × $300,000)	(195,000)
Net operating loss	$(95,000)

In general, NOLs are carried forward indefinitely to offset taxable income in future years. Thus, Maine's NOL can be carried forward until it is completely used. ◀

NOLs arising in 2018 and later years (post-2017 NOLs) carry over indefinitely, while NOLs arising in 2017 or earlier years (pre-2018 NOLs) carry over for 20 years.[10] The deductibility of NOL carryovers is limited, which differs for these two types of NOLs. For taxable years beginning after December 31, 2020, the NOL deduction is determined as follows:

1. Deduct pre-2018 NOL carryovers (but not more than taxable income before the NOL deduction).
2. Deduct post-2017 NOL carryovers (but not more than 80% of the excess of taxable income before the NOL deduction over the NOL deduction attributable to pre-2018 NOL carryovers).

EXAMPLE I:16-11 ▶ For the current year, Birch Corporation's taxable income before the NOL deduction is $500,000. It has $150,000 of pre-2018 NOLs and $290,000 of post-2017 NOLs that it is carrying over to the current year. Birch can deduct for the current year all $150,000 of the pre-2018 NOL carryovers because their amount does not exceed the $500,000 of taxable income before the NOL deduction. Birch's current year deduction for its post-2017 NOL carryovers is limited to $280,000 [0.80 × ($500,000 − $150,000)], so it deducts $280,000 of these NOLs and continues to carry over the other $10,000 ($290,000 − $280,000). Birch's NOL deduction is $430,000 ($150,000 + $280,000), and its taxable income is $70,000 ($500,000 − $430,000). ◀

ADDITIONAL COMMENT

For purposes of determining the charitable contributions deduction limit, taxable income is calculated without regard to capital loss carrybacks, but capital loss carryovers are reflected in calculating taxable income.

CHARITABLE CONTRIBUTIONS

Some of the rules for deducting charitable contributions apply to both individuals and corporations, such as those for contributions of ordinary income property (see Chapter I:8).[11] The following rules apply solely to corporations:

- A charitable contribution generally is deductible for the taxable year in which it is paid. However, if a corporation using the accrual method of accounting pays a contribution during the first 3½ months after the end of the taxable year in which the board of directors authorizes it, the corporation may elect to deduct it in the year of authorization (instead of the year paid).
- Section 170(e) allows an increased charitable contributions deduction for certain property contributions. The increased deduction is available for (1) property used to care for the ill, needy, or infants; (2) scientific research property used by colleges or universities for research and experimentation; and (3) computer technology, software, and

---

[9] The NOL rules are set forth in Sec. 172.

[10] NOLs that arose in 2018, 2019, or 2020 carried back five years and over indefinitely. NOLs that arose in 2017 or earlier years carried back two years and over for 20 years. A taxpayer, however, could elect out of the carryback period for NOLs that arose before 2021. Special rules apply for the NOLs of farming businesses and insurance companies, which are beyond the scope of this text.

[11] Rules pertaining to charitable contributions are set forth in Sec. 170.

peripherals donated to educational institutions for use in grades kindergarten through 12. In each case, the amount of the deduction equals the donor's adjusted basis in the property plus one-half of the excess of the property's FMV over its adjusted basis (not to exceed twice the property's adjusted basis).

- The charitable contributions deduction is limited to 10% of taxable income (computed without regard to the charitable contributions deduction, capital loss carry*backs*, and the dividends-received deduction).
- Charitable contributions exceeding the limitation carry over for five years. For a carryover year, charitable contributions in such year are deductible before any carryovers. This ordering is important because of the carryover year's deduction limitation; deducting the carryovers after the carryover year's charitable contributions increases the chance that the carryovers will expire unused at the end of the five-year period.

EXAMPLE I:16-12 ▶ Mesa Corporation reports the following results for 2025:

Taxable income (before deducting dividends-received and charitable contributions)	$130,000
Dividends-received deduction	10,000
Charitable contributions	20,000

Mesa has never incurred an NOL. Its charitable contributions deduction is limited to $13,000 ($130,000 × 0.10), so Mesa's taxable income is $107,000 ($130,000 − $13,000 − $10,000). Mesa carries over to 2026–2030 the $7,000 ($20,000 − $13,000) of charitable contributions that exceed the deduction limitation. ◀

EXAMPLE I:16-13 ▶ Assume the same facts as in Example I:16-12. For 2026, Mesa's taxable income (before its dividends-received and charitable contributions deductions) is $220,000, and it makes $20,400 of charitable contributions. Mesa's 2026 charitable contributions deduction is limited to $22,000 ($220,000 × 0.10). The $20,400 of 2026 charitable contributions are considered first, leaving $1,600 ($22,000 − $20,400) of limitation to accommodate the carryover from 2025. Mesa thus deducts $1,600 of the $7,000 carryover, and it continues to carry over the other $5,400 ($7,000 − $1,600) to 2027–2030. ◀

COMPENSATION DEDUCTION LIMITATION FOR PUBLICLY HELD CORPORATIONS

A publicly held corporation is denied a deduction for compensation paid to its chief executive officer, its chief financial officer, and its three highest compensated officers other than the chief executive and financial officers to the extent the compensation for that individual exceeds $1 million per year.[12] Includible compensation includes both cash and noncash benefits. The following types of compensation are not taken into account for purposes of calculating the $1 million limitation:

- Payments to a qualified retirement plan
- Tax-free employee benefits (such as employer-provided health care and Sec. 132 fringe benefits)

EXAMPLE I:16-14 ▶ Pine Corporation is a publicly held company whose securities are listed on the New York Stock Exchange. In the current year, Pine compensates its chief executive officer, Rodney, as follows: salary, $1,200,000; commissions based on sales generated by Rodney, $400,000; payments to a qualified pension plan, $25,000; and tax-free fringe benefits, $10,000. The payments to the qualified pension plan and tax-free fringe benefits are not subject to the $1 million annual deduction limitation. Thus, $600,000 ($1,600,000 − $1,000,000) of Rodney's compensation is not deductible by Pine even though Rodney is taxed on the entire $1,600,000. ◀

---

[12] Sec. 162(m), which defines a publicly held corporation with respect to registration and filing requirements under the Securities Exchange Act of 1934. For tax years beginning after December 31, 2026, the $1 million limitation also applies to the five highest compensated employees (other than the five individuals who are covered employees for pre-2027 tax years). See Sec. 162(m)(3).

For a summary of the rules relating to corporate capital gains and losses, dividends-received deduction, net operating losses, charitable contributions deduction, and compensation deduction, see Topic Review I:16-1.

TOPIC REVIEW I:16-1

Summary of Rules for Calculating Corporate Taxable Income

CAPITAL GAINS AND LOSSES

- If a net loss results from netting long-term and short-term capital gains and losses, none of this loss can be deducted from ordinary income. Instead, the loss may be carried back 3 years and forward up to 5 years and is treated as short-term in character (i.e., STCL).
- Corporate net capital gains do not receive favorable tax treatment. The 15% preferential tax rate for net capital gains (or 0% for lower-income taxpayers and 20% for higher-income taxpayers) applies to individuals but not C corporations.

DIVIDENDS-RECEIVED DEDUCTION

- The dividends-received deduction is 65% if the corporate shareholder owns 20% or more of stock in the domestic dividend-paying corporation, and 50% if the corporate shareholder owns less than 20%. A 100% deduction is available for dividends received from an 80%-or-more-owned member of an affiliated group that does not file a consolidated tax return.
- The dividends-received deduction is limited to 65% (or 50% as the case may be) of taxable income (computed without regard to the NOL deduction, the dividends-received deduction, and capital loss carrybacks) unless the corporate shareholder generates an NOL after deducting the full amount of dividends received.

CHARITABLE CONTRIBUTIONS

- An accrual basis corporation may elect to deduct a charitable contribution in the year it is authorized by the board of directors if it is paid during the first 3½ months after the end of such year.
- Corporations are allowed increased deductions for contributions of qualifying property used (1) to care for the ill, needy, or infants, (2) to conduct research or experimentation in colleges or universities, or (3) by educational institutions in grades kindergarten through 12.
- The charitable contributions deduction is limited to 10% of taxable income (computed without regard to the deductions for charitable contributions, capital loss carrybacks, and dividends-received).
- Charitable contributions exceeding the deduction limitation carry over for five years.

NOL AND COMPENSATION

- In general, NOLs may be carried forward indefinitely. Their deductibility in a carryforward year is subject to a limitation.
- Publicly held corporations are denied a deduction for compensation exceeding $1 million paid to certain key executives.

COMPUTATION OF TAX

OBJECTIVE 3

Calculate the corporate income tax liability

COMPUTATION OF TAXABLE INCOME

Table I:16-2 illustrates the computation of **taxable income** for a C corporation.

COMPUTATION OF REGULAR TAX

The corporate income tax rate is a flat 21% of taxable income.[13] Unlike individuals, a C corporation's net capital gain and qualified dividends are not taxed at a 0%, 15%, or 20% rate. Such income is taxed at the same 21% rate as ordinary income.

ADDITIONAL COMMENT

Most states impose an income tax on C corporations. Some states exempt S corporations from the state corporate income tax.

EXAMPLE I:16-15 ▶ Able Corporation's taxable income for the current year is $100,000. Ajax Corporation's taxable income for the current year is $335,000. The two firms' tax liabilities are $21,000 (0.21 × $100,000) and $70,350 (0.21 × $335,000).

---

[13] Sec. 11(b)(1).

▼ TABLE I:16-2
Computation of Corporate Taxable Income

Sales	$600,000
Minus: Cost of goods sold	(300,000)
Gross profit	$300,000
Plus: Other income	
Dividends from 25%-owned corporation	$100,000
Interest	10,000
Long-term capital gain	90,000
Gross income	$500,000
Minus: Deductions	
Salaries	$ 80,000
Repairs	20,000
Bad debts	27,000
Taxes	10,000
Contributions (subject to the 10% corporate limitation, as discussed on page I:16-8)	5,000
Depreciation	20,000
Pension and profit-sharing contributions	35,000
Total deductions	$197,000
Taxable income before special deductions	$303,000
Minus: Special deductions:	
Net operating loss deduction	(15,000)[a]
Dividends-received deduction	(65,000)[b]
Taxable income	$223,000

[a] This amount represents a net operating loss carried over from a prior year.
[b] 0.65 × $100,000 = $65,000 dividends-received deduction.

BOOK MINIMUM TAX (ALTERNATIVE MINIMUM TAX)

Chapter I:14 discusses the alternative minimum tax (AMT) for individuals. Prior to 2018, many C corporations were also subject to the AMT, with some differences in the AMT base for these two types of taxpayers.[14] The Tax Cuts and Jobs Act of 2017 repealed the AMT for C corporations for 2018 and later years.

ADDITIONAL COMMENT

Income tax expense is determined using financial accounting rules and is reported in the income statement. This expense differs from the income tax determined and reported on the federal income tax return.

Because of concerns that many large corporations reported income tax expenses in their financial statements that were small compared to their profits, Congress enacted a new version of the AMT as part of the Inflation Reduction Act of 2022. This tax, which is often referred to as the book minimum tax, applies to a C corporation whose average annual adjusted financial statement income (AFSI, which is discussed below) exceeds $1 billion.[15] The tax is 15% of AFSI exceeding the regular tax.[16] It is payable in addition to the regular tax, so their total is the greater of the regular tax or 15% of AFSI.

AFSI is based on the corporation's net income or loss in its financial statements.[17] The corporation makes various adjustments to this net income or loss, three of which are discussed here: federal income taxes, depreciation, and net operating losses.

A corporation takes into account federal income taxes for the net income or loss in its financial statements but must disregard them for its AFSI. Federal income tax expense thus is added to adjust from net income or loss towards AFSI (subtracted if there is a federal income tax benefit).

AFSI is also adjusted to reflect depreciation deducted for taxable income rather than depreciation subtracted for net income or loss. Book depreciation thus is added and tax depreciation subtracted to adjust from net income or loss towards AFSI. This helps ensure that a corporation does not incur book minimum tax merely because it claims accelerated depreciation for tax purposes.

---

[14] The pre-2018 version of the AMT applied to C corporations whose average annual gross receipts for all prior three-taxable-year periods was $7.5 million or less.

[15] Sec. 59(k). This average is for all prior three-taxable-year periods, but only such periods ending after December 31, 2021, are considered for this purpose. The book minimum tax applies for taxable years beginning after December 31, 2022.

[16] Sec. 55.

[17] Sec. 56A.

EXAMPLE I:16-16 ▶ For the current year, DEF Corporation's financial statement net income is $1.5 billion, which reflects $300 million of federal income tax expense and $200 million of book depreciation expense. DEF's taxable income is $1.1 billion, which reflects $290 million of tax depreciation deductions. DEF's AFSI is $1.71 billion, calculated as follows:

Net income	$1,500,000,000
Federal income tax expense	300,000,000
Book depreciation	200,000,000
Tax depreciation	(290,000,000)
Adjusted financial statement income	$1,710,000,000

DEF's regular tax is $231 million ($1,100,000,000 × 0.21). If DEF is subject to the book minimum tax for the current year, it is $25.5 million [($1,710,000,000 × 15%) − $231,000,000]. DEF's total tax for the current year is $256.5 million ($231,000,000 + $25,500,000), which is 15% of its AFSI. ◀

As discussed earlier in this chapter, post-2017 net operating losses (NOLs) carry forward indefinitely, and their deductibility is limited to 80% of taxable income before the NOL deduction if there are no pre-2018 NOL carryforwards. In its financial statements, a corporation with a net loss merely reports that loss; it does not carry back or forward the net loss. AFSI thus is adjusted for financial statement NOL carryforwards. This helps ensure that a corporation does not incur book minimum tax merely because it deducts an NOL carryforward for tax purposes. For AFSI, a corporation carries forward indefinitely its post-2019 financial statement net losses, and its use of these carryforwards to reduce a year's AFSI is limited to 80% of AFSI before this reduction. A financial statement net loss is the net loss in the financial statements, adjusted in the same manner as for AFSI except for this adjustment.

EXAMPLE I:16-17 ▶ GHI Corporation has the following AFSIs (before the adjustment for prior financial statement net losses):

2022	$2,200,000,000
2023	1,900,000,000
2024	(800,000,000)
2025	950,000,000

The $800 million financial statement net loss for 2024 carries forward to 2025. GHI's ability to use it to reduce 2025 AFSI is limited to $760 million ($950,000,000 × 0.80), so GHI so uses $760 million of the $800 million. The remaining $40 million ($800,000,000 − $760,000,000) of the 2024 financial statement net loss carries forward to 2026 and is available to be used then. AFSI for 2025 is $190 million ($950,000,000 − $760,000,000). ◀

Although the book minimum tax can increase a corporation's federal income tax, it also creates a minimum tax credit that the corporation carries forward indefinitely to offset future regular taxes.[18] The amount of unused minimum tax credits from prior years a corporation can use in a tax year is limited to the extent its regular tax exceeds 15% of its AFSI. Because of the minimum tax credit, the book minimum tax may accelerate a corporation's tax liability rather than permanently increasing it. In effect, the book minimum tax is a prepaid tax on the differences between a corporation's taxable income and AFSI.

EXAMPLE I:16-18 ▶ PQR Corporation is subject to the book minimum tax. For Year 1, its taxable income is $1.6 billion, and its AFSI is $2.5 billion. PQR's regular tax is $336 million ($1,600,000,000 × 0.21), and its book minimum tax is $39 million [($2,500,000,000 × 0.15) − $336,000,000].

For Year 2, PQR's taxable income is again $1.6 billion, and its AFSI is $2.0 billion. PQR's regular tax is $336 million, and its book minimum tax is zero because $300 million (15% of its AFSI) does not exceed its regular tax. PQR has a $39 million minimum tax credit available from Year 1, and it may claim $36 million ($336,000,000 − $300,000,000) of it in Year 2. PQR continues to carry forward the remaining $3 million ($39,000,000 − $36,000,000) of minimum tax credit that arose in Year 1. ◀

---

[18] Sec. 53.

PENALTY TAXES

Intended to deter otherwise abusive tax planning practices are two penalty taxes: the accumulated earnings tax and the personal holding company tax. The computation of both taxes is based on complex rules that are discussed in more detail in the companion volume to this text, *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*. These rules are summarized below.

ADDITIONAL COMMENT

The accumulated earnings tax can be avoided by the payment of a large enough dividend or by making an S corporation election. The accumulated earnings tax does not apply during the years the S corporation election is in effect.

Accumulated Earnings Tax. The **accumulated earnings tax** aims at discouraging companies from retaining excessive earnings invested in assets unrelated to business needs.[19] A company might avoid liability for this tax if its earnings are reinvested in operating assets or retained for the reasonable needs of the business. If not for this tax, closely held corporations might not pay dividends to their shareholders (thereby avoiding the double taxation of their earnings). The retained earnings then might be used for passive investment purposes.

Reasonable needs of the business are associated with numerous activities, including the following:

- Reasonably anticipated business expansion and plant replacement
- Acquiring the assets or stock (other than portfolio investments) of another business
- Providing working capital for the business
- Establishing a sinking fund to retire corporate debt
- Investing or lending to suppliers or customers

The accumulated earnings tax generally is imposed on closely held corporations. However, the tax may be imposed on a publicly held corporation if effective control is in the hands of a few related shareholders.[20]

The accumulated earnings tax base is the corporation's accumulated taxable income for a particular year. The accumulated earnings tax rate is 20%. Shareholders subject to a tax rate less than 20% on dividends can reduce the corporation's accumulated earnings tax exposure by having the corporation distribute dividends, taxed to the shareholders at a 0% or 15% rate. Accumulated taxable income is computed as follows:

ADDITIONAL COMMENT

Sec. 1222(11) defines net capital gain as the excess of the net long-term capital gain over the net short-term capital loss.

Taxable income
Plus: Dividends-received deduction
    Net operating loss deduction
    Charitable contributions carryovers deducted for current year taxable income
Minus: Net capital losses
    Net capital gain (less federal income tax on it)
    Federal income tax liability
    Charitable contributions exceeding 10% corporate limitation
    Deductions for dividends paid or deemed paid[21]
    Accumulated earnings credit

Accumulated taxable income

The accumulated earnings credit equals the greater of (1) $250,000 minus accumulated earnings and profits (E&P) at the beginning of the year[22] or (2) the amount of E&P for the tax year that is retained for the reasonable needs of the business. The reasonable needs of the business are determined at year-end and are reduced by accumulated E&P at the beginning of the year. Thus, only the amount of E&P that is retained to meet the increase in reasonable business needs may be claimed as a credit. (E&P is defined later in this chapter.)

---

[19] The basic rules for the accumulated earning tax are set forth in Code Secs. 531–537.

[20] Sec. 532(c) and *Golconda Mining Corp. v. CIR*, 35 AFTR 2d 75-336, 74-2 USTC ¶9845 (9th Cir., 1974).

[21] Sec. 561. The deduction for dividends paid includes dividends actually paid during the tax year and consent dividends (e.g., hypothetical dividends) where the shareholders agree to be taxed on such amounts. Under Sec. 563, dividends paid during the first 3½ months following the end of the tax year are considered paid on the last day of the preceding tax year.

[22] The $250,000 credit amount is reduced to $150,000 for service corporations engaged in the field of health, law, engineering, architecture, accounting, actuarial science, performing arts, or consulting.

EXAMPLE I:16-19 ▶ Compact Corporation claims a $65,000 dividends-received deduction when calculating its $100,000 taxable income for the current year (a calendar year). It pays $10,000 of dividends to its shareholders in June. Compact's accumulated E&P at the beginning of the year is $200,000, and its reasonable business needs at year-end require $220,000 of funding. Accumulated taxable income is calculated as follows:

Taxable income		$100,000
Plus: Dividends-received deduction		65,000
Minus: Federal income tax liability (0.21 × $100,000)		(21,000)
Dividends-paid deduction		(10,000)
Accumulated earnings credit—the greater of:		
(1) $250,000 (statutory exemption) – $200,000 (accumulated E&P at the beginning of the year)	$50,000	
	or	
(2) E&P retained for the increased reasonable needs of the business ($220,000 – $200,000)	$20,000	(50,000)
Accumulated taxable income		$ 84,000

Compact's accumulated earnings tax liability is $16,800 (0.20 × $84,000). It pays this tax in addition to its regular income tax. Compact's total federal tax liability is $37,800 ($21,000 + $16,800). ◀

An IRS auditor will likely examine Schedules L and M-2 of Form 1120 (U.S. Corporation Income Tax Return) to determine if accumulated earnings are excessive. The auditor will examine Schedule L (the balance sheet) to identify the assets owned by the business. Substantial marketable securities, loans to shareholders, and nonbusiness assets (for example, a boat or resort condominium) might suggest that the corporation is retaining excessive earnings. The corporation could have distributed these earnings to its shareholders in the form of dividends. Loans to shareholders might suggest the corporation's reluctance to distribute its earnings. The IRS auditor will look at Schedule M-2 to see if the corporation has declared and paid any dividends to the shareholders. To avoid the accumulated earnings tax the corporation might argue that it has consistently paid dividends.

WHAT WOULD YOU DO IN THIS SITUATION?

Scott, Steve, and Sean own 100% of the outstanding stock of Sofa Corporation for all of the current year. In its first 12 years of existence, Sofa Corporation, a manufacturer of custom-made sofas, never paid a dividend to its shareholders. It preferred instead to retain its earnings for working capital, additional machinery, and short-term investments. Scott and Steve would like to borrow money from Sofa because Scott is planning to open a florist shop, and Steve needs a loan to pay off personal debts. For these reasons, Sofa will not pay a dividend in the current year. However, the company intends to pay dividends next year when the two loans have been paid off. Sofa has accumulated E&P (before any distributions) exceeding $250,000. As Sofa's tax consultant, you inform the shareholders of the possibility that the company will be liable for the accumulated earnings tax. The shareholders ask you if they should inform the IRS of potentially excessive earnings, voluntarily pay the tax, or just wait to be audited by the IRS.

a. What advice would you give the shareholders regarding reporting the potentially excessive earnings and the payment of the tax? (See the AICPA's Statements on Tax Standards section in Chapter I:15, as well as Appendix E.)

b. What advice would you give the shareholders if the corporation instead reported low operating profits from its sofa-making business and met both personal holding company requirements in the current year?

Personal Holding Company Tax. A corporation is considered a **personal holding company (PHC)** if both of the following tests are met:[23]

ADDITIONAL COMMENT

The PHC tax is imposed mechanically, whereas the accumulated earnings tax is based on a subjective standard of purpose to avoid the tax.

- More than 50% of the value of its outstanding stock is owned by five or fewer individuals at any time during the last half of the tax year. If nine or fewer individuals own all of the corporation's stock during such time, the corporation meets this test. If there are ten or more shareholders, the stock ownership test may or may not be met, depending on their ownership percentages.
- 60% or more of its adjusted ordinary gross income is PHC income. PHC income consists of passive income, including dividends, interest, and in some circumstances, rent.

Certain types of corporations are exempt from PHC classification, such as S corporations. A corporation that qualifies as a PHC for a tax year is exempt from the accumulated earnings tax for that same tax year.

The PHC tax discourages the conversion of closely held operating companies into nonoperating companies that reinvest substantial earnings in passive investments (e.g., stocks and bonds of other companies). The tax compels a company to distribute its earnings to shareholders if the earnings are not reinvested in operating assets. Liability for the PHC tax does not require a tax-avoidance motive. By contrast, liability for the accumulated earnings tax does require an intent to avoid the tax on dividends.

The PHC tax can be a problem for a newly-formed, closely-held corporation that temporarily invests surplus funds in nonoperating assets because the income such investments generate often will be PHC income. The tax can be a problem in a closely-held corporation's final year because, as a result of scaling down its operations, a large proportion of its income may be PHC income.

Computation of PHC Tax. The **personal holding company tax** is 20% of undistributed PHC income (UPHCI). Despite its name, UPHCI is not based on the PHC income that is used for the 60% test to determine whether a corporation qualifies as a PHC. UPHCI instead is regular taxable income adjusted for various items, many of which are the same as the adjustments when calculating the accumulated earnings tax. However, the accumulated earnings credit that is allowed for accumulated taxable income is not allowed for UPHCI.

EXAMPLE I:16-20 ▶ Four individuals own all of Crane Corporation's stock throughout the current year (a calendar year), and 62% of its adjusted ordinary gross income is PHC income. Crane qualifies as a PHC for the current year because it meets both the 50% and 60% tests.

Crane claims a $16,250 dividends-received deduction when calculating its $200,000 taxable income for the current year, and it pays $18,750 of dividends to its shareholders in June. Crane's PHC tax is calculated as follows:

Regular taxable income	$200,000
Adjustments:	
Federal income tax liability (0.21 × $200,000)	(42,000)
Dividends-received deduction	16,250
Dividends-paid deduction[24]	(18,750)
Undistributed personal holding company income (UPHCI)	$155,500
Times: Personal holding company tax rate	× 0.20
Personal holding company tax	$ 31,100

ADDITIONAL COMMENT

The PHC tax, like the accumulated earnings tax, can be avoided by paying a large enough dividend or by making an S corporation election. A timely S corporation election precludes the corporation from being classified as a PHC for the years it is in effect.

---

[23] The basic rules for the PHC tax are set forth in Secs. 541–547. Ownership attribution rules apply for the 50% test.

[24] Secs. 547 and 561. The dividends-paid deduction is available for dividends paid during the tax year, dividends paid within 3½ months following the end of the tax year (if elected and subject to certain limitations), consent dividends, and dividends paid within 90 days following an IRS determination that a personal holding company tax is owed (i.e., deficiency dividends). Deficiency dividends are not allowed in computing the accumulated earnings tax.

TOPIC REVIEW I:16-2

Comparison of the Two Corporate Penalty Taxes

ITEM	ACCUMULATED EARNINGS TAX—SEC. 531	PERSONAL HOLDING COMPANY (PHC) TAX—SEC. 541
Reason for imposing the penalty tax	To discourage companies from retaining excessive earnings if such earnings are invested in nonoperating assets. A primary purpose is to compel the distribution of excessive earnings.	To discourage the conversion of closely held operating companies into passive investment companies. A primary purpose is to compel the distribution of passive income.
Elements of the tax formula	The tax base is regular taxable income plus or minus certain adjustments. The tax computation involves subjective judgment because the accumulated earnings credit (which often reduces the tax base to zero) is a function of retaining earnings for the reasonable needs of the business.	The determination of whether a corporation is a PHC and the computation of the tax is mechanical. If the corporation is a PHC, its tax base is regular taxable income plus or minus certain adjustments.
Computation of tax	Adjustments are made to taxable income for items such as the dividends-received deduction, the dividends-paid deduction, the federal income tax liability, and the accumulated earnings credit (see Example I:16-19). The tax is 20% of accumulated taxable income.	Adjustments are made to regular taxable income for items such as the dividends-received deduction, dividends-paid deduction, and the federal income tax liability to derive undistributed PHC income (see Example I:16-20). The tax is 20% of undistributed PHC income.

Crane's total federal tax liability is \$73,100 (\$42,000 + \$31,100). It would have avoided the PHC tax if it had paid at least \$174,250 (\$18,750 + \$155,500) of dividends. Special rules allow a PHC to pay (or be treated as paying) dividends even after the corporation's year-end, but its shareholders are taxed on such dividends received (or treated as having been received). ◀

Topic Review I:16-2 compares the accumulated earnings tax and PHC tax.

CONTROLLED GROUPS OF CORPORATIONS

Shareholders in one corporation could realize substantial tax savings by dividing the business into two or more corporations. These tax savings result from the corporations' benefitting from duplicate use of tax attributes, such as the Sec. 179 expense limitation and the accumulated earnings credit. To prevent this type of tax avoidance, a **controlled group** must apportion certain tax attributes among group members as if only one corporation exists.[25] An equal apportionment to each member is required unless all group members consent to a disproportionate allocation. A controlled group, as discussed below, is a group of corporations that are, in general, owned by the same shareholder or group of shareholders. Controlled groups may be classified into three types: brother-sister, parent-subsidiary, and combined. These three types are discussed below.

---

[25] Sec. 1561.

Brother-Sister Controlled Group. The IRC sets forth two definitions of a **brother-sister controlled group.** This text will refer to them as the 80%-50% definition and the 50%-only definition. Under the 80%-50% definition, a brother-sister controlled group exists if the following conditions are met:

- Five or fewer individuals, estates, or trusts own at least 80% of the voting power or value of all classes of stock of each corporation.[26] To be counted for the 80% test, a shareholder must own stock in each member of the brother-sister controlled group.
- Those five or fewer shareholders commonly own more than 50% of the total voting power or value of all classes of stock. For the purpose of this condition, stock is counted only to the extent that each shareholder owns an identical interest in each corporation.[27] The term *identical interest* means the smallest overlapping percentage of stock owned by the shareholder in any corporation included in the brother-sister group.

ADDITIONAL COMMENT

In practice, brother-sister corporations are associated with one or a small number of taxpayers, owning several small, closely-held corporations.

Thus, under the 80%-50% definition, the five or fewer shareholders not only must have more than 50% common ownership in the corporations, but also must own at least 80% of the stock in each brother-sister corporation. This definition is narrow because the shareholders must meet two tests.

The 50%-only definition is broader because the five or fewer shareholders must satisfy only the 50% common ownership test. Consequently, in situations where the 50%-only definition applies, more corporations may be deemed to be members of a controlled group than under the 80%-50% definition. The 50%-only definition applies for apportioning the accumulated earnings credit. The 80%-50% definition applies for other purposes, such as apportioning the Sec. 179 expense limitation.

EXAMPLE I:16-21 ▶ The single classes of stock in First, Second, and Third Corporations are owned by Amir, Beth, Carol, Dawn, and Edith as follows:

	Corporation			
Individuals	*First*	*Second*	*Third*	*Identical Interest*
Amir	40%	20%	20%	20%
Beth	30	30	60	30
Carol	10	40	10	10
Dawn	10	10	—	—
Edith	10	—	10	—
Total	100%	100%	100%	60%

This group meets both the 80%-50% definition and the 50%-only definition. The 80%-50% definition is met because five or fewer individuals own at least 80% of First, Second, and Third stocks (i.e., Amir, Beth, and Carol own 80% of First stock and 90% of Second and Third stocks). For purposes of the 80% test, the stock ownership of Dawn and Edith is not counted because they do not own stock in each of the three corporations. The 50% test also is met because common ownership exceeds 50% (60% of identical interests). For purposes of the 50% test, the stock ownership of Dawn and Edith is not counted because they do not own stock in each of the three corporations. ◀

Parent-Subsidiary Controlled Groups. A **parent-subsidiary controlled group** exists if the following conditions are met:

- A common parent corporation owns at least 80% of the stock in at least one subsidiary.[28]
- At least 80% of the stock in each other member of the controlled group is owned by other members of the controlled group.

---

[26] The 80% test is met if 80% or more of the total combined voting power of all classes of voting stock *or* at least 80% of the total value of all classes of stock of each corporation is held by five or fewer shareholders on December 31.

[27] Sec. 1563(a)(2).

[28] Sec. 1563(a)(1).

EXAMPLE I:16-22 ▶ Federal Corporation owns 100% of Apex Corporation stock and 30% of Giant Corporation stock. Apex also owns 50% of Giant stock. Each corporation has only one class of stock outstanding. Because Federal owns at least 80% of Apex stock, it is the common parent of the Federal-Apex-Giant parent-subsidiary controlled group. Giant also is a member of the controlled group because at least 80% of Giant stock is owned by members of the controlled group (Federal and Apex together own 80% [30% + 50%]). The parent-subsidiary controlled group consists of Federal, Apex, and Giant. ◀

Combined Controlled Groups. A combined controlled group exists if the following two conditions involving three or more corporations are met:

- A common parent owns at least 80% of at least one subsidiary (a parent-subsidiary group), and
- The common parent is a member of a brother-sister controlled group.[29]

Based on the facts of Example I:16-22, a combined controlled group would have existed if Federal was a member of a brother-sister controlled group that also included National, a situation that would have resulted from Viki's owning 100% of the single classes of stock of Federal and National. Then, Federal, National, Apex, and Giant would have constituted a combined controlled group and would have had to apportion the various tax benefits.

CONSOLIDATED RETURNS

Corporations that are members of a parent-subsidiary affiliated group usually are eligible to file a consolidated tax return if they elect to do so. An affiliated group is similar, but not identical, to a parent-subsidiary controlled group. (See Chapter C:8 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* for a detailed discussion of the requirements for filing a consolidated tax return.) Brother-sister controlled groups never can file consolidated tax returns. The parent-subsidiary members of a combined controlled group might constitute an affiliated group and thus could elect to file a consolidated tax return. Although the parent's sibling corporation is a member of the same controlled group, that sibling may not join in the consolidated tax return election. Once an affiliated group elects to file a consolidated tax return, it must continue to file on a consolidated basis as long as the group exists unless the IRS permts it to discontinue doing so.[30]

BOOK-TAX ACCOUNTING COMPARISON

Corporations eligible to file a consolidated tax return may differ from those eligible to report on a consolidated financial accounting basis. 80% stock ownership is needed to file a consolidated tax return while only 50% stock ownership is needed to issue a consolidated financial statement.

The consolidated return regulations treat the affiliated group as a single entity, thereby providing the following advantages: (1) net operating losses of one or more members can be used to offset profits of other members; (2) capital losses of one or more members can be used to offset capital gains of other members; and (3) transactions involving two or more group members are treated as occurring among divisions of a single entity, thus the taxation of profits and gains from such transactions is deferred until a subsequent transaction involving a group member and a party outside the affiliated group.

STOP & THINK

Question: Oak Corporation forms Acorn Corporation in the current year, owning 100% of Acorn's stock. Oak is profitable, but Acorn is expected to have net operating losses (NOLs) for several years because it is starting up. Would it be beneficial for Oak and Acorn to file a consolidated tax return?

Answer: It likely would be beneficial for Oak and Acorn to file a consolidated tax return because Acorn's current year NOL can be used to offset Oak's current year profit. If they filed separate tax returns instead, Acorn would carry forward the current year NOL, but it is not expected to have profits against which to use the NOL for several years. This offsetting of Acorn's NOL with Oak's profit will cease to be an advantage if Acorn becomes profitable, but their profits would be taxed at a 21% rate whether they filed a consolidated tax return or two separate tax returns (other aspects of the tax return, such as the offsetting of capital losses against capital gains and the effects of intercompany transactions, could be affected, however).

---

[29] Sec. 1563(a)(3).

[30] Reg. Sec. 1.1502-75(a)(2) and (c).

TRANSFERS OF PROPERTY TO CONTROLLED CORPORATIONS

OBJECTIVE 4

Apply the nonrecognition of gain or loss rules for corporate capitalizations

Section 351 permits investors to defer recognition of gain or loss on the transfer of property to a corporation. The property may be transferred when a new corporation is formed or when additional capital is contributed to an existing corporation. Without the Sec. 351 nonrecognition rules, an investor, sole proprietorship, or partnership might be discouraged from incorporating because the transfer of appreciated property to the corporation would constitute a taxable event, thereby resulting in a recognized gain.

SECTION 351 NONRECOGNITION REQUIREMENTS

KEY POINT

The nonrecognition provisions of Sec. 351 are mandatory rather than elective if all its conditions are met.

The deferral of gain or loss under Sec. 351 can be justified because the assets merely have been transferred to a corporation that is controlled by the transferors. In addition, the transferors do not have the wherewithal-to-pay the tax on the gains that otherwise would be recognized if they receive only stock in the transferee (controlled) corporation. Section 351 prevents recognition of losses on transfers of property that have declined in value.

ADDITIONAL COMMENT

In Sec. 351 transactions, the term "transferor" refers to the shareholder, and the term "transferee" refers to the controlled corporation.

Gain or loss is not recognized if all the following conditions are met:

- Property (other than services) is transferred to the corporation solely in exchange for stock in the transferee corporation.[31]
- Immediately after the exchange, the transferor-shareholders in the aggregate control the transferee corporation through ownership of at least 80% of its stock.[32]
- If a transferor receives money or property (other than stock in the transferee corporation), the transferor recognizes gain (but not loss) equal to the lesser of the "boot" (i.e., money plus the FMV of nonstock property) received or the realized gain.[33] In addition, a corporation that transfers appreciated property (other than its own stock or debt obligations) to the transferor-shareholders also recognizes gain on the exchange.[34]
- The character of any gain recognized by the transferor depends on the type of property transferred as follows: capital gain on capital assets, Sec. 1231 gain on Sec. 1231 property, and ordinary income on other property (e.g., inventory).
- Depreciation is not recaptured in a Sec. 351 transfer unless the transferor recognizes gain on the depreciable property transferred.[35]

EXAMPLE I:16-23 ▶ Carlos and Fred merge their sole proprietorships by forming the Miami Corporation. Carlos transfers to Miami land and a building with a $50,000 adjusted basis and a $100,000 FMV in exchange for 40% of Miami's only class of stock. Fred transfers to Miami equipment with a $60,000 adjusted basis and a $150,000 FMV in exchange for 60% of Miami stock. Miami is controlled by Carlos and Fred because together they own at least 80% of Miami's stock immediately after the exchange. Carlos and Fred recognize no gain because all of the Sec. 351 requirements are met and they received no property other than Miami stock. The depreciation recapture potential on the building and equipment is inherited by Miami. ◀

EXAMPLE I:16-24 ▶ Gail and Gary form Michigan Corporation. Gail transfers inventory with a $50,000 adjusted basis and a $100,000 FMV to Michigan in exchange for $20,000 cash and 50% of Michigan stock worth $80,000. Michigan generated the cash through bank borrowings. Gary transfers equipment with a $150,000 adjusted basis and a $100,000 FMV in exchange for 50% of stock worth

---

[31] Section 351(d) provides that services do not qualify as "property." Thus, if an individual transfers services in exchange for stock, the individual is not deemed to be a transferor for purposes of meeting the 80% control requirement, unless the individual also transfers sufficient property. The rendering of services results in the service provider's recognizing ordinary income equal to the FMV of the services rendered.

[32] Sec. 368(c). "Control" means the ownership of at least 80% of the total combined voting power of all classes of stock and at least 80% of the total number of shares of all other classes of stock.

[33] Sec. 351(b). Recognized gain is calculated on an asset-by-asset basis.

[34] Secs. 351(f) and 311(b).

[35] Secs. 1245(b)(3) and 1250(d)(3). The transferee corporation recaptures depreciation if it subsequently sells or disposes of the asset.

$80,000 and a Michigan 10-year note valued at $20,000. The Section 351 requirements are met because property is transferred by the two transferors who together control at least 80% of the Michigan stock immediately after the exchange. The tax consequences to Gail and Gary are as follows:

	Gail	*Gary*
FMV of stock received	$ 80,000	$ 80,000
Plus: Cash or note received	20,000	20,000
Amount realized	$100,000	$100,000
Minus: Adjusted basis of property transferred	(50,000)	(150,000)
Gain (loss) realized	$ 50,000	$ (50,000)
Gain (loss) recognized	$ 20,000	$ —0—

Gail's recognized gain is the lesser of the $20,000 boot she received or her $50,000 realized gain. This gain is ordinary in character because Gail transferred inventory. Because Gary realized a loss, he recognizes no gain or loss even though he received $20,000 of boot.

BASIS CONSIDERATIONS

Stock Received by the Transferor. In Sec. 351 transactions, special basis rules apply for the stock a property transferor receives and the property the corporation receives. The transferor's stock basis is computed as follows:

Basis of property transferred to the corporation	
Plus:	Any gain recognized by the transferor on the exchange (e.g., as a result of boot received)
Minus:	Amount of money received (including any transferor liabilities assumed by the transferee corporation)
	FMV of any noncash boot property received
Basis of stock received[36]	

Any boot property received by the transferor takes an FMV basis.

ADDITIONAL COMMENT

When different classes of stock are received in a Sec. 351 exchange, the total basis must be allocated among the different classes in proportion to their relative FMVs.

EXAMPLE I:16-25 ►

George and Gina form New Corporation. George transfers to New land and a building with a $60,000 adjusted basis and a $100,000 FMV in exchange for 50% of New stock. Gina transfers equipment with a $120,000 adjusted basis and a $100,000 FMV for 50% of New stock. George realizes a $40,000 gain, and Gina realizes a $20,000 loss. However, George and Gina recognize no gain or loss because the Sec. 351 requirements have been met (and, for George, no boot is received). George's basis in his New stock is $60,000, and Gina's basis in her New stock is $120,000.

STOP & THINK

Question: In Example I:16-25, George and Gina recognized no gain or loss. Why does this treatment represent tax deferral rather than permanent nonrecognition?

Solution: George's $40,000 unrecognized gain is reflected in a $60,000 stock basis that is $40,000 *below* its $100,000 FMV. Thus, if George immediately sells his stock for its FMV, he recognizes the $40,000 deferred gain ($100,000 selling price − $60,000 stock adjusted basis). Similarly, Gina's $20,000 unrecognized loss is reflected in a $120,000 stock basis that is $20,000 *above* its $100,000 FMV. Thus, if Gina immediately sells her stock for its FMV, she recognizes the $20,000 deferred loss ($100,000 selling price − $120,000 stock adjusted basis). In this way, the basis rules ensure that realized gains and losses are deferred.

---

[36] Sec. 358(a).

Property Received by Transferee Corporation. The corporation's basis for property it receives from a transferor is computed as follows:

Transferor's adjusted basis in property
Plus: Gain recognized by the transferor
Minus: Reduction for loss property (if applicable)
Basis of property to the transferee corporation[37]

BOOK-TAX ACCOUNTING COMPARISON

Financial accounting requires that the corporation record the transferred assets at their fair market values.

EXAMPLE I:16-26 ▶ In a tax-free exchange under Sec. 351, North Corporation receives property with a $60,000 adjusted basis and a $100,000 FMV. If no gain is recognized on the transfer, the transferor's $60,000 adjusted basis becomes the transferee corporation's asset basis, as well as the shareholder's stock basis. If the transferor instead had recognized a $10,000 gain because she received boot (e.g., cash), North's asset basis would have been $70,000 ($60,000 adjusted basis in the transferor's hands + $10,000 gain recognized by the transferor), and the transferor's stock basis would still have been $60,000 ($60,000 adjusted basis + $10,000 gain recognized − $10,000 FMV of boot received). ◀

The reduction for loss property is intended to discourage investors from attempting to generate double losses by transferring loss property to a corporation in connection with a Sec. 351 exchange.[38] If the corporation's basis for property it receives from a shareholder (determined without any reduction for loss property) exceeds the FMV of such property, the corporation generally must reduce its basis for the property by such excess.

TREATMENT OF LIABILITIES

Nonrecognition of Gain. Section 357(a) provides for the nonrecognition of gain upon the transferee corporation's assumption of liabilities or its taking property subject to liabilities. Accordingly, under the general rule, shareholders recognize no gain when they transfer liabilities to a controlled corporation. The shareholders, however, must reduce their stock basis by the amount of liabilities assumed or acquired. This rule is logical because, if a shareholder transfers net assets of $10,000 (e.g., gross assets of $100,000 and liabilities of $90,000), the net contributivon to capital is only $10,000 even though the shareholder has transferred $100,000 in gross assets.

TYPICAL MISCONCEPTION

When a corporation assumes a shareholder's liabilities and the shareholder recognizes no gain, one might mistakenly assume that the shareholder's stock basis is not reduced by the liabilities assumed.

EXAMPLE I:16-27 ▶ In a transaction qualifying as tax-free under Sec. 351, Ira transfers land with an $80,000 adjusted basis and a $100,000 FMV to Mega Corporation in exchange for 100% of Mega stock with a $60,000 FMV. The transferred property is subject to a $40,000 liability that the corporation assumes. The tax consequences to Ira are as follows:

FMV of stock received	$ 60,000
Plus: Liability assumed by Mega	40,000
Amount realized	$100,000
Minus: Adjusted basis of property transferred	(80,000)
Gain realized by Ira	$ 20,000
Gain recognized by Ira	$ –0–
Adjusted basis of property transferred	$ 80,000
Minus: Liability assumed by Mega	(40,000)
Ira's adjusted basis in Mega stock received	$ 40,000

In addition, Mega takes an $80,000 basis in the land. ◀

---

[37] Sec. 362(a).

[38] Sec. 362(e).

Exceptions. Two exceptions to the general rule of Sec. 357 require gain recognition upon the transfer of liabilities to a corporation. The first exception relates to the nature of the exchange. If the principal purpose for the assumption of the liabilities is tax avoidance or if the transaction does not have a bona fide business purpose, all of the transferor's liabilities assumed by the transferee corporation are treated as boot, potentially resulting in gain recognition.[39]

EXAMPLE I:16-28 ▶ In a transaction purportedly meeting the requirements of Sec. 351, Helen transfers to Orlando Corporation land and a building with a $70,000 adjusted basis and a $100,000 FMV in exchange for 100% of Orlando stock. Shortly before the transfer, Helen mortgages the property for $60,000 and uses the mortgage loan to pay off personal debts. The corporation then assumes the $60,000 mortgage and issues to Helen stock worth $40,000. The mortgage assumption lacks a bona fide business purpose because it is intended to place cash in Helen's hands without her recognizing gain under the boot rules. Consequently, for the purpose of determining gain recognized, Helen must treat the entire $60,000 liability assumed as boot. The tax consequences to Helen are as follows:

FMV of stock received	$ 40,000
Plus: Liability assumed by Orlando	60,000
Amount realized	$100,000
Minus: Adjusted basis of property transferred	(70,000)
Gain realized	$ 30,000
Gain recognized	$ 30,000
Adjusted basis of property transferred	$ 70,000
Plus: Gain recognized	30,000
Minus: Liability assumed by Orlando	(60,000)
Adjusted basis of stock received	$ 40,000

Although total boot is $60,000 (the liability assumed), Helen's recognized gain does not exceed her $30,000 realized gain. In addition, the stock basis equals its FMV because Helen recognizes the entire realized gain, with no gain to defer. Finally, Orlando's basis in the land and building is $100,000 ($70,000 adjusted basis in the transferor's hands + $30,000 gain recognized by the transferor). ◀

REAL-WORLD EXAMPLE

Customer deposits representing obligations to perform future services were considered liabilities. Because these liabilities exceeded the basis of the assets transferred to the corporation, gain was recognized. *William P. Orr,* 78 T.C. 1059 (1982).

A second exception applies to excess liabilities. If a transferor's total liabilities assumed by the transferee corporation exceeds the total basis of assets (including cash) transferred by that transferor, the transferor must recognize gain to the extent of the excess.[40] Without this rule, the transferor would take a negative basis in the stock received. Gain is recognized because the transferor has derived a net economic benefit to the extent the liabilities assumed exceed the adjusted basis of the transferred assets.

EXAMPLE I:16-29 ▶ In a transaction otherwise qualifying as tax-free under Sec. 351, Jack transfers to Maple Corporation assets with a $60,000 adjusted basis and a $100,000 FMV. Simultaneously, Maple assumes $75,000 of Jack's liabilities. Jack recognizes a $15,000 gain because the liabilities assumed by Maple exceed the basis of the assets transferred ($75,000 − $60,000). The character of Jack's recognized gain depends on the type(s) of property (capital assets, Sec. 1231 property, inventory, etc.) Jack transferred.[41] Jack's net economic benefit from the exchange is $15,000 ($75,000 liabilities assumed by Maple − $60,000 adjusted basis of assets transferred). Jack's basis in the stock received is zero ($60,000 asset adjusted basis + $15,000 gain recognized − $75,000 liabilities assumed). Because Jack's realized gain is $40,000, of which he recognizes $15,000, only $25,000 of the gain is deferred ($25,000 FMV of stock − $0 basis). Maple's basis in the assets is increased from $60,000 to $75,000 because of Jack's $15,000 recognized gain. ◀

---

[39] Sec. 357(b).

[40] Sec. 357(c). Accounts receivable and accounts payable with a zero basis for a cash basis transferor are disregarded for purposes of Sec. 357(c). (See Sec. 357(c)(3).)

Topic Review I:16-3 summarizes the general rules relating to the transfer of property to a controlled corporation.

CORPORATE CAPITAL STRUCTURE

ADDITIONAL COMMENT

Thin capitalization is primarily a problem for closely-held corporations where the shareholders also hold the debt. It is not normally a problem for large publicly-held corporations.

A corporation may be capitalized with both equity (generally common or preferred stock) and debt. The use of debt in the capital structure offers the following advantages:

- Interest on debt is deductible by the corporation (subject to limitations), while dividends on stock are not deductible.
- Stock redemptions may result in dividend or capital gain recognition by the shareholders (see pages I:16-26 through I:16-28), while debt repayment represents a tax-free return of capital.

If the corporation is too thinly capitalized (e.g., excessive debt relative to equity), the IRS may attempt to recharacterize part or all of the debt as equity and deny the corporation an interest deduction.

TOPIC REVIEW I:16-3

Sec. 351 Requirements, Gain Recognition Rules, and Basis Rules

- Sec. 351 treatment requires an exchange of property for stock. The transferor-shareholders together must own at least 80% of the corporation's stock immediately after the exchange.
- Nonqualifying property (e.g., cash, noncash property, or debt obligations of the transferee corporation) received by the transferors is treated as boot.
- The transferors recognize gain equal to the lesser of the boot received or the realized gain.
- Generally, the transferors recognize no gain if they transfer liabilities to a controlled corporation. Exceptions to the nonrecognition rule apply if (1) the principal purpose of the liability transfer is tax avoidance, (2) no bona fide business purpose for the transfer exists, or (3) total liabilities assumed by the corporation exceed the transferor's adjusted basis in the transferred assets.
- Special basis rules apply for the stock a property transferor receives and the property the corporation receives.

EARNINGS AND PROFITS

OBJECTIVE 5

Understand the significance of earnings and profits

CALCULATION OF EARNINGS AND PROFITS

Earnings and profits (E&P) measures a C corporation's economic ability to pay dividends out of its current and accumulated earnings without impairing its capital. If the corporation has no E&P, a distribution is treated as a tax-free return of capital, and possibly a capital gain, rather than a taxable dividend.

---

[41] Reg. Sec. 1.357-2(a).

Current E&P is calculated by making various adjustments to the corporation's regular taxable income.[42] This calculation, as well as the determination of accumulated E&P, is set forth in Table I:16-3.

EXAMPLE I:16-30 ▶

Park Corporation, an accrual method taxpayer, reports $100,000 of taxable income for the current year. Its tax accountant made the following adjustments to derive current E&P and the addition to accumulated E&P:

Taxable income	$100,000
Plus:	
Tax-exempt bond interest	2,000
Key officer life insurance proceeds (nontaxable)	10,000
Dividends-received deduction	20,000
MACRS depreciation in excess of ADS depreciation	15,000
Percentage depletion in excess of cost depletion	10,000
	$157,000
Minus:	
Federal income taxes accrued*	(21,000)
Net capital loss	(5,000)
Key officer life insurance premiums (not deductible because the corporation is the beneficiary)	(2,000)
Charitable contributions exceeding the 10% limitation	(3,000)
Fine for overweight trucks on city streets	(5,000)
Current E&P	$121,000
Minus: Money distribution	(5,000)
Addition to accumulated E&P	$116,000

**An accrual method of accounting corporation reduces its E&P by its accrued federal income taxes for the tax year. A cash method of accounting corporation reduces its E&P by its actual federal income taxes paid during the tax year.*

To derive E&P, regular taxable income is increased by nontaxable income—the tax-exempt bond interest and the life insurance proceeds—received by Park. Taxable income also is increased for deductions claimed when calculating regular taxable income but not allowed when calculating E&P. Two of these deductions do not represent economic outlays—the dividends-received deduction and percentage depletion in excess of cost. Another adjustment represents a timing difference that will reverse in later tax years—MACRS depreciation in excess of Alternative Depreciation System (ADS) depreciation. Regular taxable income is reduced by negative adjustments for economic outlays that are not deductible in calculating regular taxable income. These E&P reductions include federal income taxes, capital losses in excess of capital gains, key officer life insurance premiums, excess charitable contributions, and fines. ◀

BOOK-TAX ACCOUNTING COMPARISON

Accumulated E&P is similar to retained earnings in financial accounting, while current E&P is similar to net income. Accumulated E&P and retained earnings, however, differ in some ways (as do current E&P and net income). For example, issuance of a stock dividend usually reduces retained earnings but does not affect E&P.

SELF-STUDY QUESTION

Should Sue, an individual, consider transferring her $100,000 in municipal bonds to her controlled C corporation?

ANSWER

No; although the interest income on the municipal bond is excludable from the corporation's taxable income, the tax-exempt interest creates E&P for a C corporation, which causes a cash distribution to Sue to be taxable as a dividend.

CURRENT VERSUS ACCUMULATED E&P

Current and accumulated E&P must be distinguished because tracing rules determine whether a distribution is made out of current or accumulated E&P. For example, a distribution to shareholders is deemed to be made first out of current E&P and is therefore taxed as a dividend, even if accumulated E&P is negative. Accumulated E&P represents the total of all prior years' undistributed current E&P as of the first day of the tax year. Distributions are deemed to be made out of accumulated E&P only after the current E&P balance (if any) is exhausted.[43]

---

[42] These adjustments are set forth in Sec. 312 and the related Treasury Regulations.

[43] Reg. Sec. 1.316-2.

▼ TABLE I:16-3
Calculation of Earnings and Profits

Regular taxable income	
Plus:	Exclusions from regular taxable income:
	Tax-exempt interest
	Life insurance proceeds where the corporation is the beneficiary
	Recoveries of bad debts and other prior-year deductions for which the corporation received no tax benefit
	Federal income tax refunds from prior years
Plus or minus:	Adjustments for items that must be recomputed:
	Gains on installment sales (such gains are included in E&P in the year of sale)
	Income on long-term contracts based on percentage of completion method rather than completed contract method
	Difference between depreciation for regular tax purposes (e.g., MACRS) and depreciation for E&P (e.g,. ADS)*
	Excess of percentage depletion over cost depletion
Plus:	Deductions not allowed in computing E&P:
	Dividends-received deduction
	NOL carryovers, charitable contributions carryovers, and capital loss carryovers from prior years
Minus:	Expenses and losses not deductible in computing regular taxable income:
	Federal income taxes
	Life insurance premiums where the corporation is the beneficiary
	Excess capital losses not deductible in current year
	Excess charitable contributions not deductible in current year
	Expenses related to production of tax-exempt income
	Nondeductible losses on related party sales
	Nondeductible penalties and fines
	Nondeductible political contributions
Current E&P (or E&P deficit)	
Minus:	Distributions to shareholders (but not in excess of current E&P)
Addition to accumulated E&P (if any)	

* See Chapter I:10 for discussions of the modified accelerated cost recovery system (MACRS) and the alternative depreciation system (ADS).

EXAMPLE I:16-31 ► Pacific Corporation has a $100,000 accumulated E&P deficit at the beginning of the current year and $30,000 of current E&P during the current year. Pacific makes a $40,000 distribution to its shareholders. In the distribution, $30,000 is treated as a taxable dividend to the extent of current E&P, and the remaining $10,000 is treated as a tax-free return of capital (to the extent that Pacific's shareholders have stock basis) because of the accumulated E&P deficit, which is not increased as a result of the tax-free distribution. ◄

If a shareholder's stock basis is reduced to zero because of a property distribution treated as a tax-free return of capital, the excess of the distribution amount over this basis is treated as a capital gain.

EXAMPLE I:16-32 ▶ Peach Corporation has one shareholder, Georgia, who has owned her Peach stock for several years. Peach has $20,000 of accumulated E&P at the beginning of the current year and $30,000 of current E&P during the current year. Georgia's stock basis is $10,000. At the end of the current year, Peach distributes $65,000 to Georgia. The $65,000 distribution is reported as follows:

Taxable dividend paid out of current E&P	$30,000
Taxable dividend paid out of accumulated E&P	20,000
Total taxable dividend	$50,000
Tax-free return of capital	10,000
Long-term capital gain	5,000
Total distribution	$65,000

In addition, Georgia's stock basis is reduced to zero because of the $10,000 portion treated as a return of capital. ◀

If the distributing corporation has a current E&P deficit and a positive accumulated E&P balance, the current deficit and accumulated E&P balance are netted as of the distribution date.[44] The current E&P deficit for the year is prorated on a daily basis unless a nonratable allocation is more appropriate.

EXAMPLE I:16-33 ▶ Prime Corporation, a calendar-year taxpayer, has a $100,000 positive accumulated E&P balance on January 1 of the current (nonleap) year and a $35,500 current E&P deficit during the current year. Prime makes a $30,000 distribution to its shareholders on July 1 (the 182nd day of the year). Because the current deficit is allocated ratably over the year unless the corporation can show that a nonratable allocation is more appropriate, E&P as of July 1 is $82,299 [$100,000 accumulated E&P − (182/365 × $35,500 current E&P deficit)]. The entire $30,000 distribution is taxable as a dividend. ◀

NONCASH DISTRIBUTIONS

OBJECTIVE 6

Determine the tax consequences of noncash distributions and stock redemptions

TAX CONSEQUENCES TO THE SHAREHOLDERS

Occasionally, a corporation distributes noncash property (i.e., assets other than its stock or stock rights) to its shareholders. If noncash property is distributed, the following tax consequences generally ensue:

- The distribution amount is the property's FMV when distributed (reduced by any associated liabilities).
- The distribution amount is treated as a taxable dividend if the corporation has sufficient E&P.
- The shareholder's basis for the distributed property is its FMV when distributed (without reduction for any associated liabilities).

EXAMPLE I:16-34 ▶ Red Corporation distributes land and a building having a $50,000 adjusted basis and a $100,000 FMV to its sole shareholder, Irene. Red has current and accumulated E&P exceeding $100,000. The property is subject to a $40,000 mortgage, which Irene assumes. The amount distributed to Irene is $60,000 ($100,000 FMV − $40,000 liability). Irene reports a $60,000 taxable dividend because the corporation has E&P exceeding the distribution amount. Irene's basis in the property is its $100,000 FMV. ◀

REAL-WORLD EXAMPLE

A distribution of $20 Double Eagle gold coins was a noncash distribution rather than a money distribution because the gold coins were withdrawn from circulation and had numismatic value. *Warren C. Cordner v. U.S.,* 49 AFTR 2d 82-1353, 82-1 USTC ¶9275 (9th Cir., 1982).

TAX CONSEQUENCES TO THE DISTRIBUTING CORPORATION

If a corporation distributes property whose FMV exceeds the corporation's adjusted basis for it, the corporation must recognize such excess as gain.[45] That is, the corporation is treated as if it sold the property for its FMV. However, if the distributed property's adjusted basis exceeds its FMV, the corporation is not allowed to recognize any loss.[46] This treatment applies even though the corporation generally would recognize the loss if it were to sell the property for its FMV. The corporation thus loses any tax savings that would result from deducting the loss.

---

[44] Reg. Sec. 1.316-2(b).

[45] Sec. 311(b)(1).

EXAMPLE I:16-35 ▶ Rocket Corporation distributes to its shareholder Peter $75,000 in cash, along with land having a $50,000 adjusted basis and a $60,000 FMV. Rocket recognizes $10,000 ($60,000 − $50,000) of gain on the land distribution. Alternatively, if the land had a $60,000 adjusted basis and a $50,000 FMV, the corporation would not have recognized the $10,000 ($50,000 − $60,000) realized loss. ◀

If the distributed property is subject to a liability (or the shareholder assumes a liability of the corporation), the property's FMV is treated as being the greater of its FMV or the liability.[47]

EXAMPLE I:16-36 ▶ Assume the same facts as in Example I:16-35 except that the land is subject to a $70,000 mortgage. The land's FMV is treated as being $70,000 (greater of its $60,000 FMV or the $70,000 liability), so Rocket recognizes a $20,000 ($70,000 − $50,000) gain on the distribution. ◀

STOP & THINK

Question: What are the tax consequences of a pro rata stock dividend, that is, a corporation's issuing additional shares of its own single class of stock to existing shareholders?

Solution: The shareholder's economic position does not change as a result of the stock dividend. Although the shareholders receive additional shares of stock, they still own the same proportion of stock in the corporation. Consequently, they realize no economic gain on the stock dividend. Accordingly, they spread the basis of their old shares over their old and new shares, thereby decreasing the per share basis while leaving the total basis unchanged. In addition, the corporation recognizes no gain or loss and does not reduce its E&P balance. Some stock dividends, such as those involving a shareholder election to receive either stock or cash, are taxable.[48] (See Chapter C:4 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*.)

STOCK REDEMPTIONS

Two possible tax consequences ensue when a corporation repurchases (redeems) some of its outstanding stock:

- The redemption is treated as a taxable dividend to the shareholder to the extent of the corporation's E&P
- The redemption is treated as a sale of stock, generally resulting in the shareholder recognizing capital gain or loss

The first prescribed treatment is intended to discourage corporations from paying a disguised dividend in the form of a stock redemption taxable as a capital gain. For example, the corporation might redeem 10% of its sole shareholder's stock rather than pay a cash dividend. After the redemption, the shareholder continues to own all of the outstanding stock, retains the same degree of control over the corporation, and holds the distributed money or other property. Taxing the redemption as a sale would reduce the tax burden on the shareholder without reducing his/her ownership interest.

The second prescribed tax treatment can be preferable if the shareholders have unused capital losses or capital loss carryovers that otherwise would be of limited tax benefit. Moreover, sale treatment affords shareholders a tax-free recovery of their stock investment. Such a tax-free recovery does not result if the distribution is treated as a dividend.

ADDITIONAL COMMENT

Because an incremental 3.8% rate applies to net investment income for taxpayers whose modified AGI exceeds $200,000 ($250,000 for married filing jointly), some taxpayers may pay a higher rate than 15% or 20% on their net capital gains.

---

[46] Sec. 311(a).

[47] Secs. 311(b)(2) and 336(b).

[48] Sec. 305(b).

EXAMPLE I:16-37 ▶ Ajax Corporation has two equal shareholders, Rita and Harry. Each shareholder has owned 10 shares of Ajax stock for several years. Each share has a $100 basis and a $150 FMV. Ajax, which has sufficient E&P, redeems 5 shares from each shareholder for the $150 FMV. As a result of the redemption, Rita and Harry each recognize $750 ($150 FMV × 5 shares) of dividend income because each still owns 50% of Ajax stock. Rita's total $1,000 basis in her stock is not decreased as a result of the dividend treatment. On the other hand, her per share basis increases from $100 ($1,000 ÷ 10 shares) to $200 ($1,000 ÷ 5) per share.

If instead, Ajax redeems 5 of Rita's shares but none of Harry's, Rita has substantially reduced her proportionate ownership interest in Ajax. Consequently, she is entitled to sale treatment and recognizes a $250 capital gain calculated as follows:

Redemption proceeds ($150 × 5)	$750
Minus: Basis of stock redeemed ($100 × 5)	(500)
Capital gain	$250

The $250 is a long-term capital gain because Rita owned the stock for several years, and it is taxed at a preferential rate (i.e., 0%, 15%, or 20%). Moreover, only $250 is taxed in the case of sale treatment as opposed to $750 in the case of dividend treatment. In the former case, Rita's total $1,000 basis is reduced to $500. The basis of her 5 shares redeemed offsets the $750 redemption amount. Rita's per share basis remains at $100 ($500 ÷ 5 shares) after the redemption. Example I:16-38 on page I:16-28 explains why the first redemption warrants dividend treatment while the second redemption warrants sale treatment. ◀

DETERMINING WHETHER A REDEMPTION IS A DIVIDEND OR CAPITAL GAIN

A redemption is treated as an exchange taxed as a capital gain or loss if any of the following conditions are met:[49]

- The redemption is substantially disproportionate with respect to the shareholder's interest [Sec. 302(b)(2)].
- The redemption is not essentially equivalent to a dividend [Sec. 302(b)(1)].[50]
- The redemption completely terminates the shareholder's interest [Sec. 302(b)(3)].

SELF-STUDY QUESTION

Why might a corporate shareholder prefer to have a redemption treated as a dividend rather than as an exchange?

ANSWER

The corporate shareholder would be eligible for a 50%, 65%, or 100% dividends-received deduction with respect to any redemption treated as a dividend.

Substantially Disproportionate. Constructive stock ownership rules apply to determine whether a redemption is substantially disproportionate.[51] **Constructive stock ownership** means that the redeemed shareholder is considered to own the stock of certain related parties. These related parties include family members, partnerships and corporations in which the shareholder owns an interest, and trusts and estates of which the shareholder is a beneficiary.

For a redemption to be substantially disproportionate, all of the following tests must be met immediately after the redemption:

- The shareholder must own less than 80% of his or her former percentage of voting stock (including stock held by related parties).
- The shareholder must own less than 80% of his or her former percentage of common (voting and nonvoting) stock (including stock held by related parties).
- The shareholder must own less than 50% of all the voting stock (including stock held by related parties).

Under Sec. 302(b)(2) a redemption of solely nonvoting stock will not qualify for capital gains treatment.

Not Essentially Equivalent to a Dividend. A redemption that is not essentially equivalent to a dividend results in a meaningful reduction in the shareholder's interest.[52] In determining whether a meaningful reduction has occurred, the IRS looks at the shareholder's interest in the following: (1) voting power, (2) participation in earning and profits, and (3) share of net assets upon liquidation.[53] This approach usually is adopted if the redemption fails the objective tests for a substantially disproportionate redemption. Specifically, if a shareholder's interest falls below 50% after the redemption, but the redemption does not meet the 80% test, the shareholder might argue that the redemption is not essentially equivalent to a dividend. For example, a reduction in ownership from 27% to 22% fails the 80% test for substantially disproportionate redemptions (80% × 27% = 21.6%) but could be regarded as a meaningful reduction in the shareholder's interest.[54]

---

[49] Sec. 302.

[50] For example, sale treatment has been allowed where the redeemed shareholder's voting control, right to share in current earnings, and right to receive corporate assets upon liquidation have been significantly reduced. Ordinarily, this occurs when a shareholder's majority interest is converted to a 50% interest, a majority interest is converted to a minority (less than 50%) interest, or a minority interest is significantly reduced. (See, for example, Rev. Ruls. 75-502 and 76-364 cited in footnotes 53 and 54.)

[51] Sec. 318.

[52] *U.S. v. Maclin P. Davis*, 25 AFTR 2d 70-827, 70-1 USTC ¶9289 (USSC, 1970).

EXAMPLE I:16-38 ▶ In Example I:16-37, the redemption of both Rita and Harry's stock failed the substantially disproportionate test. For Rita and Harry to pass the test, each shareholder's current ownership percentage must be less than 80% of his or her former ownership percentage, or 40% (80% × 50% prior ownership) and less than 50% on an absolute basis. After the redemption, Rita and Harry each still own exactly 50% of Ajax's single class of stock, thereby failing both the 80% and 50% tests.

On the other hand, the redemption of only Rita's 5 shares qualifies for sale treatment because, after the redemption, Rita owns 33 1/3% (5 shares Rita still owns ÷ 15 total shares outstanding) of Ajax's single class of stock. Thus, Rita's post-redemption ownership is less than the 40% and 50% thresholds, thereby making the redemption substantially disproportionate. ◀

EXAMPLE I:16-39 ▶ Jane owns 60 shares of Fast Corporation's single class of stock. Her mother owns 20 additional shares of Fast stock. The remaining 20 Fast shares are owned by Peter, who is unrelated to Jane or her mother. Fast redeems 30 shares of Jane's stock for $100,000. Jane's percentage interest before the redemption is 80% [(60 + 20 shares) ÷ 100 shares]. Immediately after the redemption, her percentage interest is 71.4% [(30 + 20 shares) ÷ 70 shares]. To meet the 80% test, Jane's interest must be less than 64% (80% × 80%). Therefore, Jane does not meet the 80% test. Also, Jane does not meet the 50% test because she does not own less than 50% of Fast stock after the redemption. Both tests must be met for the redemption to qualify as substantially disproportionate. Jane likely will not qualify for Sec. 302(b)(1) "not essentially equivalent to a dividend" treatment because she has not reduced her stock interest to 50% or less. Therefore, the $100,000 is treated as a dividend and is taxable to Jane to the extent of Fast's E&P. ◀

Complete Termination. Under Sec. 302(b)(3), a complete termination of a shareholder's stock interest also qualifies for capital gain or loss treatment. At first glance, this rule appears redundant because the substantially disproportionate rule also applies to a redemption that results in a complete termination of a shareholder's interest. However, the complete termination provision permits a waiver of the family ownership attribution rules. These rules are waived if the former shareholder files an agreement with the IRS that for 10 years he or she will acquire no interest other than that as a creditor of the corporation.[55]

EXAMPLE I:16-40 ▶ Assume the same facts as in Example I:16-39 except that Fast Corporation redeems all of Jane's 60 shares for $200,000, and Jane's basis in her shares is $90,000. The family ownership attribution rules are waived if Jane agrees not to acquire any interest in Fast for 10 years. Jane's interest is deemed to be completely terminated, and the redemption is treated as a sale of stock, thus eligible for capital gains treatment. Jane recognizes a capital gain of $110,000 ($200,000 − $90,000). If the waiver is not effective because Jane remains an employee of Fast, the substantially disproportionate tests would be applied to determine whether the redemption qualifies as an exchange. Jane would be deemed to own 50% of the stock (20 shares owned ÷ 40 outstanding shares) immediately after the redemption. Thus, the substantially disproportionate test would not be met. Without an effective waiver, the redemption does not qualify as a complete termination because Jane is deemed to own her mother's stock. Consequently, the redemption would be treated as a dividend unless it could qualify for sale treatment under the Sec. 302(b)(1) "not-essentially-equivalent-to-a-dividend" test. ◀

REAL-WORLD EXAMPLE

All of a father's stock in a corporation was redeemed, and his children were the remaining shareholders. Then the father entered into a long-term contract with the corporation to perform consulting and advisory services. The contract represented an interest in the corporation and the family attribution rules were not waived. Rev. Rul. 70-104, 1970-1 C.B. 66.

---

[53] Rev. Rul. 75-502, 1975-2 C.B. 111.

[54] Rev. Rul. 76-364, 1976-2 C.B. 91.

[55] Sec. 302(c)(2). The former shareholder cannot serve as an officer, director, or employee for at least 10 years and must notify the IRS if additional stock is acquired (other than by bequest or inheritance). If such stock is subsequently acquired, it usually causes the redemption to be recharacterized as a dividend.

CORPORATE DISTRIBUTIONS IN COMPLETE LIQUIDATION

OBJECTIVE 7

Understand the tax implications of a corporate liquidation for the liquidating corporation and its shareholders

Management may decide to discontinue a corporation's operations by liquidating it. Pursuant to such a complete liquidation, the corporation may sell part or all of its assets, which the shareholders may not want to receive in a liquidating distribution. An asset sale also generates cash to pay the corporation's liabilities (including federal income taxes incurred on the liquidation). The corporation's shareholders receive any remaining cash and property as liquidating distributions in exchange for all the corporation's stock.

The tax treatment of a complete liquidation depends on whether the liquidating corporation is controlled by another corporation (i.e., the other corporation owns at least 80% of the liquidating corporation's stock). The discussion focuses first on the situation where this is not the case, e.g., one or more individuals own all of the corporation's stock. This is followed by a discussion of the tax treatment of a controlled corporation's complete liquidation.

TYPICAL MISCONCEPTION

It is sometimes assumed that corporate liquidation always is associated with the discontinuance of business activities. Sometimes, however, the business is operated as a limited liability company, partnership, or sole proprietorship after the liquidation.

LIQUIDATION OF NON-SUBSIDIARY CORPORATION

Corporate Gain and Loss Recognition. If the liquidating corporation is not at least 80%-owned by another corporation, it generally is treated as if it had sold its assets for their FMV and thus recognizes gain or loss.[56]

EXAMPLE I:16-41 ▶ In a complete liquidation, Southern Corporation distributes the following assets to Mia, its sole shareholder:

- Inventory: $12,000 basis, $20,000 FMV
- Investment land: $5,000 basis, $40,000 FMV, subject to a $30,000 liability
- Marketable securities: $20,000 basis, $15,000 FMV

Southern recognizes $8,000 ($20,000 − $12,000) of ordinary income on the distribution of the inventory, $35,000 ($40,000 − $5,000) of capital gain on the distribution of the land, and $5,000 ($15,000 − $20,000) of capital loss on the distribution of the marketable securities. ◀

Sale of Assets. The tax consequences of an asset sale closely parallel those of a liquidating distribution. If a corporation sells its assets in a complete liquidation and then distributes the sales proceeds to its shareholders, all gain or loss realized on the sale is recognized by the corporation.

Limitation on Loss Recognition. To prevent abuses, special rules limit the liquidating corporation's recognition of losses. First, a liquidating corporation recognizes no loss when it distributes property to a related person, unless the property is distributed ratably to all shareholders and the property was not contributed in a Sec. 351 transaction or otherwise as capital within the preceding five years. Second, losses are not recognized upon the sale, exchange, or distribution of property where the property was contributed in a Sec. 351 transaction or otherwise as capital, the principal purpose of which was loss recognition. These special loss limitations are explained further in Chapter C:6 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*.

---

[56] Sec. 336. If the distributed property is subject to a liability or the shareholder assumes a liability of the liquidating corporation in connection with the distribution, the property's FMV is deemed to be the greater of its actual FMV or the liability's amount.

Tax Attributes. The liquidating corporation's tax attributes, such as NOL carryovers, E&P balances, capital loss carryovers, and tax credits, are extinguished in a complete liquidation.

KEY POINT

An appraisal may be necessary to determine the FMV of the distributed assets.

Shareholders' Tax Consequences. If the liquidating corporation is not at least 80%-owned by another corporation, shareholders are deemed to have sold their stock to the corporation in exchange for the money or other property they receive as liquidating distributions.[57] If the stock is a capital asset, the shareholder recognizes capital gain or loss equal to (1) the money plus the FMV of other property distributed to the shareholder less (2) the adjusted basis of the shareholder's stock.[58] The shareholder's basis for any property received is its FMV on the distribution date.[59]

EXAMPLE I:16-42 ▶ In a complete liquidation, Sun Corporation distributes land with a $70,000 adjusted basis and a $100,000 FMV to shareholder John, in exchange for his Sun stock. John's adjusted basis in the stock is $40,000. Joan, another shareholder, receives $100,000 cash for her shares. Joan's adjusted basis in her stock is $120,000. John recognizes a $60,000 ($100,000 − $40,000) capital gain. Joan recognizes a $20,000 ($100,000 − $120,000) capital loss. The basis of the land received by John is $100,000 (the land's FMV on the distribution date). ◀

SECTION 332: LIQUIDATION OF A SUBSIDIARY CORPORATION

KEY POINT

Section 351 permits a parent corporation to incorporate a subsidiary corporation tax-free. Section 332 permits a parent corporation to liquidate a controlled subsidiary corporation without adverse tax results where the subsidiary's property has significantly appreciated in value.

Gain and Loss Considerations. Under Sec. 332, neither a parent corporation nor, generally, its 80% or more owned subsidiary corporation recognizes gain or loss when the parent liquidates the subsidiary.[60] In a Sec. 332 liquidation, the subsidiary usually is dissolved, and its assets and liabilities transferred to the parent. The Section 332 nonrecognition rule is mandatory, not elective, if its requirements are met.

For nonrecognition treatment, the subsidiary must:

- Distribute its assets in complete liquidation within a single tax year, or
- Make a series of distributions resulting in a complete liquidation over a three-year period that commences at the close of the tax year in which the first liquidating distribution is made.

If the parent owns less than 100% of the liquidating subsidiary's stock, the subsidiary recognizes gain (but not loss) on property distributed to a minority shareholder. In addition, the minority shareholder(s), recognize(s) gain or loss.

KEY POINT

A parent corporation whose basis for its subsidiary's stock exceeds the tax basis of its share of the subsidiary's net assets loses the tax benefit of the economic loss if the subsidiary is liquidated under the Sec. 332 rules.

Basis Considerations. The subsidiary's adjusted basis for property it distributes to the parent carries over to the parent, and the adjusted basis of the parent's stock in the subsidiary disappears.[61] This rule could create inequities because the parent may have paid an amount for the subsidiary stock that is greater (or less) than the parent's basis in the subsidiary's net assets.

EXAMPLE I:16-43 ▶ Several years ago, Tampa Corporation acquired 100% of Top Corporation's stock for $100,000. In the current year, Top is liquidated, and assets having a $130,000 FMV and a $50,000 basis are transferred to Tampa. Tampa and Top do not recognize any gain or loss due to the liquidation. Tampa's $100,000 basis in the Top stock disappears, and Tampa takes only a $50,000 basis in the Top assets. Tampa would recognize an $80,000 ($130,000 − $50,000) gain should it sell the assets for their $130,000 FMV immediately after the liquidation. The character of the gain would depend on the type of assets received by Tampa. ◀

When these carryover basis rules apply, the parent corporation also inherits the tax attributes of the subsidiary.[62] For example, the liquidated subsidiary's NOL and capital loss carryovers and E&P balances carry over to the parent. In addition, the subsidiary recognizes no gain under the depreciation recapture rules. Instead, this recapture potential remains with the subsidiary assets distributed to the parent.

---

[57] Sec. 331(a)(1).

[58] Certain losses on the sale of small business stock are ordinary in character if the requirements of Sec. 1244 are met (see Chapter I:9).

[59] Sec. 334(a).

[60] Under Sec. 1504(a)(2), the parent corporation must own at least 80% of the total combined voting power of all classes of stock entitled to vote and at least 80% of the total value of all classes of stock.

[61] Sec. 334(b)(1).

[62] Sec. 381.

Topic Review I:16-4 summarizes the complete liquidation rules.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 8

Describe tax planning considerations for corporations

CAPITAL STRUCTURE AND SECTION 1244

As mentioned earlier in the chapter, the issuance of long-term debt to capitalize a profitable closely-held C corporation could bolster the corporation's total economic returns and thus increase share values. However, if the corporation is no longer profitable and goes bankrupt, the corporate debt becomes worthless and is treated by noncorporate shareholders as nonbusiness bad debt. As is discussed in Chapter I:9, nonbusiness bad debt is deductible as a short-term capital loss (i.e., subject to the $3,000 per year limitation on an individual's deduction of a net capital loss).

TOPIC REVIEW I:16-4

Distributions in Complete Liquidation

NON-SUBSIDIARY CORPORATION LIQUIDATION RULES	LIQUIDATING CORPORATION	SHAREHOLDERS
Gain or loss recognition	Gain or loss equal to the FMV of the property distributed less the property's adjusted basis generally is recognized.	Capital gain or loss equal to the amount of money plus the FMV of other property received less the shareholder's basis of stock in the liquidating corporation is recognized.
Exception to the gain or loss rule	Losses are not recognized on certain distributions of property to related parties or property acquired in certain tax-free transactions where the principal purpose for the transaction is tax avoidance.	Loss might qualify as ordinary under Sec. 1244 if the shareholder is an individual.
Basis considerations	Not applicable.	The basis of noncash property received is its FMV.
Tax attributes (e.g., NOL carryovers and E&P)	Disappear upon liquidation.	Not applicable.

SEC. 332 SUBSIDIARY CORPORATION LIQUIDATION RULES	SUBSIDIARY	PARENT (AND MINORITY SHAREHOLDERS, IF ANY)
General requirements	Subsidiary liquidates, transferring its assets and liabilities to its shareholder(s).	Sec. 332 is mandatory. The parent must own at least 80% of subsidiary stock.
Gain or loss recognition	No gain or loss is recognized on the transfer of assets to the parent. Gain but not loss is recognized on distributions to minority shareholders.	The parent recognizes no gain or loss. Minority shareholders recognize gain or loss.
Basis considerations	Not applicable.	The basis of subsidiary assets carry over to the parent. Minority shareholders take an FMV basis in the assets they receive.
Tax attributes (e.g., NOL carryovers and E&P)	Inherited by the parent.	Inherited by the parent.

As an alternative, shareholders could more heaviliy capitalize the corporation with stock (equity). If certain conditions are met, this stock would be Sec. 1244 stock (small business corporation stock, see Chapter I:9 for details). If it becomes worthless, the shareholder may deduct up to $50,000 ($100,000 on a joint return) of its value as an ordinary loss. From a tax perspective, ordinary loss treatment is generally preferable to capital loss treatment that applies to nonbusiness bad debts.

The two principal components of capital structure clearly yield different results, depending on whether the corporation is profitable or unprofitable. Thus, deciding how to capitalize a corporation ultimately involves an evaluation of its potential profitability. If the owners of a new corporation believe the venture will be profitable, they should prefer debt because of the deductibility of interest payments. Because few entrepreneurs assume that their business will be unsuccessful, advising them to capitalize it with substantially more equity than debt might be difficult.

DIVIDEND POLICY

ADDITIONAL COMMENT

The reasonableness of a salary payment is a question of fact to be determined in each case. No formula can be used to determine a reasonable amount of compensation.

Dividends paid out of E&P are taxable to shareholders and nondeductible by the corporation. Consequently, in a closely held corporation, where ownership and management are the same, the owner-managers may wish to increase shareholder-employee compensation rather than increase dividends. Likewise, a shareholder may wish to lease property to the corporation instead of contribute it as capital. Even though the increased salary or rental payments are taxable to the shareholders (as are dividends), the corporation may deduct them as long as the amounts are reasonable.

EXAMPLE I:16-44 ▶ Mario and Nancy are equal owners of highly profitable Texas Corporation, which has substantial E&P. Mario and Nancy are the key officers. Each is paid $250,000 compared to $300,000 paid to others in similar positions. To increase earnings distributions to the owners, additional salary of $50,000 might be paid to both Mario and Nancy (rather than increase dividends by the same amount) because the corporation can deduct salary but not dividends. The salary payments result in a single level of taxation, while the dividend payments result in double taxation. The additional $50,000 compensation would subject the employer and the two shareholders to additional payroll taxes (e.g., the 1.45% Medicare portion of the FICA tax; there is no ceiling on the Medicare tax base). ◀

USE OF LOSSES

A corporation should carefully plan how to use its net operating loss and capital loss carryovers. For example, the sale of appreciated business assets could result in a Sec. 1231 gain that could offset capital loss carryovers. Net Sec. 1231 gains are treated as capital in character. Alternatively, as a result of depreciation recapture, the sale of assets could give rise to ordinary income. Such income could be offset by expiring pre-2018 NOLs.

If a business expects to generate net operating losses or capital losses during its start-up phase, an S corporation election might be desirable because the losses flow through to the shareholders' separate returns. The S corporation election might be terminated when the corporation becomes profitable so that C corporation treatment is preferred. (See Chapter I:17 for a discussion of S corporations.)

CHARITABLE CONTRIBUTIONS

Many owners of closely held corporations prefer to make charitable contributions through their corporations rather than as individuals because the corporations might be able to take a larger deduction. An accrual method corporation may accelerate a charitable contribution deduction if its board of directors approves the contribution before year-end and the corporation makes the contribution within 3½ months of the corporation's tax year-end. The alternative to a corporate contribution could be a nondeductible dividend payment to the owner(s) who make(s) (an) individual contribution(s).

DIVIDENDS-RECEIVED DEDUCTION

Corporate shareholders may deduct 65% (in some cases, 50%) of dividends received. However, this deduction is limited to 65% (in some cases, 50%) of taxable income unless the deduction creates or increases an NOL. Thus, a substantial scale-down of the dividends-received deduction may result if taxable income (before this deduction) is positive, but negligible. If the limitation is likely to diminish the magnitude of the deduction, the corporation might either accelerate business deductions into the current year or postpone the recognition of income to a later year. Either measure could result in the generation of an NOL that renders the limitation inapplicable. (See Examples I:16-7 and I:16-8.)

REDUCED TAXES ON TAXPAYER STOCK SALES

IRC Section 1202(a)(1) permits noncorporate investors to exclude up to 100% of any gain realized on the sale or exchange of small business stock.[63] This exclusion applies only to stock issued by C corporations that meet certain requirements; i.e., a stock holding period of five years or more, the use of at least 80% of the corporation's assets in the active conduct of a business, and a corporate asset value of $50 million or less at the time of stock issuance. See Chapter I:4 for further discussion of this exclusion.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 9

Describe compliance and procedural considerations for corporations

FILING REQUIREMENTS

A corporation must file Form 1120 (U.S. Corporation Income Tax Return) even if the corporation exists for only part of the year. Form 1120 includes several schedules, such as Schedule C (dividends-received deduction and certain other deductions) and Schedule L (balance sheets per books). A corporation may be required to file several other forms and schedules with its Form 1120, such as those for depreciation, capital gains and losses, and cost of goods sold.

KEY POINT

All corporations must file an income tax return. The filing requirements are not based on minimum amounts of gross income, as in the case of individual taxpayers.

The initial due date for a C corporation's income tax return generally is the fifteenth day of the fourth month after the end of the tax year (e.g., April 15 for calendar-year corporations).[64] Corporations generally can obtain an automatic 6-month extension by filing Form 7004 (Application for Automatic Extension of Time to File Certain Business Income Tax, Information, and Other Returns). Even if an extension is obtained, the full amount of the estimated tax must be paid on or before the initial due date (e.g., April 15 for calendar-year corporations).

Quarterly estimated tax payments must be made by the fifteenth day of the fourth, sixth, ninth, and twelfth months of the tax year. In general, the total required estimated tax payments is the lesser of 100% of the corporation's tax liability for the current year or 100% of the tax shown on the preceding year's return.[65] However, a corporation may not base the quarterly payments on the preceding year's tax liability if that liability was zero.[66] The corporation is subject to a nondeductible penalty to the extent the quarterly payments are less than the actual amounts due.

---

[63] The exclusion is 50% for Sec. 1202 stock acquired from August 11, 1993, through February 17, 2009, and it is 75% for Sec. 1202 stock acquired from February 18, 2009 through September 27, 2010.

[64] Prior to 2015 legislation, the initial due date of a C corporation's tax return was the fifteenth day of the third month after the end of its tax year. This legislation changed the initial due date from the third month to the fourth month, but it delayed the change until tax years beginning after 2025 for C corporations with a June 30 tax year-end. It also allows for such corporations a seven-month extension period for tax years beginning before 2026.

[65] Exceptions are provided for large corporations and corporations that earn their income unevenly during the tax year. Large corporations—those with taxable income exceeding $1 million in any of the three preceding tax years—must make quarterly estimated tax payments based on 100% of the tax shown on their current year return. Alternatively, they are permitted to make their first-quarter payment based on 100% of the preceding year's tax liability [Sec. 6655(d)]. Section 6655(e) permits corporations to use an annualized income installment method, or seasonally adjusted installment method if the latter installments are less than the normally-required installment [Sec. 6655(e)].

[66] Rev. Rul. 92-54 1992-2 C.B. 320.

SCHEDULES M-1, M-2, AND M-3

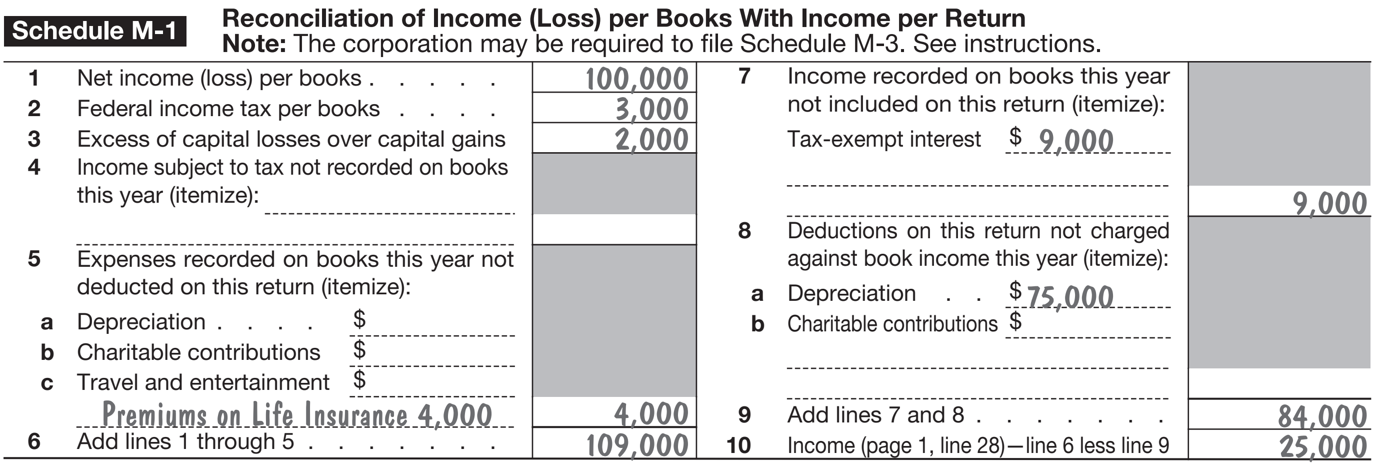
KEY POINT

While many income and expense items are treated the same way for federal income tax purposes as they are for financial accounting purposes, several items are treated differently. These book-tax differences cause financial accounting net income to differ from taxable income, and Schedules M-1 and M-3 report them.

Schedule M-1 reconciles financial accounting net income with taxable income before certain deductions (the NOL and dividends-received deductions). Figure I:16-1 shows a completed Schedule M-1 based on the following adjustments:

Net income per books	$100,000
Plus:	
Federal income tax expense	3,000
Net capital losses	2,000
Nondeductible premiums on life insurance covering key officers	4,000
Minus:	
Tax-exempt interest income	(9,000)
Excess of tax depreciation over financial accounting depreciation	(75,000)
Taxable income (before certain deductions)	$ 25,000

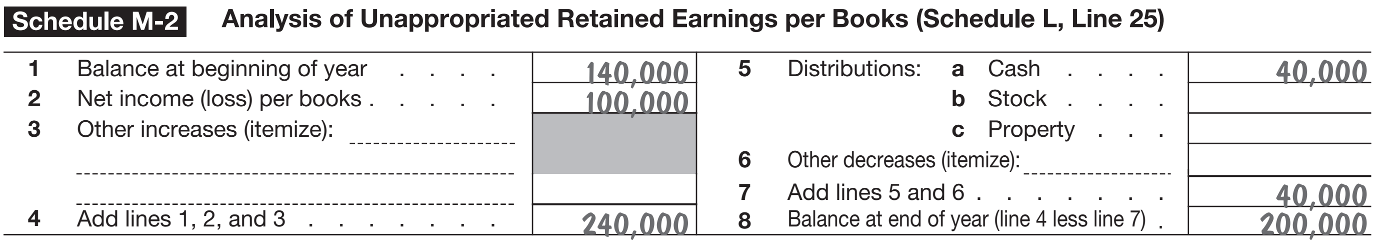
Schedule M-2 reconciles retained earnings (for financial accounting purposes) at the beginning of the year with retained earnings at year-end. This reconciliation accounts for changes in retained earnings due to net income or loss, as well as various other items (e.g., dividends and other distributions). Figure I:16-2 illustrates a completed Schedule M-2 based on the above facts and the following assumptions: a $140,000 retained earnings balance on January 1, $100,000 of net income for financial accounting purposes, and the payment of a $40,000 cash dividend.[67]



Schedule M-1 **Reconciliation of Income (Loss) per Books With Income per Return**
Note: The corporation may be required to file Schedule M-3. See instructions.

1	Net income (loss) per books	100,000	7	Income recorded on books this year not included on this return (itemize):	
2	Federal income tax per books	3,000		Tax-exempt interest $ 9,000	
3	Excess of capital losses over capital gains	2,000			
4	Income subject to tax not recorded on books this year (itemize):				9,000
5	Expenses recorded on books this year not deducted on this return (itemize):		8	Deductions on this return not charged against book income this year (itemize):	
a	Depreciation $		a	Depreciation $ 75,000	
b	Charitable contributions $		b	Charitable contributions $	
c	Travel and entertainment $				
	Premiums on Life Insurance 4,000	4,000	9	Add lines 7 and 8	84,000
6	Add lines 1 through 5	109,000	10	Income (page 1, line 28)—line 6 less line 9	25,000

FIGURE I:16-1 ▶ Form 1120, Schedule M-1



Schedule M-2 **Analysis of Unappropriated Retained Earnings per Books (Schedule L, Line 25)**

1	Balance at beginning of year	140,000	5	Distributions: a Cash	40,000
2	Net income (loss) per books	100,000		b Stock	
3	Other increases (itemize):			c Property	
			6	Other decreases (itemize):	
			7	Add lines 5 and 6	40,000
4	Add lines 1, 2, and 3	240,000	8	Balance at end of year (line 4 less line 7)	200,000

FIGURE I:16-2 ▶ Form 1120, Schedule M-2

---

[67] A corporation whose total receipts for the year and total assets at the end of the year are less than $250,000 is not required to complete Schedules M-1 and M-2 (and Schedule L, which was mentioned earlier).

Like Schedule M-1, Schedule M-3 (Net Income (Loss) Reconciliation for Corporations with Total Assets of $10 Million or More) reconciles a C corporation's financial accounting net income and taxable income, but it does so in much more detail. While Schedule M-1 is only ten lines long and is about one-quarter of a page (see Figure I:16-1 on p. I:16-34), Schedule M-3 has many more lines and is three pages long (see Figure I:16-3 on pp. I:16-36 to I:16-38). Schedule M-3 is required only for larger corporations, which file only a small fraction of corporate income tax returns but report a large fraction of corporate income. The IRS uses the information reported in Schedules M-1 and M-3 as a tool to determine which tax returns to audit.

MAINTENANCE OF E&P RECORDS

Corporations are not required to compute E&P on their tax return. They should, however, maintain adequate records of E&P items because the limitations period for contesting these items is indefinite, and the taxpayer has the burden of proof. Thus, if the IRS discovers that a corporation has current or accumulated E&P and consequently treats a distribution as a taxable dividend rather than a tax-free return of capital, the taxpayer must show that the prescribed IRS treatment is erroneous.

Form 5452 (Corporate Report of Nondividend Distributions) must be filed by any corporation that makes a return-of-capital distribution. This form requires a computation of E&P and a schedule of differences between taxable income and E&P. This form also requires a year-by-year computation of accumulated E&P.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:16-1 William Bonney and Pat Garrett incorporate Sales, Inc. on January 1, of the current year, under the laws of the State of Florida.

a. How should the new corporation be regarded under the check-the-box rules?

b. Are any entity elections available for Sales, Inc. under the IRC or the check-the-box rules?

c. How would your answers to Parts a and b change (if at all) should William Bonney be the sole shareholder of Sales, Inc.?

I:16-2 Under the present tax system, C corporation income is taxed twice, once when earned and again when the shareholders receive dividends or sell their stock. Nevertheless, the C corporation form is widely used in the United States, especially for large enterprises. Why would an entrepreneur choose C corporation status instead of one of the flow-through entity forms?

I:16-3 Some tax analysts contend that many corporations can shift the burden of corporate taxation to consumers in the form of higher prices. In what other ways might a corporation attempt to shift the burden (e.g., to employees, tenants, and/or shareholders)?

I:16-4 For most individual investors, net long-term capital gains and dividends are taxed at the same rate. Yet, in some circumstances, an investor's generating long-term capital gains is more advantageous than earning a dividend. What are these circumstances and why?

I:16-5 Acorn Corporation has a $5,000 NSTCG and a $9,000 NLTCL in the current year. Last year, Acorn had a $3,000 NLTCG. No other capital gains or losses were reported in prior tax years.

a. Do the NSTCG and NLTCL have to be offset against one another in the current year?

b. Is any portion of the NLTCL deductible in the current year?

c. What loss carryback or carryover rules should be applied to any unused capital losses incurred in the current year?

I:16-6 C corporations are allowed a dividends-received deduction (DRD) for dividends received from domestic corporations.

a. What is the purpose of the DRD?

b. What limitation applies to the DRD?

c. What additional tax liability is incurred by a C corporation when it receives $10,000 of dividend income from a 10%-owned

Net Income (Loss) Reconciliation for Corporations With Total Assets of $10 Million or More

▶ **Attach to Form 1120 or 1120-C.**
▶ **Go to *www.irs.gov/Form1120* for instructions and the latest information.**

OMB No. 1545-0123

Name of corporation (common parent, if consolidated return)

Employer identification number

Check applicable box(es): (1) ☐ Non-consolidated return (2) ☐ Consolidated return (Form 1120 only)
(3) ☐ Mixed 1120/L/PC group (4) ☐ Dormant subsidiaries schedule attached

Part I Financial Information and Net Income (Loss) Reconciliation (see instructions)

1a Did the corporation file SEC Form 10-K for its income statement period ending with or within this tax year?
☐ **Yes.** Skip lines 1b and 1c and complete lines 2a through 11 with respect to that SEC Form 10-K.
☐ **No.** Go to line 1b. See instructions if multiple non-tax-basis income statements are prepared.

b Did the corporation prepare a certified audited non-tax-basis income statement for that period?
☐ **Yes.** Skip line 1c and complete lines 2a through 11 with respect to that income statement.
☐ **No.** Go to line 1c.

c Did the corporation prepare a non-tax-basis income statement for that period?
☐ **Yes.** Complete lines 2a through 11 with respect to that income statement.
☐ **No.** Skip lines 2a through 3c and enter the corporation's net income (loss) per its books and records on line 4a.

2a Enter the income statement period: Beginning MM/DD/YYYY Ending MM/DD/YYYY

b Has the corporation's income statement been restated for the income statement period on line 2a?
☐ **Yes.** (If "Yes," attach an explanation and the amount of each item restated.)
☐ **No.**

c Has the corporation's income statement been restated for any of the five income statement periods immediately preceding the period on line 2a?
☐ **Yes.** (If "Yes," attach an explanation and the amount of each item restated.)
☐ **No.**

3a Is any of the corporation's voting common stock publicly traded?
☐ **Yes.**
☐ **No.** If "No," go to line 4a.

b Enter the symbol of the corporation's primary U.S. publicly traded voting common stock . . . . ☐☐☐☐☐

c Enter the nine-digit CUSIP number of the corporation's primary publicly traded voting common stock . . . . ☐☐☐☐☐☐☐☐☐

4a	Worldwide consolidated net income (loss) from income statement source identified in Part I, line 1 .	**4a**	
b	Indicate accounting standard used for line 4a (see instructions): (1) ☐ GAAP (2) ☐ IFRS (3) ☐ Statutory (4) ☐ Tax-basis (5) ☐ Other (specify) ________		
5a	Net income from nonincludible foreign entities (attach statement)	**5a**	( )
b	Net loss from nonincludible foreign entities (attach statement and enter as a positive amount) . . .	**5b**	
6a	Net income from nonincludible U.S. entities (attach statement)	**6a**	( )
b	Net loss from nonincludible U.S. entities (attach statement and enter as a positive amount)	**6b**	
7a	Net income (loss) of other includible foreign disregarded entities (attach statement)	**7a**	
b	Net income (loss) of other includible U.S. disregarded entities (attach statement)	**7b**	
c	Net income (loss) of other includible entities (attach statement)	**7c**	
8	Adjustment to eliminations of transactions between includible entities and nonincludible entities (attach statement)	**8**	
9	Adjustment to reconcile income statement period to tax year (attach statement)	**9**	
10a	Intercompany dividend adjustments to reconcile to line 11 (attach statement)	**10a**	
b	Other statutory accounting adjustments to reconcile to line 11 (attach statement)	**10b**	
c	Other adjustments to reconcile to amount on line 11 (attach statement)	**10c**	
11	**Net income (loss) per income statement of includible corporations.** Combine lines 4 through 10 .	**11**	

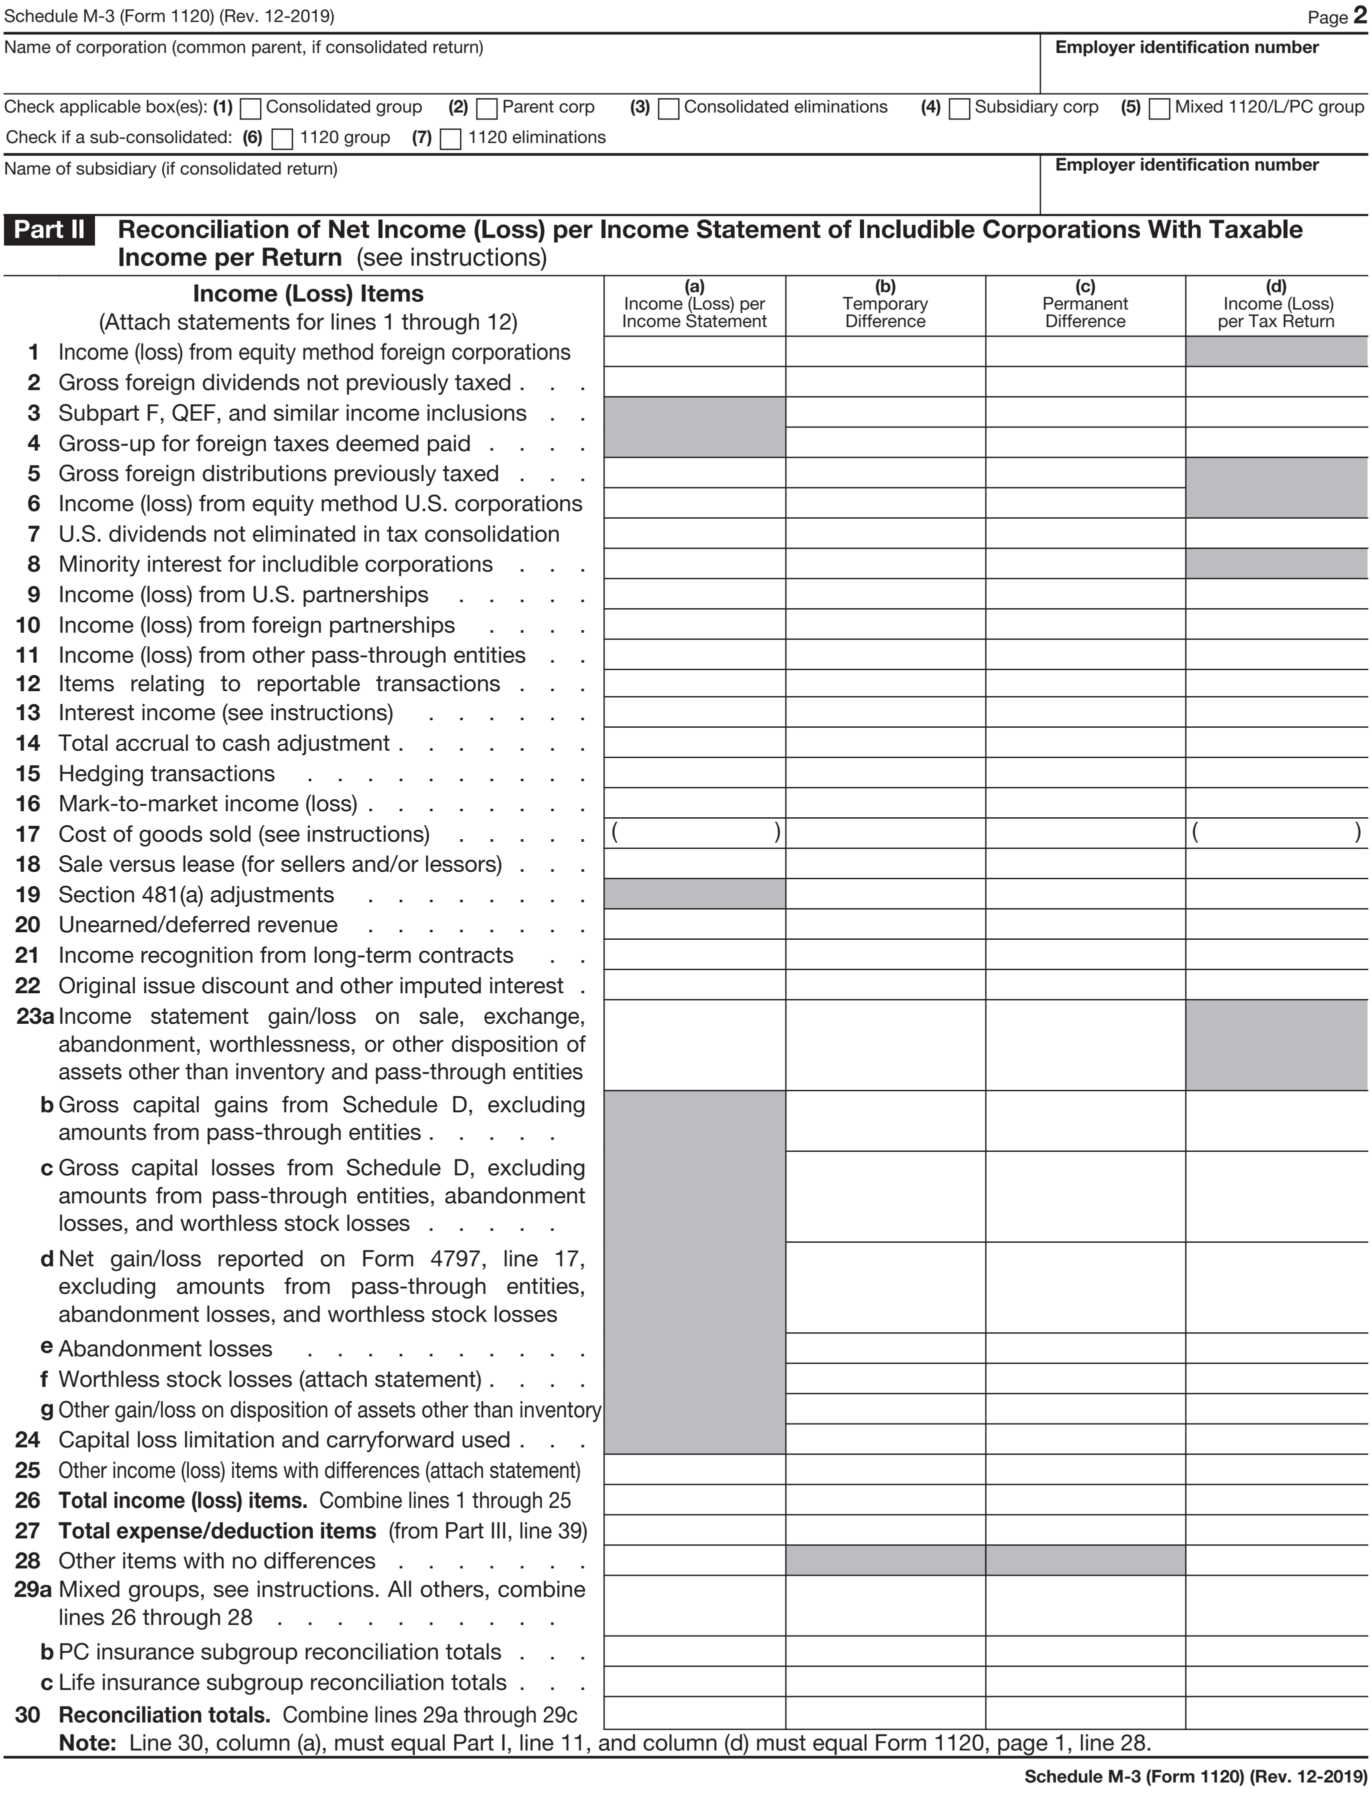
Note: Part I, line 11, must equal Part II, line 30, column (a) or Schedule M-1, line 1 (see instructions).

12 Enter the total amount (not just the corporation's share) of the assets and liabilities of all entities included or removed on the following lines.

	Total Assets	Total Liabilities
a Included on Part I, line 4 . . . . ▶		
b Removed on Part I, line 5 . . . . ▶		
c Removed on Part I, line 6 . . . . ▶		
d Included on Part I, line 7 . . . . ▶		

For Paperwork Reduction Act Notice, see the Instructions for Form 1120. Cat. No. 37961C **Schedule M-3 (Form 1120) (Rev. 12-2019)**

FIGURE I:16-3A ▶ Form 1120, Schedule M-3



Schedule M-3 (Form 1120) (Rev. 12-2019) Page **2**

Name of corporation (common parent, if consolidated return)

Employer identification number

Check applicable box(es): **(1)** ☐ Consolidated group **(2)** ☐ Parent corp **(3)** ☐ Consolidated eliminations **(4)** ☐ Subsidiary corp **(5)** ☐ Mixed 1120/L/PC group

Check if a sub-consolidated: **(6)** ☐ 1120 group **(7)** ☐ 1120 eliminations

Name of subsidiary (if consolidated return)

Employer identification number

Part II **Reconciliation of Net Income (Loss) per Income Statement of Includible Corporations With Taxable Income per Return** (see instructions)

Income (Loss) Items (Attach statements for lines 1 through 12)	**(a)** Income (Loss) per Income Statement	**(b)** Temporary Difference	**(c)** Permanent Difference	**(d)** Income (Loss) per Tax Return
1 Income (loss) from equity method foreign corporations				▨
2 Gross foreign dividends not previously taxed				
3 Subpart F, QEF, and similar income inclusions	▨			
4 Gross-up for foreign taxes deemed paid	▨			
5 Gross foreign distributions previously taxed				▨
6 Income (loss) from equity method U.S. corporations				▨
7 U.S. dividends not eliminated in tax consolidation				
8 Minority interest for includible corporations				▨
9 Income (loss) from U.S. partnerships				
10 Income (loss) from foreign partnerships				
11 Income (loss) from other pass-through entities				
12 Items relating to reportable transactions				
13 Interest income (see instructions)				
14 Total accrual to cash adjustment				
15 Hedging transactions				
16 Mark-to-market income (loss)				
17 Cost of goods sold (see instructions)	( )			( )
18 Sale versus lease (for sellers and/or lessors)				
19 Section 481(a) adjustments	▨			
20 Unearned/deferred revenue				
21 Income recognition from long-term contracts				
22 Original issue discount and other imputed interest				
23a Income statement gain/loss on sale, exchange, abandonment, worthlessness, or other disposition of assets other than inventory and pass-through entities				▨
b Gross capital gains from Schedule D, excluding amounts from pass-through entities	▨			
c Gross capital losses from Schedule D, excluding amounts from pass-through entities, abandonment losses, and worthless stock losses	▨			
d Net gain/loss reported on Form 4797, line 17, excluding amounts from pass-through entities, abandonment losses, and worthless stock losses	▨			
e Abandonment losses	▨			
f Worthless stock losses (attach statement)	▨			
g Other gain/loss on disposition of assets other than inventory	▨			
24 Capital loss limitation and carryforward used	▨			
25 Other income (loss) items with differences (attach statement)				
26 **Total income (loss) items.** Combine lines 1 through 25				
27 **Total expense/deduction items** (from Part III, line 39)				
28 Other items with no differences		▨	▨	
29a Mixed groups, see instructions. All others, combine lines 26 through 28				
b PC insurance subgroup reconciliation totals				
c Life insurance subgroup reconciliation totals				
30 **Reconciliation totals.** Combine lines 29a through 29c				

Note: Line 30, column (a), must equal Part I, line 11, and column (d) must equal Form 1120, page 1, line 28.

Schedule M-3 (Form 1120) (Rev. 12-2019)

FIGURE I:16-3B ▶ Form 1120, Schedule M-3

18 Deferred compensation				
19 Charitable contribution of cash and tangible property				
20 Charitable contribution of intangible property				
21 Charitable contribution limitation/carryforward				
22 Domestic production activities deduction (see instructions)				
23 Current year acquisition or reorganization investment banking fees				
24 Current year acquisition or reorganization legal and accounting fees				
25 Current year acquisition/reorganization other costs				
26 Amortization/impairment of goodwill				
27 Amortization of acquisition, reorganization, and start-up costs				
28 Other amortization or impairment write-offs				
29 Reserved				
30 Depletion				
31 Depreciation				
32 Bad debt expense				
33 Corporate owned life insurance premiums				
34 Purchase versus lease (for purchasers and/or lessees)				
35 Research and development costs				
36 Section 118 exclusion (attach statement)				
37 Section 162(r)–FDIC premiums paid by certain large financial institutions (see instructions)				
38 Other expense/deduction items with differences (attach statement)				
39 **Total expense/deduction items.** Combine lines 1 through 38. Enter here and on Part II, line 27, reporting positive amounts as negative and negative amounts as positive				

Schedule M-3 (Form 1120) (Rev. 12-2019)

FIGURE I:16-3C ▶ Form 1120, Schedule M-3

domestic corporation? From a 25%-owned domestic corporation? From a 100%-owned domestic corporation (that does not file a consolidated tax return)?

d. What is the effective tax rate on the dividend income? Hint: the effective tax rate equals the increase in a C corporation's tax liability divided by the additional gross income that it reports.

I:16-7 What conditions must be met for an accrual-basis corporation to elect to deduct a charitable contribution in a year before it is paid?

I:16-8 Acorn Corporation's stock is publicly held. Its chief executive officer, Carl, currently receives an annual salary of $1 million. The board of directors is considering increasing his compensation by $200,000.

a. What are the income tax consequences to Acorn if Carl's salary is increased to $1,200,000?

b. What alternatives might be considered to increase Carl's annual compensation that would produce more favorable tax consequences for Acorn?

I:16-9 Agnew Corporation has been successful in recent years, with its annual net income growing from about $50 million to $100 million. The individuals who started Agnew several years ago own all of its stock, but they are considering an initial public offering because they see an opportunity for substantially more growth. The CFO is concerned that doing so may cause Agnew to incur the book minimum tax. Explain whether Agnew is likely to incur this tax if it goes public.

I:16-10 Blazic Corporation is subject to the book minimum tax. For the current year, its adjusted financial statement income is about 20% larger than its taxable income. Explain why Blazic's book minimum tax for the current year is zero.

I:16-11 The accumulated earnings tax is effectively a penalty on corporations.

a. What is the purpose of the accumulated earnings tax?

b. Why does the "reasonable needs of the business" exception either reduce or eliminate the accumulated earnings tax burden for many corporations?

I:16-12 Acme Corporation is a highly profitable closely held corporation that has never paid a dividend. During the past five years, after-tax earnings of $200,000 per year have been retained in the business. All of the earnings ($1 million) have been reinvested in operating assets and to finance an expansion of the business. Is the corporation subject to the accumulated earnings tax because no dividends have been paid?

I:16-13 The personal holding company (PHC) tax imposes a penalty on corporations.

a. What is the purpose of the PHC tax?

b. Two tests are used to classify a corporation as a PHC. What are these tests, and how do they serve the purpose of the PHC tax?

I:16-14 In terms of a corporation's incurring liability for the tax, what is the difference between the personal holding company tax and the accumulated earnings tax? Do both taxes require a tax avoidance motive?

I:16-15 Why are controlled groups of corporations required to apportion among group members tax attributes such as the Sec. 179 expense limitation and accumulated earnings credit?

I:16-16 Discuss the underlying rationale for the nonrecognition of gain or loss in a Sec. 351 transaction.

I:16-17 **a.** Brett transfers a building having a $75,000 FMV and a $30,000 adjusted basis to Gator Corporation. An advantage of the asset transfer under Sec. 351 is that Brett can defer his $45,000 ($75,000 FMV − $30,000 adjusted basis) realized gain. What tax disadvantage accrues to Gator as a result of the post-transfer aspects of the transaction?

b. Assume the same facts as in Part a except that the building's FMV is instead $30,000 and its adjusted basis is $75,000. What tax disadvantage results from the transfer as presently structured? Are there any suggestions that you can offer to Brett to improve his tax benefits?

c. Explain why the basis of gain property that is contributed to a corporation in a Sec. 351 exchange is not equal to its FMV on the date of the exchange. Is the basis of the property that is contributed to the corporation adjusted when gain is recognized by the transferor?

d. How would your answers to Part a change if Brett transferred a $25,000 mortgage along with the land and received stock having a value less than the amount of the liability?

I:16-18 Carmen transfers land and a building having a $60,000 adjusted basis and a $100,000 FMV to Bass Corporation in a transaction ostensibly qualifying as tax-free under Sec. 351. Immediately before the exchange, Carmen incurs a $50,000 mortgage on the property. The mortgage is assumed by the corporation, and the mortgage proceeds are used by Carmen to remodel her personal residence.

a. What are the likely tax consequences of the asset transfer?

b. What is the rationale for this result?

I:16-19 Sato, Jose, and Satish form a new corporation. Each individual contributes $100,000 in appreciated property and receives a one-third (equity) ownership interest. Jose and Satish also lend the corporation $250,000 cash in exchange for two 30-year notes (debt) bearing annual interest at a below-market rate of 3.5%.

a. From the corporation's and the shareholders' perspectives, what are the principal advantages of capitalizing with debt as opposed to equity?

b. What are the tax consequences to Sato, Jose, and Satish if the property transfer meets the requirements of Sec. 351?

c. What tax consequences to the corporation and its shareholders would ensue if the IRS recharacterizes the debt as equity?

I:16-20 Chang and George, high income taxpayers, are starting a new business that manufactures and sells explosives. They expect the business to sustain $500,000 in losses in its first two years of operation, then gradually generate profits. Given their high income level, the nature of their business, and its projected operating results, what entity form(s) might Chang and George find advantageous, and why?

I:16-21 Under current tax law, a corporation may deduct interest (subject to limitations) but not dividends paid to shareholders. What potential problems are created by this disparate treatment? Should the law be changed to either disallow the interest deduction or allow a dividends-paid deduction?

I:16-22 Why is it generally preferable to structure the redemption of a shareholder's stock to meet the substantially disproportionate test or the complete termination test rather than the not-essentially-equivalent-to-a-dividend requirement?

I:16-23 Compare the three types of redemptions (i.e., substantially disproportionate, not essentially equivalent to a dividend, and complete termination of shareholder interest) in terms of the following features:

a. Often permissible, even where percentage stock ownership does not decrease by more than 20%.

b. Family ownership attribution rules may be waived under certain conditions.

c. Treated as an exchange taxed as a capital gain or loss.

d. Stock not surrendered in exchange for corporate distribution.

I:16-24 A shareholder owns some shares of a corporation's only class of stock. Explain why a redemption that completely terminates the shareholder's stock interest often qualifies as substantially disproportionate. How could a redemption qualify for capital gain or loss treatment as a complete termination but not as substantially disproportionate?

I:16-25 How does the tax treatment of the complete liquidation of a corporation differ when all of its stock is owned by one corporation versus being owned by one individual?

I:16-26 A corporate formation can take place tax-free when an individual transfers the assets of a business to a corporation and no boot property is distributed by the corporation to the shareholder. A corporate liquidation, on the other hand, is taxable to both the liquidating corporation and its shareholder(s). Why does the tax law differentiate between the two transactions?

I:16-27 Why is Sec. 1244, which pertains to small business corporation stock, in the tax code? What advantages and disadvantages are afforded to owners of Sec. 1244 stock?

I:16-28 Why is it generally preferable to increase salaries, interest, or rental payments to employee-shareholders in a closely held corporation rather than increase dividends?

I:16-29 What advantages and disadvantages accrue to a corporation and its shareholders of (1) electing C corporation status for the business, or (2) electing S corporation status?

I:16-30 Explain the purpose of Schedule M-3 in corporate income tax reporting. Explain which C corporations must file this form and which C corporations need not file this form.

I:16-31 Besides M-1 and M-2, what other schedules are incorporated in Form 1120, and what do they purport to report? *(Hint: go to* www.irs.gov. *Retrieve and review the form.)*

ISSUE IDENTIFICATION QUESTIONS

I:16-32 Acorn Corporation is a very profitable closely held corporation that is owned solely by Helen, age 55, who plans to retire in 10 years. Management continuity is a problem because neither the existing employees nor Helen's children are interested in or capable of managing the company. Acorn has never paid a dividend and does not intend to do so in the future because dividends are not deductible by the corporation and would be taxable to the shareholders. Helen does not wish to expand the business and plans to have the corporation reinvest its earnings in securities. What tax issues should Helen consider in the short run? In the long run?

I:16-33 Hugo and Helga each own unincorporated businesses. They plan to form a corporation to which they would transfer all of their business assets and liabilities in exchange for all of the corporation's stock. Hugo's assets have substantially appreciated over time. A transfer of all of his assets and liabilities would result in an excess of liabilities over the adjusted basis of the assets. Helga has substantial unrealized losses on some of her business properties (e.g., land and a building). Her tax accountant has recommended that she sell the properties to a third party or to the corporation to recognize capital losses or Sec. 1231 losses that could be used to offset personal capital or ordinary gains. The sales proceeds then could be invested in the new corporation. What tax issues should Hugo and Helga consider with respect to the asset transfer, the capital structure, and other aspects of the corporate formation?

I:16-34 Eastern Corporation is formed by John and Joy with an initial capitalization of $500,000. Two alternative capitalization plans are being considered: (1) John and Joy, who are unrelated, each would receive $200,000 of 8% 15-year bonds and $50,000 of Eastern stock, or (2) John and Joy each would receive $250,000 of Eastern stock. John's business assets that would be transferred to Eastern have significantly appreciated over time, and John does not want to recognize any gain on the transfer of these assets. What tax issues should John and Joy consider with respect to the asset transfer, the capital structure, and other aspects of the corporate formation?

PROBLEMS

I:16-35 ***Capital Gains and Losses.*** First Corporation, in its fifth year of operations, realizes the following capital gains and losses in the current year:

Long-term capital gain	$20,000
Long-term capital loss	(8,000)
Short-term capital gain	16,000
Short-term capital loss	(30,000)

Taxable income (exclusive of the capital gains and losses) is $60,000.

a. What is First's taxable income for the current year?

b. In what years can First deduct any capital losses that are not deductible in the current year?

I:16-36 ***Capital Loss Carrybacks and Carryovers.*** Federal Corporation realizes the following in 2025:

Net short-term capital loss	$ 80,000
Net long-term capital loss	120,000

Federal-realized net long-term capital gains in the three preceding years were as follows:

2022	$19,000
2023	20,000
2024	60,000

a. What are the amount and character of any capital loss carryback to 2022 through 2024?

b. What treatment should be accorded any unused capital loss amount after the carryback?

c. What is the character of any unused capital loss carryovers?

I:16-37 ***Dividends-Received Deduction.*** During the current year, Florida Corporation reports the following results:

Net income from operations	$100,000
Dividend from a 20%-owned corporation (qualifying for the dividends-received deduction)	200,000

a. What is the amount of Florida's dividends-received deduction?

b. How would your answer to Part a change if Florida instead reported a $20,000 loss from operations?

c. How would your answer to Parts a and b change if the dividend income were instead from a 10%-owned corporation and the loss from operations in Part b were instead $130,000?

I:16-38 ***Dividends-Received Deduction.*** Calculate the dividends-received deduction and taxable income for each independent scenario below. Assume there are no other income or deduction items.

a. During the current year, Purple Corporation reports $260,000 of gross income from operations and $170,000 of allowable business deductions. In addition, Purple receives dividends of $200,000 from Blue Corporation. Purple owns 25% of Blue and the dividends qualify for the dividends-received deduction.

b. During the current year, Yellow Corporation reports $160,000 of gross income from operations and $180,000 of allowable business deductions. In addition, Yellow receives dividends of $220,000 from Green Corporation. Yellow owns 15% of Green common stock and the dividends qualify for the dividends-received deduction.

I:16-39 ***Net Operating Losses.*** For the current year, Alpha Corporation reports $500,000 of gross income from business operations and $625,000 of allowable business deductions. It also received from a domestic corporation $150,000 in dividends for which it is entitled to a 65% dividends-received deduction. What is Alpha's taxable income reported on Form 1120?

I:16-40 ***Charitable Contributions.*** During the current year, Georgia Corporation has $900,000 of gross income and $650,000 of deductible business expenses, and it contributes $40,000 cash to qualified charities. It does not receive any dividends and does not have any capital loss carrybacks.

a. What is Georgia's charitable contributions deduction for the current year?
b. How are any excess contributions treated?

I:16-41 ***Corporate Tax Rate.*** In the current year, Colorado Corporation has $800,000 of gross profit, $490,000 of deductible expenses, a $10,000 long-term capital gain, and a $2,000 short-term capital gain. Colorado also receives $8,000 of qualified dividends (it owns less than 1% of the payor's stock). Determine Colorado's federal income tax for the current year.

I:16-42 ***Book Minimum Tax.*** Yellow Corporation is subject to the book minimum tax. For the current year, its financial statement net income is $2.5 billion, and its taxable income is $2.0 billion. Net income reflects $330 million of book depreciation expense and $450 million of federal income tax expense, and taxable income reflects $375 million of tax depreciation deductions. Yellow is not allowed any credits. Determine its book minimum tax for the current year.

I:16-43 ***Book Minimum Tax.*** Euclid Corporation is subject to the book minimum tax. It has the following adjusted financial statement incomes (before the adjustment for prior financial statement losses):

Year 1	$2,900,000,000
Year 2	1,800,000,000
Year 3	(1,000,000,000)
Year 4	650,000,000

Determine Euclid's adjusted financial statement income for Year 4.

I:16-44 ***Book Minimum Tax.*** Badger Corporation is subject to the book minimum tax. The following information pertains to Badger for Years 1 and 2:

	Year 1	*Year 2*
Adjusted financial statement income	$4,000,000,000	$4,100,000,000
Taxable income	2,700,000,000	3,000,000,000

a. What is Badger's book minimum tax for Year 1?
b. What is Badger's book minimum tax for Year 2?
c. How much minimum tax credit may Badger claim for Year 2?
d. How much minimum tax credit does Badger carry from Year 2 to Year 3?

I:16-45 ***Accumulated Earnings Tax.*** The IRS is auditing Crane Corporation, a manufacturer of widgets, to determine whether the company is liable for the accumulated earnings tax in a prior tax year. Crane is owned by 20 shareholders who are unrelated and was not a personal holding company in the year in question. Crane reported the following results for the current tax year (a calendar year):

Taxable income	$150,000
Federal income taxes	31,500
Dividends-received deduction	85,000
Dividend paid on June 1	20,000

The accumulated E&P balance on January 1 is $180,000, and the company can justify the retention of the $180,000 of E&P at the beginning of the year plus $80,000 of earnings earned in the current year in terms of meeting its reasonable business needs. In fact, all of the January 1 earnings were retained for the reasonable needs of the business.

a. What is Crane's accumulated taxable income?
b. What is Crane's accumulated earnings tax liability?
c. If Crane potentially owes the accumulated earnings tax, what steps can it take to reduce or eliminate the liability?

I:16-46 ***Personal Holding Company Tax.*** Three unrelated individuals each own one-third of Delta Corporation's stock, and its personal holding company (PHC) income is 75% of its adjusted ordinary gross income. George, Delta's president, believes that PHC status is not detrimental because Delta has paid dividends to its shareholders for several years and therefore should not be liable for any penalty tax.

Delta reports the following results for the current tax year (a calendar year):

Taxable income	$50,000
Federal income tax liability	10,500
Dividends paid on July 1	6,000
Dividends-received deduction	80,000

a. Is George's belief correct? Explain.
b. What is Delta's PHC tax liability, if any, for the current year?
c. How could Delta avoid liability for the PHC tax?

I:16-47 ***Controlled Group.*** Alfred, Barbara, and Cathy own stock in First, Second, and Third Corporations as follows:

Individuals	*First*	*Second*	*Third*
Alfred	40%	40%	40%
Barbara	30%	60%	30%
Cathy	30%	–0–	30%

Which corporations are members of a brother-sister controlled group under the 80%-50% definition?

I:16-48 ***Corporate Formation.*** In the current year, Jack, Karen, Latoya, and Marc transfer the following property to Giant Corporation (an existing corporation), which is owned equally by the four transferors.

- Jack transfers a building with a $60,000 adjusted basis and a $100,000 FMV for additional Giant stock having an $80,000 FMV and $20,000 of marketable securities having an adjusted basis of $15,000 in Giant's hands. $10,000 of MACRS straight-line depreciation on the building was claimed by Jack prior to the transfer.
- Karen transfers equipment with a $120,000 adjusted basis and a $100,000 FMV for additional Giant stock having an $80,000 FMV and a $20,000 20-year Giant note. $25,000 of MACRS depreciation on the equipment was claimed by Karen prior to the transfer.
- Latoya transfers inventory with a $70,000 adjusted basis and a $100,000 FMV for additional Giant stock having an $80,000 FMV and $20,000 cash.
- Marc transfers land with a $30,000 adjusted basis and a $100,000 FMV, subject to a $40,000 mortgage, which Giant assumes, for additional Giant stock having a $60,000 FMV.

a. What amount and character of gain or loss does Jack recognize? What is Jack's basis in the Giant stock and the marketable securities? What is Giant's basis in the building?
b. What amount and character of gain or loss does Karen recognize? What is Karen's basis in the Giant stock and note? What is Giant's basis in the equipment?
c. What amount and character of gain or loss does Latoya recognize? What is Latoya's basis in the Giant stock? What is Giant's basis in the inventory?
d. What amount and character of gain or loss does Marc recognize? What is Marc's basis in the Giant stock? What is Giant's basis in the land?
e. What amount and character of gain or loss does Giant recognize on the distribution of its stock, note, and other property to its shareholders?

I:16-49 *Corporate Formation.* Linda and Cynthia decide to form a corporation in a transaction that meets the requirements of Sec. 351. Linda transfers machinery she has held for several years with a basis of $45,000 and a fair market value of $70,000 for 60% of the new corporation's stock. The machinery was originally purchased for $100,000 and is subject to a liability of $10,000 that the corporation has agreed to assume. Cynthia transfers land held for investment with a basis of $32,000 and a fair market value of $40,000 for the remaining 40% of the corporation's stock.

a. Determine Linda's basis in her shares and any gain or loss recognized.
b. Determine Cynthia's basis in her shares and any gain or loss recognized.

I:16-50 *Corporate Formations: Transfer of Liabilities.* In a transaction that meets the requirements of Sec. 351, Matt transfers to Hill Corporation land with a $600,000 adjusted basis and a $1,000,000 FMV that was used in his business. The land is subject to an $800,000 mortgage, which Hill assumes. Matt receives 100% of Hill stock.

a. What amount and character of gain or loss are recognized by Matt?
b. What is Matt's basis in the Hill stock?
c. What is Hill's basis in the land?

I:16-51 *Earnings and Profits (E&P).* During the current year, Nevada Corporation distributed $100,000 in cash to its sole shareholder. Because the corporation has a $300,000 accumulated E&P deficit at the beginning of the current year and only $30,000 of taxable income in the current year, Nevada's controller believes that the distribution should be treated as a tax-free return of capital to the shareholder. Your investigation reveals the following information that may have an effect on the computation of current E&P:

Federal income tax liability	$ 6,300
Dividends-received deduction	60,000
Depreciation for regular taxable income	94,000
Depreciation for E&P	64,000
Charitable contributions exceeding 10% limitation	9,000

a. What is Nevada's current E&P?
b. How much (if any) of the $100,000 cash distribution is taxable as a dividend to the sole shareholder?
c. What is the amount of Nevada's accumulated E&P balance (deficit) on the last day of the current year?

I:16-52 *Earnings and Profits (E&P).* North Corporation has $200,000 of accumulated E&P at the beginning of the current year. North distributed $300,000 cash during the current year to its shareholders. The company's operating results for the current year are as follows:

Taxable income	$100,000
Tax-exempt bond interest	10,000
Dividends-received deduction	7,000
Federal income tax liability	21,000
Net capital loss	27,000

a. What is North Corporation's current E&P?
b. How much of the $300,000 cash distribution is taxable as a dividend?
c. What is North's accumulated E&P balance (deficit) at the end of the current year?

I:16-53 *Earnings and Profits (E&P).* Ohio Corporation has a $40,000 accumulated E&P balance at the beginning of the current year, and it has a $73,000 current E&P deficit for the current year (which is not a leap year). The corporation distributes $60,000 cash to its sole shareholder on May 5. The shareholder's tax basis in her Ohio stock at the beginning of the year is $325,000.

a. What amount of the $60,000 distribution is taxable as a dividend (assume a ratable allocation of the deficit)?
b. What are the amount and character of any nondividend distributions to the shareholder?
c. What is the amount of Ohio's accumulated E&P balance (deficit) on the last day of the year?

I:16-54 ***Property Distributions.*** Old Corporation has liquidity problems but wants to maintain its existing dividend policy. Old distributes investment land to its two shareholders. The land has a $30,000 adjusted basis and a $100,000 FMV. Old has an E&P balance of $300,000 (excluding the effects of the distribution). Nancy receives 50% of the land, and Palm Corporation receives the remaining 50%. Assume no taxable income or loss from current year operations.

a. What distribution amount is taxable to Nancy and Palm?
b. What is the basis of the property to Nancy and Palm?
c. What are the income tax consequences of the distribution to Old?

I:16-55 ***Property Distributions.*** Without liquidating, Park Corporation distributes equipment with a $70,000 adjusted basis and a $80,000 FMV to Pam. The equipment is subject to a $25,000 mortgage assumed by Pam. Park has $300,000 of E&P (excluding the distribution).

a. How much gain (if any) does Park recognize on the distribution of the equipment?
b. What distribution amount is taxable as a dividend to Pam?
c. What is Pam's basis in the equipment?

I:16-56 ***Withdrawing Earnings from a Business.*** Beth owns 100% of Omega Corporation's stock and also is Omega's CEO. Omega is a C corporation that expects to earn $150,000 before deducting any salary paid to Beth. She wants the corporation to pay her $150,000 for the current year and is considering three options: (1) a $150,000 dividend, (2) a $74,000 salary plus a $76,000 dividend, or (3) a $150,000 salary. Beth's marginal tax rate is 24% for ordinary income and 15% for qualified dividends. Calculate the total tax liability (corporate and individual) for each of the three options, and determine which option results in the lowest total tax. Ignore payroll taxes on any salary.

I:16-57 ***Stock Redemptions.*** Private Corporation redeems some of its stock from Jane, a major shareholder. Before the redemption Jane owns 50 of the 100 outstanding shares, and her daughter Jill owns 40 shares. The remaining ten shares are owned by unrelated individuals. Private redeems for $600,000 in cash 40 of Jane's shares, having a $200,000 basis. Private has $900,000 of current and accumulated E&P. Jane's basis in her remaining ten shares is $50,000 immediately before the redemption.

a. What are the tax consequences of the redemption to Jane?
b. What is Jane's basis in her remaining ten shares after her 40 shares are redeemed?
c. How would your answers to Parts a and b change if Jane and Jill were not related?

I:16-58 ***Stock Redemption.*** Prime Corporation redeems some of its stock from two of its shareholders on the same date. Frank and his son Sam own 50 and 20 shares, respectively, of the 100 shares outstanding before the redemption. The remaining 30 shares are owned by unrelated individuals. Prime redeems for $50,000 10 of Frank's shares having a $15,000 basis. All of Sam's shares, having a $30,000 basis, are redeemed for $100,000. Sam files an agreement with the IRS that he will acquire no interest in the corporation other than as a creditor for 10 years. Prime has current and accumulated E&P of $200,000.

a. What are the tax consequences of the redemption to Frank and Sam?
b. What are the tax consequences of the redemption to Sam if he does not file the agreement or if he violates the agreement during the 10-year period?

I:16-59 ***Corporate Liquidation.*** Queen Corporation adopts a plan of complete liquidation on January 1 of the current year. The corporation sells the assets listed below to King Corporation during the current year. This sale is followed by the assumption of Queen's liabilities by King Corporation and a single liquidating distribution of $1,200,000 cash to Ahmed (Queen's sole shareholder) on December 12 of the current year. Ahmed has a $400,000 basis in his Queen stock, which he has held for seven years. The following facts are relevant:

- Inventory costing $600,000 is sold to customers for $1,000,000.
- Depreciable fixed assets with a $2,000,000 adjusted basis are sold for $3,000,000. Depreciation recapture under Sec. 1245 is $800,000.
- Land held as a capital asset with a $4,000,000 adjusted basis is sold for $5,000,000.

a. What are the tax consequences of the liquidation to Queen?
b. What are the tax consequences to Ahmed upon his receiving the liquidating distribution?
c. How would your answers to Parts a and b change if the assets were instead distributed to Ahmed in exchange for his Queen stock and Ahmed then proceeded to sell the assets for the prices indicated above?

I:16-60 *Corporate Liquidation.* Several years ago, Tampa Corporation acquired 100% of Union Corporation stock for $1,000,000. In the current year, Tampa liquidates Union and receives all of its assets and liabilities. Tampa continues to operate Union as a division. On the liquidation date, the basis and FMV of Union's assets are $700,000 and $2,500,000, respectively. Union also has $100,000 of liabilities that were owed to third parties and E&P of $125,000 on the liquidation date.

a. How much gain or loss does Union recognize as a result of the liquidation?
b. What is Tampa's basis in the Union assets?
c. What Union tax attributes (if any) carry over to Tampa?

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:16-61 Penny and Rick, equal partners in a partnership, recently attended a business-planning seminar held in their town. While at the seminar they learned about limiting their personal liability by using the corporate form of business association. Penny and Rick's business has incurred product liability because it manufactures replacement parts for motorcycles. The most important information that Penny and Rick acquired from the seminar was the tax and legal advantages of incorporating their partnership business. According to a speaker at the seminar, incorporation would protect Penny and Rick from losing their personal wealth if someone sued them. Following a phone call from the partners to set up an appointment, you have scheduled a meeting with Rick and Penny for this afternoon. In preparation for the meeting you draft a list of points to discuss with the couple. What kinds of tax and non-tax strategies should you include in this list?

I:16-62 Peter Martin owned an equity interest in retail hardware stores for a nationwide chain. The eleven stores operate in a single midwestern state under the name Martin Corporation. Peter has been the chief financial officer of the company for 15 years. His retirement plans call for him to take his pension from Martin in six months and play golf in sunny Gainesville, Florida. Since Peter's son and daughter will be operating the company, Peter will probably drop by the office to see family and old friends and to provide management advice. Peter will continue to serve on Martin's board of directors. The Martin stock is owned as follows: Peter and his wife Jaclyn, 25%; Peter's son and daughter-in-law, 25%; Peter's daughter and son-in-law, 25%. All six individuals serve on Martin's board of directors, along with six outside directors. The outside directors and Martin employees (other than those listed above) own the remaining 25% of the stock. Peter is thinking about his post-retirement years. He would like to withdraw money from the company, in addition to his pension and board of directors compensation. He would like to redeem some of his stockholdings each year. What advice can you provide Peter about the tax consequences of the redemption(s)?

I:16-63 Gertrude, age 67 and widowed, owns 50 acres of land on the Chattahoochee River that she and her husband purchased for $10,000 when they were newlyweds many years ago. The land is near Atlanta and is now worth at least $1,500,000 if sold undivided. Gertrude is considering selling the land to her wholly owned ABC Corporation for its $1,500,000 market value. Alternatively, Gertrude is considering transferring ownership of the land to ABC in exchange for additional ABC stock.

ABC will subdivide the land and sell it off as 50 one-acre lots with total proceeds of the lot sales expected to be at least $3,000,000. Land development costs will be approximately $300,000 and sales commissions will be 5% of the sales price.

Analyze the tax implications of Gertrude's two choices. Assume that Gertrude's marginal tax rate on ordinary income is 37% and that she has never generated capital gains. Assume that ABC would recognize ordinary income on the lot sales taxed at the marginal tax rate of 21%. (Ignore the 3.8% net investment income tax for higher-income taxpayers for this problem.)

TAX FORM/RETURN PREPARATION PROBLEMS

I:16-64 *Short Tax Form.* Mallard Corporation is a C corporation and is located at 3800 Market Street, Johnsonville, Colorado 81733. It was incorporated on June 27, 1983, its employer identification number is 44-9876543, and its total assets are $4.7 million. Mallard reports its financial accounting net income for 2024 is as follows:

Sales	$10,000,000
Cost of goods sold	(6,700,000)
Gross profit	$ 3,300,000

Expenses:		
Bad debts	$190,000	
Charitable contributions	90,000	
Depreciation	400,000	
Interest	225,000	
Other	345,000	
Payroll and property taxes	120,000	
Repairs	175,000	
Salaries and wages	865,000	(2,410,000)
Net operating income		$ 890,000
Dividend income		20,000
Interest income		4,000
Long-term capital gain		32,000
Net income before income tax expense		$ 946,000
Income tax expense		(196,350)
Net income		$ 749,650

Additional information about Mallard for 2024 is available:

- Bad debt expense for federal income tax purposes (direct write-off method) is $185,000.
- The charitable contributions were cash.
- Depreciation for federal income tax purposes is $560,000.
- $260,000 of the salaries and wages are for its officers.
- The dividends were received from domestic corporations. Mallard owns less than 1% of their stock.
- $3,000 of the interest income is taxable, and $1,000 of it is tax-exempt.
- A $60,000 net operating loss that arose in 2023 is available.
- Mallard made $160,000 of timely estimated tax payments for 2024. It wants any overpayment to be credited to its 2025 estimated tax.
- Unappropriated retained earnings for financial accounting purposes was $580,000 at the beginning of 2024.
- Mallard paid $740,000 of cash dividends during 2024.

Prepare page 1 of Mallard's 2024 Form 1120 (U.S. Corporation Income Tax Return), as well as Schedules M-1 and M-2 on page 6.

I:16-65 Limestone Corporation is a C corporation that uses the calendar year as its tax year. Its employer identification number is 44-1357913. Limestone is located at 234 Main Street, Anytown, New York 12345 and was incorporated on May 13, 1993. Limestone reports its financial accounting net income for 2024 as follows:

Sales		$7,800,000
Cost of goods sold		(4,200,000)
Gross profit		$3,600,000
Expenses:		
Advertising	$140,000	
Bad debts	17,800	
Charitable contributions	50,000	
Depreciation	52,000	
Interest	38,000	
Other	170,000	
Payroll and property taxes	300,000	
Rent	591,600	
Repairs and maintenance	54,000	
Salaries and wages	1,500,000	(2,913,400)
Net operating income		$ 686,600
Dividend income		1,000
Interest income		1,300
Long-term capital gain		2,000
Net income before income tax expense		$ 690,900
Income tax expense		(147,000)
Net income		$ 543,900

Additional information is available regarding Limestone's income statement items:

- Bad debt expense for federal income tax purposes (direct write-off method) is $17,000.
- The charitable contributions were cash. Limestone has a $32,000 charitable contributions carryover from 2023 to 2024.
- Depreciation for federal income tax purposes is $114,600.
- Other expenses include a $10,000 nondeductible fine.
- $300,000 of the salaries and wages are for its officers.
- The dividends were received from domestic corporations. Limestone owns less than 20% of their stock. Limestone sold this stock during the year, realizing the $2,000 long-term capital gain.
- $900 of the interest income is taxable, and $400 of it is tax-exempt.

Limestone reports the following financial accounting balance sheets for the end of 2023 and the end of 2024:

	At 12/31/2023	*At 12/31/2024*
Cash	$ 160,000	$ 216,700
Accounts receivable (net)	240,000	272,200
Inventories	1,090,000	1,290,000
Tax-exempt securities	71,000	71,000
Other investments	108,000	25,000
Depreciable assets (net)	351,500	419,500
Other assets	163,000	168,000
Total assets	$2,183,500	$2,462,400
Accounts payable	$ 530,000	$ 450,000
Notes payable	500,000	465,000
Other liabilities	44,000	39,000
Total liabilities	$1,074,000	$ 954,000
Common stock	$ 10,000	$ 10,000
Additional paid-in capital	740,000	740,000
Retained earnings	359,500	758,400
Total shareholders' equity	$1,109,500	$1,508,400

Additional information is available regarding Limestone's balance sheet items:

- At the end of 2023, accounts receivable was $250,000 and the allowance for bad debts was $10,000. At the end of 2024, accounts receivable was $283,000 and the allowance for bad debts was $10,800.
- Limestone uses the cost method and FIFO for its inventory costs. It is not subject to the rules of Sec. 263A, and it did not change its methods for determining inventory costs.
- At the end of 2023, depreciable assets were $370,000 and accumulated depreciation was $18,500. At the end of 2024, depreciable assets were $490,000 and accumulated depreciation was $70,500.
- The note payable is due in three years, but Limestone paid back some of it during 2024.
- The retained earnings are unappropriated.

During 2024, Limestone purchased $4.4 million of inventory and paid $145,000 of cash dividends. It made $140,000 of timely estimated tax payments for 2024 and wants any overpayment to be credited to its 2025 estimated tax.

Prepare the following portions of Limestone's 2024 federal income tax return:

- Form 1120, page 1
- Form 1120, Schedules C, J, L, M-1, and M-2
- Form 1125-A

CASE STUDY PROBLEMS

I:16-66 Frank, Paul, and Sam are considering merging their respective unincorporated businesses into a new C corporation called FPS. Frank would transfer land and a building with a $50,000 adjusted basis and $100,000 FMV to the corporation in exchange for $100,000 of FPS common stock. Paul would transfer inventory with an adjusted basis of $60,000 and $100,000 FMV in exchange for $50,000 of FPS stock and $50,000 of FPS 10-year notes. Sam would contribute equipment with an adjusted basis of $80,000 and $60,000 FMV along with legal services worth $40,000 in exchange for $100,000 of FPS stock.

Prepare a client memo that details the tax consequences of the transactions to FPS, Frank, Paul, and Sam.

I:16-67 Beth, who is married, is the sole shareholder of Pet Store Inc., a C corporation. She also manages the store. She wishes to expand the business, but the corporation needs additional capital for her to do so. Fortunately, she has saved $50,000 cash and plans to contribute it to the corporation. However, she does not know whether to contribute the cash in exchange for additional stock or lend the cash in exchange for a note.

Prepare a client memo that explains the tax consequences and requirements of each alternative so that Beth can make an informed decision.

TAX RESEARCH PROBLEMS

I:16-68 The income tax laws for a particular state depend on the business entity's organizational status. Answer the following four questions using the web site for a particular department of state (for example, Florida's information can be found at dos.myflorida.com).

a. What business entity forms are permitted in the state selected?

b. Must a business that uses one of the basic business forms (for example, corporation, partnership, or LLC) organized and operating in the state register with a state agency? If so, which agency?

c. Must a business that uses one of the basic business forms that is organized outside of the state (for example, Georgia) but which operates in the state (for example, Florida) register with an agency in the state of organization? In the state in which it operates? In both states?

d. Does the state selected impose an income tax on corporations organized in the state? On foreign corporations (corporations formed outside of the state selected) who conduct part or all of their business in their home state and part in the state selected?

I:16-69 Charlie Corporation acquired 100% of Delta Corporation common stock on July 1 of the current tax year. Prior to the acquisition, Delta supplied Charlie with about 50% of the raw materials and other components used in producing its plastic toys. Delta will continue to be Charlie's major supplier as well as a supplier to other toy makers. Both corporations have been profitable for years and expect to be profitable after the acquisition. Charlie's CEO asks you if the two corporations, filing a single consolidated tax return would be less costly (in terms of both taxes paid and filing fees) than their filing two separate tax returns. How do you respond to this inquiry?

I:16-70 Ted is the sole shareholder of Zero Corporation. Before his retirement from the company, he gave 100 shares of Zero stock to his son. A few months later, Ted sold his remaining 1,900 shares to Zero for $2 million. The company has E&P exceeding $2 million. Ted's basis in his 2,000 shares before the two transfers was $1.2 million. Ted requested a waiver of the Sec. 318 attribution rules and treated the redemption of Zero stock as a long-term capital gain. Ted also agreed to serve as a consultant to the company. The terms of the agreement are that Ted will be paid as an independent contractor $175 per hour plus expenses. The agreement does not specify a minimum number of hours of services to be provided each month. Three years later the IRS audits Ted's return and argues that the redemption should be treated as a dividend under Sec. 301. Have the Sec. 302(c)(2) requirements that permit a waiver of the family attribution rules been met?

A partial list of research sources is:

- *William M. Lynch v. CIR*, 58 AFTR 2d 86-5970, 86-2 USTC ¶9731 (9th Cir., 1986)

I:16-71 Beth in Case Study Problem I:16-67 also wants to know whether she can make a $50,000 capital contribution to the corporation without the corporation's issuing additional shares. If so, should she have the corporation issue the shares or not? Assume that Beth's basis in her stock is $40,000 and that she files a joint return with her husband.

A partial list of research sources is:

I:16-72 In 2022, Peter purchased 150 shares of Able Manufacturing Corporation stock for $75,000. Able is a C corporation that has 40 shareholders. None of the other 39 shareholders own more than 5% of the 5,000 shares outstanding. No events have occurred that have changed either the number of shares of stock that Peter owns, or Peter's total basis in his shares. Peter is unhappy with Able's management. It is now Spring 2025 and Peter would like to sell part or all of his Able stock and reinvest the proceeds in the stock of another small corporation. At present, his total unrealized gain is $300,000. Peter was told by his stockbroker that he may be eligible to exclude part or all of his profit on the sale of the Able shares from current taxable income. What advice on reducing the tax cost of the sale can you give him?

- Sec. 1(h)
- Sec. 1045
- Sec. 1202
- Sec. 1244

I:16-73 Erin Brinson founded BCD Corporation in 1995 with a contribution of $50,000 cash. The entity has always been a C corporation and Erin has not made any other capital contributions nor has BCD made any distributions. When she retired in 2025, Erin transferred ownership of BCD to her son, Evan, and two other employees. Evan now owns 60% of BCD stock and the two other employees each own 20%. The transaction was consummated by BCD redeeming 90% of Erin's shares for a $2,000,000 note payable over the next 15 years and Evan and the two other employees' buying the remaining 10% for notes totaling $250,000 payable over the next 15 years. All notes bear market rates with interest and principal payable twice a year on a regular basis. Erin owned the building in which BCD operates. As part of this transaction, Erin agreed to a new 5-year lease to BCD at market rental rates. How should the transfers of stock in BCD be taxed? Must Erin take measures to qualify for the most favorable tax treatment?

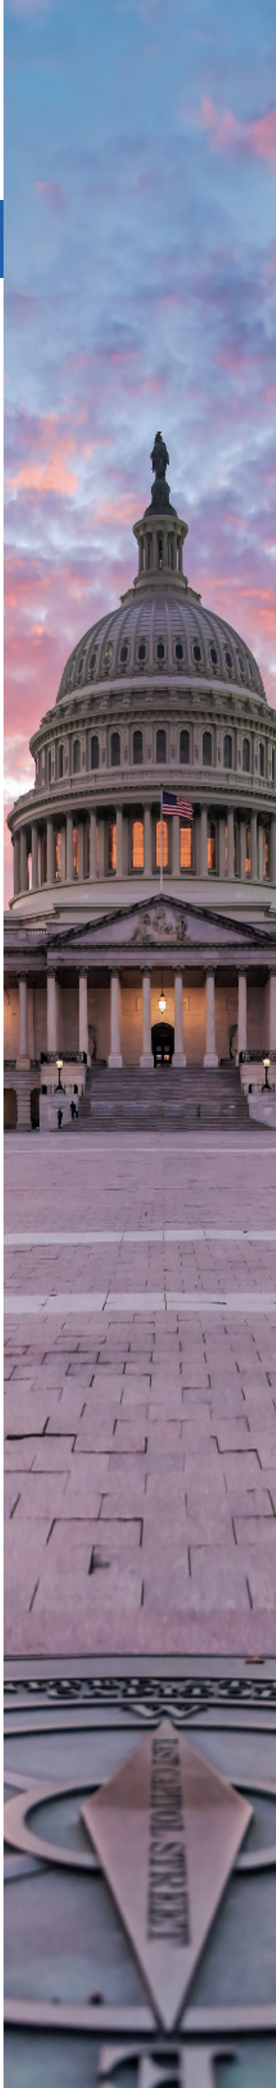
CHAPTER

17

PARTNERSHIPS AND S CORPORATIONS



LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Compare and contrast the various types of pass-through entities
2. Determine the tax implications of forming and operating a partnership, including partnership distributions
3. Explain the requirements for electing and maintaining S corporation status, and apply operating rules for S corporations
4. Identify tax planning opportunities for partnerships and S corporations
5. Comply with procedural and reporting requirements for partnerships and S corporations

James Byard/Zoonar GmbH/Alamy Stock Photo

CHAPTER OUTLINE

Types of Pass-Through Entities...17-2
Taxation of Partnerships...17-4
Taxation of S Corporations...17-21
Tax Planning Considerations...17-33
Compliance and Procedural Considerations...17-35

Pass-through or conduit business entities, such as partnerships, S corporations, limited liability companies, and limited liability partnerships, have the major advantage of entailing only one level of taxation.[1] These legal organizational forms thus represent an interesting blend of what tax theorists call the entity and aggregate theories of taxation. In some ways, they are treated as entities separate from their owners. For example, the entity files a tax return (for information purposes), makes elections pertaining to accounting periods and methods, and computes the results of business operations. In other ways, however, a pass-through entity is treated as a mere aggregation of its owners. For example, the entity is generally not taxed, and the entity's income, deductions, losses, and credits are allocated to the owners based on their proportionate ownership or some other allocation arrangement. These allocated items then pass through to the owners to be reported in their own tax returns.

KEY POINT

Pass-through entities (also called flow-through entities) entail taxation only at the ownership level. This single level of taxation is achieved by (1) exempting the entity from taxation; (2) passing income, deductions, losses, and credits through to the owners; and (3) adjusting the basis of the owner's interest in the entity.

Aside from exempting pass-through entities from entity level taxation, the tax law preserves the single level of taxation in another important way: basis adjustments made to the owner's interest in the entity. Each owner obtains an original basis in his or her ownership interest upon acquiring the interest via formation of the entity, purchase of the entity interest, gift of the entity interest, etc. Subsequently, the owner's basis increases if the entity earns income or if the owner contributes additional money or property to the entity. Conversely, the owner's basis decreases if the entity incurs a loss or if the entity distributes money or property to the owner. In short, the owner's basis increases as the entity expands, and the owner's basis decreases as the entity contracts. Without these basis adjustments, the owner could be subject to double taxation upon selling his or her interest or upon the liquidation of the entity.

EXAMPLE I:17-1 ▶ Conduit Company is a pass-through entity with two owners, George and Flo. Each owner has a $10,000 original basis in the entity. In its first year of operations, Conduit earns $30,000, which is allocated $15,000 to each owner. Thus, each owner reports $15,000 in his or her individual tax return even though the entity does not distribute the earnings to the owners. At the beginning of the second year, Flo sells her interest to Fred for $25,000. If Flo did not get an increased basis adjustment for her $15,000 of earnings, she would recognize a $15,000 ($25,000 selling price − $10,000 basis in the entity) gain on the sale of her interest, which taxes her twice on the $15,000. However, both George and Flo do increase their bases to $25,000 ($10,000 original basis + $15,000 share of entity earnings) at the end of the first year. Therefore, when Flo sells her interest for $25,000, she incurs no addition taxable gain ($25,000 selling price − $25,000 basis in the entity = $0 gain). ◀

The next section of this chapter briefly describes the four basic types of pass-through business entities. Afterward, the chapter provides more detail on the tax treatment of partnerships and S corporations.

TYPES OF PASS-THROUGH ENTITIES

OBJECTIVE 1

Compare and contrast the various types of pass-through entities

PARTNERSHIPS

Of the pass-through business entities, partnerships have been around the longest. The IRC defines a *partnership* as "a syndicate, group, pool, joint venture, or other unincorporated organization" that carries on any business, financial operation, or venture. The definition of a partnership, however, does not include a trust, estate, or corporation.[2] A partner is a member of such syndicate, group, pool, joint venture, or organization, and the partner can be an individual, corporation, trust, or estate. Unlike a corporation, which must file incorporation documents with the state, partnerships require no legal documentation although states do have laws that govern the rights and restrictions of partnerships and model their laws on the Uniform Partnership Act, Revised Uniform Partnership Act,

---

[1] Trusts and estates also are conduit entities to some extent in that they are not taxed on income that is distributed. Trusts and estates are not generally used to conduct business activities. Income taxation of trusts and estates is discussed in Chapter C:14 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*.

[2] Secs. 761(a) and 7701(a)(2).

Uniform Limited Partnership Act, or Revised Limited Partnership Act. A partnership must have at least two partners but can have an unlimited number beyond two.

A partnership can be either a general partnership or a limited partnership. In a general partnership, each partner has unlimited liability for partnership debts. Thus, these partners are at risk for more than their investment in the partnership. In a limited partnership, at least one partner must be a general partner, and at least one partner must be a limited partner. As in a general partnership, the general partners are liable for all partnership debts, but the limited partners are liable only to the extent of their investment plus any amount they commit to contribute to the partnership if called upon. Moreover, limited partners may not participate in the management of the partnership.

A major document for a partnership is the partnership agreement. In this agreement, the partners set out the terms of how the partnership will operate and how income, deductions, losses, and credits will be allocated to the partners. The partners, therefore, should take great care in drafting this agreement.

A partnership files an annual information return with the IRS. This return, Form 1065 (U.S. Partnership Return of Income), reports the results of the partnership's operations and indicates the separate income, deduction, loss, and credit items that pass through to the partners. A sample Form 1065 appears in Appendix B of the *Comprehensive* and *Corporations, Partnerships, Estates & Trusts* volumes.

REAL-WORLD EXAMPLE

For 2021, 4.5 million domestic partnerships filed returns. Of these, 396,000 were limited partnerships, and 2.9 million were limited liability companies. The source for the statistics in this example, and other similar examples in the chapter, is the IRS Statistics of Income.

S CORPORATIONS

An *S corporation* is so designated because rules pertaining to this entity are located in Subchapter S of the Internal Revenue Code (IRC). S corporations are corporations that have elected to be treated by the tax laws as pass-through entities. Similar to partnerships, therefore, S corporations are not taxed, and income, deduction, loss, and credit items pass through to the shareholders. These entities, however, still are corporations so that corporate tax rules apply to them unless overridden by the Subchapter S provisions.[3] As with C corporations, the shareholders enjoy limited liability, but S corporations offer less flexibility than do partnerships. For example, the number and type of shareholders are limited, and the shareholders cannot agree to allocate income, deduction, loss, and credit items in a way that differs from their proportionate stock ownership.

To achieve S corporation status, the corporation must file an S election, and its shareholders must consent to that election. An electing S corporation files an information return, Form 1120-S (U.S. Income Tax Return for an S Corporation), which reports the results of the corporation's operations and indicates the separate income, deduction, loss, and credit items that pass through to the shareholders. A sample Form 1120-S appears in Appendix B of the *Comprehensive* and *Corporations, Partnerships, Estates & Trusts* volumes.

REAL-WORLD EXAMPLE

S corporation returns represented 74.8% of all corporate tax returns filed in 2021. The total number of S corporations has grown from 735,000 returns filed in 1985 to 6.4 million in 2021.

LIMITED LIABILITY COMPANIES

A qualifying *limited liability company (LLC)* combines the best features of a partnership and a corporation even though it is neither. Specifically, it provides the limited liability protection of a corporation for all the LLC's owners, called members. An LLC can have an unlimited number of members who can be individuals, corporations, estates, or trusts.

An LLC may elect to be taxed as either a corporation or a partnership under the check-the-box regulations.[4] Under these Treasury Regulations, an LLC with more than one member is treated as a partnership unless the LLC affirmatively elects to be classified as a corporation. In most cases, LLCs will prefer to be classified as a partnership because of the tax advantages of that organizational form. Assuming the LLC opts for its default partnership classification, it annually files Form 1065 (U.S. Partnership Return of Income). Nevertheless, an LLC is not legally a partnership; it just is treated as one for tax purposes. A single member LLC may choose to be taxed as a corporation or

ADDITIONAL COMMENT

The LLC type of entity has been legislatively adopted by all 50 states.

---

[3] Sec. 1371(a)(1).

[4] Reg. Secs. 301.7701-1 through -4.

to be disregarded for tax purposes. If the entity is disregarded, income earned by the single member LLC is generally taxed to its owner under the sole proprietorship rules.

ADDITIONAL COMMENT

Another variation is the limited liability limited partnership (LLLP). The LLLP is a partnership formed under a state's limited partnership laws but that can elect under the state's laws to provide the general partners with limited liability.[5]

LIMITED LIABILITY PARTNERSHIPS

A *limited liability partnership (LLP)* is a partnership form that is particularly attractive to professional service partnerships, such as public accounting firms. As a result, many professional firms have adopted the LLP form, primarily to limit legal liability. Under state LLP laws, partners are liable for their own acts and the acts of individuals under their direction. However, LLP partners are not liable for the negligence or misconduct of other partners. Thus, from a liability perspective, an LLP partner is like a limited partner with respect to other partners' acts but like a general partner with respect to his or her own acts.

TAXATION OF PARTNERSHIPS

OBJECTIVE 2

Determine the tax implications of forming and operating a partnership, including partnership distributions

FORMATION OF A PARTNERSHIP

Upon forming a partnership, the partners often contribute property (e.g., money, business equipment, and inventory previously used in a proprietorship) or services to the partnership. In exchange for this property and/or services, the partners receive an interest in the partnership. For each partner, a **partnership interest** represents an equity interest similar to corporate stock and is a capital asset.

KEY POINT

The nonrecognition provisions of Sec. 721 apply not only at the time of the formation of a partnership but also to subsequent capital contributions.

Section 721: Nonrecognition Rules. Section 721 prevents the recognition of gain or loss upon either the transfer of property in exchange for a partnership interest or subsequent transfers of property by the partners in exchange for a pro rata increase in their partnership interests. Without this nonrecognition provision, gain on a transfer of appreciated property would be recognized, and the partners might not have sufficient liquidity (e.g., cash) to pay the tax. In addition, the transfer of property to the partnership represents a mere change in ownership form, which is not a recognition event under the tax laws. Finally, the depreciation recapture rules do not apply if no gain is recognized under Sec. 721.

The following exceptions to the Sec. 721 nonrecognition rules should be noted:

- The Sec. 721 nonrecognition of gain or loss rules do not apply if the partner acts in a capacity other than as partner. For example, if a partner sells property to the partnership in an arm's-length transaction, the sale would be taxable.[6]
- If a partner contributes services instead of cash or property in exchange for an unrestricted partnership interest, the fair market value (FMV) of the services is taxed as compensation to the contributing partner because services do not qualify as property.[7]
- The contributing partner recognizes gain if liabilities transferred to the partnership exceed the partner's basis in the partnership.[8]
- The contributing partner recognizes gain if the partnership would be treated as an investment company had it incorporated under Sec. 351.[9]

KEY POINT

The substituted basis of the partnership interest is consistent with the nonrecognition of gain or loss.

Basis of a Partnership Interest. If the Sec. 721 nonrecognition rules apply, Sec. 722 provides a substituted basis rule for determining the basis of a partnership interest. In a simple case where no liabilities exist, the basis of the contributing partner's partnership interest equals the sum of money contributed plus the adjusted basis of other property transferred to the partnership.

---

[5] For a detailed discussion, see Shop Talk, "Service Firms Practicing as LLLPs: What are the Tax Consequences?," *Journal of Taxation,* August 2005.

[6] Reg. Sec. 1.721-1(a).

[7] Reg. Sec. 1.721-1(b)(1). In May 2005, the IRS issued proposed regulations which would bring partnership interests issued in exchange for services under Sec. 83 rules. If and when these regulations become final, they will significantly change the taxation of a partnership interest received for services.

[8] (See Example I:17-4 and the discussion of the partnership basis rules.)

[9] Sec. 721(b). The partnership is considered to be an investment company if 80% or more of the transferred assets (excluding cash and nonconvertible debt obligations) consist of marketable stocks or securities. This restriction prevents investors from diversifying their portfolios by creating a partnership through a nontaxable transfer of securities in exchange for a partnership interest.

EXAMPLE I:17-2 ▶ Allen contributes business equipment having a $10,000 FMV and a $4,000 adjusted basis to the ABC Partnership in exchange for a 30% interest in the partnership. The basis of Allen's partnership interest is $4,000 because he recognizes no gain or loss on the asset transfer under Sec. 721. ◀

If a contributing partner renders services to the partnership in exchange for a partnership interest, the contributing partner's basis equals the amount of income recognized from rendering the services (i.e., the FMV of the services).[10] The FMV basis is permitted because the partner recognizes ordinary income equal to the FMV of the services.

EXAMPLE I:17-3 ▶ Angela contributes property having a $10,000 FMV and a $4,000 adjusted basis and renders services valued at $10,000 in exchange for a 60% interest in the ABC Partnership. Section 721 protects Angela from gain recognition on the property transfer. However, Angela recognizes $10,000 of ordinary income for the services rendered. Thus, the basis of Angela's partnership interest equals $14,000 ($4,000 adjusted basis of the property plus the $10,000 FMV of the services). ◀

ADDITIONAL COMMENT

A partner's basis in the partnership interest commonly is called "outside basis."

Section 752 Basis Adjustments. A partner's basis for his or her partnership interest includes the partner's ratable share of partnership liabilities as well as the basis attributable to any property and services contributed to the partnership. In addition, the following rules apply if a partnership assumes a partner's liability or if the partner transfers property to the partnership subject to a liability:

- An increase in partnership liabilities is treated as a cash contribution by all partners, which increases their bases by their share of the assumed liabilities.
- The partnership's assumption of a partner's liability is treated as a cash distribution to the partner whose liability it assumed, which decreases that partner's basis in the partnership.

EXAMPLE I:17-4 ▶ Brad contributes a building to a newly formed partnership, BCD Partnership, in exchange for a one-third interest in the partnership. The building has a $90,000 FMV, an $80,000 adjusted basis, and is subject to a $60,000 mortgage. The partnership assumes the mortgage but has no other liabilities. Carol and Dale each contribute $30,000 of cash for a one-third interest in the partnership. After the contributions, the partners have the following bases in their partnership interests:

	Brad	*Carol*	*Dale*
Adjusted basis of property or amount of cash contributed	$80,000	$30,000	$30,000
Plus: Share of mortgage assumed by the partnership ($60,000 × 1/3 to each)	20,000	20,000	20,000
Minus: Decrease in Brad's personal liabilities	(60,000)	–0–	–0–
Basis in partnership interest	$40,000	$50,000	$50,000 ◀

Under the general rules of Sec. 752, a partner's basis in the partnership interest increases by the partner's share of any changes in the partnership's liabilities during the year. For example, if total partnership liabilities (including accounts and notes payable, mortgages, bank loans, etc.) increase during the year from $100,000 to $200,000, the basis of a partner with a 50% interest in the partnership increases by $50,000 ($100,000 increase in liabilities × 0.50).

Negative Basis Rule. The basis of a partnership interest cannot be negative. Therefore, Sec. 731 requires recognition of gain in situations where a negative basis would otherwise occur.

EXAMPLE I:17-5 ▶ Becky transfers property having a $100,000 FMV and a $25,000 adjusted basis, which is subject to a $60,000 mortgage, in exchange for a one-third interest in the BCD Partnership. The partnership owes no other liabilities. Becky, Cindy, and Dan each have a one-third interest in the partnership. The $60,000 reduction in Becky's individual liabilities is treated as a distribution of money. Thus, Becky recognizes a $15,000 gain because the distribution exceeds her $45,000 ($25,000 + $20,000) basis in the partnership interest. Becky's basis in the partnership interest is zero after the distribution. The basis is computed as follows:

---

[10] Reg. Sec. 1.722-1. Also, see footnote 7.

Adjusted basis of property transferred	$ 25,000
Plus: Becky's share of the mortgage assumed by the partnership ($60,000 × 1/3)	20,000
Basis before deemed distribution	45,000
Minus: Decrease in Becky's individual liabilities	(60,000)
Becky's basis in the partnership interest (cannot be negative)	$ –0–

The cash deemed distributed in excess of Becky's predistribution basis causes her to recognize a $15,000 ($60,000 − $45,000) gain. Becky reduces her basis to zero by the deemed distribution because her basis in the partnership interest cannot be less than zero. ◀

STOP & THINK

Question: In Example I:17-5, Becky transferred property subject to a liability exceeding the property's adjusted basis. How does the treatment of excess liabilities in a partnership differ from the treatment when such property is transferred to a corporation?

Solution: In a corporate situation, the shareholder recognizes gain to the extent that total liabilities exceed the total basis of property transferred by that shareholder. Thus, had Becky transferred the same property to a corporation in a Sec. 351 transaction, she would have recognized gain for the entire $35,000 ($60,000 mortgage − $25,000 adjusted basis) excess liability. In a partnership, however, the transferor partner recognizes gain only if the deemed money distribution associated with the liability exceeds the partner's basis in the partnership interest. Thus, in Example I:17-5, Becky recognized only a $15,000 gain. If she had substantial basis in an existing partnership, she would have recognized no gain.

Holding Period for a Partnership Interest. If a partner contributes only cash to the partnership in exchange for a partnership interest, the holding period begins the day after the partner acquires the interest. If the partner contributes property, the holding period for the partnership interest generally includes the holding period of the contributed property. However, if the contributed property is other than a capital asset or Sec. 1231 property, the holding period begins on the date the partnership interest is acquired.[11]

EXAMPLE I:17-6 ▶ In the current year, Johanna contributes business machinery to the JK Partnership in exchange for a partnership interest. Johanna originally acquired the machinery on March 12, 2020. Because the machinery is Sec. 1231 property, Johanna's holding period for her partnership interest also begins on March 12, 2020 (the date she acquired the machinery). If Johanna had contributed inventory instead of machinery, the holding period would begin the day after the inventory contribution date. ◀

ADDITIONAL COMMENT

When property that has been held for personal use is contributed to a partnership, the basis equals the lesser of the property's FMV or adjusted basis on the contribution date.

Basis of Partnership Assets. Section 723 provides a carryover basis rule for property contributed to the partnership. Generally the partnership's basis in the property is the same as that of the transferor partner, even if the contributing partner recognizes gain. Without this rule, partners could increase the basis of their property for depreciation and subsequent sale purposes merely by contributing appreciated property to a partnership. When the carryover basis rule applies, the partnership's holding period for the property includes the period the property was held by the contributing partner.[12]

EXAMPLE I:17-7 ▶ In the current year, Carlos contributes equipment with a $6,000 adjusted basis and an $8,000 FMV to the CDE Partnership and receives a one-third interest in the partnership. Carlos acquired the equipment on January 17, 2020. CDE's basis for the equipment is $6,000, its adjusted basis in the hands of the contributing partner. Carlos recognizes no gain due to the Sec. 721

---

[11] Reg. Sec. 1.1223-1(a).

[12] Sec. 1223(2) and Reg. Sec. 1.723-1.

nonrecognition rules. CDE's holding period for the equipment also begins on January 17, 2020 because it includes Carlos' holding period for the property. ◀

ADDITIONAL COMMENT

A partnership's basis in its assets commonly is called "inside basis."

An individual who contributes property encumbered with a liability to a partnership may have to recognize gain on the transfer if the deemed cash distribution from the partnership's assumption of the liability exceeds the partner's basis in the partnership (see Example I:17-5). The adjusted basis of Becky's partnership interest in Example I:17-5 is reduced by this release from the liability (but not below zero). It is not increased by the gain Becky recognizes, however, because the gain recognition is due to a distribution of money on the release from the liability and not from the contribution of the property to the partnership. For a similar reason, the partnership does not increase its basis in contributed property by the partner's recognized gain.[13]

BOOK-TAX ACCOUNTING COMPARISON

For many items, the partnership must maintain separate sets of records for tax purposes, partnership "book" purposes, and financial accounting (GAAP) purposes.

Book Accounting Considerations. Like all publicly traded entities, publicly traded partnerships must produce financial statements prepared in accordance with GAAP. However, one of the most confusing aspects of partnership tax accounting is that Treasury Regulations require the maintenance of another set of accounting "books" based on the requirements of Reg. Sec. 1.704-1(b)(2)(iv). These regulations for properly maintaining partnership capital accounts mandate "book" accounting that is similar (but not identical) to GAAP financial accounting partnership rules. Under these partnership book rules, the carryover basis rules used in taxation do not apply for book accounting. For example, if property is contributed to a partnership, its book value is recorded at the contributed property's FMV while the tax basis is recorded as a carryover. This book accounting in the regulations is a measure of the economic investment each partner has made to the partnership. This book accounting treatment in the regulations results in differences between the tax bases and book values of contributed assets. These differences between tax and book values will be important in our study of special allocations (page I:17-9). Just remember that when the text mentions book accounting for partnerships, it is the accounting required by Reg. Sec. 1.704-1(b)(2)(iv) and not financial statements prepared according to GAAP.

EXAMPLE I:17-8 ▶

Anwar contributes cash of $30,000 and Beth contributes land having a $30,000 FMV and a $20,000 adjusted basis to the AB Partnership. Each partner receives a 50% interest in the partnership. For book accounting purposes, the cash and land are each recorded at $30,000. For tax purposes, the carryover basis of the land to the partnership is $20,000. The partnership realizes no gain or loss for book accounting purposes if it later sells the land for $30,000. However, the partnership recognizes a $10,000 gain under the tax rules because the land's adjusted basis for tax purposes is only $20,000. The $10,000 precontribution gain must be allocated to Beth. (See the section titled Special Allocations on page I:17-9 for a discussion of precontribution gains and losses.) ◀

BOOK-TAX ACCOUNTING COMPARISON

The difference between book value and tax basis also causes GAAP, book, and tax depreciation to differ if a partner contributes depreciable property.

Topic Review I:17-1 highlights the nonrecognition of gain or loss provisions and basis rules.

ADDITIONAL COMMENT

If a partnership claims the amortization deduction in its first year, the partnership is deemed to have properly made the election. If the partnership chooses to forgo the deemed election, it can elect to capitalize the expenditures (without amortization) on a timely filed tax return for the tax year the partnership begins business. See Reg. Sec. 1.709-1.

Organizational and Syndication Fees. A partnership can deduct up to $5,000 of costs of organizing the partnership in the year the partnership begins business. The deduction is limited to the lesser of (1) the amount of organizational expenditures or (2) $5,000, reduced by the amount by which such organizational expenditures exceed $50,000. Any organizational expenditures exceeding the first-year deduction can be deducted ratably over the 180-month period beginning with the month the partnership begins business.[14] Organizational expenditures that qualify for this amortization treatment include items such as the attorney's fees for drafting the partnership agreement, the accountant's fees for setting up the financial record system, and filing fees.

The partnership must capitalize expenses attributable to syndicating the partnership. These expenses, however, are *not* amortizable. **Syndication fees** are expenses incurred to promote and market partnership interests (usually associated with tax-sheltered limited partnership interests). Examples of nondeductible syndication fees include brokerage and registration fees, legal fees of the underwriter and issuer, and printing costs associated with the prospectus and promotional materials.

---

[13] Rev. Rul. 84-15, 1984-1 C.B. 158.

[14] These rules are contained in Sec. 709.

TOPIC REVIEW I:17-1

Section 721 Formations: Nonrecognition of Gain or Loss Rules

- Neither the partnership nor the partners recognize gain or loss on the transfer of property to a partnership in exchange for a partnership interest or an increase in a partnership interest.
- A partner's basis in his or her partnership interest is adjusted upward for the following items:
  - Amount of cash contributed to the partnership
  - Adjusted basis of noncash property contributed
  - FMV of services contributed
  - Section 752 adjustment for liabilities
- The partnership's basis in transferred property carries over from the transferor partners.
- With exceptions pertaining to contributions of cash and ordinary income property, a partner's holding period for his or her partnership interest includes the holding period of the contributed property.
- The partnership's holding period in contributed property includes the transferor's holding period.
- The nonrecognition rules do not apply to services contributed. The contributing partner recognizes ordinary income equal to the FMV of the services, and the partner's basis in the partnership interest is increased by the amount of income recognized from rendering the services.
- The depreciation recapture rules generally do not apply to contributed property. Instead, the depreciation recapture potential carries over to the partnership.

PARTNERSHIP OPERATIONS

The partnership tax return (Form 1065) provides information regarding the measurement and reporting of income, deductions, losses, and credits that pass through to the partners. Certain separately stated items (e.g., capital gains and losses, charitable contributions, and Sec. 1231 gains and losses) pass through to the partners without losing their identity. Such items must be separately stated because their tax effect depends on the partner's particular tax situation. These items are reported on Schedules K and K-1 of the partnership return. Schedule K reports tax information for the entire partnership, and a separate Schedule K-1 summarizes the results for each partner.

Items that do not have special tax effect are netted at the partnership level and are reported on page 1 of Form 1065. The netting of such items results in partnership ordinary income or ordinary loss, which then is allocated to the partners depending on the profit and loss sharing ratios contained in the partnership agreement. Table I:17-1 (on the next page) contains a list of commonly encountered separately stated items and items that make up partnership ordinary income or loss.

ADDITIONAL COMMENT

Many states impose an income tax on each nonresident partner's share of income produced by the partnership in that state, which can cause a partner to file several state income tax returns when a partnership conducts business in those states.

EXAMPLE I:17-9 ▶ The EFG Partnership has three equal partners and incurs the following items in the current year:

Gross profit from operations	$500,000
Long-term capital gain	12,000
Tax-exempt interest income	3,000
Short-term capital loss	4,500
Business deductions	210,000
Depreciation deductions	50,000

These items are classified as follows:

Partnership ordinary income:	
Gross profit from operations	$ 500,000
Minus: Business deductions	(210,000)
Depreciation	(50,000)
Partnership ordinary income	$ 240,000

Separately stated items:	
Long-term capital gain	$ 12,000
Short-term capital loss	(4,500)
Tax-exempt income	3,000

The partnership reports ordinary income or loss items on page 1 of Form 1065. It reports the separately stated items (as well as the $240,000 total partnership ordinary income) on Schedule K of Form 1065. It also prepares a separate Schedule K-1 for each partner that reports to the partner that partner's share of partnership items. In this example, each partner's Schedule K-1 reports one-third of the partnership ordinary income ($80,000 each) and one-third of each separately stated item. The partners then use the Schedule K-1 information to prepare their own tax returns. ◀

SPECIAL ALLOCATIONS

Section 704 permits partners some latitude in allocating income, deductions, losses, and credits among the individual partners. Special allocations are unique to partnerships and permit flexible arrangements among the partners for sharing specific income and loss items. A partner's distributive share of such items generally is determined by the partnership agreement. However, the special allocation provisions restrict the partners' freedom to shift tax benefits among individual partners. For example, the special allocation must have substantial economic effect (e.g., it cannot be a tax sham). In addition, a special allocation must be made for property contributed by the partners when determining the allocation of depreciation deductions and the amount of gain or loss recognized when the partnership eventually sells the property. Essentially, the allocation of the depreciation deductions and the amount of recognized gain or loss must take into account the difference between the partnership's basis for the contributed property and the property's FMV at the time of the contribution.

ADDITIONAL COMMENT

In general, partnership income or loss is allocated according to the partnership agreement, which can be amended any time up to the due date for filing the partnership return.

▼ TABLE I:17-1

Segregation of Ordinary Income and Separately Stated Items

Items	Separately Stated Items (Schedules K and K-1)	Partnership Ordinary Income (or Loss) (Page 1 of Form 1065)
Sales minus cost of goods sold (gross profit)		X
Salaries and wage expense		X
Guaranteed payments to partners*	X	X
Tax, bad debt, and repair expenses		X
Charitable contributions	X	
Investment income (interest, dividends, etc.) and expense	X	
Foreign income taxes paid or accrued	X	
Specially allocated income, deduction, loss, gain, and credit items that differ from the general profit and loss allocation ratios	X	
Tax-exempt interest income	X	
Capital gains and losses	X	
Sec. 1245 and Sec. 1250 depreciation recapture		X
Unrecaptured Sec. 1250 gain	X	
Sec. 1231 gains or losses	X	
Sec. 179 expensing	X	
Tax credits	X	
Tax preference items	X	

*Guaranteed payments appear in both columns because the partnership deducts them to arrive at partnership ordinary income (or loss), and they are reported separately and are taxable to the partner who receives the payments.

WHAT WOULD YOU DO IN THIS SITUATION?

Alex and Alicia plan to form a partnership in the current year with each partner making an equal capital contribution to the partnership. The partnership agreement will specify that the partners share equally in partnership profits and losses. Among other things, the partnership will invest in taxable and tax-exempt bonds. The partners expect the taxable and tax-exempt bonds each to generate $2,500 of interest per year. For the next several years, Alex expects to be in the 12% tax bracket and Alicia expects to be in the 32% individual tax bracket. Without a special allocation, each partner would be allocated $1,250 of each type interest. Instead, however, they want a special allocation in the partnership agreement that allocates (1) all $2,500 of taxable interest to Alex plus $150 ($1,250 × 0.12) of tax-exempt interest to compensate him for the additional taxes owed on the extra $1,250 of taxable interest and (2) the remaining $2,350 ($2,500 − $150) of tax-exempt interest to Alicia. Alex and Alicia seek your advice on the propriety of this special allocation. Hint: Prepare a schedule of after-tax interest income to the partners with and without the special allocation.

EXAMPLE I:17-10 ► Clay and Dana formed an equal partnership five years ago. Clay contributed cash of $100,000, and Dana contributed land having a $60,000 adjusted basis and a $100,000 FMV. The partnership's basis for the land is $60,000 (Dana's carryover basis). If the partnership sells the land in the current year for $110,000, it recognizes $50,000 ($110,000 − $60,000) of gain. If a special allocation of the gain were not required, Clay and Dana each would be allocated $25,000 of the gain based on their equal profit and loss sharing ratios. The special allocation rules, however, require $45,000 of the gain to be allocated to Dana ($40,000 appreciation accruing before her transfer of property to the partnership plus $5,000, which is one-half of the $10,000 of post-contribution appreciation). The remaining $5,000 of post-contribution gain is allocated to Clay [($110,000 − $100,000) × 0.50]. ◄

ALLOCATION OF PARTNERSHIP INCOME, DEDUCTIONS, LOSSES, AND CREDITS TO PARTNERS

If a partner's interest in the partnership changes during the year (e.g., due to the sale of a partnership interest or the entry of a new partner who contributes property to the partnership in exchange for an interest), all the partners must determine their distributive share of the partnership income, deductions, losses, and credits according to their varying interests in the partnership during the year.[15] Treasury Regulations prescribe two basic methods for applying the varying interest rule: (1) the interim closing method, whereby the partnership closes its books at the time of the variation and allocates items accordingly or (2) an elective proration method, whereby the partnership prorates items on either a calendar day, semi-monthly, or monthly convention.[16] Special rules apply to extraordinary items and so-called cash basis items.

ADDITIONAL COMMENT

Under the varying interest regulations, extraordinary items include, among other things, the sale of capital assets or Sec. 1231 property not in the ordinary course of business. These items are allocated based on the partners' interest in the partnership on the date of the transaction. Cash basis items include, among other things, taxes, interest, and payments for services or use of property for which the partnership uses the cash basis method of accounting. These items must be prorated even if the partnership uses the interim closing method.

EXAMPLE I:17-11 ► Colleen and Dan are equal partners in the CDE Partnership, which uses the calendar year as its tax year. On December 1 of the current year, Ed contributes $50,000 cash for a one-third interest in the partnership. The partnership reports $21,900 of ordinary income for the current tax year ending on December 31. The partners agree to the proration method with a calendar day convention. Thus, the variation is deemed to occur at the end of the day on December 1. Accordingly, the partners report their shares of the partnership loss as follows (assuming a non-leap year).

Partner		*Income Allocation*
Colleen	1/2 × $21,900 × 335/365	$10,050
	1/3 × $21,900 × 30/365	600
	Colleen's share of income	$10,650
Dan	Same as Colleen	10,650
Ed	1/3 × $21,900 × 30/365	600
	Total allocation of income	$21,900

[16] Reg. Sec. 1.706-4.

BASIS ADJUSTMENTS FOR OPERATING ITEMS

KEY POINT

Although the basis of C corporation stock is not likely to change over time, the basis of a partnership interest is subject to frequent adjustment.

Under Sec. 705, the basis of each partnership interest is adjusted to reflect the partner's share of income and deduction items. This basis adjustment is necessary to ensure the single level of taxation of partnerships. Basis adjustments for income and deduction items are made currently regardless of whether the partners receive an actual distribution from the partnership. In addition, each partner's basis in the partnership interest is adjusted for capital contributions, withdrawals, and changes in liabilities that occur during the year. Each partner's basis is increased by the partner's distributive share of partnership ordinary income and separately stated income and gain items. The basis of the partnership interest is increased whether the income is taxable to the partners or is tax-exempt.[17]

A partner's basis is decreased (but not below zero) by partnership distributions and by the partner's distributive share of partnership ordinary loss, separately stated losses and deductions, and expenditures that are nondeductible in computing partnership ordinary income or loss (e.g., charitable contributions made by the partnership).

Partners also increase their basis by their share of partnership liabilities. That share depends on whether the partnership liabilities are recourse or nonrecourse. A recourse liability is one where the lender has recourse to all partnership assets as well as general partners' other assets for satisfaction of the loan. In other words, the lender has recourse to the general partners, so they have what is called the economic risk of loss. Thus, recourse liabilities are allocated to the partners based on their economic risk of loss. A nonrecourse liability is one where the lender has recourse only to specified partnership property, such as real estate, for satisfaction of the loan. In other words, the lender has no recourse to the partners. Nonrecourse liabilities are allocated based on the partners' profit-sharing percentages.

EXAMPLE I:17-12 ▶ David and Edith form a partnership in the current year and share profits and losses equally. However, David is a general partner, and Edith is a limited partner. Thus, David has all the economic risk of loss for recourse liabilities. The partnership agreement provides for no special allocations. The following transactions occur during the year:

- David contributes land having a $60,000 basis and a $100,000 FMV in exchange for his initial partnership interest.
- At the end of the year, the partnership has $100,000 of nonrecourse liabilities and $30,000 of recourse liabilities.
- The partnership earns $50,000 of ordinary income.
- The partnership earns $5,000 of tax-exempt interest income.
- The partnership incurs $10,000 of capital losses.
- The partnership makes a $15,000 charitable contribution.
- The partnership distributes $20,000 in cash to David.

David's year-end basis is determined as follows:

Capital contribution of land (adjusted basis)		$ 60,000
Plus:	Share of partnership nonrecourse liabilities ($100,000 × 0.50)	50,000
	Share of partnership recourse liabilities ($30,000 × 1.00)	30,000
	Share of ordinary income ($50,000 × 0.50)	25,000
	Share of tax-exempt interest income ($5,000 × 0.50)	2,500
Minus:	Distribution to David	(20,000)
	Share of charitable contribution ($15,000 × 0.50)	(7,500)
	Share of capital losses ($10,000 × 0.50)	(5,000)
David's basis at the end of the current year		$135,000

◀

STOP & THINK

Question: Why do partners increase the basis of their partnership interests by their share of tax-exempt income?

Solution: Increasing the basis ensures that the income will retain its tax-exempt character when the partnership income is subsequently distributed in the form of cash or the partner's interest in the partnership is sold or exchanged.

---

[17] If the partnership includes oil and gas properties, an increase in basis is made for the excess of percentage depletion claimed over the basis of the property subject to depletion, and a reduction in basis is made for the depletion deduction claimed under Sec. 611.

SPECIAL DEDUCTIONS AND LIMITATIONS

Qualified Business Income Deduction. For tax years beginning after 2017, the tax law allows a deduction for qualified business income (sometimes referred to as the "pass-through deduction").[18] The deduction reduces taxable income (instead of adjusted gross income), but taxpayers can take the deduction regardless of whether they claim the standard deduction or itemized deductions. The deduction pertains to the taxpayer's qualified business income from a partnership, S corporation, or sole proprietorship, as well as to a percentage of the taxpayer's qualified REIT and publicly traded partnership income. The purpose of the deduction is to bring the tax rates on these types of businesses somewhat in line with the tax rate applicable to corporations.

In general, the deduction is limited to the lesser of: (1) the combined qualified business income (combined QBI) of the taxpayer or (2) 20% of the excess of taxable income (without regard to the QBI deduction) over any net capital gain. Qualified business income (QBI) is defined as the net amount of items of income, gain, deduction, and loss for the trade or business, plus 20% of qualified REIT dividends and 20% of qualified publicly traded partnership income. Excluded from this definition are investment-related items such as capital gains and losses, dividends, and interest income as well as any employee compensation and guaranteed payments that the taxpayer receives from the entity.

Generally, QBI includes only income from a U.S. trade or business. In addition, taxpayers in service-related businesses (e.g., law, accounting, healthcare, and consulting) are eligible for the deduction only if their taxable income is less than a threshold amount ($197,300 for 2025 or $191,950 for 2024 for single taxpayers and $394,600 for 2025 or $383,900 for 2024 for married taxpayers filing jointly). This provision also imposes limitations based on W-2 wages. Combined QBI is further defined as the lesser of:

1. 20% of qualified business income, or
2. The greater of the following:
    - 50% of W-2 wages allocable to the taxpayer by the business, or
    - 25% of allocable W-2 wages plus 2.5% of the allocable share of the unadjusted basis of qualified property immediately after it has been acquired.

The W-2 limitations, however, do not apply to those businesses that meet the same taxable income thresholds as those for service-related businesses (that is, $197,300 for single taxpayers and $394,600 for married taxpayers filing jointly, with the same inflation and phase out provisions as mentioned previously).

For partnerships and S corporations, the QBI deduction is applied at the partner or shareholder level. Accordingly, each partner or shareholder takes into account his or her share of entity levels of items in calculating his or her QBI deduction.

EXAMPLE I:17-13 ▶ The AB Partnership has two equal partners, Able and Baker. In the current year, the partnership earns $300,000 of ordinary income (all business) and recognizes a $20,000 long-term capital gain. Able is married and files a joint tax return and claims the standard deduction. Other than partnership items, Able has only a $2,000 short-term capital loss at the individual level. Able's taxable income is calculated as follows (ignoring the deduction for one-half of self-employment tax):

Share of partnership ordinary income		$150,000
Share of partnership long-term capital gain	$10,000	
Minus: Short-term capital loss	(2,000)	
Net capital gain		8,000
Adjusted gross income		$158,000
Minus: Standard deduction		(30,000)
QBI deduction		(24,000)
Taxable income		$104,000

Excess taxable income without regard to the net capital gain and QBI deduction is $120,000 ($150,000 − $30,000). Thus, the QBI deduction is the lesser of:

Combined QBI ($150,000 × 0.20)	$30,000 or
20% of excess taxable income ($120,000 × 0.20)	$24,000

◀

---

[18] Sec. 199A.

Limitation on Net Business Interest. For tax years beginning after 2017, the tax law limits the deductibility of business interest in a given year to the sum of the following amounts:[19]

- Business interest income
- 30% of adjusted taxable income (but not less than zero)
- Floor plan financing interest for motor vehicles

Adjusted taxable income for this purpose means taxable income computed without regard to:

- Income, gain, deduction, or loss not allocable to a trade or business
- Business interest or business interest income (i.e., amounts allocable to a trade or business)
- Any NOL (carryover) deduction
- The qualified business income deduction
- For years beginning before January 1, 2022, any deduction allowable for depreciation, amortization, or depletion
- Any other adjustments provided by the Treasury Department

Taxpayers meeting the $31 million in 2025 ($30 million in 2024) gross receipts test for small businesses, however, are exempt from this limitation.

For partnerships and S corporations, the limitation applies at the entity level and is taken into account in computing partnership or S corporation ordinary (non-separately stated) income or loss. At the partner or S corporation shareholder (owner) level, adjusted taxable income for computing the interest limitation for interest incurred outside the partnership or S corporation does not include pass-through items from the entity, but the owner's adjusted taxable income is increased by the owner's share of the entity's "excess taxable income." Excess taxable income arises when the interest limitation at the entity level exceeds the entity's net interest and is a mechanism for increasing an owner's adjusted taxable income to take advantage of the unused limitation that occurred at the entity level. In this situation,

Excess taxable income = (Excess limit/Limit) × Adjusted taxable income

If net interest is limited at the entity level, the excess interest does not carryover at the entity level. Instead, each owner is allocated a share of the excess interest as a pass-through item to be carried to the owner's succeeding tax year in which the owner is allocated excess taxable income from the same entity. The following example demonstrates these rules.[20] ◀

EXAMPLE I:17-14 ▶ The AB Partnership has two equal partners. Assume no taxpayer qualifies for the small business exception (even though the example uses small numbers for convenience). The partnership earns $24,000 of non-interest ordinary income. The limitation on business interest in this case would be $7,200 ($24,000 × 0.30). Now, consider three independent levels of business interest expense ($7,200, $4,800, and $9,200) as shown in the following table:

Interest Expense	*Deductible Amount*	*Partnership Ord. Inc.*	*Partner Share*	*Excess Interest*	*Excess Limit*
$7,200	$7,200	$16,800	$8,400	$ –0–	$ –0–
4,800	4,800	19,200	9,600	–0–	2,400
9,200	7,200	16,800	8,400	2,000	–0–

If the partners incurred business interest expense from sources other than the AB partnership, they would not be allowed to include their share of partnership items in adjusted taxable income at the partner level to increase partner-level limitations. This rule prevents the partners from using partnership pass-through income to allow additional interest deduction at the partner level beyond that intended by the limitation provision.

---

[19] Sec. 163(j).

[20] See the Conference Report to the Tax Cuts and Jobs Act of 2017.

In the second case, however, each partner's adjusted taxable income is increased by the partner's share of excess taxable income. Excess taxable income is $8,000 ($2,400/$7,200 × $24,000), and each partner's share is $4,000. This increase in adjusted taxable income is the basis for the 30% limit at the partner level, so the increased limit is $1,200 ($4,000 × 0.30). Note that this formulation is a fairly complicated way to increase the partner's limit by the partner's share of the partnership excess limit, in this case $1,200 = $2,400 × 0.50.

Finally, in the third case, each partner's share of excess interest ($1,000 each) carries over at the partner level to offset that partner's excess taxable income from the same partnership in a subsequent year. The excess interest reduces the partner's basis in the partnership in the year it occurs, not in a carryover year when it is used.

These rules apply in a similar manner to an S corporation and its shareholders. Also, the partners (or shareholders) also may qualify for the business income deduction. ◀

LIMITATIONS ON LOSSES AND RESTORATION OF BASIS

Although a partner's distributive share of the partnership's ordinary loss and any separately stated losses and deductions passes through to the partner, Sec. 704(d) limits deductibility of the losses to the partner's adjusted basis in his or her partnership interest as determined at the end of the partnership's tax year.[21] All positive and negative adjustments referred to in Example I:17-12 (except the loss) are made before the limitation is considered. If the loss limitation rule did not apply, the partner's interest could have a negative basis. Any unused losses and deductions carry over indefinitely and are allowed in subsequent years when the partner again has a positive basis in his or her partnership interest.

BOOK-TAX ACCOUNTING COMPARISON

Although a partner's basis in his or her partnership interest may not go below zero, a partner's book capital account (equity) may be negative.

EXAMPLE I:17-15 ▶ Ellen, who has a 50% interest in the EF Partnership, has a $10,000 basis in her partnership interest at the end of Year 1 (before deducting her share of losses). The EF Partnership incurs a $50,000 ordinary loss in Year 1. Ellen's share of the loss is $25,000 ($50,000 × 0.50), but Ellen can deduct only $10,000 in Year 1. The remaining $15,000 of loss carries over to Year 2. The deductible loss reduces Ellen's partnership basis to zero at the end of Year 1. ◀

EXAMPLE I:17-16 ▶ Assume the same facts as in Example I:17-15 except in Year 2 Ellen's share of partnership liabilities increases by $5,000, Ellen's share of Year 2 ordinary income is $5,000, and Ellen makes a $5,000 additional capital contribution. Ellen's basis increases by a total of $15,000 due to the three items. Therefore, in Year 2, she deducts the $15,000 loss carryover from Year 1. The deduction reduces Ellen's partnership basis to zero at the end of Year 2. A zero tax basis for a partnership interest does not necessarily mean that the interest is worthless. The FMV of the partnership's net assets and accounting book value, nevertheless, may be substantial. ◀

Topic Review I:17-2 summarizes the allocation and basis rules.

Passive Activity Loss Limitations. The passive activity loss limitations discussed in Chapter I:9 apply to partners who do not materially participate in the business of the partnership. The passive activity loss rules apply at the *partner* level, that is, each partner must determine whether he or she materially participates in the partnership. If a loss is determined to be passive, a partner may not deduct the loss against either earned income or portfolio income (e.g., dividends and interest) but may deduct the loss only against other passive income. These rules are highly significant and play a major role in determining the deductibility of partnership losses by partners.

TAX STRATEGY TIP

Taxpayers can control to a limited degree when they use partnership and S corporation losses in their individual tax returns. If loss pass-throughs exceed the partner's end-of-year basis in his or her investment, the loss will not be deductible until the partner again has basis in his or her investment. If a taxpayer incurs a loss in the current year and wants to deduct the loss on next year's personal tax return, he or she must make an additional capital contribution after year-end. Alternatively, a shareholder can loan money to his or her S corporation before year-end to ensure having sufficient basis to use the loss currently. A partner can make similar capital contributions. A partnership (but not an S corporation) can control the timing of the loss deductions for its partners through additional borrowings it makes prior to the end of the tax year.

Limitation on Excess Business Losses. For tax years beginning after 2020 and before January 2026, the tax law imposes a limitation on excess business losses, applicable to noncorporate taxpayers.[22] The IRC defines an **excess business loss** as the excess of:

- The aggregate deductions for the year attributable to trades and businesses, over
- The sum of aggregate gross income or gain attributable to such trades or businesses, plus $313,000 ($626,000) for married taxpayers filing jointly) in 2025 ($305,000/$610,000 in 2024).

---

[21] Three other rules also restrict the deductibility of losses. The at-risk rules contained in Sec. 465 limit loss deductions to the partner's at-risk basis. In addition, Sec. 469 contains passive activity loss rules that disallow virtually all net passive activity losses, and Sec. 461(l) limits the deductibility of excess business losses. These restrictions are discussed in Chapter I:9 of this text and in Chapter C:9 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*.

[22] Sec. 461(l).

TOPIC REVIEW I:17-2

Allocation Rules and Basis Adjustments

- When a partner contributes property to a partnership, any unrecognized precontribution gain or loss must be allocated to the contributing partner when the partnership sells the property.
- Partnership income, gains, deductions, losses, and credits are allocated to the partners on a daily basis based on each partner's interest in the partnership.
- Special allocations of income, gains, deductions, losses, and credits are permitted as long as they have substantial economic effect.
- Basis in the partnership interest is increased by the partner's share of ordinary income, separately stated income items, and tax-exempt income. Basis is reduced by a partner's share of ordinary loss, separately stated deductions and losses, and nondeductible expenditures. Basis also is adjusted for capital contributions, distributions, and changes in partnership liabilities. Basis cannot be decreased below zero.
- Ordinary losses and separately stated deduction and loss items that exceed a partner's basis carry over indefinitely until the partner again has a positive basis in his or her partnership interest.

The $313,000 ($626,000) is adjusted for inflation annually. Any disallowed excess business loss carries over as a net operating loss subject to the 80% of taxable income limitation on NOLs in the carryover year.

For partnerships and S corporations, the limitation applies at the partner or shareholder level, with each partner or shareholder taking into account his or her share of entity level items of income, gain, deduction, or loss. However, the new limitation applies after the application of the Sec. 469 passive activity loss limitation.

EXAMPLE I:17-17 ► Carl is single and is a one-third partner in the CDE Partnership, which engages in active businesses. In the current year, the partnership incurs a $960,000 ordinary loss, $320,000 of which is Carl's share. Carl also receives $500,000 of salary from his consulting business. Carl's excess business loss is $7,000 ($320,000 − $313,000 threshold). Thus, he can offset $313,000 of the partnership pass-through loss against his salary, but the remaining $7,000 carries over as an NOL to his next taxable year. ◄

TRANSACTIONS BETWEEN A PARTNER AND THE PARTNERSHIP

Sometimes a partner may independently engage in transactions with the partnership. For example, a partner may sell property to the partnership rather than make a capital contribution of the property. In such transactions, the partner is treated as an outside independent party.[23] Thus, a partner recognizes gain or loss on the sale of property to the partnership, and the partnership receives a cost basis equal to the amount of consideration paid. Because the partner and the partnership are not truly independent parties, abuse of this provision is possible. For example, the partners might want to recognize losses by selling certain assets at a loss to the partnership while still retaining those assets in the partnership. Alternatively, a partner may wish to sell certain depreciable business assets (Sec. 1231 property) at a gain taxable to the partner at favorable capital gains rates while the partnership receives a stepped-up FMV basis in the assets for depreciation purposes. Section 707(b) forestalls such potential abuses by disallowing losses and by providing ordinary income (rather than capital gain) treatment under the following circumstances:

---

[23] Rules for transactions taking place between a partner and the partnership are found in Sec. 707.

ADDITIONAL COMMENT

Defining a partner's interest in a partnership is not always an easy matter. These determinations become difficult if a partner has varying interests in different types of income.

- Losses are disallowed on sales or exchanges between a partner and the partnership if the partner owns more than a 50% interest in the partnership. A loss also is disallowed if a sale or exchange of property occurs between two partnerships in which the same persons own more than a 50% interest. The Sec. 267 constructive ownership rules apply to determine whether the 50% test is met. If the purchaser (i.e., the partner or the partnership) of the property later sells the asset to an outsider, the gain recognized is reduced by the previously disallowed loss.
- Gains are treated as ordinary income (rather than capital gains) if the partner owns (directly or indirectly) more than a 50% interest in the partnership and if the exchanged asset is not a capital asset in the transferee's hands.[24] Again, the Sec. 267(b) constructive ownership rules apply.

EXAMPLE I:17-18 ▶ Ira has a 60% interest in the HI Partnership. Ira sells land with a $100,000 adjusted basis to the partnership for its $60,000 FMV. Ira does not recognize the $40,000 ($60,000 − $100,000) loss because Ira owns more than a 50% interest in the partnership. The partnership takes a $60,000 cost basis in the land. If the partnership later sells the land to an outsider for $110,000, the partnership recognizes only $10,000 of gain because the $50,000 ($110,000 − $60,000) realized gain is reduced by Ira's $40,000 previously disallowed loss. ◀

EXAMPLE I:17-19 ▶ Helen has a 90% interest in the HI Partnership. Helen sells a building used in her business with a $60,000 adjusted basis to the HI Partnership for its FMV of $100,000. After the purchase, the partnership continues to use the building in its business activities. Before the sale, Helen had taken straight-line depreciation. Had Helen instead sold the building to an outsider, she would have recognized $40,000 of unrecaptured Sec. 1231 gain, which usually receives capital gain treatment. However, Helen's $40,000 gain is treated as ordinary income because she sold the building to a partnership in which she owns a more than 50% interest, and the building is not a capital asset to the partnership. The ordinary income does not qualify for a reduced tax rate, nor can it be used to offset capital losses. HI Partnership takes a $100,000 cost basis in the building. ◀

ADDITIONAL COMMENT

A partner generally has to make estimated tax payments to cover the income and self-employment taxes on a guaranteed payment.

Guaranteed Payments. Even though a partner does not qualify as an employee of the partnership for tax purposes, the partnership agreement may provide for fixed salary payments that are not based on partnership income. Generally, the partnership deducts such payments as guaranteed payments to arrive at partnership ordinary income. They are includible in the partner's gross income in the tax year received. The partnership also can make guaranteed payments in lieu of interest payments on the amount of the partner's capital investment. Such payments are deductible by the partnership to arrive at partnership ordinary income and are includible in the partner's gross income.

EXAMPLE I:17-20 ▶ José owns a 40% interest in the JKL Partnership. The partnership agreement provides that José is to receive a fixed salary of $20,000 plus 10% interest on his average capital balance. The partnership makes no guaranteed payments to the other partners. If his average capital balance for the year is $50,000, the partnership would pay $5,000 (0.10 × $50,000) of interest as a guaranteed payment. If partnership ordinary income is $10,000 before deducting the guaranteed payments, the partnership ordinary loss is $15,000 ($10,000 income − $25,000 of guaranteed payments to José). José reports $25,000 of ordinary income for the year, consisting of the $20,000 salary and the $5,000 interest. He also reports a $6,000 ($15,000 × 0.40) ordinary loss. The other partners in total report a $9,000 ($15,000 × 0.60) ordinary loss. ◀

ADDITIONAL COMMENT

Although José receives a fixed "salary," he is not considered to be an employee of the partnership. The "salary" is treated as self-employment income. Moreover, the guaranteed payment is not qualified business income for the QBI deduction, so any amounts allocated to guaranteed payments reduces the QBI deduction.

PARTNERSHIP DISTRIBUTIONS

A distribution of cash or property from the partnership to a partner generally is treated as a nontaxable return of capital. This treatment closely parallels the nontaxable consequences resulting from a capital contribution of property made in exchange for a partnership interest under Sec. 721.

A distribution may result in a reduction of a partner's capital interest in the partnership. This type of distribution is called a **nonliquidating distribution**. The partnership may wish to liquidate a partner's entire interest due to retirement, death, or other business reasons. These distributions are called **liquidating distributions**. In such cases, the liquidating distribution is treated as a sale or exchange of the partnership interest.

---

[24] Gains also are converted to ordinary income if the sale is between two partnerships in which the same persons own directly or indirectly more than a 50% interest in the partnership. In determining the 50% ownership rule, the Sec. 267 constructive ownership rules apply.

Due to the complex nature of this topic, this chapter includes only an abbreviated coverage of these materials, and the discussion of liquidating distributions is omitted. Chapter C:10 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* includes detailed coverage of these topics.

KEY POINT

The adjusted basis of a property distributed by a partnership generally measures the taxability of the distribution. The difference between the property's FMV and basis can be important, however, in determining the property's basis when the partnership distributes multiple properties.

Nonliquidating Distributions. As a general rule, neither the partner nor the partnership recognize gain or loss if the partnership distributes money or other property to the partner.[25] Such nonliquidating distributions usually are treated as nontaxable returns of capital. If the amount of money received by the partner exceeds the partner's basis for the partnership interest, however, the partner recognizes gain to the extent of the excess.[26] If the partnership distributes property other than money (e.g., land and machinery) to the partner, the basis of the partnership interest is reduced by the adjusted basis of the distributed assets. As previously mentioned, neither the partnership nor the distributee partner recognize gain or loss even if the adjusted basis of the distributed property exceeds the partner's basis in his or her partnership interest. In this case, the basis of the property to the partner is reduced to equal the basis of the partnership interest. If the partnership distributes both money and property, the money distribution reduces the basis of the partnership interest before any adjustment for the property distribution.

SELF-STUDY QUESTION

Carl, a partner with a $10,000 basis in the ABC Partnership, receives property having an FMV of $20,000 and a basis of $8,000 in a nonliquidating distribution. How much gain does Carl recognize?

ANSWER

None. A partner recognizes gain only when the amount of cash distributed exceeds the basis of the partnership interest.

EXAMPLE I:17-21 ▶

Jane receives a nonliquidating distribution of $10,000 cash from the JK Partnership. At the distribution date, Jane's basis in her partnership interest is $8,000. Of the $10,000 distribution, $8,000 is a nontaxable free return of capital, which reduces Jane's basis to zero. The remaining $2,000 is a capital gain.[27] ◀

EXAMPLE I:17-22 ▶

Jeff receives a nonliquidating distribution of land having a $6,000 adjusted basis and a $10,000 FMV from the JK Partnership. Jeff's predistribution basis in his partnership interest is $8,000. Neither Jeff nor the partnership recognize gain or loss on the distribution. Jeff's basis in the land is $6,000, and his basis in his partnership interest is reduced by $6,000 (the adjusted basis of the property distributed). Thus, following the distribution, Jeff's basis in his partnership interest is $2,000 ($8,000 − $6,000). ◀

EXAMPLE I:17-23 ▶

Jean receives from the JK Partnership a nonliquidating distribution of $5,000 cash plus land having a $6,000 adjusted basis and a $10,000 FMV. Jean's predistribution basis in her partnership interest is $8,000. Her basis initially is reduced by the $5,000 cash distribution to reflect a nontaxable return of capital treatment. The remaining $3,000 basis in her partnership interest is allocated to the land, and neither Jane nor the partnership recognize gain or loss on the distribution. Jean's basis for her partnership interest is zero after the distribution. ◀

Topic Review I:17-3 summarizes the gain or loss recognition rules relating to nonliquidating distributions.

SALE OF A PARTNERSHIP INTEREST

Recognition of Gain or Loss. A partnership interest is a capital asset similar to a corporate security. It may be sold or exchanged as existing partners retire or withdraw from the business. The remaining partners may acquire the selling partner's interest, or the outgoing partner may sell the interest to an outsider.

ADDITIONAL COMMENT

A sale of a partnership interest is treated as a sale even though the sale results in the termination of the partnership. For example, if one partner in a two-person partnership sells his or her interest to the other partner, the transaction is treated as a sale.

Capital gain or loss generally arises from the sale of a partnership interest because the interest is a capital asset in the hands of the selling partner. For noncorporate partners,

---

[25] Sections 731 through 733 contain the partnership distribution rules. Distribution of marketable securities also can trigger gain recognition.

[26] Exceptions apply if unrealized receivables and inventory items, referred to as Sec. 751 assets, remain in the partnership or are distributed to the partner. In such instances, the partnership and/or the partner may recognize gain on the distribution.

[27] A portion of this gain may be converted to ordinary income if Jane's share of any Sec. 751 assets (i.e., unrealized receivables and substantially appreciated inventory items) held by the partnership changes as a result of the cash distribution.

TOPIC REVIEW I:17-3

Nonliquidating Distributions

- Generally, neither the partner nor the partnership recognize gain or loss on a nonliquidating distribution of money or other property. However, if the distributed money exceeds the distributee partner's basis in the partnership interest, the partner recognizes gain on the excess. For this purpose, any release from partnership liabilities is treated as money distributed to the partner.
- The partner's basis in the partnership interest is reduced (but not below zero) by the amount of money distributed. If the partnership distributes property other than money, the following two points apply.
  - If the adjusted basis of distributed property does not exceed the partner's basis in the partnership interest (after reduction for money distributions), the basis of the distributed property carries over to the partner, and the partner's basis in the partnership interest is reduced by the distributed property's adjusted basis.
  - If the adjusted basis of distributed property exceeds the partner's basis in the partnership interest (after reduction for money distributions), the distributed property takes a basis equal to the partner's remaining basis in the partnership interest, and the partner's basis in the partnership interest is reduced to zero.

the long-term capital gain is taxed at the applicable capital gains rate. In this case, a partnership is viewed as an entity separate and distinct from the partners. However, under Sec. 751, a partner is considered to own a proportionate interest in each partnership asset (i.e., the partnership is viewed as a conduit), which results in part capital gain and part ordinary income treatment depending on the character of the underlying assets.

ADDITIONAL COMMENT

The applicable long-term capital gains tax rate can be 0%, 15%, or 20% depending on the taxpayer's filing status and taxable income level. See the Quick Reference section of the text for threshold levels. In addition, an incremental 3.8% rate applies to net investment income for taxpayers whose modified AGI exceeds $200,000 ($250,000 for married filing jointly).

Under the general rules of Sec. 741, gain or loss is measured by the difference between the amount realized and the selling partner's adjusted basis in the partnership interest. The amount realized includes the partner's share of partnership liabilities from which the partner is released as a result of the sale. The basis of the partnership interest also is adjusted by the selling partner's distributive share of partnership income or loss, which must be computed up to the sale date.

EXAMPLE I:17-24 ▶ On October 1, Jesse sells his interest in the JK Partnership to Paula, an outsider, for $150,000 cash plus release from $30,000 of partnership liabilities. Jesse's basis in his partnership interest is $74,000 before taking into account his distributive share of partnership income for the period ending on the sale date and his share of any increase in partnership liabilities during the same period. For the current year, Jesse's share of the partnership income for the period up to the date of sale is $20,000, and his share of increased partnership liabilities is $6,000. Thus, at the sale date, Jesse's basis in his partnership interest is $100,000 ($74,000 basis on January 1 + $20,000 share of partnership income + $6,000 share of increased partnership liabilities). The amount realized on the sale is $180,000 ($150,000 selling price + $30,000 liability release). Thus, Jesse recognizes an $80,000 gain on the sale, which is capital gain unless ordinary income is triggered under Sec. 751. (See Example I:17-25 for an illustration of Sec. 751 treatment.) ◀

Section 751 Ordinary Income Treatment. Ordinary income rather than capital gain treatment may result under Sec. 751 if a partnership has unrealized receivables or inventory items when the partner sells a partnership interest. A sale of Sec. 751 assets by the partnership results in ordinary income, which passes through to the partners. Thus, this rule prevents a partner from converting ordinary income into capital gain by selling or liquidating the partnership interest before the partnership sells or collects on the Sec. 751 assets. Section 751 assets include the following:

- Inventory items include the traditional definition of inventory plus any other property except capital assets and Sec. 1231 property
- Unrealized receivables for services rendered or goods delivered, such as accounts receivable of a cash method partnership (i.e., receivables having a zero basis)
- Unrealized receivables also include Sec. 1245 and 1250 depreciation recapture potential (i.e., amounts that would be recaptured as ordinary income if Sec. 1245 or 1250 property were sold by the partnership) or recapture potential arising under certain other IRC sections

EXAMPLE I:17-25 ▶ Joy's basis in her partnership interest is $100,000, and the amount realized on its sale is $180,000, which results in an $80,000 gain. The cash basis partnership has accounts receivable with a zero basis and a $30,000 FMV. Joy's share of these receivables is $10,000. Thus, $10,000 of the amount realized on the sale of the partnership interest is attributed to Joy's share of the accounts receivable. Because her share of the receivables has a zero basis and a $10,000 FMV, $10,000 ($10,000 − $0) of the gain is ordinary income to Joy as though she had sold her share of the receivables. The remaining $70,000 ($80,000 − $10,000) of gain from the sale of Joy's partnership interest is a capital gain. ◀

ADDITIONAL COMMENT

In addition to the rates described in the adjoining paragraph, an incremental 3.8% rate applies to net investment income for taxpayers whose modified AGI exceeds $200,000 ($250,000 for married filing jointly).

Other Special Treatments. In addition to Sec. 751 ordinary income treatment, Sec. 1(h) applies various other tax rates on the sale of a partnership interest. First, a 28% rate applies to gain a partner would have recognized had the partnership sold any collectibles. Second, a 25% rate applies to unrecaptured Sec. 1250 gain a partner would have recognized had the partnership sold its Sec. 1250 property (i.e., depreciable real property). These two special rules are in lieu of the 15% or 20% rate that generally applies to capital gains of a partner selling his or her partnership interest. Thus, any gain on the sale of a partnership interest allocable to these items will be taxed at a 25% or 28% tax rate rather than 15% or 20%.

OPTIONAL AND MANDATORY BASIS ADJUSTMENTS

Section 754 provides an election that permits a basis adjustment to the assets of a continuing partnership when a partner sells or exchanges a partnership interest or when certain distributions occur. This election, made by the partnership, prevents inequities that might arise because the basis of partnership assets are not adjusted under general partnership tax accounting rules. The election is binding for all future years unless the IRS consents to a revocation of the election. In addition, a partnership may have to make mandatory basis adjustments in certain circumstances even if a Sec. 754 election is not in effect.

EXAMPLE I:17-26 ▶ Jim acquires Antonio's one-third partnership interest in the ABC Partnership for $40,000. The partnership's balance sheet on the sale date includes the following:

	Adjusted Basis	*FMV*
Assets:		
Cash	$20,000	$ 20,000
Accounts receivable	10,000	10,000
Inventory	15,000	20,000
Depreciable assets	15,000	85,000
Total	$60,000	$135,000
Liabilities	$15,000	$ 15,000
Capital accounts:		
Antonio	15,000	40,000
Beth	15,000	40,000
Carmen	15,000	40,000
Total	$60,000	$135,000

If the partnership has a Sec. 754 election in effect, Jim's optional basis adjustment equals the difference between his basis in the partnership interest of $45,000 ($40,000 amount paid + $5,000 of ABC's liabilities) and his $20,000 ($60,000 × 1/3) share of basis in the underlying partnership assets. Thus, Jim steps up the basis of his share of partnership assets from $20,000 to $45,000. The election does not affect the remaining partners' underlying basis in partnership assets.

The election would be favorable only to Jim because his share of the appreciated partnership assets (inventories and depreciable assets) would be stepped up by $25,000, based on the relative amounts of appreciation for each asset. Jim then would be entitled to additional depreciation deductions on the increased basis of the depreciable assets. In addition, Jim would receive an increased basis for calculating gain on the sale of the inventory. If this election were not in effect and the inventory were sold, Jim would report $1,667 (1/3 × $5,000) gain from the sale of his one-third interest in the inventory even though he paid $6,667 (1/3 × $20,000) for such interest. ◀

Once the election is in effect, its application may be detrimental because a downward adjustment is required if the amount paid for a partnership interest is less than the adjusted basis of the assets (i.e., the assets have declined rather than appreciated in value).

In addition, the IRC contains provisions to prevent shifting of losses using the optional basis adjustment mechanism. Under these rules, the partnership must make a mandatory basis adjustment following a transfer of partnership interest, whether or not the partnership has made a Sec. 754 election, if (1) the partnership's basis in its partnership property is more than $250,000 above the FMV for partnership property (i.e., a built-in loss of $250,000 or more) or (2) the transferee partner would be allocated a loss of more than $250,000 if the partnership were to sell its assets for their FMV immediately after the transfer. This rule, and a similar rule related to distributions, are an attempt to prevent taxpayers from transferring losses on partnership property or on property contributed to a partnership.

PARTNERSHIP ELECTIONS

Tax Year Restrictions. When a partnership's tax year ends, each partner's distributive share of the partnership income (including guaranteed payments) is reported on each partner's Form 1040 (or Form 1120 for corporate partners). With no restrictions about partnership tax year ends, this rule would allow significant deferral of partnership income. Thus, if a partnership's tax year ends on January 31 and the partners report on a calendar year ending December 31, partnership income earned from February 1 of Year 1 through December 31 of Year 1 (as well as partnership income earned in January of Year 2) is reported in the partners' Year 2 federal income tax returns (filed in Year 3). This situation results in an effective 11-month income deferral.

EXAMPLE I:17-27 ▶ Kim is admitted to the ABC Partnership on April 1 of Year 1. Kim is a calendar-year taxpayer who previously was an employee of the partnership from January 1 of Year 1 until her admission to the partnership. Kim's earnings as an employee for the three-month period are $8,000. She received monthly distributions of $3,000 for the last nine months of the year that represent draws against her share of estimated partnership income for the partnership year ending January 31 of Year 2. Kim's distributive share of the partnership income for the period April 1 of Year 1 through January 31 of Year 2 is $60,000. Because distributions to a partner are treated as made on the last day of the partnership's tax year (January 31 of Year 2) and because the partnership tax year ends after December 31 of Year 1, Kim's income for Year 1 is only $8,000 (her salary as an employee for the first three months of Year 1). Kim reports her $60,000 share of partnership income for the year ending January 31 of Year 2, on her Year 2 tax return, which she files in Year 3. ◀

ADDITIONAL COMMENT

Partnerships having only individual partners usually have calendar tax years. The three-step test most often comes into play when the partnership has one or more fiscal year corporate partners.

To prevent or minimize opportunities for deferring partnership income as illustrated in Example I:17-27, Sec. 706 provides the following requirements on the selection of a tax year by the partnership:

- A partnership uses the tax year of the one or more partners who, in aggregate, own a majority interest (more than 50%) in the partnership. This majority interest tax year rule is determined on the first day of the partnership's existing tax year.
- If partners having a majority interest in the partnership do not have the same tax year, the partnership uses the same tax year as *all* of its principal partners (a **principal partner** has a 5% or greater interest in the partnership).
- If the principal partners do not have the same tax year and no majority of its partners have the same tax year, the partnership uses the tax year that allows the "least aggregate deferral." (See Chapter C:9 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* for a detailed discussion of this requirement.)

EXAMPLE I:17-28 ▶ ABC Partnership has one corporate partner, Ace Corporation, with a fiscal year-end of March 31. Ace Corporation has a 25% interest in the ABC Partnership. The other partners are individuals with a calendar year for tax purposes, none of whom has a 5% or more interest in the ABC Partnership. ABC Partnership must use a calendar year for tax purposes (the tax year of the individual partners who in aggregate own a 75% majority interest). ◀

SELF-STUDY QUESTION

Ace and Buckeye, corporate partners in the ABC Partnership, have September 30 year-ends. Craig, an individual partner, uses the calendar year. Ace, Buckeye, and Craig have equal one-third interests in the partnership. What tax year must the newly-organized partnership adopt?

ANSWER

It must adopt a September 30 year-end because it must use the tax year of the two corporate partners that together own a majority interest (two-thirds in this case).

The rules given above have three exceptions. First, a partnership with all calendar year partners can adopt or change to a fiscal year if it can convince the IRS that a business purpose exists for the choice. For example, if the partnership owns a ski resort, it probably could make a good case for closing the partnership tax year on May 31, shortly after the ski season ends, rather than on December 31, which is in the middle of the ski season. However, the IRS must agree that a valid business purpose exists for using the fiscal year.

Second, a partnership may adopt or change to a fiscal year-end if the business recognizes 25% or more of its annual gross receipts in the last two months of the fiscal year, with this being the case for three consecutive 12-month periods. Third, a partnership may elect a maximum three-month deferral if it agrees to make a special tax payment each year that approximates the income deferral benefit.[28] The net effect of these rules is to restrict any deferral opportunities for partnerships in choosing their tax year-end.

(See Chapter C:9 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* for a detailed discussion of partnership tax years.)

Cash Method of Accounting Restrictions. A partnership may elect with its first tax return any method of accounting that clearly reflects income. Unlike the tax year election, partnerships may elect an accounting method without regard to the methods used by its partners. The two most commonly used methods are the cash method and the accrual method. Under the cash method, the partnership reports income as received and expenses when actually paid. Under the accrual method, the partnership reports income when earned even if the cash has not yet been received. Similarly, the partnership reports expenses when incurred, not when actually paid.

Congress understands that the cash method does not always reflect the economic realities of a business. However, Congress also concedes that the cash method is much simpler to use than the accrual method. Because of its simplicity, the cash method still is an option, but Congress has restricted its use. For example, partnerships that have a C corporation for a partner and that have average gross receipts exceeding $31 million during the prior three years are not allowed to use the cash method of accounting.[29] Tax shelters, no matter what their size, may not use the cash method under any circumstances. (See Chapter I:11 for a discussion of permissible accounting methods.)

TAXATION OF S CORPORATIONS

OBJECTIVE 3

Explain the requirements for electing and maintaining S corporation status, and apply operating rules for S corporations

QUALIFICATION REQUIREMENTS

To qualify as an S corporation, a business must meet the definition of a small business corporation.[30] To meet this definition, the entity[31]:

- Must be a domestic (U.S.) corporation rather than a foreign corporation
- Must not be an ineligible corporation[32]
- Must not have more than 100 shareholders[33]

---

[28] Secs. 444 and 7519.

[29] Sec. 448(a)(2). Section 448(b) provides exceptions for farming businesses and certain qualified personal service corporations.

[30] These qualification rules are in Sec. 1361.

[31] An S corporation does not have to be a corporation. Under the check-the-box regulations, a noncorporate entity can make an S election, in which case the entity is automatically deemed to have elected to be treated as a corporation under the check-the-box regulations. (See Reg. Secs. 301.7701-1, -2, and -3 that describe the tax consequences of a noncorporate entity electing to be taxed under the check-the-box regulations.) Most LLCs and partnerships will not make an S election because of the additional benefits available with the more liberal partnership tax rules.

[32] Ineligible corporations include insurance companies, certain financial institutions, U.S. possessions corporations, and Domestic International Sales Corporations.

[33] Members of a single family are counted as one shareholder.

- Must have only individuals, estates, certain kinds of trusts, and certain kinds of tax-exempt organizations as shareholders
- Must not have a nonresident alien as a shareholder
- Must issue only one class of stock

ADDITIONAL COMMENT

Some states do not recognize the S election for state income tax purposes, which results in the payment of state income taxes by S corporations.

All the above requirements must be met for the initial election to be made. Once the corporation makes an S election, the requirements must be met on every day of each tax year the S election is in effect. Otherwise, the election terminates.

100-Shareholder Limitation. The S corporation rules place no restriction on the amount of an S corporation's assets or income. Nevertheless, most large, publicly-traded corporations have more than 100 shareholders and therefore are not eligible for S corporation status.

Members of a family count as one shareholder for the 100-shareholder limitation. Members of a family include a common ancestor, the lineal descendants of the common ancestor, and the spouses (or former spouses) of the lineal descendants or common ancestor. The common ancestor must not be more than six generations removed from the youngest shareholder at the time the corporation makes the election. This is a surprisingly large group treated as a single shareholder. For example, if the common ancestor marries only once and has two children, and each of his descendants does the same, the generation that is six generations removed from the common ancestor includes 64 direct descendants and their 64 spouses. Also, the common ancestor need not be living at the time of the election. The requirement is only that the group of individuals who are to be treated as one family shareholder must have a common ancestor no more than six generations removed.

SELF-STUDY QUESTION

At any one time, how many different individuals could be shareholders in a single S corporation?

ANSWER

The number could be huge because 100 different families could be shareholders.

EXAMPLE I:17-29 ▶

Adobe Corporation, a qualifying S corporation, has 100 shareholders, including both Brad and Vanessa, who are married and are counted as one shareholder. No other shareholders are members of one family. Brad dies and wills his stock to his two best friends, who do not already own Adobe stock. Before the estate distributes the stock, the estate and Vanessa count as one shareholder, and the S corporation remains qualified under the 100-shareholder limitation. Adobe becomes disqualified as an S corporation when the estate distributes the stock to the two friends because the corporation then has 102 shareholders. ◀

TAX STRATEGY TIP

The lower a shareholder's marginal tax rate is in relation to the C corporation tax rate, the more attractive is the S corporation election.

Type of Shareholder Restrictions. A qualifying shareholder must be an individual (other than a nonresident alien), estate, qualifying trust, or qualifying tax-exempt organization.[34] Thus, a C corporation or a partnership may not own stock in an S corporation. If a C corporation or partnership were permitted to own stock, the 100-shareholder limitation easily could be avoided through indirect ownership of the S corporation stock through another corporation or partnership having many shareholders or partners.

Subsidiaries of S Corporations. Although an S corporation may not have a corporate shareholder, it may own stock of a C corporation. If this stock ownership equals or exceeds 80%, however, the S corporation (parent) and the C corporation (subsidiary) are considered an affiliated group under Sec. 1504. Nevertheless, an S corporation may not file a consolidated tax return with its 80%-owned subsidiaries.[35] In addition, an S corporation may have a Qualified Subchapter S Subsidiary (QSub).[36] The subsidiary is a QSub if the parent S corporation owns 100% of the QSub stock and elects to treat the QSub as such. Under this election, the QSub is not treated as a separate corporation for income tax purposes. Instead, all assets, liabilities, income, deductions, and credits of the QSub are treated as those of the parent S corporation.

---

[34] Qualifying trusts include voting trusts, Sec. 678 grantor trusts, electing small business trusts, and qualified Subchapter S trusts. Qualifying tax-exempt organizations include qualified retirement plan trusts and charitable organizations. (See Chapter C:11 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* for a discussion of these trusts.)

[35] Sec. 1504(a)(8).

[36] Sec. 1361(b)(3).

One Class of Stock Restriction. An S corporation can have only one class of stock outstanding. This requirement simplifies problems that otherwise would result from determining how corporate income and losses should be allocated to the shareholders.

TAX STRATEGY TIP

If a corporation needs to issue preferred stock for estate planning reasons (e.g., freezing the value of the stock), the S corporation is not an available choice because the preferred stock is a second class of stock.

The requirement for one class of stock, however, can be troublesome if an S corporation is thinly capitalized (i.e., significant amounts of debt exist in the capital structure) because the debt may in fact be equity and represent a second class of stock. To reduce the uncertainty regarding the second class of stock issue, a safe-harbor rule provides that straight debt shall not be treated as a second class of stock if it meets certain requirements. To qualify as straight debt, the interest rate cannot be contingent on profits,[37] the debt cannot be convertible into stock, and the creditor must be either a person otherwise eligible to be an S corporation shareholder or a person actively and regularly engaged in the business of lending money.

Aside from the debt issue, Treasury Regulations provide that a corporation is treated as having only one class of stock if all outstanding shares of stock confer identical rights to distribution and liquidation proceeds. This test is based on the corporate charter, articles of incorporation, bylaws, applicable state law, and any binding agreements relating to distribution or liquidation proceeds.[38] Nevertheless, shares of common stock can have different voting rights without violating the one-class-of-stock restriction.

EXAMPLE I:17-30 ▶ Dale is the sole owner of an S corporation. For estate tax planning purposes, Dale wishes to make gifts of certain shares of the corporation's stock to his children while still retaining control of the company. A class of S corporation common stock with limited or no voting rights may be issued to Dale in exchange for a capital contribution. Dale can subsequently make gifts of this new stock to his children without disqualifying the S election. ◀

ELECTION REQUIREMENTS

The corporation files an election for S corporation status, and all shareholders who own stock on the date of the S election must consent to the election.[39] The election and consent are filed with the IRS on Form 2553 (Election by a Small Business Corporation). Shareholders who own stock during any part of the tax year including the election date must consent to the election even if they are not shareholders on the election date. A shareholder who sells his or her stock during the year but before the election will receive an allocation of the S corporation's income or loss for the portion of the election year he or she owned the stock.

A corporation may make the election in the tax year preceding the election year or on or before the fifteenth day of the third month of the election year. An election after the fifteenth day of the third month of the election year is treated as made for the next tax year. Once made, the election remains in effect until revoked or terminated.

The tax law, however, provides some relief for improper elections. First, if the corporation misses the deadline for making the S election, the IRS can treat the election as timely if the IRS determines that the corporation had reasonable cause for making the late election. Second, if the election was ineffective because the corporation inadvertently failed to qualify as a small business corporation or because it inadvertently failed to obtain shareholder consents, the IRS can nevertheless honor the election if the corporation and shareholders take steps to correct the deficiency within a reasonable time period.

EXAMPLE I:17-31 ▶ Circle Corporation is a calendar year C corporation. To elect S corporation status for Year 2, it must file the election any time in Year 1 (the preceding year) or during the period January 1 through March 15 of Year 2. If Circle makes the election on March 31 of Year 2, the corporation remains a C corporation for all of Year 2 and becomes an S corporation in Year 3. However, if Circle can show reasonable cause for making the late election, the IRS may allow the election to be effective for Year 2. ◀

---

[37] The interest rate, however, may vary with the prime rate or a similar factor unrelated to the debtor corporation.

[38] Reg. Sec. 1.1361-1(l).

[39] Election and termination rules are in Sec. 1362.

TERMINATION CONDITIONS

Revocation of S Corporation Status. A corporation may terminate an S election either voluntarily via a revocation or involuntarily by failing to continue to meet the requirements for a small business corporation (e.g., if on any day in any year the S corporation has more than 100 shareholders or issues a second class of stock). A voluntary revocation requires consents from shareholders owning more than 50% of the corporation's stock.

TAX STRATEGY TIP

S corporations have been around since the 1960s. Limited liability companies (LLC) and limited liability partnerships (LLP) have become quite popular since the mid-1990s. Sometimes, shareholders may want to change their S corporation to an LLC or LLP. Careful planning is essential to avoid unintended results. Changing from an S corporation to an LLC can be costly because the S corporation is liquidated for income tax purposes. Shareholders may recognize substantial gains in addition to legal and accounting costs in making the transition.

General Effective Date. Under the general rules, a revocation is effective for the entire tax year if the corporation files a statement on or before the fifteenth day of the third month of the tax year. If the corporation files the revocation after this date (e.g., after March 15 for a calendar year S corporation), the effective date is the first day of the next tax year.

EXAMPLE I:17-32 ▶ Shareholders owning more than 50% of the stock of a qualifying calendar year S corporation consent to a voluntary revocation statement filed by the corporation on March 12 of Year 1. Because the corporation filed the revocation on or before March 15, it is taxed as a C corporation for all of Year 1. If the corporation does not file the revocation until March 16 of Year 1, it continues to be treated as an S corporation during Year 1, and it becomes a C corporation in Year 2. ◀

KEY POINT

An election to be treated as an S corporation becomes effective only as of the beginning of a tax year, but a termination can become effective before the end of the normal tax year.

Specified Revocation Date. The law provides an exception when the corporation and its shareholders specify a prospective revocation date. In this case, the revocation takes effect as of the specified date. If the corporation specifies a prospective date other than the first day of a tax year, the revocation results in a short tax year for the final S corporation tax return and a short tax year for the initial C corporation tax return. In this case, the income or loss is allocated between the two short years on a prorated daily basis.[40]

EXAMPLE I:17-33 ▶ Assume the same facts as in Example I:17-32 except that the corporation specifies a prospective termination date of July 1 of Year 1. The revocation is effective as of this date, and the corporation files an S corporation short-period return for the period January 1 through June 30 of Year 1, and files a C corporation short-period return for the period July 1 through December 31 of Year 1. The income or loss is prorated to each return on a daily basis. Unless extended, the S corporation return is due September 15 of Year 1, and the C corporation return is due March 15 of Year 2. ◀

Involuntary and Inadvertent Terminations. An S corporation may involuntarily lose its special tax status and revert to a C corporation if it fails to meet the small business corporation requirements or if it has excessive amounts of passive (investment) income for each year in a three-year period (i.e., more than 25% of gross receipts).[41] However, if the IRS deems that the termination was inadvertent and the S corporation or its shareholders take the necessary steps within a reasonable time period to restore its small business corporation status, the S corporation status is considered to have been continuously in effect.

EXAMPLE I:17-34 ▶ A calendar year S corporation adds an unqualified shareholder on June 4. The S corporation status terminates on June 3. The corporation files a short-period S corporation tax return for the period January 1 through June 3 and files a C corporation tax return for the period from June 4 through December 31. Income or loss is prorated to the two tax returns on a daily basis. ◀

---

[40] The first day of the C corporation tax year is the day on which the revocation occurs. Under Sec. 1377(a)(2), a special election may be made to use the interim closing method (i.e., the books are closed as of the termination date) if all affected shareholders consent to this method.

[41] The passive income restrictions apply solely to S corporations that were previously taxed as C corporations in pre-election years and have accumulated Subchapter C earnings and profits from those years on the last day of three consecutive S corporation tax years. Thus, a corporation that elects S corporation status in its initial tax year and continually retains such status is not subject to the restrictions. If the restrictions apply and the S corporation has passive income exceeding 25% of its gross receipts for three consecutive tax years, the S election automatically terminates on the first day of the fourth tax year. In addition, a penalty tax equal to 35% of the corporation's excess net passive income is imposed during each year of the three-year period.

EXAMPLE I:17-35 ▶ Assume the same facts as in Example I:17-34 except the termination is deemed to be inadvertent, and the violation of shareholder requirements is corrected within a reasonable time period. The S corporation status is considered to have been continuously in effect, and no C corporation tax return is required. A single S corporation tax return will be filed for the year. ◀

Election After Termination. If an S corporation terminates its election either by ceasing to be a small business corporation or by revocation, the corporation may not reelect S corporation status for five years unless the IRS consents to an early reelection.

Topic Review I:17-4 summarizes the S corporation qualification, election, and termination rules.

S CORPORATION OPERATIONS

Income, gains, losses, deductions, and credits pass through to the S corporation's shareholders in a manner similar to the partnership rules. Some common separately stated items include:

- Short-term and long-term capital gains and losses
- Sec. 1231 gains and losses
- Unrecaptured Sec. 1250 gains
- Charitable contributions[42]
- Credits
- Interest on investment indebtedness
- AMT adjustments and tax preference items
- Foreign taxes paid or accrued
- Dividends and other portfolio income

Table I:17-1, appearing earlier in this chapter, provides a list of comparable items for partnerships. These separately stated items are segregated from the computation of ordinary income (or loss) because each item affects the tax returns of the various shareholders differently, depending on their particular tax situation. The residual income or loss amount (i.e., the amount remaining after removing the separately stated items) represents the S corporation's ordinary income (or loss). Separately stated items and S corporation ordinary income (or loss) pass through to the shareholders as of the last day of the S corporation's tax year.[43] The S corporation computes its ordinary income (or loss) on page 1 of Form 1120-S (U.S. Income Tax Return for an S Corporation), and it reports all items on Schedule K of that return. Then, the corporation prepares a Schedule K-1, which reports to each shareholder his or her share of the S corporation items. The shareholders use the Schedule K-1 information to prepare their individual tax returns (Form 1040).

ADDITIONAL COMMENT

A shareholder of a corporation also can be an employee of the corporation. Payments with respect to the employment status are considered salary whereas payments with respect to ownership of stock are treated as corporate distributions.

The tax treatment of some S corporation items is similar to that for C corporations. For example, the S corporation deducts salaries paid to its shareholders in the calculation of ordinary income or loss and not as a separately stated item on Schedule K-1. In addition, S Corporations can deduct up to $5,000 in organizational expenditures in the year in which business begins. The deduction is limited to the lesser of the organizational expenditures or $5,000, reduced by the amount by which such organizational expenditures exceed $50,000. Any excess organizational expenditures may be amortized over 180 months beginning with the month the S Corporation's business begins. S corporations, however, are not entitled to certain other corporate deductions, such as the dividends-received deduction or the net operating loss deduction because dividends and net operating losses pass through to the S corporation's shareholders.

ADDITIONAL COMMENT

A corporation is deemed to make the election to deduct and amortize organizational expenditures unless it chooses to forgo the election.

---

[42] The IRS has ruled in Rev. Rul. 2000-43, 2000-2 C.B. 333, that charitable contributions made by an S corporation cannot be reported using the accrual method permitted for C corporations under Sec. 170(a)(2).

[43] Sec. 1363. Special rules apply if the S election terminates during the tax year. These rules are beyond the scope of this text.

TOPIC REVIEW I:17-4

S Corporation Qualification, Election, and Termination Rules

QUALIFICATION REQUIREMENTS

- An S corporation must be a domestic corporation.
- A maximum of 100 shareholders are allowed. Members of a family count as one shareholder, and each beneficiary of a qualifying trust is a separate shareholder.
- Only individuals (citizens or resident aliens), estates, certain kinds of trusts, and certain kinds of tax-exempt organizations can be shareholders. No corporate or general partnership shareholders are permitted.
- Only one class of stock generally may be issued and outstanding. Multiple classes of stock can be used if the only difference between the classes is voting rights.
- Certain corporations that maintain special tax statuses are ineligible.
- If an S corporation has an 80%-or-more-owned subsidiary, it cannot file a consolidated tax return with that subsidiary. Special rules apply to a Qualified Subchapter S Subsidiary (QSub).

ELECTION REQUIREMENTS

- All shareholders on the S election date must consent to the election and the corporation must file Form 2553. To be effective for the election year, the corporation must file the S election and consent form on or before the fifteenth day of the third month of the election year. Otherwise, the election is effective for the next tax year.
- The IRS can waive the election deadline if the corporation shows reasonable cause for late filing.
- The IRS can grant relief for improper elections if they are inadvertent and subsequently corrected.

TERMINATION RULES

- To effect a voluntary revocation, shareholders owning more than 50% of the S corporation's stock must consent. The revocation is effective for the entire year if made on or before the fifteenth day of the third month of the tax year. Otherwise, the revocation is effective the first day of the next tax year unless the corporation specifies a prospective revocation.
- An involuntary termination occurs if (1) the S corporation fails to meet any of the small business corporation requirements (e.g., it has more than 100 shareholders) or (2) it has excessive passive investment income in a three-year period (assuming the corporation has prior C corporation accumulated E&P). If the IRS deems the involuntary termination to be inadvertent, the S corporation status is considered to have been continuously in effect provided the corporation and shareholders correct the defect.
- Aside from the inadvertent termination exception, a corporation may not reelect S corporation status for five years after a termination or revocation.

EXAMPLE I:17-36 ▶ Ajax Corporation, an S corporation owned equally by Linda and Hal, reports the following operating results for the current year (a non-leap year):

Sales	$10,000
Minus: Cost of goods sold	(2,000)
Gross profit	$ 8,000
Plus: Long-term capital gains	3,000
Total income	$11,000
Minus: Administrative expenses	(800)
Repairs	(200)
Sec. 1231 losses	(1,100)
Charitable contributions	(900)
Net income	$ 8,000

The S corporation reports these items on its tax return as follows:

	Schedule K Ordinary Income	*Schedule K* Separately Stated Items	*Linda's K-1*	*Hal's K-1*
Sales	$10,000			
Cost of goods sold	(2,000)			
Administrative expenses	(800)			
Repairs	(200)			
Total ordinary income	$ 7,000		$3,500	$3,500
Long-term capital gains		$ 3,000	1,500	1,500
Sec. 1231 losses		(1,100)	(550)	(550)
Charitable contributions		(900)	(450)	(450)

Linda and Hal each report $3,500 of ordinary income plus 50% of each separately stated item on their individual tax returns. ◀

SELF-STUDY QUESTION

Compare the manner in which income of an S corporation is allocated among the shareholders to the manner in which partnership income is allocated among the partners.

ANSWER

In the case of an S corporation, the income must be allocated based on the percentage of stock owned on a daily basis. Partners have much greater flexibility. The partnership agreement serves as the basis for allocation, with special allocations being permitted. No special allocations are permitted for an S corporation.

Income, gains, losses, deductions, credits, and other separately stated items are allocated to the shareholders based on the number of shares of stock owned on each day of the S corporation's tax year. Thus, if a shareholder sells S corporation stock during the year, ordinary income (or loss) and separately stated items are allocated on a daily basis to the seller and purchaser of the stock.[44]

EXAMPLE I:17-37 ▶ Assume the same facts as in Example I:17-36 except Linda sells her stock to Mark on the 181st day of the tax year. Income through the date of the transfer is allocated to Linda. Thus, Linda reports $1,736 [0.50 × (181 ÷ 365) × $7,000] of the ordinary income and a similar portion of each separately stated item. Mark reports the ordinary income and separately stated items for the remainder of the year. The sale does not affect the way Hal reports his share of the income. ◀

BASIS ADJUSTMENTS TO S CORPORATION STOCK

Usually, a shareholder's original basis for S corporation stock is either the amount paid for the stock or a substituted basis from a nontaxable transaction (e.g., a Sec. 351 corporate formation).[45] Adjustments subsequently are made for ordinary income (or loss) and separately stated items that pass through to the shareholders, as well as additional capital contributions by shareholders and distributions to shareholders.[46] These basis adjustments apply in the following order: (1) positive adjustments for contributions, S corporation ordinary income, and separately stated income and gain items; (2) negative adjustments for distributions; and (3) negative adjustments for S corporation ordinary loss and separately stated deduction and loss items.

EXAMPLE I:17-38 ▶ During the current year, Juan pays $40,000 for 100 shares of Allied Corporation stock. Allied is a calendar year S corporation. Juan's share of Allied's current year ordinary income is $10,000. In addition, his share of separately stated items includes $4,000 of long-term capital gains and $2,000 of Sec. 1231 losses. Allied also distributes $5,000 cash to Juan during the year. Juan's basis in the S corporation stock on December 31 is computed as follows:

Original basis (cost)		$40,000
Plus:	Share of ordinary income	10,000
	Share of long-term capital gains	4,000
Minus:	Cash distribution to Juan	(5,000)
	Share of Sec. 1231 losses	(2,000)
Basis of stock on December 31		$47,000

◀

---

[44] If the corporation makes a special election under Sec. 1377(a)(2), the income is allocated according to the accounting methods used by the S corporation (instead of on a daily basis) when a shareholder terminates his or her interest during the tax year.

[45] The death or gift tax basis rules also may be used to determine the initial basis for S corporation stock.

[46] Sec. 1367.

The logic behind these basis adjustments is the same as for partnerships. They prevent double taxation of income or double deductions for losses.

EXAMPLE I:17-39 ▶

Kayla is in the 37% tax bracket for ordinary income and faces a 23.8% tax rate on long-term capital gains (including the 3.8% tax on net investment income). She plans to form Alpha Corporation by contributing $100,000 in exchange for Alpha stock. Alpha will invest the contributed funds in its business operations. During the next ten years, Kayla expects Alpha to earn $900,000 of ordinary business income before taxes. At the end of the ten-year period, Kayla plans to sell her Alpha stock. If Alpha operates as an S corporation, Kayla will recognize $900,000 of pass-through income on which she must pay taxes. Assuming she will qualify for the 20% qualified business income deduction, her pass-through income effectively will be taxed at 29.6% [37% × (1 − 0.20)]. So that Kayla will have sufficient cash to pay these taxes, Alpha will distribute $266,400 ($900,000 × 0.296) over the ten-year period. On the other hand, if Alpha operates as a C corporation, it will pay taxes at its 21% tax rate and will make no distributions to Kayla. Thus, Alpha will incur $189,000 ($900,000 × 0.21) of taxes over the ten-year period. If an S corporation, Alpha's value at the end of ten years will be 733,600 ($100,000 contribution + $900,000 pretax earnings − $266,400 distributed). If a C corporation, its value will be $811,000 ($100,000 contribution + $900,000 pretax earnings − $189,000 corporate taxes paid). Thus, Kayla will sell the stock at one of these amounts, depending on whether Alpha operates as an S corporation or a C corporation. The results of these alternatives are as follows:

	S Corporation with Stock Basis Adjustments	*C Corporation with No Stock Basis Adjustments*
Selling price of stock	$ 733,600	$811,000
Original contribution	$ 100,000	$100,000
Kayla's pass-through income	900,000	–0–
Distributions to Kayla	(266,400)	–0–
Adjusted basis of Alpha stock	$ 733,600	$100,000
Gain on sale of stock	$ –0–	$711,000
Times: Capital gains tax rate	0.238	0.238
Tax on capital gain	$ –0–	$169,218
After-tax proceeds (selling price − tax)	$ 733,600	$641,782

Thus, the S corporation results in the higher after-tax proceeds primarily because its shareholder is subject to only one level of taxation rather than the double taxation afforded by the C corporation, that is, the corporate-level tax and the tax upon selling the C corporation stock. Essentially, with the qualified business income deduction, the S corporation income is taxed at 29.6% [37% × (1 − 0.20)], while the C corporation income is taxed at 39.8% [21% + 23.8% × (1 − 0.21)]. ◀

S CORPORATION LOSSES AND LIMITATIONS

An ordinary loss and any separately stated loss and deduction items of an S corporation are allocated among the shareholders based on the number of shares of stock owned on each day of the S corporation's tax year.[47] The last day of the S corporation's tax year determines when the shareholders report the loss on their tax return.[48] Most S corporations must use a calendar tax year, although an S corporation can use a fiscal year if that year can be shown to be a natural business year because the corporation's operations are cyclical.

EXAMPLE I:17-40 ▶

Sigma Corporation is an S corporation whose tax year ends on January 31 of each year because Sigma has a natural business year that ends on that date. All of its shareholders report their taxes using a calendar year. Sigma reports a $100,000 ordinary loss for the 12-month period ending January 31 of Year 2. The shareholders report the entire loss on their calendar Year 2 returns. ◀

---

[47] Sec. 1366(a)(1).

[48] The same rule applies for reporting ordinary income and separately stated income and gain items.

A shareholder's deduction for ordinary losses and separately stated items cannot exceed his or her basis for the S corporation stock plus the debt basis for any shareholder loans made to the S corporation.[49] A shareholder, however, obtains no debt basis for corporate-level liabilities even if he or she guarantees them. The following rules apply in determining the deductibility of ordinary loss and separately stated loss items:

- Positive basis adjustments increase stock basis for ordinary income or separately stated income or gain items incurred during the year before ordinary losses, and separately stated losses and deductions reduce stock basis.
- The shareholder's deduction for pass-through losses is limited to the sum of (1) stock basis after the above positive adjustments and after distributions but before negative adjustments for losses and deductions and (2) the shareholder's debt basis.[50]
- A shareholder's pass-through loss first reduces the shareholder's stock basis (but not below zero).
- If the loss exceeds the shareholder's stock basis, the remaining pass-through loss reduces the shareholder's debt basis (but not below zero).
- If the loss exceeds both the stock and debt basis, the shareholder carries over the excess loss and deducts it in a subsequent year when the shareholder again has basis in the stock or debt.

KEY POINT

An S corporation shareholder gets debt basis, separate from stock basis, for amounts the shareholder lends directly to the corporation, but the shareholder gets no basis for corporate liabilities owed to third parties. This treatment differs from that of partnership liabilities.

ADDITIONAL COMMENT

The loss carryover period is indefinite but does not transfer to another taxpayer if the shareholder disposes of all his or her stock or if the shareholder dies. Furthermore, if the S election terminates, the loss must be used against any basis of the former S corporation stock by the end of a one-year post- termination transition period.

EXAMPLE I:17-41 ▶ Matt owns 20% of the stock of an S corporation. His stock basis is $18,000 at the end of Year 1 after adjustments for separately stated income and gain items. Matt also loans the S corporation $12,000 during Year 1. The S corporation incurs a $200,000 ordinary loss in Year 1. Matt's share of the ordinary loss is $40,000 (0.20 × $200,000). Matt's deduction and carryover of the unused loss are as follows:

Basis in stock	$ 18,000
Minus: Ordinary loss applied against stock basis	(18,000)
Basis in stock after ordinary loss	$ –0–
Debt basis in loan	$ 12,000
Minus: Ordinary loss applied against debt basis	(12,000)
Debt basis in loan after ordinary loss	$ –0–
Share of ordinary loss	$ 40,000
Minus: Loss allowed in Year 1 ($18,000 + $12,000)	(30,000)
Carryover of ordinary loss to Year 2	$ 10,000 ◀

If a shareholder's basis is insufficient to absorb the entire amount of ordinary loss (and separately stated loss and deduction items), the pass-through of each item is prorated. For example, if a shareholder's basis is $5,000 and he or she has a $6,000 ordinary loss and a $4,000 capital loss, the total deduction is limited to $5,000. This deduction consists of a $3,000 [($6,000 ÷ $10,000) × $5,000] ordinary loss and a $2,000 [($4,000 ÷ $10,000) × $5,000] capital loss. The shareholder also has a $3,000 ($6,000 − $3,000) ordinary loss carryover and a $2,000 ($4,000 − $2,000) capital loss carryover.

Restoration of Basis. If a shareholder's debt basis is reduced by a loss deduction, subsequent net increases in a future year initially increase the debt basis until that basis reduction is fully restored. Any excess positive adjustment then increases the shareholder's stock basis.

---

[49] Sec. 1366(d)(1). The deductible loss is treated as a deduction for AGI on an individual shareholder's tax return. S corporation shareholders also are subject to special limitations on losses and deductions that pass through from the S corporation (e.g., at-risk limitations under Sec. 465 and passive activity losses under Sec. 469). (See Chapter C:11 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* for a discussion of these additional limitations.)

[50] Secs. 1366(d)(1)(A) and 1367(a)(2).

EXAMPLE I:17-42 ▶ Assume the same facts as in Example I:17-41, and in Year 2 the S corporation's ordinary income is $140,000. Matt's share of the income is $28,000 (0.20 × $140,000). The $28,000 of income earned in Year 2 permits Matt to deduct the $10,000 ordinary loss carryover from Year 1. Matt's net increase is $18,000 ($28,000 − $10,000 loss carryover). Thus, Matt restores debt basis by $12,000, its original amount. The remaining $16,000 of income increases stock basis. Accordingly, stock and debt basis are adjusted as follows:

	Stock Basis	*Debt Basis*
Basis at beginning of year	$ –0–	$ –0–
Plus: Income for the year ($28,000)	16,000	12,000
Minus: Loss carryover from prior year	(10,000)	–0–
Basis at end of year	$ 6,000	$12,000

◀

ADDITIONAL COMMENT

In a manner similar to partners, S corporation shareholders may be subject to the passive activity loss limitations on their pass-through losses if they do not materially participate in the S corporation's business. See Chapter I:9 for a detailed discussion of the passive activity loss limitations rules.

If the debt basis is not fully restored, gain results when the corporation repays the loan. If the loan is in the form of a note, the repayment results in a capital gain because the note constitutes a capital asset.[51] However, ordinary income results if the loan is an unsecured advance.[52]

Special Deductions and Limitations. An S corporation and its shareholders are subject to the rules regarding the qualified business income deduction, the limitation on net business interest, and the limitation on excess business losses. These topics were covered in the partnership section of this chapter and apply in a similar way to S corporations and their shareholders.

Topic Review I:17-5 summarizes the basic tax rules for S corporation shareholders.

OTHER S CORPORATION CONSIDERATIONS

ADDITIONAL COMMENT

Another important difference between partnerships and S corporations involves the tax consequences of property distributions. An S corporation recognizes gain if it distributes appreciated property to its shareholders, but a partnership would not recognize such gain. Also, the property's FMV is used for S corporation distributions while the property's adjusted basis is used for partnership distributions.

Distributions of Cash and Property to Shareholders. A money or property distribution made by an S corporation to its shareholders is treated as a return of capital if the S corporation has no accumulated earnings and profits from pre-S corporation years.[53] As such, the amount of money or FMV of the noncash property distributed to a shareholder reduces the basis of the shareholder's S corporation stock. If distributions exceed the shareholder's stock basis, the excess is treated as a capital gain if the stock is a capital asset.[54]

The S corporation recognizes gain (but not loss) if it distributes noncash property to its shareholders.[55] The distribution is treated as if the corporation sold the property to the shareholders at its FMV. The gain passes through to the shareholders who increase their stock basis accordingly. The distributed property's FMV then reduces the shareholders' stock bases.

TOPIC REVIEW I:17-5

Basic Tax Rules for S Corporation Shareholders

- Ordinary losses and separately stated loss and deduction items are allocated to shareholders on a per share per day basis.
- Shareholders may be eligible for the 20% qualified business income deduction.
- Limitations on net business interest and excess business losses may apply.
- The last day of the S corporation's tax year determines the year in which the shareholders report their share of income, gain, deductions, losses, credits, and other separately stated items.
- Basis cannot be reduced below zero. Positive basis adjustments are made for ordinary income and separately stated income or gain items before basis reductions for distributions, ordinary losses, and separately stated loss and deduction items.
- Losses initially reduce the shareholder's stock basis (but not below zero). Any excess losses then reduce a shareholder's basis in debt owed by the S corporation to the shareholder.
- Unused losses are suspended and carried over until the shareholder again has basis to absorb the losses.
- Net positive basis adjustments in subsequent years initially increase the shareholder's debt basis until fully restored. Any additional positive basis adjustments increase the shareholder's basis in S corporation stock.

---

[51] Rev. Rul. 64-162, 1964-1 C.B. 304.

[52] Rev. Rul. 68-537, 1968-2 C.B. 372.

[53] The tax consequences of property distributions to an S corporation's shareholders are discussed in Chapter C:11 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*.

[54] Sec. 1368(b). The S corporation also can have accumulated E&P from a tax year in which it was taxed as a C corporation. The tax consequences of a distribution made by an S corporation having accumulated E&P are complex. These rules are beyond the scope of this text but are discussed in Chapter C:11 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts*.

[55] Sec. 311(b).

EXAMPLE I:17-43 ▶ Austin Corporation, an S corporation, distributes land (a capital asset) to its sole shareholder Sue. The land has a $10,000 basis and a $90,000 FMV. Prior to the distribution, Sue's stock basis is $200,000. The S corporation recognizes an $80,000 capital gain, which passes through to Sue. Sue increases her Austin stock basis by the $80,000 pass-through gain and decreases it by the $90,000 FMV of the distribution. Thus, after the distribution, her stock basis is $190,000, and her basis in the land is $90,000 (its FMV). ◀

Tax Year Restrictions. S corporations must use a calendar year unless the corporation can establish a business purpose (i.e., a natural business year) for choosing a fiscal year-end.[56] These year-end restrictions prevent shareholders from deferring pass-through income for up to 11 months (e.g., if a January 31 fiscal year-end were permitted). Also, like a partnership, an S corporation may elect a maximum three-month deferral if it agrees to make a special tax payment each year that approximates the deferral benefit.

ADDITIONAL COMMENT

For purposes of calculating which shareholders own more than 2% of the S corporation's outstanding stock, the Sec. 318 attribution rules apply.

Treatment of Fringe Benefits. S corporation shareholders who own more than 2% of the outstanding stock are not eligible for some nontaxable corporate employee fringe benefits, including the following examples:

- The group term life insurance exclusion for premiums paid for up to $50,000 coverage (Sec. 79)
- The exclusion from income for premiums paid for accident and health insurance and medical reimbursement plans (Secs. 105 and 106)[57]
- The exclusion for cafeteria plan benefits (Sec. 125)
- Meals and lodging furnished for the convenience of the employer (Sec. 119)

A more-than-2% shareholder includes the fringe benefits listed above in gross income as compensation, which is deductible by the S corporation. Amounts received by a shareholder owning 2% or less of the S corporation's stock are excluded from the shareholder's gross income and deductible by the corporation as they would be for an employee of a C corporation.

EXAMPLE I:17-44 ▶ Bass Corporation, an S corporation, pays health insurance and group term life insurance premiums for its employee-owner group, all of whom own more than 2% of the Bass stock. The owner-employees include the premiums in their gross income, and the S corporation deducts the premiums. Employee-shareholders who own more than 2% of the S corporation's stock can deduct 100% of the amount includible in gross income as being paid for medical insurance for themselves, their spouses, and their dependents.[58] The premiums would not be included in the gross income of employees who did not own any Bass stock, or who owned 2% or less of the Bass stock. ◀

Many S corporation fringe benefits are not subject to special treatment for a more-than-2% shareholder. A partial list of such fringe benefits includes:

- Stock options
- Nonqualified deferred compensation
- Compensation for injuries and sickness (Sec. 104)
- Educational assistance programs (Sec. 127)
- Dependent care assistance programs (Sec. 129)
- Certain fringe benefits (Sec. 132)

The employee reports these fringe benefits under the general gross income inclusion rule applicable to the fringe benefit, and the corporation deducts them as ordinary business expenses under Sec. 162.

---

[56] Sec. 1378(b).

[57] Rev. Rul. 91-26, 1991-1 C.B. 184, clarified by Ann. 92-16, 1992-5 I.R.B. 53. Rules similar to those applying to more than 2% S corporation shareholders will apply to all partners in a partnership. The payment is deductible by the partnership and includible in the partner's gross income. Notice 2008-1, 2008-1 C.B. 251, eases the for-AGI deductibility of health insurance premiums.

[58] Sec. 162(l)(1) and (5).

Corporate Tax on Built-in Gains. A 21% corporate tax on built-in gains applies if a corporation that previously was a C corporation elects S corporation status.[59] The built-in gains tax does not apply to a corporation that always has been an S corporation or that elected S corporation status before 1987. A built-in gain exists if the FMV of an asset exceeds its adjusted basis on the day the S election becomes effective. If the corporation sells an asset with a built-in gain within the five-year recognition period beginning on the effective date for the election, the S corporation pays tax on the built-in gain. Built-in losses existing on the first day of the S election period can reduce built-in gains. Any appreciation on the asset that occurs after conversion from a C corporation to an S corporation is subject to the regular S corporation pass-through rules but is not taxed under the built-in gains tax. Assets acquired after the first day of the S corporation election period also are exempt from the built-in gains tax.

EXAMPLE I:17-45 ▶ Beach Corporation, an accrual basis taxpayer, incorporated four years ago and subsequently elected S corporation status beginning January 1 of last year. On January 1 of last year, Beach owned land with a $50,000 basis and a $200,000 FMV. Beach sold the land this year for $225,000. Thus, Beach reports a total gain of $175,000 ($225,000 − $50,000). The first $150,000 of the gain is subject to the built-in gains tax at the corporate level and passes through to the shareholders. The remaining $25,000 of post-conversion appreciation also is subject to the regular S corporation pass-through rules but is not subject to the built-in gains tax. In addition, the built-in gains tax paid by the corporation passes through as a loss to the shareholders. ◀

KEY POINT

Congress enacted the built-in gains tax to prevent C corporations from avoiding double taxation in a corporate liquidation or asset sale by electing S corporation status immediately before the liquidation or sale.

Tax on Excess Net Passive Income. A 21% excess net passive income tax applies when an S corporation has passive investment income for the tax year that exceeds 25% of its gross receipts and, at the close of the tax year, the S corporation has E&P that accumulated while it was a C corporation.[60]

EXAMPLE I:17-46 ▶ Acorn Corporation made an S election last year after having been a C corporation for several years. Acorn has accumulated C corporation E&P at the end of the current year. During the current year, Acorn's excess net passive income is $10,000, comprised of dividends and interest. The excess net passive income tax is $2,100 ($10,000 × 0.21). The tax reduces (on a pro rata basis) the passive income items (e.g., dividends and interest) that pass through to Acorn's shareholders. ◀

STOP & THINK

Question: Suppose shareholders of an S corporation wanted to convert the business into a limited liability company (LLC). What tax obstacles might they encounter?

Solution: The shareholders would have to liquidate the corporation and recontribute the assets to the LLC. Because the S corporation must comply with general corporate tax rules, the liquidation will cause gain and loss recognition at the corporate level for property distributed (Sec. 336). This gain (loss) will pass through to the shareholders and be taxable (deductible) to them. In addition, the liquidation might trigger the corporate level tax on built-in gains (Sec. 1374). Thus, conversion from an S corporation to an LLC could have adverse tax consequences. Contrast these major tax obstacles with the conversion of a partnership to an LLC. The IRS has ruled that the conversion of a partnership to an LLC is a nontaxable event.[61]

Sale of S Corporation Stock. If an S corporation shareholder sells his or her stock, he or she recognizes a capital gain. Unlike under the partnership rules discussed earlier, the S corporation shareholder does not have to convert any of the gain to ordinary income as under Sec. 751 or to unrecaptured Sec. 1250 gain under Sec. 1(h). If the S corporation owns collectibles, however, gain attributable to those assets would be subject to the

---

[59] Sec. 1374. This discussion is only a sketch of these complex rules.

[60] Sec. 1375(a). These rules are discussed in greater detail in Chapter C:11 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts.*

[61] Rev. Rul. 95-37, 1995-1 C.B. 130.

28% capital gains tax rate.[62] Aside from this exception and other rare exceptions, the shareholder's gain would be taxed at the applicable capital gains rate if he or she has held the stock for more than one year.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 4

Identify tax planning opportunities for partnerships and S corporations

USE OF OPERATING LOSSES

Often, the decision to select a particular form of business organization involves both tax and nontax issues. For example, owners may prefer the corporate form because of nontax attributes such as limited liability, the relative freedom to transfer ownership interests, and the ability to raise outside equity capital.

In many instances, however, the tax attributes dominate, making the partnership or S corporation form preferable to the C corporation. If the owners expect operating losses in the initial years of operation, they may prefer the partnership (or LLC) form to either the C corporation or the S corporation form of organization. In a C corporation, the operating losses do not benefit the shareholders directly and may be of no benefit if the corporation cannot generate sufficient profits in future years to offset the loss carryovers.[63] In a partnership, the losses pass through to the partners, limited by their basis for the partnership interest. The basis of a partner's interest, however, includes his or her share of partnership liabilities. In contrast, an S corporation's ability to pass through losses is limited to the shareholder's basis in the stock and any shareholder loans to the corporation. Other S corporation liabilities are not included in determining the shareholder's loss limitation. Thus, the partnership (or LLC) form of conducting business may provide its owners a greater opportunity to deduct losses than does the S corporation form.

EXAMPLE I:17-47 ▶

Mary and Marty are considering whether to operate a new business venture as a C corporation, S corporation, LLC, or a partnership. Regardless of the form chosen, Mary and Marty will materially participate in the business. Mary and Marty plan to invest $50,000 of equity and raise an additional $50,000 from outside creditors (e.g., accounts payable and a mortgage). They expect initial losses of $20,000 per year for five years. Three alternatives are available. If they use a C corporation, the corporate losses are not deductible (i.e., the corporation has net operating loss carryovers of $100,000 after the five-year period). If they elect S corporation status, Mary and Marty can deduct only $50,000 because the general corporate debt is not included in their stock basis. The remaining $50,000 loss carries over indefinitely at the shareholder level unless the shareholders lend $50,000 of additional funds to the corporation (instead of having the corporation borrow these amounts from outside creditors) or make $50,000 of additional capital contributions. If they form a partnership or LLC, Mary and Marty can deduct the full $100,000 of losses because their basis includes their ratable share of the partnership's liabilities.[64] Assuming Mary and Marty have sufficient other sources of income to absorb the losses, the value of these additional deductions in the first five years favors the partnership or LLC form of organization. A nontax factor that might influence the decision is the limited liability protection offered by the corporate or LLC forms. ◀

STOP & THINK

Question: Paul, a single taxpayer, owns a business that produces $50,000 of annual profits. If the business were incorporated, it could justify retaining all of its earnings and pay little or no dividends. Paul also has $180,000 of taxable income from other sources. Should Paul organize the business as an S corporation or as a C corporation?

Solution: Although many factors would be involved, one important tax factor is that Paul's $50,000 of income from the business would be taxed at 32% marginal tax rates (in 2025) if the business is an S corporation because the $50,000 increases his taxable income to $230,000. If Paul claims the 20% QBI deduction, these marginal tax rates effectively would be 25.6% [32% × (1 − 0.20)]. In contrast, the C corporation tax rate is 21% of taxable income. Thus, with Paul's facts, the marginal tax rate on the $50,000 is lower with the C corporation form even after considering the QBI deduction for S corporation qualified business income. Additional taxation would result with the C corporation form, however, if Paul withdrew profits as a dividend or recognized a capital gain upon selling his stock or liquidating the corporation.

---

[62] Reg. Sec. 1.1(h)-1. An incremental 3.8% rate also applies to net investment income for taxpayers whose modified AGI exceeds $200,000 ($250,000 for married filing jointly).

[63] In a C corporation, net operating losses carry back two years and over 20 years if arising before 2018. If occurring in tax years 2018, 2019, or 2020, NOLs carry back five years and carry forward indefinitely. If arising after 2021, NOLs carry over indefinitely with no carryback allowed.

[64] Taxpayers also must satisfy the at risk rules of Sec. 465, the passive activity loss rules of Sec. 469, and the excess business loss limitations of Sec. 361(l). These topics are discussed in Chapter I:9.

INCOME SHIFTING AMONG FAMILY MEMBERS

Subject to gift tax rules and restrictions, an attractive tax planning strategy is to shift income from higher tax bracket family members to children or others who are subject to lower tax rates. With an S corporation, parents may gift nonvoting common stock and shift income to their children if the children are not subject to the kiddie tax. Thus, a portion of the S corporation income is taxed to the children even though the parents retain all voting rights for the corporate stock. A partnership interest also may be gifted to other family members. However, the IRS generally does not recognize the family member as a partner where capital (e.g., inventory, plant, and equipment) is a material income-producing factor unless the individual is the real owner of the interest and has dominion and control over it. If property is given to a child subject to the kiddie tax, income above certain levels will be subject to a modified version of the estate and trust income tax rates (see Chapter I:2).

With an S corporation or a partnership, family members (e.g., children) can be hired as employees. Thus, income may be shifted to lower tax bracket family members. The kiddie tax rules discussed previously have no effect on earned income even if derived from a parent's business. In a partnership and an S corporation, however, the IRS will reallocate income to reflect the value of the services and capital contributions if the entity pays unreasonable salaries.[65]

EXAMPLE I:17-48 ▶ Paul, the sole owner of an S corporation, gifts 20% of the corporation's stock equally to his children Kelly, age 25, and Joslyn, age 12. The S corporation's ordinary income is $100,000 after deducting a $10,000 salary paid to Paul. If a reasonable salary for Paul's services is $50,000, the IRS may reduce ordinary income by the additional $40,000 of salary to $60,000 ($100,000 − $40,000) and increase Paul's taxable compensation to $50,000. Thus, the share of ordinary income that passes through to the children is reduced from $20,000 (0.20 × $100,000) to $12,000 (0.20 × $60,000). Kelly's $6,000 ([$60,000 × 0.20] × 0.50) of income is taxed at her regular tax rate because she is not subject to the kiddie tax. On the other hand, $3,900 ($6,000 − $2,100) of Joslyn's income is taxed at special rates based on the estate and trust income tax rates. ◀

OPTIONAL BASIS ADJUSTMENT ELECTION UNDER SEC. 754

A basis adjustment election under Sec. 754 usually is desirable for an incoming partner whose partnership interest cost more than the tax basis of his or her share of partnership assets. The excess amount increases the new partner's basis for his or her interest in the partnership's assets. If the partnership made a Sec. 754 election in a prior year, the election continues in effect and automatically applies to subsequent years. When made, all partners must agree to the election because the partnership makes the election rather than the individual partner.

Therefore, before consummating a sale, an incoming partner should attempt to obtain assurances from the remaining partners that the partnership will make the election in the current year if the election is not already in effect. The partnership makes the election by attaching a statement to a timely filed tax return for the year the transaction occurs. The partnership cannot make a retroactive election for prior years.[66] A Sec. 754 election, however, may have adverse effects in subsequent years if the amount paid for a partnership interest is less than the tax basis of partnership assets because the incoming partner

ADDITIONAL COMMENT

The Sec. 754 election may be revoked only with the approval of the IRS. The IRS, however, will not approve a revocation if the primary purpose is to avoid stepping down the basis of partnership assets.

---

[65] Secs. 1366(e) and 704(e).

[66] Reg. Sec. 1.754-1(b).

must reduce his or her share of basis in partnership assets. However, if the partnership assets have a built-in loss exceeding $250,000 or if the incoming partner would be allocated more than a $250,000 loss if the partnership were to sell its assets at their FMV, the downward basis adjustment would be mandatory even without the Sec. 754 election. See Chapter C:10 of *Pearson's Federal Taxation: Corporations, Partnerships, Estates & Trusts* for additional coverage of this topic.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 5

Comply with procedural and reporting requirements for partnerships and S corporations

PARTNERSHIP FILING REQUIREMENTS AND ELECTIONS

Partnerships must file Form 1065 (U.S. Return of Partnership Income) on or before the fifteenth day of the third month following the close of its tax year (by March 15 for a calendar year partnership). The partnership, however, can obtain an automatic six-month extension by filing Form 7004 (Application for Automatic Extension of Time to File Certain Business Income Tax, Information, and Other Returns). The IRS imposes penalties for failure to file a timely or complete partnership return.

Partnership Elections. The partnership makes most elections affecting the computation of partnership income. These elections include:

- Selection of a tax year
- Selection of an overall accounting method
- Inventory valuation method
- Depreciation methods
- Amortization method for organizational expenditures
- Optional basis adjustments under Sec. 754

REAL-WORLD EXAMPLE

A partnership reported its capital gain on a sale in one tax year rather than on the installment basis. The partners could not use the installment method because this is a partnership election. *George Rothenberg,* 48 T.C. 369 (1967).

An election made at the partnership level is binding on all partners.

In addition, each partner also makes certain elections. The common elections falling into this category are the partners' own accounting periods and methods and the election to take a credit or deduction for foreign income taxes.

REPORTING PARTNERSHIP ITEMS ON FORM 1065

A partnership reports ordinary income or loss on page 1 of Form 1065 while Schedule K summarizes all the separately stated items (e.g., capital gains and losses, tax credits, and charitable contributions). Schedule K also includes guaranteed payments made to partners and the partnership's ordinary income or loss, even though reported on page 1. The partnership prepares a separate Schedule K-1 for each partner. The Schedule K-1 reports each partner's share of the Schedule K items, depending on the agreed upon ratio for sharing income, deduction, loss, and credit items. This schedule becomes the primary input for preparing each partner's federal income tax return.

A partnership also must prepare a balance sheet (Schedule L), a reconciliation of income per books with income per tax (Schedule M-1), and an analysis of capital accounts (Schedule M-2). A partnership must file Schedule M-3 in lieu of Schedule M-1 if any one of the following conditions holds: (1) the amount of total assets reported in Schedule L exceeds $10 million; (2) the amount of adjusted total assets equals or exceeds $10 million, where adjusted total assets equal the Schedule L amount plus the following items that appear in Schedule M-2: (a) capital distributions made during the year, (b) net book loss for the year, and (c) other adjustments; (3) total receipts equal or exceed $35 million; or (4) a reportable entity partner owns at least a 50% interest in the partnership on any day of the tax year, where a reportable entity partner is one that had to file its own Schedule M-3.

ADDITIONAL COMMENT

Because calendar year S corporation returns are due on March 15, a six-month extension runs to September 15, which is one month prior to the extended due date for individuals. This equalizes treatment of S corporations with partnerships as discussed on the previous page.

S CORPORATION FILING REQUIREMENTS AND ACCOUNTING METHOD ELECTIONS

An S corporation must file its corporate tax return no later than the fifteenth day of the third month following the end of the tax year. The S corporation reports its results on Form 1120-S (U.S. Income Tax Return for an S Corporation). An S corporation can obtain an automatic six-month extension of time for filing its tax return by filing Form 7004 (Application for Automatic Extension of Time to File Certain Business Income Tax, Information, and Other Returns).

The S corporation, rather than the shareholders, makes the accounting method elections used to compute ordinary income or loss and the separately stated items. As with a partnership, the corporation makes these elections independently of the accounting method elections made by its shareholders.

REPORTING S CORPORATION ITEMS ON FORM 1120-S

Page 1 of Form 1120-S summarizes the ordinary income and deduction items for the S corporation. If the corporation owes any tax due to the excess net passive income tax or the ≠built-in gains tax, such amounts also are reported on page 1 of the return. Schedule K lists the separately stated items and ordinary income or losses for the S corporation, S corporation distributions, and selected other items. The corporation prepares a Schedule K-1 for each shareholder reflecting his or her share of the ordinary income (loss) and separately stated items. The Schedule K-1 becomes the basis for preparing each shareholder's federal income tax return. The S corporation also must prepare a balance sheet (Schedule L) and a reconciliation of income per books with income per tax (Schedule M-1). An S corporation must file Schedule M-3 in lieu of Schedule M-1 if the amount of total assets reported in Schedule L equals or exceeds $10 million.

COMPARISON OF ALTERNATIVE FORMS OF BUSINESS ORGANIZATIONS

Table I:17-2 provides a comparison of sole proprietorships, partnerships, S corporations, and C corporations. The partnership comments also apply to entities treated as partnerships for tax purposes such as LLCs or LLPs.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:17-1 Distinguish between the partnership, S corporation, and C corporation forms regarding the following:

- **a.** Incidence of taxation on the organization's business income
- **b.** Taxation of distributions to owners
- **c.** Application of the conduit and separate entity concepts of taxation
- **d.** Limitation on number and type of owners.

I:17-2 Explain how the following types of business entities are treated under the check-the-box regulations. What alternative treatments are available other than the default classification?

- **a.** Corporation
- **b.** Partnership (general and limited)
- **c.** Limited liability company (LLC)
- **d.** Limited liability partnership (LLP)

I:17-3 Anya is considering whether to become a limited partner in a real estate investment partnership by making a $10,000 investment. The limited partnership will generate substantial operating losses for its first five years. Discuss the advantages and disadvantages of the entity electing to be taxed as a C corporation versus being treated as a partnership or S corporation.

▼ TABLE I:17-2
Comparison of Alternative Forms of Business Organizations

Attributes	Sole Proprietorship	Partnership	S Corporation	C Corporation
Application of the separate entity versus the conduit (pass-through) concepts.	Single level of taxation. The proprietor is the same person as the individual taxpayer. The sole proprietor reports proprietorship income, gains, deductions, losses, and credits in his or her individual tax return.	Conduit with a single level of taxation. The partnership is not taxed. Instead, its income, gains, deductions, losses, and credits pass through to the partners to be taxed in their tax returns.	Conduit with a single level of taxation. Similar to a partnership in that its income, gains, deductions, losses, and credits pass through to the shareholders to be taxed in their tax returns. In special cases, the S corporation may pay entity level taxes on built-in gains and excess net passive income.	Entity with double taxation. The corporation is taxed at the entity level, and its shareholders are taxed again when they receive dividends, sell their stock, or liquidate the corporation.
Applicable income tax rates	Individual tax rates apply to the proprietorship's income, which is included in the propri- etor's total taxable income.	Individual tax rates apply to individual partners; corporate tax rates apply to corporate partners; and estate and trust tax rates apply to fiduciary partners.	Individual tax rates apply to individual shareholders; estate and trust tax rates apply to fiduciary shareholders.	A 21% flat tax rate applies to a corporation's taxable income. Individual, corporate, or estate and trust tax rates apply to shareholders receiving dividends from the C corporation. Qualified dividends are taxed at the applicable capital gains rate (see the Quick Reference section of the text).
Ownership restrictions	By definition, a sole proprietorship can have only one owner.	A partnership must have at least two partners and can have an unlimited number of partners; these partners can be individuals, corporations, estates, or trusts.	An S corporation can have up to 100 shareholders (with members of a family counting as one). Shareholders are limited to individuals, estates, certain trusts, and certain tax-exempt organizations.	A C corporation can have an unlimited number of shareholders of any type.
Personal liability	The sole proprietor is liable for debts of the proprietorship.	General partners have unlimited liability. Limited partners have liability to the extent of their investment.	Shareholders have limited liability.	Shareholders have limited liability.
Other nontax factors	A sole proprietorship has management continuity problems and may have difficulty raising outside capital.	A partnership has management continuity problems and restrictions on the transfer of partnership interests. It may have difficulty raising outside capital although limited partners, who are pure investors, mitigate this problem.	S corporations have the same characteristics as C corporations. An additional cost may arise if the state income tax law does not recognize the conduit form of taxation and taxes the S corporation as a C corporation.	Along with limited liability, C corporations have continuity of life, centralized management, and free transferability of ownership interests. These factors may outweigh the disadvantages of double taxation.

▼ TABLE I:17-2 (Continued)
Comparison of Alternative Forms of Business Organizations

Attributes	Sole Proprietorship	Partnership	S Corporation	C Corporation
Basis	A sole proprietor has basis in the business's assets but has no basis in the entity.	A partnership has basis in its assets, and its partners have basis in their partnership interests. A partner's basis includes his or her share of partnership liabilities. A partner's basis is adjusted for his or her share of partnership transactions.	An S corporation has basis in its assets. Shareholders have basis in their stock and a separate debt basis in their loans to the corporation. A shareholder's basis does not include corporate level liabilities. A shareholder's stock basis is adjusted for his or her share of corporate transactions. Debt basis is adjusted downward for pass-through losses and increased for restora- tions.	A C corporation has basis in its assets, and shareholders have basis in their stock. Stock basis is adjusted upward only for additional contributions to the corporation and downward for distributions that exceed the corporation's E&P.
Qualified business income deduction	A sole proprietor may qualify for the business income deduction.	A partner may qualify for the business income deduction.	A shareholder may qualify for the business income deduction.	A C corporation and its shareholders are not eligible for the qualified business income deduction.
Treatment of losses	Assuming the at-risk and passive activity loss limitations do not apply, shareholders still may be subject to the limitation on excess business losses. Unused proprietor NOLs carry over indefinitely subject to the 80% of taxable income limitation.	Partners' pass-through losses are limited to the basis of their partnership interests. At-risk, passive activity loss, and excess business loss limitations also may apply.	Shareholders' pass-through losses are limited to their stock and debt basis. At-risk, passive activity loss, and excess business loss limitations also may apply.	C corporation losses do not pass through to its shareholders. Unused corporate level NOLs carry over indefinitely subject to the 80% of taxable income limitation.
Choice of accounting methods	The sole proprietor can elect the cash or accrual method for business items. However, the accrual method for sales and purchases is required if inventory is a material income producing factor.	Partnerships can elect the cash or accrual method unless they are tax shelters or have a C corporation as a partner, in which case they must use the accrual method. Also, the accrual method for sales and purchases is required if inventory is a material income producing factor.	S corporations can elect the cash or accrual method unless they are tax shelters, in which case they must use the accrual method. Also, the accrual method for sales and purchases is required if inventory is a material income producing factor.	C corporations must use the accrual method unless they are personal service corporations or have annual gross receipts less than $26 million, in which case they can elect the cash or accrual method.
Choice of tax year	A sole proprietorship must use the same tax year as the sole proprietor, usually a calendar year.	The tax year is restricted to that of the majority partners, principal partners, or the least aggregate deferral. The partnership can use a fiscal year if it establishes a business purpose (e.g., a natural business cycle). Other special rules allow a tax year resulting in a maximum three-month deferral.	The tax year is restricted to a calendar year unless the corporation establishes a business purpose (e.g., a natural business cycle) for a fiscal year. Other special rules allow a tax year resulting in a maximum three-month deferral.	C corporations can use a calendar year or any fiscal year. Personal service corporations, however, face restrictions similar to those for S corporations.

▼ TABLE I:17-2 (Continued)
Comparison of Alternative Forms of Business Organizations

Attributes	Sole Proprietorship	Partnership	S Corporation	C Corporation
Employment-related tax considerations	A sole proprietor is not considered an employee of the business and must pay self-employment taxes on business earnings. Special tax treatment for corporate fringe benefits, such as group term life insur- ance, are not available to the proprietor.	A partner is not considered an employee of the partnership and must pay self-employment taxes on business earnings. Special tax treatment for corporate fringe benefits, such as group term life insurance, are not available to the partners.	Same as partnerships for shareholders own- ing more than 2% of the S corporation's stock. S corporation shareholders may be treated as employees, however, for Social Security tax purposes if they receive a salary.	A shareholder- employee may be treated as an employee for Social Security tax and fringe benefits purposes.

I:17-4 Paula transfers two assets to a partnership in separate transactions:
- **a.** Land with a $60,000 adjusted basis and a $100,000 FMV in exchange for a 20% interest in the partnership.
- **b.** A machine with a $50,000 adjusted basis and a $40,000 FMV. The partnership signs a note for $40,000 as consideration for the exchange.

Explain whether Paula recognizes gain or loss for either or both of these transactions, and discuss the reason for any difference in tax treatment.

I:17-5 In the current year, Penny contributes machinery to a partnership in exchange for a minority partnership interest. She acquired the machinery five years earlier. It now has a $50,000 adjusted basis and a $90,000 FMV. What are Penny's basis and holding period for the partnership interest? What is the partnership's basis and holding period for the machine? Why are the partnership formation rules structured in their current format?

I:17-6 Compare the Sec. 721 partnership formation rules for a new partnership with the Sec. 351 corporate formation rules for a new C corporation.

I:17-7 How is Mario's basis in his accrual method partnership interest affected by each of the following changes in partnership assets and liabilities (assuming he has a 50% interest in the partnership)?
- **a.** Mario contributes a building with a $100,000 FMV, and a $70,000 adjusted basis. The building is subject to a $50,000 mortgage, which the partnership assumes.
- **b.** The partnership's accounts payable increase by $50,000 during the tax year.
- **c.** The partnership pays off a $40,000 bank note that was outstanding for several years.
- **d.** The partnership distributes $10,000 cash each to Mario and his partner.

I:17-8 Sally contributes farm machinery with a $150,000 FMV, a $125,000 basis, and a $50,000 note owed to the AB Bank to a new partnership in exchange for a 25% partnership interest. Total partnership liabilities after Sally's contribution are $340,000. What gain or loss do Sally and the partnership recognize on the property contribution to the partnership? What is the partnership's basis and holding period in the machinery? What is Sally's basis in her partnership interest? How would your answers to this problem change (if at all) had Sally's asset contribution instead been made to an existing corporation for a 25% stock interest?

I:17-9 Assume the same basic facts as in Problem I:17-8. How would your answer change if the entity is a new corporation with all owners making property contributions? The corporation makes a timely election to be treated as an S corporation beginning with its first year.

I:17-10 What are the tax consequences to a partner who contributes liabilities that exceed the total basis of assets transferred to a new partnership in exchange for a partnership interest? How does your answer change if the same assets and liabilities are instead transferred to form a new C corporation?

I:17-11 What inequities might result if partners were not required to make special allocations for pre- contribution gains and losses on noncash property contributed to a partnership?

I:17-12 Indicate whether a partner's basis in the partnership interest increases, decreases, or is not affected by the partner's share of the following operating items:
- **a.** Ordinary income
- **b.** Ordinary loss
- **c.** Tax-exempt income
- **d.** Capital loss
- **e.** Capital gain
- **f.** Charitable contribution made by the partnership
- **g.** Distributions of cash to the partners
- **h.** Distributions of appreciated noncash property to the partners
- **i.** Guaranteed payments

I:17-13 Phyllis owns a 30% interest in the PQR Partnership and has a $20,000 basis in her partnership interest (before adjustments for Phyllis's share of current year partnership income or loss). During the current year, the PQR Partnership reports a $100,000 ordinary loss and no change in partnership liabilities. Phyllis materially participates in the business in the current year.

a. What amount of the loss can Phyllis deduct in the current year?

b. What is Phyllis's basis in her partnership interest at the end of the current year?

c. What happens to Phyllis's unused ordinary loss (if any)?

d. What advice can you give Phyllis about reducing the amount of unused loss (if any) that was not deductible in the current year?

I:17-14 Ralph sells an asset to the RST Partnership at a loss. In which of the following situations does he recognize a loss?

a. Ralph owns a 20% direct interest in the partnership, and his son also owns a 20% interest.

b. Ralph owns a 35% direct interest in the partnership, and his daughter also owns a 35% interest.

c. Ralph owns a 35% direct interest in the partnership, and his 100%-owned C corporation also owns a 35% interest.

I:17-15 Jose owns a 60% interest in the JKL Partnership. What are the amount and character of the recognized gain or loss in each of the following situations?

a. Jose sells common stock held as an investment with a $1,000 adjusted basis and a $3,000 FMV to the partnership. Jose held the stock for more than one year as an investment before the sale. The partnership also held the stock as an investment after the sale.

b. Jose sells a parcel of land held for investment purposes with a $10,000 adjusted basis and a $25,000 FMV to the partnership. The land is used in the partnership's business.

c. The partnership sells Jose a building used in its business with a $100,000 adjusted basis and a $60,000 FMV.

I:17-16 Marsha is a 30% partner in the MNO partnership. Niles and Oprah each have a 35% interest in the partnership. The partnership earns $100,000 from ordinary operations before considering a $10,000 guaranteed payment to Marsha. How much income does each partner report from the partnership?

I:17-17 The SJ Partnership, in which Sandy and Jack are equal partners, reported the following income and losses in the current year:

Interest from municipal bonds	$ 30,000
Interest from corporate bonds	25,000
LTCL from stock sale	20,000
Net income from operations	125,000

How do the partners treat these items?

I:17-18 Explain the circumstances that cause a partner to recognize gain or loss if the partnership distributes money or other property in a nonliquidating partnership distribution.

I:17-19 Explain why a partner who sells his or her interest in the partnership for cash must include his or her share of the partnership liabilities in the amount realized from the sale.

I:17-20 What are the tax consequences to a partner who sells his or her partnership interest if the partnership has Sec. 751 assets (i.e., unrealized receivables or inventory items)? What is the reason for this result?

I:17-21 Why did Congress enact the 20% qualified business income deduction?

I:17-22 Explain why a relatively small business operating as a pass-through entity would not cause its owner(s) to be subject to the limitation on excess business losses should the entity generate losses.

I:17-23 What are the primary advantages of using an S corporation instead of a C corporation?

I:17-24 What are the tax consequences to an S corporation and its shareholders if one of the requirements for a small business corporation is not met at some time in a tax year?

I:17-25 An S corporation issues straight debt obligations to its shareholders. Is it possible for the debt to be treated as a second class of stock, which would terminate the S election? Explain.

I:17-26 Andrew sells his Ajax Corporation stock to Angela on March 1. On March 15, Ajax elects S corporation status for the current year. Ajax is a calendar year taxpayer. Which shareholder(s) must consent to the election? Why? Which shareholder(s) receive an allocation of the S corporation's profits? Losses? For what time period is the allocation received by each shareholder?

I:17-27 An S corporation's shareholder wants the corporation to voluntarily revoke the S election. What percentage of the stock interests must agree to the revocation? When is the revocation effective?

I:17-28 Under what conditions will an S corporation involuntarily lose its special tax status and revert to being a C corporation? What remedies are available if the S corporation termination is deemed to be inadvertent?

I:17-29 Indicate whether the following items are reported on the tax return of an S corporation as part of ordinary income (or loss) or as separately stated items:

- **a.** Repairs
- **b.** Long-term capital gains
- **c.** Short-term capital losses
- **d.** Section 1231 gains
- **e.** Tax-exempt interest income
- **f.** Tax credits
- **g.** Tax preference items
- **h.** Salary paid to an S corporation shareholder

I:17-30 Explain why the basis of S corporation stock is increased by the stockholder's share of ordinary income and separately stated gain and income items and reduced by the stockholder's share of an ordinary loss and separately stated loss and deduction items.

I:17-31 Anne has a $10,000 basis in her S corporation stock on January 1 of the current year. On March 1 of the current year, Anne lends the corporation $8,000. Her share of the S corporation's ordinary loss for the current year (which has not yet ended) is expected to be $28,000. Anne expects her marginal tax rate to be 12% in the current year. She expects that her marginal tax rate will increase to 32% next year, and she anticipates substantial profits for the S corporation next year. Advise Anne regarding the deductibility of her share of the losses and the desirability of making additional capital contributions or loans to the S corporation in either year.

I:17-32 Allied Corporation, an S corporation, is considering making a distribution of land to its sole shareholder. Allied acquired the land three years ago and used it in its business activities. The land now has a $30,000 adjusted basis and a $130,000 FMV. Allied has been an S corporation since its inception 12 years ago. Explain the tax consequences of the land distribution to the corporation and to the shareholder.

I:17-33 Barry and Bart are considering whether to start a new manufacturing business. Alternative forms of business organization being considered include operating as a partnership, a limited liability company, an S corporation, or a C corporation. Barry and Bart are calendar year taxpayers but would like to use a January 31 year-end for the business to obtain an 11-month income deferral. Discuss the implications and restrictions of operating under each alternative form of business organization being considered.

I:17-34 Assume the same facts as in Problem I:17-33 except Barry and Bart instead are considering the treatment of fringe benefits. Barry and Bart want to provide group term life insurance and accident and health insurance for themselves and their employees and plan to make the premium payments from business funds. Explain any restrictions that apply to each form of business organization.

I:17-35 Explain the circumstances in which an S corporation is subject to taxation at the corporate level.

ISSUE IDENTIFICATION QUESTIONS

I:17-36 Bert and José plan to combine their unincorporated businesses by forming a partnership. Bert has substantially appreciated business assets. Moreover, if he transfers all the business' liabilities and assets, the liabilities will exceed the adjusted basis of the assets but not their FMV. José will render services to the entity in addition to transferring his business assets. What tax issues should Bert and José consider?

I:17-37 Helen and Helga are equal partners in the HH Partnership. However, Helen devotes most of her time managing the business and believes that she should be given additional compensation in the form of a guaranteed payment. Currently, the partnership is operating at a break-even point (i.e., zero ordinary income and no separately stated items of income or loss). The basis of each partner's partnership interest also is negligible. Helen has requested a $40,000 guaranteed payment as compensation for her additional efforts. What tax issues should Helen and Helga consider?

I:17-38 Coastal Corporation has been a C corporation for several years and has substantial earnings and profits. Its tangible business assets are highly appreciated, and the corporation has paid no dividends for several years. The board of directors and its key shareholders are now recommending making an S election, selling the appreciated property, and paying a substantial cash distribution in the initial S corporation tax year. What tax issues should Coastal and its shareholders consider?

PROBLEMS

I:17-39 *Formation of Partnership and Treatment of Liabilities.* Andrea, Robert, and Agatha form the ARA Partnership as equal general partners. Andrea contributes land with a $20,000 basis and a $40,000 FMV along with cash of $60,000. Andrea has held the land for two years as an investment. Robert contributes equipment with a $50,000 adjusted basis and a $100,000 FMV. Robert has used the equipment in his sole proprietorship for three years and has claimed $40,000 of accelerated depreciation. Agatha contributes accounts receivable from her sole proprietorship with a zero basis and a $45,000 FMV along with cash of $35,000. In addition, Agatha set up the accounting system for the business. She normally would charge $20,000 to do the same job for a client. On the first day of business, the partnership borrows $90,000 (recourse debt) from their bank to begin the business. The partners have equal risk of loss for these liabilities.

a. How much gain, loss, or income must each partner recognize on the formation of the partnership? What is the character of any gain, loss, or income recognized?
b. How much gain, loss, income, or deduction will the ARA Partnership recognize on the formation?
c. What is the partnership's basis in its property on the day the business begins?
d. What is each partner's basis in his or her partnership interest?

I:17-40 ***Formation of a Partnership and Treatment of Liabilities.*** Bonnie, Carlos, and Dale form the BCD Partnership as equal partners. Bonnie contributes land and a building having a $50,000 adjusted basis and a $200,000 FMV that is subject to a $100,000 mortgage assumed by the partnership. The land and the building originally cost $200,000, with $180,000 allocated to the building and $20,000 allocated to the land. Bonnie had claimed $150,000 of straight-line depreciation on the building. Carlos contributes cash of $100,000, and Dale contributes land (a capital asset) having a $200,000 adjusted basis and a $100,000 FMV. All assets have been held for more than one year. Assume the partners have an equal economic risk of loss.

a. What is the amount of Bonnie's recognized gain or loss on the transfer?
b. What is Bonnie's basis in her partnership interest?
c. What is Carlos's basis in his partnership interest?
d. What is the amount of Dale's recognized gain or loss on the transfer?
e. What is Dale's basis in his partnership interest?
f. What is the partnership's basis for each of the contributed properties?

I:17-41 ***Formation of a Partnership and Treatment of Liabilities.*** In the current year, Dana transfers to the DE Partnership land and a building having a total $25,000 adjusted basis and an $80,000 FMV. In addition, the property is subject to a $70,000 mortgage. The land and the building cost $105,000 when Dana acquired them in 1990, and Dana has claimed $80,000 of straight-line depreciation on the building. The land and building originally cost $20,000 and $85,000, respectively. Dana, who is active in the management of the partnership, receives a one-half interest in the partnership. Assume the partners' economic risk of loss is equal to their interest in the partnership.

a. What are the amount and character of Dana's recognized gain or loss on the transfer?
b. What is Dana's basis in her partnership interest?
c. When does Dana's holding period for the partnership interest begin?
d. What is the basis of the contributed properties to the DE Partnership?

I:17-42 ***Formation of a Partnership and Loss Limitation.*** Dan, who is active in the management of the partnership, contributes $10,000 in cash to the newly formed DEF Partnership for a 10% interest in the partnership. The partners transfer no liabilities to the partnership. During the partnership's first year, DEF borrows $75,000 from a bank and is liable for accounts payable amounting to $180,000 at the end of the current year. The DEF Partnership incurs a $400,000 ordinary loss during the current year.

a. How much of the ordinary loss may Dan deduct on his individual tax return?
b. What is Dan's basis in his partnership interest at the end of the current year?
c. How much of the loss (if any) carries over to future years?

I:17-43 ***Expenses of Forming a Partnership.*** The ABC Partnership, a calendar year entity, is formed and begins business on July 1 of the current year. ABC incurs the following expenditures on the date the partnership is formed:

Legal fees incident to the organization of the partnership	$ 6,000
Printing costs associated with the syndication of the partnership	4,000
Brokerage fees associated with underwriting efforts to sell limited partnership interests	5,000
Legal fees associated with asset transfers by three partners	10,000
Accounting services incurred during the organizational period	3,000

a. What is the appropriate tax treatment (i.e., capitalization, capitalization subject to amortization, or immediate expensing) for each of these items?
b. How much amortization should the partnership deduct for the current year?

I:17-44 ***Pass-Through of Income and Separately Stated Items.*** Damien and Donna are equal partners in the DD Partnership. The passive activity loss, at-risk, and excess business loss limitation rules are not applicable to the partners. The partnership reports the following items on its Schedule K during the current year:

Ordinary loss	$10,000
Long-term capital gains	40,000
Research and experimentation credit	4,000
AMT tax preference items	6,000
Distribution to the partners	25,000

Damien's basis in his partnership interest is $80,000 at the beginning of the current year. The DD Partnership's liabilities increased by $20,000 during the current year.
a. What amounts should Damien report on his individual tax return as a result of DD Partnership's activities?
b. What is Damien's basis in his partnership interest after taking into account the Schedule K items?

I:17-45 ***Special Allocations on Contributed Property.*** Ed contributes land (a capital asset) having a $60,000 adjusted basis and a $100,000 FMV, and Gail contributes $100,000 cash to the EG Partnership. Ed and Gail each receive 50% interests in the partnership. Two years later the partnership sells the land (still a capital asset) for $110,000. What are the amount and character of the EG Partnership's gain or loss? How much of EG's gain or loss is allocated to Ed? To Gail? Are the results equitable?

I:17-46 ***Loss Allocations—Varying Interest Rule.*** Alice and Bruce are equal partners in the calendar year AB Partnership. On November 1 of the current year, Carl joined the partnership by making a $100,000 cash contribution in exchange for a one-third interest. Alice and Bruce's partnership interests are each reduced to one-third. The AB Partnership reports a $109,500 ordinary loss for the tax year ending on December 31. Assuming the partners agree to the proration method with a calendar day convention and that the current year is a non-leap year, how much of the partnership's loss is allocated to Alice, Bruce, and Carl?

I:17-47 ***Basis of a Partnership Interest.*** Anita has a one-half interest in the AB Partnership. Anita's basis in her interest at the beginning of the current year is $75,000. During the year, the following events occur:

- Partnership liabilities increase by $50,000.
- Partnership earns $60,000 of ordinary income.
- Partnership recognizes $20,000 of capital losses.
- Partnership incurs $3,000 of nondeductible expenses.
- Partnership earns $10,000 of tax-exempt interest.
- Anita withdraws $15,000 in cash.
- Anita contributes land having a $20,000 adjusted basis and a $100,000 FMV as an additional capital contribution without increasing her interest in the partnership.

a. What gain (if any) does Anita recognize on the transfer of the land to the partnership?
b. What is Anita's basis in her partnership interest at the end of the current year?

I:17-48 ***Partnership Losses and Basis.*** Keith has a one-half interest in the KL Partnership. His basis in the partnership interest at the end of the current year (before deducting his share of partnership losses) is $40,000. His share of the partnership's ordinary loss in the current year is $180,000. Next year, Keith makes a $60,000 additional capital contribution, and the partnership's ordinary income is $100,000. Assume that no change occurs in Keith's partnership interest as a result of the capital contribution and that he materially participates in the business. Partnership liabilities do not change.
a. How much ordinary loss can Keith deduct in the current year?
b. What is Keith's basis in his partnership interest at the end of the current year?
c. How much ordinary income or loss does Keith report next year?
d. What is Keith's basis in his partnership interest at the end of next year?
e. How much loss can Keith use in future years? What has to happen to enable him to use the loss?

I:17-49 ***Transactions Between the Partners and the Partnership.*** Kevin has a 30% interest in the KLM Partnership. Louis (Kevin's son) also has a 30% interest. An individual unrelated to either Kevin or Louis holds the remaining 40% interest. Kevin sells the following assets to the partnership during the year:

- Common stock (a capital asset held more than one year) having a $10,000 basis and a $25,000 FMV and selling price.
- Land (a Sec. 1231 asset) having a $100,000 adjusted basis and a $60,000 FMV and selling price.
- Machine having a $50,000 adjusted basis and a $70,000 FMV and selling price. The original cost of the machine was $60,000, and Kevin deducted $10,000 in MACRS depreciation before the transfer.

a. What are the amount and character of Kevin's recognized gain or loss on the sale of the common stock? The land? The machine?
b. What gain or loss would the partnership recognize if it sells the land two years later for $90,000?

I:17-50 ***Guaranteed Payments and Qualified Business Income Deduction.*** Laura and Mark are equal partners in the LM Partnership. Laura receives a $35,000 guaranteed payment in the current year and also withdraws $15,000 of her partnership capital in cash. Partnership ordinary income is $100,000 after deducting the guaranteed payments for the current year. Assume that Laura is single and has salary income from other sources such that her marginal tax rate is 24%. Also assume that, because she has other income, 20% of qualified business income will be less than 20% of excess taxable income.

a. What amount must Laura include in her gross income, and what is her taxable amount and after-tax income for the current year taking into account the qualified business income deduction?
b. How would your answer change if Laura did not receive the guaranteed payment?

I:17-51 ***Nonliquidating Distributions.*** Lynn's basis in her partnership interest is $9,000 when she receives a nonliquidating distribution of $5,000 cash and land having a $6,000 adjusted basis and a $12,000 FMV.

a. What gain or loss does the partnership recognize when making the distribution?
b. What are the amount and character of the income or gain Lynn must recognize on the distribution?
c. What is Lynn's basis in the land?
d. What is Lynn's basis in her partnership interest after the distribution?

I:17-52 ***Sale of a Partnership Interest.*** The balance sheet of the ABC Partnership at December 31 of the current year is as follows:

	Adjusted Basis	*FMV*
Assets:		
Cash	$ 10,000	$ 10,000
Accounts receivable	20,000	20,000
Inventory	15,000	21,000
Land, buildings, and machinery	60,000	84,000[a]
Total	$105,000	$135,000
Liabilities and capital:		
Accounts payable	$ 5,000	$ 5,000
Notes payable	10,000	10,000
Allen's capital account (1⁄3)	30,000	40,000
Beth's capital account (1⁄3)	30,000	40,000
Candace's capital account (1⁄3)	30,000	40,000
Total	$105,000	$135,000

[a] Assume that $3,000 would be ordinary income under the depreciation recapture rules and $5,400 would be unrecaptured Sec. 1250 gain if the partnership sold the assets.

All partners have an equal interest in the partnership. Allen sells his partnership interest to an outsider on December 31 of the current year for $40,000. Allen's basis in the partnership interest is $35,000 (which includes Allen's share of partnership liabilities).

a. What amount does Allen realize on the sale?
b. What are the amount and character of Allen's recognized gain or loss on the sale?

I:17-53 ***Reporting Partnership Income.*** Rita, a calendar year taxpayer, is an employee of the RST Partnership, which has a June 30 year-end. The partnership pays Rita a salary of $2,500 per month for the period January 1 through June 30, 2025. On July 1, 2025, she joins the partnership and receives monthly drawings (distributions) of $2,500 for the 12-month period ending June 30, 2026. The drawings reflect her approximate share of partnership income for the period July 1, 2025, through June 30, 2026. On June 30, 2026, Rita's share of partnership ordinary income is $40,000.

a. What amount of income does Rita report on her 2025 individual tax return?

b. What amount of income does Rita report on her 2026 individual tax return?

c. Which part (if any) of Rita's income is subject to Social Security taxes?

I:17-54 ***Qualified Business Income Deduction and Net Business Interest Limitation.*** Charlene is an equal partner in the CD Partnership. The partnership does not qualify as a small business under the $31 million gross receipts test. The partnership incurred the following items for the current year. Ignore the deduction for one-half of self-employment tax.

Gross receipts	$ 35,000,000
Minus: Cost of goods sold	(21,000,000)
Gross profit	$ 14,000,000
General business expenses	2,400,000
Salary expense (W-2 wages)	1,600,000
Depreciation expense	1,000,000
Interest expense	2,000,000

Charlene is married and files a joint tax return, has no other sources of income, and claims the standard deduction. Calculate the partnership's ordinary income for the current year and Charlene's taxable income.

I:17-55 ***S Corporation Terminations.*** Which of the following events will cause termination or revocation of the S election for a calendar year corporation? When is the termination or revocation effective? (Assume all other requirements for an S election are met and that any termination is not inadvertent.)

a. Best Corporation has 100 qualifying S corporation shareholders. Sam dies on October 13, and the estate holds his stock for the rest of the year.

b. Assume the same facts as in Part a except the estate distributes the stock to Sam's child before the end of the tax year. Sam's child did not previously own any Best stock.

c. Best issues nonvoting common stock to Susan's two children during the current year. Susan's children did not previously own any Best stock.

d. Shareholders Susan, Ted, and Tim, who own 60% of the Best stock, file the necessary form on October 1 to revoke the election as of this date. All three shareholders are calendar year taxpayers.

I:17-56 ***S Corporation Ordinary Income and Separately Stated Items.*** The income statement for Central Corporation, an S corporation, reports the following:

Sales	$260,000
Cost of goods sold	(60,000)
Repair expense	(5,000)
Depreciation expense	(20,000)
Salary expense	(30,000)
Long-term capital losses	(15,000)
Charitable contributions	(5,000)
Sec. 1231 losses	(8,000)
Net income per tax books	$117,000

a. What is Central's ordinary income (or loss) for the year?

b. Which of the above items appear as separately stated items on Schedule K?

c. Carol owns 50% of Central's stock, which has a $75,000 basis (before taking into account any of the items listed above). What is Carol's stock basis after all adjustments for Carol's share of Central's ordinary income or loss and separately stated items?

d. What is Carol's combined qualified business income (QBI), assuming Carol's only income comes from Central?

I:17-57 ***Basis of S Corporation Stock.*** Cathy is a 40% shareholder of City Corporation. City is a calendar year S corporation. Cathy acquired her stock on January 1 of the current year for $80,000. In the current year, City reports the following results of operations, cash distributions, and salary payments:

Ordinary income allocable to Cathy	$30,000
Salary payments to Cathy	40,000
Long-term capital loss allocable to Cathy	5,000
Cash distributions to Cathy	17,000

a. What is Cathy's stock basis at the end of the current year?
b. What amounts should Cathy include in her individual tax return for the current year? Will the salary Cathy pays to herself affect her qualified business income deduction?

I:17-58 ***S Corporation and Partnership Losses.*** In the current year, Harold and Faye form Entity Company by each contributing $50,000 to the company in exchange for a 50% ownership interest. In addition, the company borrows $40,000 from First Bank. In the current year, the company incurs a $110,000 loss from operations.

a. How much of the loss can each partner deduct in the current year if Entity is a partnership, and what is each partner's basis in his or her partnership interest at the end of the year?
b. How much of the loss can each shareholder deduct in the current year if Entity is an S corporation, and what is each shareholder's basis in his or her stock at the end of the year?

I:17-59 ***S Corporation Losses, Stock Basis, and Debt Basis.*** Chris owns one-third of Coastal Corporation's stock, and he materially participates in the business. Coastal, an S corporation, uses the calendar year as its tax year. On January 1 of the current year, Chris's stock basis is $25,000, and he has a $10,000 loan outstanding to the corporation. In the current year, Coastal reports a $180,000 ordinary loss.

a. What amount of loss can Chris deduct on his individual tax return?
b. What is Chris's basis in his stock and debt at December 31?
c. How much of the loss (if any) carries over to subsequent years?
d. If Coastal reports ordinary income of $90,000 during the next year, what is Chris's basis in his stock and debt at the end of next year?

I:17-60 ***S Corporation Basis for Stock and Debt.*** Because of earlier losses, Cindy has a zero basis in her S corporation stock and a zero basis in her $10,000 loan to the corporation. During the current year, Cindy acquires additional shares of the S corporation stock for $8,000, and her share of the S corporation income is $7,000.

a. What are Cindy's stock and debt bases on December 31?
b. What are the tax consequences to Cindy if the corporation fully repays her loan (secured by a note) on January 1 of the following year?

I:17-61 ***S Corporation Distributions and Stock Basis.*** Control Corporation distributes $11,000 cash to shareholder Craig whose stock basis is $8,000 before this year's income or the distribution. Craig's share of ordinary income for the current year is $1,000, and the corporation has no separately stated items. Control always has been an S corporation.

a. What are the tax consequences of the distribution (i.e., amount and character of income or gain to Control and Craig)?
b. What is Craig's stock basis at the end of the tax year?

I:17-62 ***S Corporation and Partnership Property Distributions.*** Omega Company has two equal owners, William and Mary. Prior to a property distribution, each owner has a $200,000 basis in his or her ownership interest. In the current year, Omega distributes property to William having a $50,000 FMV and a $30,000 basis and distributes property to Mary having a $50,000 FMV and a $60,000 basis. The property is a capital asset. In Parts a and b, determine Omega's gain or loss recognized (if any), the owners' gain or loss recognized (if any), and the owners' basis in his or her ownership interest after the distribution.

a. Omega is partnership.
b. Omega is an S corporation.
c. In the S corporation case, is distributing the loss property to Mary a good idea? Why or why not?

I:17-63 ***S Corporation Distributions and Basis of Property.*** Compact Corporation, an S corporation, distributes land used in its business to Clay, its sole shareholder. The land has a $75,000 adjusted basis and a $125,000 FMV. Clay assumes a $20,000 mortgage secured by the land distributed to him. Immediately before the distribution, Clay's basis in the

Compact stock is $170,000, which includes his share of ordinary income and separately stated items for the current year (other than any gains or losses recognized because of the distribution). Compact always has been an S corporation.

a. What are the tax consequences of the distribution to Compact and Clay?
b. What is Clay's basis in the land?
c. How would your answer to Part a change if the land instead had a $100,000 adjusted basis and a $75,000 FMV?

I:17-64 ***S Corporation Fringe Benefits.*** Copper Corporation formed two years ago and immediately elected S corporation status. In the current year, the corporation pays the following insurance premiums for its employees:

Group term life insurance for shareholder-employees, all of whom own more than 2% of the stock	$3,000
Accident, health, and medical reimbursement plan insurance premiums for shareholder-employees, all of whom own more than 2% of the stock	5,000
Group term life insurance premiums for employees who are not shareholders	1,000
Accident, health, and medical reimbursement plan insurance premiums for employees who are not shareholders	2,000

a. What tax consequences result from Copper's payment of the insurance premiums?
b. What are the tax consequences to the shareholder-employees and to the employees who are not shareholders?

I:17-65 ***S Corporation Built-in Gains Tax.*** Delta Corporation made an S election on January 1 of the current year. Delta had been a C corporation since its inception in 2003. The corporation has the following operating results during the current year:

Ordinary income	$200,000
Long-term capital gains	130,000

The adjusted basis and FMV of capital assets held on January 1 and sold during the current year were $200,000 and $320,000, respectively, as of January 1 of the year in which the corporation's S election became effective.

a. Is Delta Corporation subject to the built-in gains tax under Sec. 1374? Explain.
b. What is the corporation's tax liability on the built-in gain (if applicable)?
c. How would your answers to Parts a and b change if Delta Corporation instead had made its S election effective January 1, 2005?

COMPREHENSIVE PROBLEM

I:17-66 Charles is a 60% partner in CD Partnership, a calendar year partnership. For 2025, Charles received a Schedule K-1 that reported his share of partnership items as follows:

Partnership ordinary income	$105,000
Tax-exempt income	1,000
Qualified dividend income	3,000
Short-term capital loss	20,000
Sec. 1231 loss	17,000
Charitable contributions	2,000
Cash distribution	60,000
Guaranteed payment	40,000

In addition, Charles and his wife, Charlene, had the following items relating to activities outside the partnership:

Charlene's salary	$80,000
Long-term capital gain	49,000
Interest income from corporate bonds	5,000
Mortgage interest expense	12,000
State income taxes	8,000
Property taxes on home	3,000
Charitable contributions	5,500
Withholding on Charlene's salary	18,000
Estimated tax payments (paid one-fourth on each of the quarterly due dates)	24,000

Charles and Charlene file a joint tax return. Calculate the following items for Charles and Charlene. (Ignore the deduction for one-half of self-employment tax.)

a. Adjusted gross income (AGI)
b. Taxable income
c. Tax liability
d. Taxes due or refund

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

I:17-67 Joann and Bob, both single taxpayers in their mid-40s, own an employment business. The firm finds temporary employment for students in the college town of Gainesville, Florida. They have operated the business as a two-person equal partnership for five years. Profits have grown in each of the first five years until the partnership earns approximately $300,000 per year. Bob's parents operate a small grocery store in Nebraska and have successfully used the C corporation form for many years. They have become confused with all the new business forms—limited liability companies, limited liability partnerships, S corporations, etc.—that people have recommended to them. Bob mentions that he and Joann each has been taking $60,000 out of his and Joann's business each year as distributions. They have come to you for help in determining whether their partnership form of business is the way to operate the business in the future. What strategies can you develop for improving Joann's and Bob's personal and business tax positions?

I:17-68 Peter, Paul, and Mary plan to create a new business that buys, restores, and sells classic cars. The three individuals have been involved in a number of business deals dating back to the 1990s. Each individual has a net worth of at least $2 million. Peter has located an old auto dealership to be the showroom for the classic cars. Paul has restored many classic cars so he has developed the network for purchasing restorable cars. Mary is a well-established promoter of new businesses and is in charge of determining the business plan, selecting the entity form, obtaining the external financing, and hiring the firm's accountant. She also will handle most of the day-to-day management. Mary has narrowed the business entity choice down to a partnership, C or S corporation, or limited liability company. You have talked with Mary about this project at length in three different meetings. She wants your advice about selecting the appropriate business entity for the business. Prepare a short list of the pros and cons of using each of the four business forms and be prepared to make a final recommendation to Mary at your next meeting with her.

I:17-69 Steve and Erin started a general partnership to do landscaping and sell gardening supplies. Both will work in the business full time and need to withdraw approximately $40,000 a year each to live on. The partnership has purchased substantial capital assets that it will hold until the cash from their sale is needed in the business. For the first five years of operations, the partnership expects to earn approximately $140,000 of ordinary income each year before distributions to the two owners. Assume that the entire amount of ordinary income will qualify for the business income deduction, without being limited by 20% of excess taxable income. Steve and Erin are single taxpayers and have income from other sources so their partnership earnings will be taxed at a 22% marginal rate. Should the two set up $40,000 guaranteed payments for each, or should they take out the $40,000 as draws from their distributive shares of partnership income? Ignore self-employment taxes in your analysis as the self-employment taxes would be the same in either case.

I:17-70 Five years ago, Abigail invested $400,000 for a 25% interest in Crab Tree Partnership. The partnership has incurred losses every year and by the beginning of this year, her outside basis in Crab Tree has declined to $20,000 including her share of liabilities. The partnership is predicted to have losses of $200,000 this year. Abigail has come to you for both tax and non-tax advice about whether or not she should increase her basis by $30,000, either by increasing their recourse debt or by contributing an additional $30,000 to the partnership. Provide Abigail with some of the tax and non-tax factors she should consider when making this decision.

TAX FORM/RETURN PREPARATION PROBLEMS

I:17-71 The XYZ Partnership reports the following items during 2024:

Sales	$400,000
Cost of goods sold	120,000
Dividends—all qualified	6,000
Interest income on certificate of deposit held as an investment	2,000
Tax-exempt interest	1,500
Salaries to employees	130,000
Federal employment taxes	9,000
Rental expense	5,000
Guaranteed payments to partners	40,000
Net long-term capital gain	12,000
Net short-term capital loss	5,000
Repairs	3,000
MACRS depreciation	10,000
Section 1231 losses	8,000
Charitable contributions	3,500
Amortization of organizational expenditures	1,000
Research and experimentation credit	2,500
Cash distributions to partners	20,000

Calculate ordinary income (or loss) by completing page 1 of Form 1065, and complete Schedule K (Partners' Shares of Income, Credits, Deductions, etc.). Leave spaces blank on Form 1065 if information is not provided.

I:17-72 Eagle Corporation, an S corporation, reports the following items during 2024:

Sales	$500,000
Cost of goods sold	150,000
Dividends—all qualified	7,000
Interest income on certificate of deposit held as an investment	2,500
Tax-exempt interest income	1,200
Employees' salaries (other than officers)	90,000
Federal employment taxes	6,000
Rental expense	8,000
Officers' salaries (all shareholders)	40,000
Net long-term capital gain	8,000
Net short-term capital loss	10,000
Repairs	2,000
MACRS depreciation	12,000
Section 1231 losses	4,000
Charitable contributions	2,000
Amortization of organizational expenditures	1,000
Research and experimentation credit	3,500
Cash distributions to shareholders	12,000

Calculate ordinary income (or loss) by completing page 1 of Form 1120-S, and complete Schedule K (Shareholders' Shares of Income, Credits, Deductions, etc.). Leave spaces blank on Form 1120-S if information is not provided.

CASE STUDY PROBLEMS

I:17-73 Peggy, Phil, and Ralph each have unincorporated accounting practices, and they wish to pool their resources and operate as a single business entity. Peggy owns a building that has appreciated in value since she purchased it eight years ago. They intend to use this building for their office. Other than the building, they own office equipment, computer equipment, and furniture, none of which is worth more than book value. They all have substantial outstanding accounts receivable with a zero basis because each individual uses the cash method of accounting. Each individual has substantial amounts of portfolio income (i.e., dividends and interest) earned outside of their business activities. Under the plan, accounts payable with a zero basis from the unincorporated accounting practices would be transferred to the new entity.

Each accountant has two or three employees. They all agree on the importance of providing benefits to their employees, such as group health insurance, group term life insurance, and a retirement plan of some kind. Additionally, they wish to have their staff participate in the profits of the company and have some form of equity interest in the company.

Peggy, Phil, and Ralph use different computerized accounting and billing systems. They also have different documentation requirements for their client files. The computerized accounting records, billing records, and client files will all have to be consolidated from three systems to one system. The conversion will take place over a period of time. For this reason, they anticipate reporting a loss for their first tax year.

Peggy, Phil, and Ralph have agreed that they want to operate as a pass-through entity because they wish to avoid double taxation, and they want to use the losses from the first year immediately. They have come to you for advice. Prepare a client memo comparing the pros and cons of operating the accounting practice as a partnership or an S corporation.

I:17-74 Dan is the partial owner of an S corporation that currently has 100 shareholders. In March of the current year, Dan sold some of his S corporation stock to each of his two adult children. In August, Dan redeemed the stock he sold because he is in the midst of a divorce and was fearful of the consequences associated with giving voting rights for his business to his children. Dan informs you, his tax consultant, of the stock sale and subsequent redemption. You explain to Dan that by selling the stock he created 102 shareholders between the months of March and August and that the S election had been terminated on the day preceding the date on which the corporation first had more than 100 shareholders. Dan tells you that he sees no reason to inform the IRS of the termination because he bought back the stock within the same tax year, and the IRS probably would not discover the event. What are your responsibilities as a CPA under the SSTS rules as mandated by the AICPA concerning the S election termination? (See the *Statements on Standards for Tax Services* in Appendix E for a discussion of these issues.) What advice can you offer Dan concerning reinstatement of the S election under the rules for inadvertent terminations?

TAX RESEARCH PROBLEMS

I:17-75 Sandra is an employee of the Beach Group, an organization active in the Florida real estate industry. Sandra finds real estate property on Miami Beach and subsequently organizes partnerships to acquire and finance the property. Sandra was particularly interested in one building in the Art Deco district that was to be purchased and renovated. She gathered interested investors who formed the Deco Partnership, consisting of two general partners and several limited partners. In exchange for her services in organizing the partnership, Sandra received a 3% limited partnership interest only in the profits of the Deco Partnership. As part of the agreement, the profits interest was transferable only at the discretion of the general partners. Based on the uncertainty in the South Florida real estate industry at the time, the partners could not estimate whether profits or losses would be generated when the renovation was completed in three years. Based on these facts, will Sandra's receipt of the limited partnership interest be a taxable event?

I:17-76 Chuck, Cindy, and Clay are equal shareholders of Able Corporation common stock. Able was incorporated in the current year. Able elects to be treated as an S corporation starting in its initial year. Chuck, Cindy, and Clay each contributed $10,000 cash to Able in exchange for their common stock. Able borrows $60,000 from a bank, and Chuck, Cindy, and Clay personally guaranteed the corporation's loan. In the current year, Able suffers a $90,000 ordinary loss. How much of the corporation's loss can Chuck, Cindy, and Clay deduct? (Assume the at-risk and passive activity loss limitation rules do not apply.)

I:17-77 In January 2024, Joey contributed investment land he had held two years with an FMV of $6,000 and an adjusted basis of $10,000, and Rachel contributed $6,000 cash to form the Green Partnership as equal general partners. During 2024, the partnership earned ordinary income of $10,000 and made no distributions. On January 1, 2025, while the partnership still held the land, Joey sold his interest in the partnership to Phoebe for $11,000. In April 2025, Green partnership sold for $5,400 the land that Joey contributed. What are the tax consequences of these transactions?

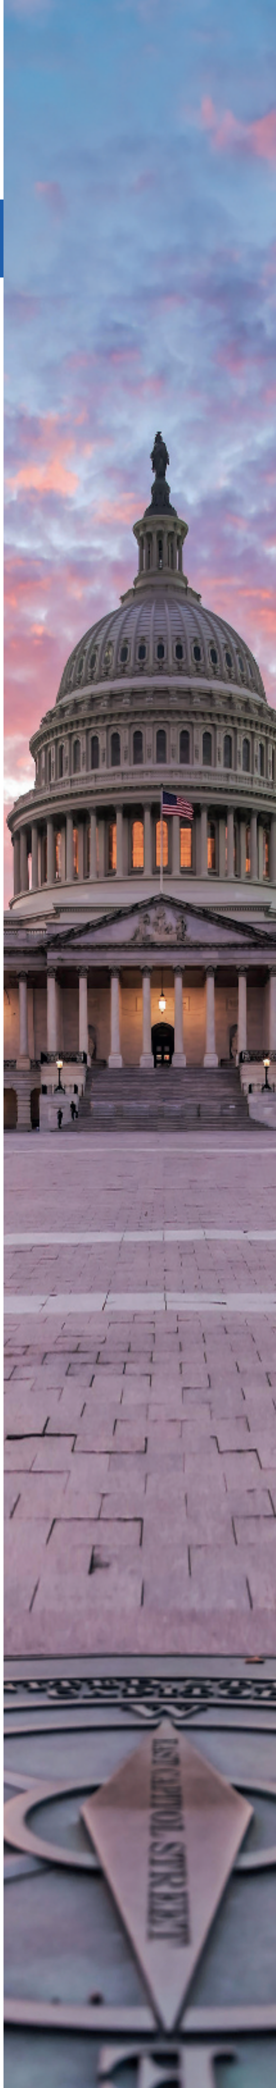
TAXES AND INVESTMENT PLANNING

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Apply the investment models to various investment alternatives
2. Use the investment models to make Roth conversion and entity choice decisions
3. Recognize the role of implicit taxes in investment decisions



James Byard/Zoonar GmbH/Alamy Stock Photo

CHAPTER OUTLINE

Investment Models...18-2
Other Applications of Investment Models...18-15
Implicit Taxes and Clienteles...18-24

When added to this volume, this chapter was derived from a book originally written by Myron S. Scholes and Mark A. Wolfson and takes what has become known as the Scholes-Wolfson approach to investment strategy.[1] Consequently, the chapter differs significantly from other chapters in this text. First, the chapter does not present details of tax law. Instead, it introduces a conceptual framework for understanding how taxes affect basic investment decisions. Second, the chapter develops and illustrates models for determining the after-tax outcomes of various investment alternatives. Although these models may look strange at first, they become familiar and manageable after some study and practice. Third, the chapter extends the models' application to the Roth conversion decision and the pass-through versus C corporation choice. Fourth, the chapter introduces the role of implicit taxes as well as explicit taxes in investment decisions. As demonstrated later, the before-tax rate of return of a tax-favored asset is reduced by market forces as investors increase their demand for these investments. This reduced rate of return is an implicit tax that investors need to consider when making their decisions.

INVESTMENT MODELS

OBJECTIVE 1

Apply the investment models to various investment alternatives

The investment models described in this chapter fall into four categories depending on how investment earnings are taxed. We refer to these models as follows:

- The Current Model—Investment earnings are taxed currently.
- The Deferred Model—Investment earnings are taxed at the end of the investment period.
- The Exempt Model—Investment earnings are exempt from explicit taxation.
- The Pension Model—The initial investment is deductible or excludable from gross income, and the entire accumulation, not just earnings, is taxed at the end of the investment period.

KEY POINT

Future values are necessary to compare all amounts at the same point in time. This comparable time frame is critical in evaluating alternative investment opportunities.

These models in their basic form reflect the following assumptions:

- The investment's before-tax rate of return is constant over the investment period.
- The investor's marginal tax rate is constant over the investment period.
- Investment earnings are reinvested at the same rate of return as earned by the original investment.
- The investor knows future rates of returns and tax rates with certainty.
- The investor incurs no transaction costs.

ADDITIONAL COMMENT

This chapter ignores the additional 3.8% tax rate on net investment income that could apply to taxpayers having modified AGI exceeding $200,000 ($250,000 for married filing jointly).

The models can be modified, however, to accommodate changes to these assumptions. For example, we later show how to adapt the Current Model for changing tax rates (see Example I:18-5).

For simplicity, this chapter generally uses the following individual marginal tax rates for ordinary income: 40%, 35%, 30%, 25%, and 15%. Although these rates do not conform exactly to current tax rates, they are sufficient to demonstrate the concepts in this chapter. Moreover, the current rates are temporary, i.e., through 2025. In addition, the chapter assumes a 20%, 15%, or 0% capital gains tax rate for transactions not subject to the Sec. 1202 exclusion. For regular C corporations, the chapter uses the actual current tax rate of 21%.

THE CURRENT MODEL

The Current Model gives the future value of an investment having the following characteristics:

- Only after-tax dollars are invested.
- The earnings on the investment are taxed annually (currently); thus, the reinvested earnings grow at the after-tax rate of return.

---

[1] The original book was published by Prentice Hall/Pearson Education, Inc. The current edition of the book is published as M. M. Erickson, M. L. Hanlon, E. L. Maydew, and T. J. Shevlin, *Scholes & Wolfson's Taxes and Business Strategy* (Cambridge Business Publishers, 2020).

Common examples of investments taxed this way are savings accounts, money market funds, and taxable bonds, if the investor reinvests the after-tax earnings annually.

Investment with No Taxation. Before developing the Current Model, however, we first illustrate how an investment grows when compounded annually in a no-tax situation, and we introduce the notions of before-tax dollars and the before-tax rate of return. We then show the relationship between before-tax dollars and after-tax dollars and between before-tax and after-tax rates of return. Finally, we incorporate these concepts into the Current Model.

EXAMPLE I:18-1 ► Carla, an individual investor, lives in a land of no taxation and earns $1,000 of salary. She invests this amount in a bond that pays interest at 10% per year and holds the bond for three years, reinvesting the interest annually at the same 10% return. The following schedule details the investment's cash flow over the three years:

ADDITIONAL COMMENT

The rates of return used in this chapter do not attempt to reflect the actual returns in the current economy. A 10% rate of return is used often in examples and problems for computational ease in demonstrating the concepts in this chapter.

(1) Year	*(2)* Cumulative Investment at Beginning of Year	*(3)* Interest Income[a]	*(4)* Cumulative Investment at End of Year[b]
1	$1,000	$100	$1,100
2	1,100	110	1,210
3	1,210	121	1,331

[a] Column 2 × 10%
[b] Column 2 + Column 3

Thus, at the end of three years, the $1,000 original investment accumulates to $1,331. ◄

ADDITIONAL COMMENT

Definitions of variables:
- ATA: After-tax accumulation
- BT$: Before-tax dollars
- AT$: After-tax dollars
- BTROR or R: Before-tax rate of return
- ATROR or r: After-tax rate of return
- t: Marginal tax rate, generally
- t_o: Marginal tax rate at time of investment
- t_n: Marginal tax rate at end of investment horizon
- n: Investment horizon

Also see Topic Review I:18-1 on page I:18-16.

The three-year accumulation determined in Example I:18-1 also can be calculated as follows: $\$1{,}000\ (1.1)^3 = \$1{,}331$, which is $1,000 compounded at 10% for three years. Thus, the general form of the compounding formula is:

$$\text{Accumulation} = \text{BT\$}(1 + \text{R})^{\text{n}}$$

In this formula, BT$ stands for before-tax dollars invested. For instance, in Example I:18-1, Carla invested the entire $1,000 because taxes did not reduce her salary. Also in the formula, R is the before-tax rate of return (BTROR). Again, this return is a before-tax percentage because, as in Example I:18-1, the interest on the investment is not taxed. Consequently, the investor can reinvest all the interest with nothing siphoned away as taxes. Finally, n equals the number of years the investor holds the investment or, in other words, n represents the investment horizon. Thus, the formula gives the future value (accumulation) of before-tax dollars invested for n years while earning a BTROR equal to R.

The Current Model. Now assume our investor is subject to taxation at marginal tax rate t. In this case, any earned income, such as salary, will be subject to taxes, leaving only after-tax dollars available for investment.

EXAMPLE I:18-2 ► Assume the same facts as Example I:18-1 except Carla's $1,000 salary is subject to tax, and her marginal tax rate is 40%. That is, t = 40% or 0.4. In this case, Carla has only $600 to invest. This amount is computed as follows:

Salary before taxes	$1,000
Minus: Taxes ($1,000 × 0.4)	(400)
After-tax dollars available to invest	$ 600

◄

TAX STRATEGY TIP

Although this chapter focuses on federal income taxes, a taxpayer must consider all applicable taxes when making investment decisions (e.g., state income taxes).

The $600 amount determined in Example I:18-2 also can be calculated as follows:

$$\begin{aligned}\text{After-tax dollars} &= \$1{,}000 - (\$1{,}000 \times 0.4)\\ &= \$1{,}000\ (1 - 0.4) \qquad \text{(Factoring out the \$1,000 salary)}\\ &= \$1{,}000 \times 0.6 = \$600\end{aligned}$$

In general, then, the relationship between before-tax dollars (BT\$) and after-tax dollars (AT\$) can be expressed as follows:

$$AT\$ = BT\$(1 - t)$$

Now assume that the interest our investor earns also is taxed at her marginal tax rate. The following example shows the impact on the investor's after-tax cash flows.

EXAMPLE I:18-3 ▶

Carla (from the two previous examples) again earns \$1,000 of salary, but because of taxation at 40%, she has only \$600 to invest, as shown in Example I:18-2. She invests the \$600 in a bond for three years that yields 10% interest per year before taxes. However, in this case, the interest income also is taxed at 40%. The following schedule details the investment's cash flow over the three years:

(1) Year	*(2)* Cumulative Investment at Beginning of Year	*(3)* Before-Tax Interest Income[a]	*(4)* Tax on Interest[b]	*(5)* After-Tax Interest Income[c]	*(6)* Cumulative Investment at End of Year[d]
1	\$600.00	\$60.00	\$24.00	\$36.00	\$636.00
2	636.00	63.60	25.44	38.16	674.16
3	674.16	67.42	26.97	40.45	714.61

[a] Column 2 × 10%
[b] Column 3 × 40%
[c] Column 3 − Column 4
[d] Column 2 + Column 5

◀

In Example I:18-3, after-tax interest in Column 5 for Year 1 also can be calculated as follows:

$$\begin{aligned}\text{After-tax interest} &= \$600(0.1) - \$600(0.1)(0.4)\\ &= \$600(0.1)\,(1 - 0.4) \qquad \text{(Factoring out the \$600 after-tax salary and the 10\% before-tax rate of return)}\\ &= \$600(0.1)(0.6)\\ &= \$600(.06) = \$36\end{aligned}$$

ADDITIONAL COMMENT

An easy way to remember that r is the ATROR and R is the BTROR is that taxation shrinks big R down to little r.

Thus, although the BTROR is 10%, the after-tax rate of return (ATROR) is only 6%. In general, the relationship between the BTROR and the ATROR can be expressed as follows:

$$r = R(1 - t)$$

As before, R equals the BTROR, and t equals the investor's marginal tax rate. The new variable, r, equals the ATROR, which is easy to remember because taxes reduce big R to little r.

With knowledge of this ATROR, the three-year accumulation in Example I:18-3 also can be calculated as follows: After-tax accumulation (ATA) = \$600 $(1.06)^3$ = \$714.61, which is \$600 compounded at 6% for three years. Thus, the general form of the after-tax compounding formula is:

The Current Model:

$$ATA = AT\$(1 + r)^n \text{ or}$$
$$ATA = AT\$[1 + R(1 - t)]^n$$

Note that, because of current taxation, investments conforming to the Current Model provide no deferral advantages because all earnings are taxed currently. As demonstrated later in this chapter, the other three models reflect certain tax advantages.

EXAMPLE I:18-4 ▶ At the beginning of Year 1, Harry invests \$5,000 (AT\$) in a money market fund that pays a 5% annual return before taxes. Harry's marginal tax rate is 30%, and he allows all after-tax earnings to remain in the money market fund. That is, he withdraws only enough cash to pay taxes on the fund's annual earnings. The following table shows Harry's after-tax accumulation for various investment horizons. In this table, note that Harry's ATROR equals 3.5%, which is 5% (1 − 0.30). Thus, the Current Model appears as $\$5,000\,[1 + 0.05\,(1 - 0.30)]^n$ or $\$5,000\,(1.035)^n$.

Investment Horizon (n)	*Computation*	*After-Tax Accumulation*
5 years	$\$5,000\,(1.035)^5$	\$5,938.43
10 years	$\$5,000\,(1.035)^{10}$	\$7,052.99
20 years	$\$5,000\,(1.035)^{20}$	\$9,948.94

◀

Changes to Assumptions. As stated earlier, the Current Model (as well as other models) assumes that R and t are constant over the investment period. However, the model can be modified to accommodate changes to these assumptions. This modification is accomplished by breaking the model into separate components, as demonstrated in the next example.

EXAMPLE I:18-5 ▶ At the beginning of Year 1, Dan invests \$5,000 (AT\$) in a money market fund that pays a 5% annual return before taxes. He plans to leave the after-tax earnings in the fund for 15 years. Dan expects his marginal tax rate to be 25% over the next five years but expects his tax rate to be 35% for the subsequent ten years. Thus, his ATROR for the first five years equals 3.75%, which is 5% (1 − 0.25). For the remaining ten years, his ATROR equals 3.25%, which is 5% (1 − 0.35). Dan's after-tax accumulation (ATA) after 15 years is calculated as follows:

$$\text{ATA} = \$5,000(1.0375)^5(1.0325)^{10} = \$8,275.82$$

Note that the first part of this calculation, $\$5,000\,(1.0375)^5 = \$6,010.50$, gives the accumulation after the five years during which Dan's tax rate is 25%. This accumulation then continues to grow at the 3.25% ATROR for the remaining ten years as follows: $\$6,010.50\,(1.0325)^{10} = \$8,275.82$. ◀

THE DEFERRED MODEL

KEY POINT

Tax deferral is beneficial because the dollars not used currently to pay tax can be reinvested to help generate additional earnings.

The Deferred Model gives the future value of an investment having the following characteristics:

- ▶ Only after-tax dollars are invested (as with the Current Model).
- ▶ The earnings on the investment are not taxed annually; thus, they grow at the BTROR.
- ▶ The accumulated earnings are taxed at the end of the investment horizon when the investor cashes out of the investment; thus, taxation of these earnings is deferred.

The traditional nondeductible IRA described in Chapter I:7 is a classic example of the Deferred Model. Recall that, if the taxpayer or the taxpayer's spouse is covered by an employer-sponsored qualified retirement plan and the taxpayer's AGI exceeds a specified amount, the taxpayer may not deduct contributions to a traditional IRA.[2] Moreover, if the taxpayer's AGI exceeds another threshold, the taxpayer may not contribute to a Roth IRA.[3] Nevertheless, a taxpayer precluded from making *deductible* contributions to a traditional IRA or contributions to a Roth IRA still may make *nondeductible* contributions up to \$7,000 (for 2025) per year to a traditional IRA. These nondeductible contributions are after-tax dollars.

EXAMPLE I:18-6 ▶ Marsha's marginal tax rate is 35%. Due to her high AGI, she is ineligible to make deductible or Roth IRA contributions. Nevertheless, she wishes to contribute the maximum \$7,000 to a traditional nondeductible IRA. She wants to know how much taxable salary she must earn to have \$7,000 left for the contribution. Recall that AT\$ = BT\$(1 − t). Rearranging these terms gives

---

[2] See Chapter I:7 for details on the AGI range over which an individual's deduction for traditional IRA contributions phases out.

[3] See Chapter I:7 for details on the AGI range over which an individual's maximum allowed Roth IRA contribution phases out.

$BT\$ = AT\$/(1 - t)$. In other words, we can "gross up" after-tax dollars by dividing after-tax dollars by one minus the tax rate. Accordingly, the before-tax dollars necessary to yield $7,000 after taxes equals $10,769, which is $7,000/(1 − 0.35). Thus, Marsha must earn $10,769 of salary before taxes. The tax on this amount equals $3,769, which is $10,769 × 0.35, leaving $7,000 available to contribute to the nondeductible IRA.

EXAMPLE I:18-7 ▶ Suppose Marsha makes the $7,000 contribution to a traditional nondeductible IRA in the current year and makes no subsequent contributions. Suppose further that investments in the IRA yield 8% per year before taxes and that Marsha allows her investment to accumulate in the IRA for 15 years. At the end of 15 years, she withdraws all amounts from the IRA, at which time her marginal tax rate still is 35%. Marsha's basis in her IRA is $7,000 because she did not deduct her $7,000 of contributions to it. The following calculation demonstrates one way to determine Marsha's after-tax accumulation in the IRA:

(1) Before-tax accumulation in the IRA [$\$7,000(1.08)^{15}$]	$22,205
(2) Minus: Original contribution	(7,000)
(3) Accumulated earnings before taxes	$15,205
(4) Times: Tax rate	0.35
(5) Tax on accumulated earnings	$ 5,322
(6) After-tax accumulation (Line 1 – Line 5)	$16,883

The calculation in Example I:18-7 also can be formulated as follows:

$$ATA = \$7,000(1.08)^{15} - [\$7,000(1.08)^{15} - \$7,000] \times 0.35$$

The first term, $\$7,000\,(1.08)^{15}$, gives the total before-tax accumulation; the subtraction in brackets gives the accumulated before-tax earnings; and the multiplication by 35% gives the tax on the accumulated earnings. Subtracting these taxes from the first term gives the total after-tax accumulation. Factoring out the $7,000 investment results in the following expression (which yields a $16,883 after-tax accumulation):

$$ATA = \$7,000\{(1.08)^{15} - [(1.08)^{15} - 1] \times 0.35\}$$

Substituting our general symbols into this expression yields the following model, the component parts of which are shown in Figure I:18-1:

$$ATA = AT\$\{(1 + R)^{n} - [(1 + R)^{n} - 1] \times t_{n}\}$$

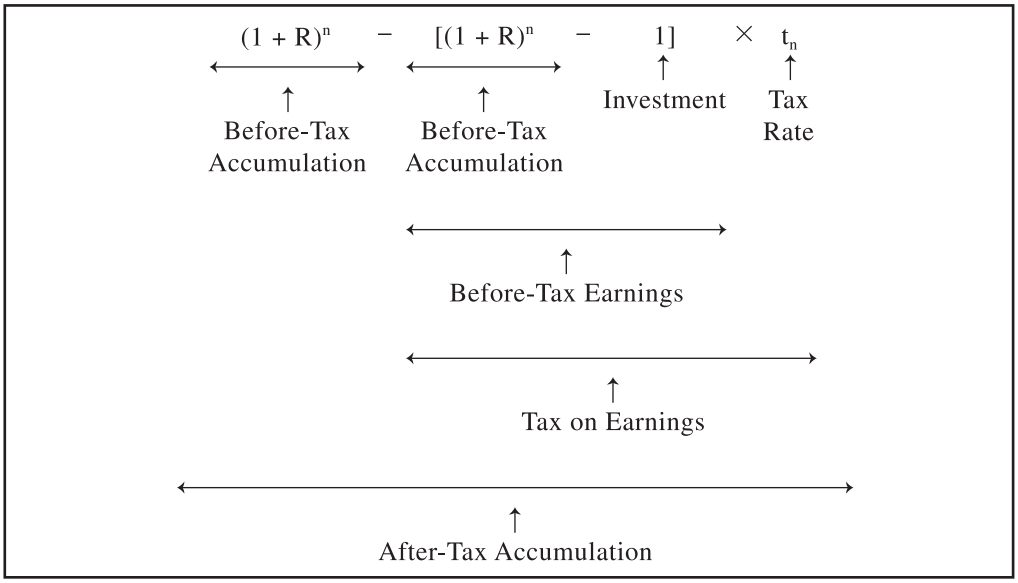


FIGURE I:18-1 ▶ Deferred Model Before Algebraic Simplification

The subscript n on the tax rate emphasizes that the rate in Year n applies rather than the rate in the investment year or any intervening year. To make the model easier to use computationally, we can simplify this model algebraically with the following three steps. Multiplying through by t_n yields:

$$ATA = AT\$\{(1 + R)^n - [t_n\ (1 - R)^n - t_n]\}$$

Carrying the first minus sign through yields:

$$ATA = AT\$[(1 + R)^n - t_n\ (1 + R)^n + t_n]$$

Factoring out $(1 + R)^n$ yields:

The Deferred Model:

$$ATA = AT\$[(1 + R)^n(1 - t_n) + t_n]$$

We call this model the Deferred Model because the tax on investment earnings is deferred until the investor cashes out of the investment. This characteristic causes the Deferred Model investment to outperform the Current Model investment given equal BTRORs and constant tax rates.

EXAMPLE I:18-8 ▶ Phillip can invest $1,000 (AT$) directly in a taxable bond outside an IRA, or he can contribute the $1,000 to a traditional nondeductible IRA and invest in the same bond through the IRA vehicle. In either case, the bond yields an annual 10% BTROR. Phillip's marginal tax rate is 35%, and he expects it to remain so for the entire investment horizon. The two alternatives give the following after-tax accumulations after 20 years:

Bond outside the IRA (Current Model):

$$\$1{,}000[1 + 0.1(1 - 0.35)]^{20} = \$1{,}000(1.065)^{20} = \$3{,}523.65$$

Bond inside the IRA (Deferred Model):

$$\$1{,}000[(1.1)^{20} \times (1 - 0.35) + 0.35] = \$4{,}722.87$$

The Deferred Model investment outperforms the Current Model investment because, within the IRA, the interest on the bond grows at the BTROR (10%), with taxation deferred until Year 20. ◀

Annualized ATROR. As we explained earlier, the ATROR in the Current Model is $r = R\ (1 - t)$. That is, an investment that fits the Current Model yields this ATROR annually. The annual ATROR is a useful number for comparison to annual ATRORs of other models. However, the annual ATROR of other models, such as the Deferred Model, is not always obvious. Therefore, to determine this comparable number, we compute a variable called the annualized ATROR. The annualized ATROR is the rate of return that would cause a Current Model investment to yield the same accumulation per after-tax dollar invested as does the model under consideration.

For example, we derive the annualized ATROR for the Deferred Model as follows:

$$(1 + r_{ann})^n = [(1 + R)^n(1 - t_n) + t_n]$$

Here, the left-hand side of the equation is the Current Model investment compounding at the annualized ATROR, which we symbolize as r_{ann}. The right-hand side is the Deferred Model with one after-tax dollar invested. Taking the nth root of each side yields:

$$(1 + r_{ann}) = [(1 + R)^n(1 - t_n) + t_n]^{1/n}$$

Subtracting 1 from each side yields:

$$r_{ann} = [(1 + R)^n\ (1 - t_n) + t_n]^{1/n} - 1$$

The general form for this relationship, which can be used for any model, is:

Annualized ATROR:

$$r_{ann} = [\text{Accumulation per AT\$ invested}]^{1/n} - 1$$

EXAMPLE I:18-9 ▶ Consider the same facts as in Example I:18-8. The annualized ATROR for the investment outside the IRA is 6.5%. No additional computation is necessary because the model already is in the Current Model form. The accumulation per AT$ invested inside the IRA (the Deferred Model) can be determined two ways. First, divide the total accumulation ($4,722.87) by the $1,000 (AT$) invested, which yields 4.72287. Alternatively, compute the accumulation per AT$ as follows: $[(1.1)^{20}(1 - 0.35) + 0.35] = 4.72287$. The annualized ATROR, then, is computed as follows: $r_{ann} = (4.72287)^{1/20} - 1 = 0.0807128$ or 8.07128%. Thus, on an annualized basis, a 20-year investment outside the IRA (the Current Model) yields 6.5% after taxes, while a 20-year investment inside the IRA (the Deferred Model) yields 8.07128% after taxes. To check this result, simply put the 8.07128% annualized ATROR in the Current Model to see that it yields the same result as did the Deferred Model.

$$\text{ATA} = \$1{,}000(1.0807128)^{20} = \$1{,}000(4.72287) = \$4{,}722.87$$ ◀

Capital Assets. The Deferred Model also describes the after-tax growth of a capital asset. For example, suppose a stock grows annually at rate R and does not pay dividends, that is, the stock is strictly a growth stock. In n years, the stock will be worth $(1 + R)^n$. If the investor then sells the stock for its fair market value (FMV), the investor pays tax on the capital gain. Consequently, the tax on the gain is deferred until the investor sells the asset, which reflects the realization principle of taxation. Moreover, the capital gain may be taxed at a preferential capital gains tax rate. Thus, when applied to capital assets, the Deferred Model provides two tax advantages: deferral and a preferential tax rate.

When Figure I:18-1 is applied to this situation, the before-tax accumulation represents the selling price at the FMV, and the before-tax earnings represent the capital gain.

EXAMPLE I:18-10 ▶ Brian purchases stock for $5,000. The stock appreciates (grows) at an 8% rate before taxes. Brian sells the stock ten years later for $10,795, which is $5,000 $(1.08)^{10}$. At the time of sale, his regular tax rate is 40%, but his long-term capital gains tax rate is 20%. One way to calculate Brian's after-tax proceeds is as follows:

(1) Selling price [$5,000(1.08)^{10}]	$10,795
(2) Minus: Original investment (basis)	(5,000)
(3) Long-term capital gain	$ 5,795
(4) Times: Long-term capital gains tax rate	0.20
(5) Tax on capital gain	$ 1,159
(6) After-tax proceeds (Line 1 – Line 5)	$ 9,636

Alternatively, the after-tax proceeds can be determined quickly with the Deferred Model as follows:

$$\text{ATA} = \$5{,}000 \times [(1.08)^{10}(1 - 0.20) + 0.20] = \$9{,}636$$ ◀

Comparing Current and Deferred Models. As mentioned earlier, a Deferred Model investment always outperforms a Current Model investment if BTRORs are constant over time and equal across models and if tax rates also are constant and equal. However, when these conditions are not present, the models must be compared to determine which is preferable. One way to make this comparison is to set up a spreadsheet of the various alternatives.

EXAMPLE I:18-11 ▶ As in Example I:18-8, assume that Phillip can invest $1,000 (AT$) in a taxable bond either outside or inside a traditional nondeductible IRA. The bond yields 10% per year before taxes, and Phillip's marginal tax rate is 35%. Assume also that Phillip will be younger than 59½ when he withdraws the funds from the IRA. As described in Chapter I:7, a taxpayer who withdraws

ADDITIONAL COMMENT

Individuals who are age 73 or older must take required minimum distributions (RMDs) from their traditional IRAs (age 75 if born after 1958). A 25% penalty applies to the extent that actual distributions fall short of the RMD (10% if the individual rectifies the shortfall during a correction window).

amounts from a traditional IRA before reaching age 59½ generally must pay a 10% penalty tax on the taxable portion of the withdrawal. This penalty, in effect, increases the applicable tax rate in the Deferred Model. Thus, the following models apply (the Deferred Model with no penalty is repeated for comparison):

Bond outside the IRA (Current Model):

$$\$1{,}000\ [1 + 0.1\ (1 - 0.35)]^n = \$1{,}000\ (1.065)^n$$

Bond inside the IRA (Deferred Model)—No penalty:

$$\$1{,}000\ [(1.1)^n \times (1 - 0.35) + 0.35]$$

Bond inside the IRA (Deferred Model)—With penalty:

$$\$1{,}000\ [(1.1)^n \times (1 - 0.45) + 0.45]$$

Notice that the 10% penalty effectively increases the marginal tax rate to 45%. Given the 10% penalty, which investment is better, the Current Model or the Deferred Model? The answer depends on the length of the investment horizon. Table I:18-1 schedules the after-tax accumulations and related annualized ATRORs for various investment horizons (n) from one to 20 years.

Before considering the penalty situation, observe the no penalty case. For all values of n above one, the Deferred Model investment produces a greater after-tax accumulation than does the Current Model investment (compare Columns 2 and 3). This result also is apparent

▼ TABLE I:18-1

Comparison of Current and Deferred Models

	After-Tax Accumulations			Annualized ATRORs[d]		
(1) n	(2) Current Model[a]	(3) Deferred Model No Penalty[b]	(4) Deferred Model with Penalty[c]	(5) Current Model	(6) Deferred Model No Penalty	(7) Deferred Model with Penalty
1	$1,065	$1,065	$1,055	6.5%	6.500%	5.500%
2	1,134	1,137	1,116	6.5	6.607	5.617
3	1,208	1,215	1,182	6.5	6.711	5.733
4	1,286	1,302	1,255	6.5	6.813	5.848
5	1,370	1,397	1,336	6.5	6.913	5.961
6	1,459	1,502	1,424	6.5	7.009	6.073
7	1,544	1,617	1,522	6.5	7.103	6.182
8	1,655	1,743	1,629	6.5	7.195	6.289
9	1,763	1,883	1,747	6.5	7.283	6.394
10	1,877	2,036	1,876	6.5	7.368	6.497
11	1,999	2,205	2,019	6.5	7.451	6.597
12	2,129	2,390	2,176	6.5	7.531	6.694
13	2,267	2,594	2,349	6.5	7.608	6.789
14	2,415	2,818	2,539	6.5	7.682	6.881
15	2,572	3,065	2,747	6.5	7.753	6.970
16	2,739	3,337	2,977	6.5	7.822	7.057
17	2,917	3,635	3,230	6.5	7.888	7.140
18	3,107	3,964	3,508	6.5	7.952	7.221
19	3,309	4,325	3,814	6.5	8.013	7.299
20	3,524	4,723	4,150	6.5	8.071	7.375

[a] $\$1{,}000(1.065)^n$

[b] $\$1{,}000\ [(1.1)^n(1 - 0.35) + 0.35]$

[c] $\$1{,}000\ [(1.1)^n(1 - 0.45) + 0.45]$

[d] $[(\text{ATA per AT\$})^{1/n} - 1] \times 100$

in the annualized ATRORs. For all values of n above one, the Deferred Model investment produces an annualized ATROR greater than 6.5% (compare Columns 5 and 6). Moreover, the greater the n, the greater the annualized ATROR from the Deferred Model investment. This result occurs because tax deferral increases as the investment horizon lengthens. Thus, the longer the deferral, the better the annualized ATROR produced by the Deferred Model investment.

Now compare the Current Model to the Deferred Model with the 10% penalty. For investment horizons up to ten years, the Current Model investment outperforms the Deferred Model investment, while for horizons greater than ten years, the Deferred Model investment beats the Current Model investment (compare Columns 2 and 4). This result can be seen more easily with the annualized ATRORs, where beginning in Year 11, the annualized ATRORs for the Deferred Model investment exceed 6.5% (compare Columns 5 and 7). The Current Model investment is better for short horizons because the applicable tax rate is 35% rather than 45% (rate + penalty). However, after ten years, the deferral benefit of the Deferred Model investment overcomes the penalty's detrimental effect. Thus, if an investor has a long enough investment horizon, a traditional nondeductible IRA subject to the 10% penalty may be the preferred method of accumulating savings, assuming the investor is ineligible for the Roth IRA. ◀

THE EXEMPT MODEL

The Exempt Model gives the future value of an investment having the following characteristics:

- Only after-tax dollars are invested (as with the Current and Deferred Models).
- Earnings on the investment are exempt from explicit taxation (unlike the Current and Deferred Models).

In fact, the Exempt Model is a special case of either the Current Model or the Deferred Model with the tax rate equal to zero. Consequently, the investment grows at the BTROR and appears as follows:

The Exempt Model:

$$ATA = AT\$(1 + R)^n$$

REAL-WORLD EXAMPLE

Individuals reported $55.5 billion of tax-exempt interest income for 2021.

State and local government obligations, such as municipal bonds, are classic examples of the Exempt Model. Section 103 excludes interest on these instruments from gross income.

EXAMPLE I:18-12 ▶

Carmen invests $10,000 (AT$) in tax-exempt municipal bonds, which yield 5% per year. She reinvests the interest and holds the bonds for ten years. Thus, the investment accumulates to $16,288.95, which is $10,000 $(1.05)^{10}$. ◀

Other examples of the Exempt Model are the Roth IRA (see Chapter I:7) and the Roth option for Sec. 401(k) and Sec. 403(b) plans. Like the traditional nondeductible IRA, the Roth IRA does not allow a deduction for contributions. However, upon withdrawals, the accumulated earnings are not taxed. We will say more about the Roth IRA after developing the Pension Model.

STOP & THINK

Question: Does the Exempt Model imply that no taxation occurs in the tax system for investments of this type?

Solution: No. Taxation occurs because the taxpayer invests after-tax dollars, which means the invested amount comes from some taxable source. If no taxation occurred at all, the model would appear as Accumulation $= BT\$ (1 + R)^n$, which is the situation described on page I:18-3 just after Example I:18-1.

THE PENSION MODEL

The Pension Model gives the future value of an investment in a qualified retirement plan having the following characteristics:

- Before-tax dollars are invested (unlike the previous three models).
- The annual earnings on the investment grow at the BTROR (as with the Deferred and Exempt Models).
- The entire accumulation, not just the earnings, is taxed at the end of the investment horizon when the investor cashes out of the plan.

Thus, the Pension Model provides two levels of tax deferral. First, salary or earned income contributed to the plan escapes taxation when contributed but is taxed later upon withdrawal. Second, earnings on the underlying investment are not taxed while in the plan but also are taxed later upon withdrawal. This double deferral contrasts with the Deferral Model, in which only the taxes on investment earnings are deferred.

Deductible IRAs and H.R. 10 plans described in Chapter I:7 are classic examples of the Pension Model. The taxpayer deducts the IRA or H.R. 10 contribution from gross income, the underlying investments grow at before-tax rates of return, and the taxpayer later includes any withdrawals in gross income.

EXAMPLE I:18-13 ▶ Frank, whose marginal tax rate is 35%, earns $1,000 of salary and wishes to contribute this amount to a deductible IRA (Pension Model). He may do so because he can deduct the $1,000 contribution from gross income, leaving the entire $1,000 available for contribution. If, instead, Frank contributes to a traditional nondeductible IRA (Deferred Model) or a Roth IRA (Exempt Model), he can contribute only $650 because he must pay $350 of taxes on the $1,000 salary. Thus, Frank can contribute $1,000 before-tax dollars to a deductible IRA as contrasted with $650 after-tax dollars to a traditional nondeductible IRA or a Roth IRA. ◀

Other examples of the Pension Model include traditional (i.e., non-Roth) Sec. 401(k) and Sec. 403(b) plans, which are discussed in Chapter I:7. Both of these type plans operate through a salary reduction agreement whereby the employee elects to have a specified amount of his or her salary contributed to the plan. The employee excludes the amount of salary contributed to the plan from his or her gross income. However, annual contributions are limited to $23,500 (for 2025).[4] As with IRA and H.R. 10 plans, the underlying investments in Sec. 401(k) and Sec. 403(b) plans grow at before-tax rates of return, and the employee later includes any withdrawals in gross income. Withdrawals before the employee reaches age 59½, however, generally are subject to a 10% penalty in addition to the tax. Although most employers can offer Sec. 401(k) plans, only educational institutions and certain tax-exempt organizations may provide Sec. 403(b) plans.

Employer-sponsored qualified retirement plans also fit the Pension Model. In this case, the employer makes a deductible contribution on the employee's behalf, and the employee excludes the contribution from gross income. Upon retirement, the employee's retirement payments are fully taxed.

EXAMPLE I:18-14 ▶ Frank in Example I:18-13 makes the $1,000 contribution to a deductible IRA. The investment in the IRA will earn 10% per year before taxes, and Frank will withdraw all accumulated amounts from the IRA after 20 years. He expects his tax rate to be 25% at that time, and he will not be subject to the 10% penalty for early withdrawals. The following calculation demonstrates one way to determine Frank's after-tax accumulation in the IRA:

Before-tax accumulation in the IRA [$1,000(1.1)^{20}]	$6,728
Minus: Tax on withdrawn accumulation ($6,728 × 0.25)	(1,682)
Accumulated earnings after taxes	$5,046 ◀

The calculation in Example I:18-14 also can be formulated as follows:

$$\text{ATA} = \$1{,}000(1.1)^{20} - [\$1{,}000(1.1)^{20}] \times 0.25$$

---

[4] Section 402(g) imposes this dollar limitation. In addition, Sec. 414(v) increases the limitation for taxpayers age 50 or older (see Chapter I:7 for discussion). Percentage of compensation limitations also apply to contributions to Sec. 401(k) and Sec. 403(b) plans, but these limitations are complex and beyond the scope of this chapter. (See Chapter I:7 and Secs. 403(b) and 415(c).)

Factoring out the before-tax accumulation of $\$1{,}000(1.1)^{20}$ yields the following expression:

$$\text{ATA} = \$1{,}000(1.1)^{20}(1 - 0.25)$$

Substituting our general symbols into this expression yields:

The Pension Model:

$$\text{ATA} = \text{BT\$}(1 + \text{R})^{\text{n}}(1 - \text{t}_{\text{n}}) \text{ or}$$

$$\text{ATA} = \text{AT\$}\left[\frac{1}{(1 - \text{t}_0)}(1 + \text{R})^{\text{n}}(1 - \text{t}_{\text{n}})\right]$$

Recall that BT\$ = AT\$/(1 − t). That is, before-tax dollars equal after-tax dollars grossed up by one minus the tax rate. Thus, the second form of the Pension Model is equivalent to the first form. The second form, however, has the same format as the other three models: AT\$ times a future value formula. This format allows the investor to compare all four models without considering a specific level of investment because each model in this format is stated in terms of the after-tax accumulation per AT\$ invested. In these models, t_{o} is the tax rate in Year 0, and t_{n} is the tax rate in Year n.

EXAMPLE I:18-15 ▶

Given four options listed below, Beth wants to know the after-tax accumulation and annualized ATROR of each.

- Current Model: R = 10%, t = 25%, n = 5
- Deferred Model: R = 9%, t_{n} = 35%, n = 5
- Exempt Model: R = 8%, n = 5
- Pension Model: R = 10%, t_{o} = 25%, t_{n} = 35%, n = 5

The results of the four options are as follows:

Model	*Computation*	*After-Tax Accumulation*	*Annualized ATROR*
Current	$[1 + 0.1(1 - 0.25)]^5$	1.4356	7.50%
Deferred	$(1.09)^5(1 - 0.35) + 0.35$	1.3501	6.19%
Exempt	$(1.08)^5$	1.4693	8.00%
Pension	$[1/(1 - 0.25)](1.1)^5(1 - 0.35)$	1.3958	6.90%

◀

ADDITIONAL COMMENT

The tax rates (t_{o} and t_{n}) in these comparisons are those faced by a particular individual because of changing tax laws and/or because of an individual's changing circumstances, e.g., levels of income at the time of investment versus at the end of the investment horizon.

Comparing Exempt and Pension Models. With equal BTRORs, constant tax rates (i.e., $\text{t}_{\text{o}} = \text{t}_{\text{n}}$), and no limitation on contributions, the Exempt and Pension Models are equivalent because the $1/(1 - \text{t}_{\text{o}})$ and $(1 - \text{t}_{\text{n}})$ terms cancel out, leaving the Pension Model (second form) to appear as $\text{AT\$}(1 + \text{R})^{\text{n}}$. However, if t_{o} and t_{n} differ for a particular individual, this equivalency disappears. Thus, the following relationships hold:

- If $\text{t}_{\text{o}} = \text{t}_{\text{n}}$, ATA per Exempt Model = ATA per Pension Model.
- If $\text{t}_{\text{o}} > \text{t}_{\text{n}}$, ATA per Exempt Model < ATA per Pension Model.
- If $\text{t}_{\text{o}} < \text{t}_{\text{n}}$, ATA per Exempt Model > ATA per Pension Model.

EXAMPLE I:18-16 ▶

Consider the following situations:

- R = 10%, t_{o} = 30%, t_{n} = 30%, n = 10
- R = 10%, t_{o} = 40%, t_{n} = 30%, n = 10
- R = 10%, t_{o} = 30%, t_{n} = 40%, n = 10

The after-tax accumulations (ATAs) for the three situations are as follows:

Situation	*Exempt Model*	*Pension Model*
$\text{t}_{\text{o}} = 30\%, \text{t}_{\text{n}} = 30\%$	$(1.1)^{10} = 2.5937$	$[1/(1 - 0.30)](1.1)^{10}(1 - 0.30) = 2.5937$
$\text{t}_{\text{o}} = 40\%, \text{t}_{\text{n}} = 30\%$	$(1.1)^{10} = 2.5937$	$[1/(1 - 0.40)](1.1)^{10}(1 - 0.30) = 3.0260$
$\text{t}_{\text{o}} = 30\%, \text{t}_{\text{n}} = 40\%$	$(1.1)^{10} = 2.5937$	$[1/(1 - 0.30)](1.1)^{10}(1 - 0.40) = 2.2232$

◀

Deductible IRA Versus Roth IRA. The Exempt and Pension models can be used to compare investment in a traditional deductible IRA versus a Roth IRA. If the amount of before-tax dollars available for investment does not exceed the $7,000 limitation (for 2025),[5] the comparative results are similar to those in Example I:18-16.[6]

EXAMPLE I:18-17 ▶

Marcy has $7,000 of salary before taxes available for contribution to either a traditional deductible IRA or a Roth IRA. The underlying investments will earn a 10% BTROR. After ten years, Marcy plans to withdraw the entire accumulation without penalty. If her marginal tax rate is 30% in the contribution year, she can contribute either $7,000 (BT$) to the deductible IRA or $4,900 (AT$) to the Roth IRA. If her marginal tax rate upon withdrawal is 30%, she will have the following after tax accumulations under each alternative:

Roth IRA: [$4,900(1.1)^{10}$]	$12,709
Deductible IRA: [$7,000(1.1)^{10}(1 - 0.30)$]	$12,709

Thus, with constant tax rates, the two alternatives yield the same after-tax accumulation.

If Marcy's current tax rate is 40%, and her later tax rate is 30%, the two alternatives yield the following after-tax accumulations:

Roth IRA: [$4,200(1.1)^{10}$]	$10,894
Deductible IRA: [$7,000(1.1)^{10}(1 - 0.30)$]	$12,709

Thus, with decreasing tax rates, the deductible IRA yields the better result.

Finally, if Marcy's current tax rate is 30%, and her later tax rate is 40%, the two alternatives yield the following after-tax accumulations:

Roth IRA: [$4,900(1.1)^{10}$]	$12,709
Deductible IRA: [$7,000(1.1)^{10}(1 - 0.4)$]	$10,894

Thus, with increasing tax rates, the Roth IRA yields the better result. ◀

TAX STRATEGY TIP

When given a choice between a Roth IRA and a traditional *non*deductible IRA, the taxpayer always should choose the Roth IRA. However, if the taxpayer's AGI exceeds the limitation for contributions to a Roth IRA, the taxpayer can contribute to a traditional nondeductible IRA and then immediately roll over the traditional IRA contribution into a Roth IRA. The Roth rollover (also called a conversion) has no AGI limitation.

In Example I:18-17, the before-tax dollars available for contribution did not exceed the $7,000 limitation on IRA contributions. However, suppose the taxpayer wishes to compare a $7,000 contribution to a deductible IRA with a $7,000 contribution to a Roth IRA. In this case, the two contributions are not equivalent because the taxpayer makes the contribution to the deductible IRA with before-tax dollars and to the Roth IRA with after-tax dollars. To have $7,000 after-tax dollars available for a Roth IRA contribution, the taxpayer must have $7,000/(1 – t_o) before-tax dollars available for investment. If the taxpayer has this amount available and contributes $7,000 to a deductible IRA, the taxpayer will have some available funds left over for investment outside the deductible IRA.[7]

EXAMPLE I:18-18 ▶

Mark wants to contribute $7,000 to either a deductible IRA or a Roth IRA. His current marginal tax rate is 30%. To contribute $7,000 (AT$) to a Roth IRA, his before-tax dollars available for investment must be $10,000, which is computed as BT$ = $7,000/(1 – 0.30). On the other hand, if he contributes $7,000 (BT$) to a deductible IRA, he has $3,000 ($10,000 – $7,000) remaining. This $3,000 is subject to tax so that, after taxes at 30%, Mark will have $2,100 (AT$) [$3,000(1 – 0.30)] remaining for investment outside the IRA.

A convenient short-cut method to determine the amount remaining for outside investment is to multiply the $7,000 deduction by the tax rate to arrive at the tax savings from the traditional IRA deduction. Specifically, the $7,000 deduction will generate $2,100 of tax savings for outside investment, computed as $7,000 × 0.30 = $2,100. This shortcut, however, works only if the taxpayer considers contributing the maximum amount to the deductible or Roth IRA. ◀

Given the previous discussion, the deductible IRA versus Roth IRA decision can be framed as follows:

---

[5] For taxpayers age 50 or older, the limitation is increased by $1,000 for 2025, called a catch-up limitation.

[6] For an analysis of this contribution choice when the future marginal tax rate and returns (i.e., t_n and R) are uncertain, see D. S. Hulse, "Roth versus Traditional Account Contributions and Tax Rate Uncertainty," *Journal of Financial Planning*, March 2023, pp. 68–76.

[7] Participants in Sec. 401(k) and Sec. 403(b) plans can opt to have their elective deferrals treated as Roth contributions. For a detailed analysis of this decision, see K. E. Anderson and D. P. Murphy, "The New Roth Option for 401(k) and 403(b) Plans: A Decision Framework," *Journal of Financial Service Professionals*, January 2002, pp. 45–56.

Roth IRA	$\$7{,}000(1+R)^n$
Versus	
Deductible IRA	$\$7{,}000(1+R)^n(1-t_n)$
Plus	
Outside Investment	$\$7{,}000(t_o)[1+R(1-t)]^n$

In this framework, $\$7{,}000(t_o)$ is the tax savings from the traditional IRA deduction, which the taxpayer invests in an investment conforming to the Current Model. If the taxpayer's outside investment conforms to the Deferred Model or some other model, the alternative model can be substituted for the Current Model in this decision framework.

EXAMPLE I:18-19 ▶ Helen wishes to invest $7,000 in either a deductible IRA or a Roth IRA. The underlying investments will earn a 10% BTROR. After ten years, Helen plans to withdraw the entire accumulation without penalty. Her marginal tax rate is 30% in the contribution year, and she expects her marginal tax rate upon withdrawal to be 30%. If she contributes to the deductible IRA, she will invest the tax savings in an investment yielding a 10% BTROR and which is currently taxable at 30%. The alternative investments yield the following results:

Roth IRA [$\$7{,}000(1.1)^{10}$]	$18,156
Deductible IRA [$\$7{,}000(1.1)^{10}(1-0.30)$]	$12,709
Plus: Outside investment [$\$7{,}000(0.30)(1.07)^{10}$]	4,131
Total	$16,840

With constant tax rates, the Roth IRA produces the better result because, with the deductible IRA, part of the investment goes to an outside investment taxed less favorably than the IRA. Note also that, because the $7,000 limitation is after-tax dollars for the Roth IRA but before-tax dollars for the deductible IRA, constant tax rates no longer produce equivalent results.

Suppose instead that Helen expects her tax rate to be 15% when she withdraws the IRA accumulation (but, as above, her tax rate is 30% before such withdrawal). In this case, the alternative investments yield the following results:

Roth IRA [$\$7{,}000(1.1)^{10}$]	$18,156
Deductible IRA [$\$7{,}000(1.1)^{10}(1-0.15)$]	$15,433
Plus: Outside investment [$\$7{,}000(0.30)(1.07)^{10}$]	4,131
Total	$19,564

Thus, with a reduced tax rate in the withdrawal year, the deductible IRA (plus the outside investment) yields the better result. ◀

MULTIPERIOD STRATEGIES

All previous examples assumed a single amount invested for a specified time period. However, suppose an investor wants to invest a certain amount each year over several years. In this case, the investor may optimize his or her after-tax accumulation by investing in one type of investment in early years and another type investment in late years.

EXAMPLE I:18-20 ▶ For the next 15 years, Jack wishes to invest $10,000 (AT$) at the beginning of each year into either nondividend paying stock that increases in value at 8% per year before taxes or a taxable bond that yields 10% per year before taxes. Jack's regular tax rate is 30%, but he pays only 15% on long-term capital gains. Jack wants to know which asset to invest in for each of the 15 years. The following models apply to this situation:

Stock (Deferred Model):

$$\$10{,}000[(1.08)^n(1-0.15)+0.15]$$

Taxable bond (Current Model):

$$\$10{,}000[1+0.1(1-0.30)]^n = \$10{,}000(1.07)^n$$

Table I:18-2 schedules the alternatives for each year. The stock produces the larger after-tax accumulations for investments made in Years 1 through 9. For Years 10 through 15, however, the taxable bonds outperform the stock. Consequently, Jack should invest in stock for each of

▼ TABLE I:18-2
Multiperiod Investments

(1) Year	(2) n	(3) Amount Invested	(4) Stock[a] (Deferred Model)	(5) Taxable Bond[b] (Current Model)	(6) Greater of Column 4 or 5
1	15	$10,000	$ 28,463	$ 27,590	$ 28,463
2	14	10,000	26,466	25,785	26,466
3	13	10,000	24,617	24,098	24,617
4	12	10,000	22,904	22,522	22,904
5	11	10,000	21,319	21,049	21,319
6	10	10,000	19,851	19,672	19,851
7	9	10,000	18,492	18,385	18,492
8	8	10,000	17,233	17,182	17,233
9	7	10,000	16,068	16,058	16,068
10	6	10,000	14,988	15,007	15,007
11	5	10,000	13,989	14,026	14,026
12	4	10,000	13,064	13,108	13,108
13	3	10,000	12,208	12,250	12,250
14	2	10,000	11,414	11,449	11,449
15	1	10,000	10,680	10,700	10,700
Total ATA with no switching			$271,756	$268,881	
Total ATA with switching strategy					$271,953

[a] $\$10{,}000\ [(1.08)^n(1 - 0.15) + 0.15]$
[b] $\$10{,}000\ (1.07)^n$

the first nine years and hold the stock for the rest of the 15-year investment horizon. For the remaining six years, he should invest in taxable bonds. This switching strategy maximizes the total after-tax accumulation compared to investing in either stock or bonds for the entire 15-year period (compare Column 4 and 5 totals to Column 6 total).

The stock outperforms the taxable bonds for the first nine years even though the taxable bonds yield a higher BTROR than does the stock. This result occurs because the deferral benefit outweighs the lower BTROR for long investment horizons. ◀

SUMMARY AND COMPARISON OF BASIC INVESTMENT MODELS

Topic Review I:18-1 summarizes the models along with simple examples. In the examples, each model assumes an investment earning 10% before taxes and assumes a constant 30% tax rate. With these assumptions, the Exempt and Pension Models outperform the Current and Deferred Models, and the Deferred Model outperforms the Current Model.

OTHER APPLICATIONS OF INVESTMENT MODELS

OBJECTIVE 2

Use the investment models to make Roth conversion and entity choice decisions

In the previous section of this chapter, we developed four investment models and applied them to currently taxable investments, capital gains assets, tax-exempt bonds, and retirement plans. In this section, we present two additional applications: (1) the Roth conversion decision and (2) the pass-through entity versus C corporation form of business operations.

TOPIC REVIEW I:18-1

Summary of Investment Models

Investment Model	Initial Income	Investment Earnings or Capital Gain	Examples[a]	ATA	ATA/AT$	r_{ann}
Current: $AT\$[1 + R(1-t)]^n$ — or — $AT\$(1+r)^n$	Taxed currently	Taxed annually	$\$700(1.07)^5$	$ 981.79	1.4026[b]	7.00%
Deferred: $AT\$[(1+R)^n(1-t_n) + t_n]$	Taxed currently	Tax deferred	$\$700[(1.1)^5(0.7) + 0.30]$	$ 999.15	1.4274[c]	7.38%
Exempt: $AT\$(1+R)^n$	Taxed currently	Tax exempt	$\$700(1.1)^5$	$1,127.36	1.6105[d]	10.00%
Pension: $BT\$(1+R)^n(1-t_n)$ — or — $AT\$\left[\frac{1}{(1-t_o)}(1+R)^n(1-t_n)\right]$	Tax deferred	Tax deferred	$\$1{,}000(1.1)^5(0.7)$ — or — $\$700(1/0.7)(1.1)^5(0.7)$	$1,127.36	1.6105[e]	10.00%

Definitions of Variables:

ATA = After-tax accumulation (future value of an investment)

BT$ = Before-tax dollars

AT$ = After-tax dollars

R = Before-tax rate of return (BTROR)

r = After-tax rate of return (ATROR)

r_{ann} = Annualized ATROR

n = Investment horizon

t = Marginal tax rate, generally and for Current Model

t_o = Marginal tax rate in the year of investment (Year 0) for Pension Model

t_n = Marginal tax rate at the end of the investment horizon (Year n) for Deferred and Pension Models

[a] Initial before-tax income (BT$) = $1,000; AT$ = $1,000(0.7) = $700; $R = 10\%$; $t = t_o = t_n = 30\%$; $n = 5$

[b] Also: $(1.07)^5 = 1.4026$

[c] Also: $(1.1)^5(0.7) + 0.30 = 1.4274$

[d] Also: $(1.1)^5 = 1.6105$

[e] Note that the $1,127.36 after-tax accumulation is divided by $700, not $1,000, because $700 is the after-tax dollar equivalent of $1,000 before taxes. Also: $(1/0.7)(1.1)^5(0.7) = 1.6105$

ROTH CONVERSION DECISION

An individual may roll over distributions from a traditional IRA to a Roth IRA without regard to AGI levels. Also, amounts in traditional 401(k), 403(b), and 457(b) plans can be rolled over to Roth 401(k), 403(b), and 457(b) plans, as well as to Roth IRAs. When referring to Roth 401(k), 403(b), and 457(b) plans, the text will simply refer to Roth 401(k) plans, with this term encompassing all three plans. The rollover does not have to entail an actual distribution, however, in that the individual can implement the conversion with an in-plan rollover. An individual may want to effect a Roth conversion for several reasons.

- Individual tax rates might be high enough in retirement to justify avoiding them with Roth tax-exempt income.
- Roth-type accounts do not require minimum distributions, unlike traditional-type accounts.
- The Roth tax-exempt income does not count toward Social Security or Medicare premium thresholds.

The decision models in this section focus primarily on the first bullet item, that is, the tax rate structure the individual faces at the time he or she is considering converting versus the tax rate upon withdrawing the amounts accumulated in the Roth IRA or Roth 401(k) plan. The tax rates are important at the time of conversion because the conversion is a taxable event. The tax rates upon withdrawal are important because retaining a traditional IRA or 401(k) plan entails paying taxes at the time of withdrawal. Thus, conversion to a Roth triggers a current tax but avoids later taxation, while retaining a traditional deductible IRA defers current taxation but entails taxation upon withdrawing accumulated amounts. The discussion and examples henceforth will address the Roth IRA conversion decision, but the models are applicable to the Roth 401(k) plan conversion as well.[8] However, the option of paying the conversion tax from 401(k) funds may not be available because of plan restrictions on withdrawals prior to retirement.

The following concepts and assumptions apply to the decision model, and Table I:18-3 provides the definitions of variables used in the models.

- The models compare the after-tax accumulation (ATA) of retaining the traditional IRA with the ATA of converting the traditional IRA to a Roth IRA.
- The ATA of retaining the traditional IRA is the future value of the IRA accumulation minus the taxes paid upon withdrawal.
- The ATA of the converted Roth IRA is the future value of the IRA accumulation minus the future value (opportunity cost) of the tax paid upon conversion.
- The models assume a conversion with the conversion tax paid from outside taxable sources (investments) or from a pre-existing Roth IRA, with no penalty in either case.[9]
- For comparability, the models assume a lump-sum distribution at the end of the investment horizon.

Retention Model. The model for retaining the existing traditional IRA is as follows:

$$\mathrm{ATA} = V_k(1+R)^n - t_n[V_k(1+R)^n - B_k]$$

The expression to the left of the minus sign calculates the before-tax accumulation in the IRA at time n. The expression to the right of the minus sign reduces the before tax accumulation by the tax on the withdrawal at time n. Note that this formulation is a variation of the Pension Model.

Conversion Models. The models for converting to the Roth IRA are as follows:

With Conversion Tax Paid from Outside Source:

$$\mathrm{ATA} = V_k(1+R)^n - CT_k(1+r)^n$$

With Conversion Tax Paid from Roth IRA Funds:

$$\mathrm{ATA} = V_k(1+R)^n - CT_k(1+R)^n$$

$$\text{Where } CT_k = t_k\,(V_k - B_k) \quad \text{(assuming no early withdrawal penalty)}$$

TABLE I:18-3
Definitions of Variables

Variable	Definition
V	Value of traditional IRA at conversion
B	Basis in traditional IRA at conversion. An IRA will have basis to the extent the individual made nondeductible contributions to a traditional IRA.
R	Before-tax rate of return on assets inside the IRA, assumed the same for all years
CT	Amount of conversion tax upon conversion
r	Annualized after-tax rate of return on investments outside the IRA, which represents the opportunity cost of paying tax on the IRA conversion from sources outside the IRA
t	Marginal tax rate for ordinary income
n	Years in investment period from time of conversion to lump-sum liquidation in year n; also used as subscript to denote year n
k	Subscript on relevant variables to denote year of conversion

---

[8] For a comprehensive analysis of the Roth 401(k) conversion decision, see K. E. Anderson and D. S. Hulse, "In-Plan Rollovers from Traditional 401(k), 403(b), and 457(b) Plans to Roth Accounts: A Decision Framework," *Journal of Financial Service Professionals*, September 2013, pp. 89–98.

[9] The model where funds from a pre-existing Roth IRA are used to pay the conversion tax assumes that the distribution is tax-free (e.g., is a qualified distribution or is from basis in the Roth IRA). See the article cited in footnote 8 for an analysis where the conversion tax is paid from traditional IRA funds.

Again, the expression to the left of the minus sign in each model calculates the before-tax accumulation in the IRA at time n. The expression to the right of the minus sign reduces the before-tax accumulation by the conversion tax paid at the time of conversion times a future value term. The conversion tax needs to be formulated as a future value so all amounts are compared in the same time frame. The future value term also represents the opportunity cost of paying the conversion tax currently and thereby losing the earnings on the tax amount diverted from its investment source. Note that the two models differ by the rate of return used to determine this opportunity cost. If the conversion tax is paid from an outside source, the taxpayer forfeits the ATROR that could be earned on that amount. The model assumes this source is a taxable account rather than from another IRA. On the other hand, if the conversion tax is paid from a Roth IRA, the taxpayer forfeits the BTROR that could be earned in the IRA.

EXAMPLE I:18-21 ▶ Beth currently has a traditional IRA to which she made deductible contributions in the IRA's early years. Later, however, Beth was no longer eligible for the deduction but continued to make nondeductible contributions. By the current year, the IRA will have accumulated in value to $100,000 ($V_k = \$100,000$), and $10,000 of the contributions will have been nondeductible ($B_k = \$10,000$). Beth's current marginal tax rate is 25%, and she expects her tax rate to remain at 25% for the next 20 years ($t_k = t_n = 0.25$). Beth can earn an 8% BTROR ($R = 0.08$) on investments in the IRA and a 6% ATROR ($r = 0.06$) on investments outside the IRA. Beth plans to cash out the IRA in 20 years ($n = 20$) with no early withdrawal penalty. Her two options yield the following results:

Retain Existing Traditional IRA:

$\text{ATA} = \$100{,}000(1.08)^{20} - 0.25[\$100{,}000(1.08)^{20} - \$10{,}000] = \$352{,}072$

Convert to Roth IRA with Conversion Tax Paid from Outside Source:

$\text{CT}_k = 0.25(\$100{,}000 - \$10{,}000) = \$22{,}500$

$\text{ATA} = \$100{,}000(1.08)^{20} - \$22{,}500(1.06)^{20} = \$393{,}935$

Therefore, Beth should convert to the Roth IRA. ◀

EXAMPLE I:18-22 ▶ Assume the same facts as in Example I:18-21 except Beth expects her tax rate upon withdrawal to be 15% ($t_n = 0.15$).

Retain Existing Traditional IRA:

$\text{ATA} = \$100{,}000\ (1.08)^{20} - 0.15[\$100{,}000\ (1.08)^{20} - \$10{,}000] = \$397{,}681$

Convert to Roth IRA with Conversion Tax Paid from Outside Source:

$\text{CT}_k = 0.25(\$100{,}000 - \$10{,}000) = \$22{,}500$

$\text{ATA} = \$100{,}000(1.08)^{20} - \$22{,}500(1.06)^{20} = \$393{,}935$

In this case, retaining the traditional IRA edges out converting to a Roth IRA. However, if the dollar difference is small, the Roth IRA still could be the better choice based on other factors, such as not requiring minimum distributions. ◀

EXAMPLE I:18-23 ▶ Assume the same facts as in Example I:18-22 except Beth uses Roth IRA funds to pay the conversion tax.

Retain Existing Traditional IRA:

$\text{ATA} = \$100{,}000(1.08)^{20} - 0.15[\$100{,}000(1.08)^{20} - \$10{,}000] = \$397{,}681$

Convert to Roth IRA with Conversion Tax Paid from Roth IRA funds:

$\text{CT}_k = 0.25(\$100{,}000 - \$10{,}000) = \$22{,}500$

$\text{ATA} = \$100{,}000(1.08)^{20} - \$22{,}500(1.08)^{20} = \$361{,}224$

In this case, a large dollar difference presents much more support for the retention decision than does the result in Example I:18-22. This large difference occurs because of the higher opportunity cost associated with the conversion tax. ◀

Factors that Bias the Decision Toward a Roth Conversion. Several observations can be made about which factors might sway the decision toward converting to the Roth IRA rather than retaining the traditional IRA. These factors are as follows:

- A high tax rate in the withdrawal year (t_n) relative to the tax rate in the conversion year (t_k). Converting allows the traditional IRA to avoid the high tax rate in the withdrawal year.
- A high ratio of IRA basis (B_k) to IRA value (V_k). A high basis reduces the conversion tax.
- Use of funds outside an IRA to pay conversion tax (CT) and a low ATROR (r). Paying from outside sources reduces the opportunity cost of converting to a Roth IRA.

PASS-THROUGH ENTITY VERSUS C CORPORATION

ADDITIONAL COMMENT

As the income and deductions pass through to the owners of partnerships and S corporations, they retain their character. For example, ordinary income at the entity level is ordinary income to the owner, and capital gains at the entity level pass through as capital gains.

Chapter I:16 described how the government taxes C corporations and their shareholders, and Chapter I:17 introduced the tax consequences of operating as a pass-through entity. Pass-through entities include partnerships, limited liability companies (LLCs), limited liability partnerships (LLPs), and S corporations. A pass-through entity's primary characteristic is that income escapes taxation at the entity level and passes through to be taxed at the ownership level. Another key feature of the pass-through entity is that the owners may deduct 20% of qualified business income (QBI) that passes through to the owners from the entity (see Chapter I:17 for details and limitations). Corporate income, on the other hand, is taxed once at the entity level and again at the owner level. Taxation at the owner level occurs when the corporation distributes its earnings, when the shareholder sells his or her stock, or when the corporation liquidates.

In this section, we show that the Current Model describes a pass-through entity and that a variation of the Deferred Model describes a C corporation. These models can be used to decide which form of business is best from a tax perspective. At first, one might think the pass-through entity is the better form because it avoids double taxation. But, in fact, the better alternative depends on a combination of factors, specifically, rates of returns, the corporate tax rate, the owner's tax rate, the entity's expected life span (investment horizon), and the availability of the QBI deduction for owners of pass-through entities.

The Pass-Through Model. To keep matters simple, we assume an S corporation with only one shareholder. The one-owner assumption allows us to focus on the entity decision without worrying about distributive shares and differential individual tax rates among owners. The model also applies to an S corporation, a partnership, an LLC, or an LLP with more than one owner. In addition, the model applies to a sole proprietorship because that form of business also entails one level of taxation.

EXAMPLE I:18-24 ▶ Assume the following facts. Rebecca forms an S corporation by contributing $10,000 to the corporation in exchange for all the corporation's stock. The S corporation invests in assets that produce a 10% BTROR per year. At the end of each year, the S corporation distributes cash to Rebecca equal to the taxes she must pay on the S corporation's pass-through earnings. The corporation reinvests the remaining earnings in its business. Rebecca's tax rate is 40%. For this example, assume that Rebecca does not claim the QBI deduction (see Example I:18-25 for results with the QBI deduction). Immediately after the end of the second year, the S corporation liquidates, selling the assets and distributing the cash proceeds to Rebecca. Because the corporation reinvested its retained earnings, the total basis of the corporation's assets increased as well. Assuming the FMV of the assets increased similarly, the sale produces no realized gain at the entity level. The following schedule shows the results of these transactions at the entity and owner levels:

	Year 1	*Year 2*
Entity level:		
Investment at beginning of year	$10,000	$10,600
Plus: Earnings on investment (10% × investment)	1,000	1,060
Minus: Distribution to shareholder (40% × earnings)	(400)	(424)
Investment at end of year	$10,600	$11,236

	Year 1	*Year 2*
Owner level:		
Stock basis at beginning of year	$10,000	$10,600
Plus: Increase due to pass-through income	1,000	1,060
Minus: Decrease due to distribution	(400)	(424)
Stock basis at end of year	$10,600	$11,236

Upon liquidation, the S corporation sells the assets and distributes the $11,236 to Rebecca. Because Rebecca's stock basis equals $11,236, she recognizes no additional gain on the liquidation. Thus, after two years, she ends up with $11,236 on a $10,000 original investment. ◀

In Example I:18-24, the S corporation could reinvest only its earnings after paying the shareholder's tax. Thus, the investment grew at a 6% ATROR, which is 10% (1 − 0.4). Consequently, the shareholder's after-tax accumulation also can be calculated as follows: ATA = $\$10{,}000(1.06)^2 = \$11{,}236$. From the owner's viewpoint, then, the pass-through entity resembles the Current Model. In general terms, the owner's after-tax accumulation can be expressed as:

The Pass-Through Model:

$$\text{ATA} = \text{Contribution}[1 + R_f(1 - t_p)]^n$$

In this model, R_f equals the pass-through entity's BTROR, t_p is the owner's marginal tax rate (p is for personal), and n is the investment horizon. If the owner claims the 20% QBI deduction, t_p will equal the owner's ordinary tax rate times (1 − 0.20), assuming the QBI deduction is not limited by 20% of excess taxable income.[10] Although Example I:18-24 assumes a liquidating distribution at the end of the investment, the same result would have occurred had the owner sold her ownership interest (stock in this case) to another party.

ADDITIONAL COMMENT

The subscript f could be thought of as flow-through entity, as pass-through entities sometimes are called that.

EXAMPLE I:18-25 ▶

Assume the same facts as in Example I:18-24 except Rebecca claims the QBI deduction. In this case, her tax rate effectively is 32% [40% × (1 − 0.20].

ADDITIONAL COMMENT

Example I:18-25 and other examples in this chapter assume that the QBI deduction is not limited to 20% of excess taxable income. Also, the analysis for a partnership pass-through entity would be complicated by the existence of the self-employment tax and the deduction for one-half of the self-employment tax.

	Year 1	*Year 2*
Entity level:		
Investment at beginning of year	$10,000	$10,680
Plus: Earnings on investment (10% × investment)	1,000	1,068
Minus: Distribution to shareholder (32% × earnings)	(320)	(342)
Investment at end of year	$10,680	$11,406
Owner level:		
Stock basis at beginning of year	$10,000	$10,680
Plus: Increase due to pass-through income	1,000	1,068
Minus: Decrease due to distribution	(320)	(342)
Stock basis at end of year	$10,680	$11,406

Upon liquidation in this case, the S corporation sells the assets and distributes the $11,406 to Rebecca. Because Rebecca's stock basis equals $11,406, she recognizes no additional gain on the liquidation. Thus, after two years, she ends up with $11,406 on a $10,000 original investment, which is an amount greater than in Example I:18-24 because the QBI deduction effectively reduced her marginal tax rate. The tax reduction in turn increases the amount of earnings the S corporation could retain and reinvest in its business. In other words, the investment in this case grew at a 6.8% ATROR, which is 10% (1 − 0.32), rather than 6%, which is 10% (1 − 0.40). Using the pass-through model yields the same result as follows: $\$10{,}000\ (1.068)^2 = \$11{,}406$. ◀

---

[10] The analysis with the QBI deduction also assumes that the business income is not from a specified service-related business, e.g., law or accounting (or that the owner's income is not high enough to make such business income ineligible for the QBI deduction). See Chapter I:17 for details.

The C Corporation Model. Again, to keep matters simple, we assume a C corporation with only one shareholder, and we further assume that the corporation retains all earnings after paying corporate level taxes. That is, the corporation pays no dividends. The model could be modified to reflect annual dividend payments, but such a model becomes extremely complicated and is beyond the scope of this chapter.

EXAMPLE I:18-26 ▶ Assume the same facts as in Example I:18-24 except Rebecca forms a C corporation instead of an S corporation. In this case, the corporation makes no annual distributions to Rebecca. Instead, the corporation pays its own taxes at a 21% rate and reinvests the after-tax retained earnings. Thus, the shareholder has no owner-level taxes until the corporation liquidates. Rebecca's ordinary tax rate remains 40%, but her capital gains tax rate is 20%. As in Example I:18-24, the sale prior to liquidation produces no realized gain at the entity level. The following schedule shows the results of these transactions at the entity and owner levels (assuming Sec. 1202 does not apply):

	Year 1	*Year 2*
Entity level:		
Investment at beginning of year	$10,000	$10,790
Plus: Earnings on investment (10% × investment)	1,000	1,079
Minus: Corporate taxes (21% × earnings)	(210)	(227)
Investment at end of year	$10,790	$11,642
Owner level:		
Stock basis	$10,000	$10,000
(1) Liquidation proceeds		$11,642
(2) Minus: Stock basis		(10,000)
(3) Capital gain on liquidation		$ 1,642
(4) Times: Long-term capital gains tax rate		0.20
(5) Tax on capital gain		$ 328
(6) After-tax proceeds (Line 1 – Line 5)		$11,314

Because the corporation is a C corporation, Rebecca makes no adjustments to her stock basis, which remains at $10,000. Consequently, she recognizes a capital gain upon liquidation, and after two years she ends up with $11,314 on a $10,000 original investment. ◀

In Example I:18-26, the C corporation was able to reinvest only its after-tax earnings. Thus, at the corporate level, the investment grew at a 7.9% ATROR, which is 10% (1 – 0.21). Consequently, the corporate-level accumulation before distribution to the shareholders can be calculated as follows: $\$10{,}000[1 + 0.1(1 - 0.21)]^2 = \$10{,}000(1.079)^2 = \$11{,}642$. In general terms, this expression is: Contribution $[1 + R_c(1 - t_c)]^n$, or Contribution $(1 + r_c)^n$. This formulation is a variation of the Current Model, where R_c is the corporation's BTROR, r_c is the corporation's ATROR, and t_c is the corporation's tax rate.

Upon liquidation, the shareholder receives the corporate-level accumulation and pays tax at rate t_p on the difference between the distribution and her stock basis. Thus, the shareholder's after-tax accumulation in Example I:18-26 can be formulated as follows:

$$\text{ATA} = \$10{,}000(1.079)^2 - [\$10{,}000(1.079)^2 - \$10{,}000] \times 0.20$$

The first term, $\$10{,}000(1.079)^2$, gives the corporate-level after-tax accumulation; the subtraction in brackets gives the shareholder's liquidation gain before shareholder-level taxes; and the multiplication by 20% gives the tax on the liquidation gain. Subtracting this tax from the first term gives the shareholder's total after-tax accumulation on the investment in the C corporation. Factoring out the $10,000 contribution yields the following expression:

$$\text{ATA} = \$10{,}000\{(1.079)^2 - [(1.079)^2 - 1] \times 0.20\}$$

Substituting our general symbols into this expression yields the following model, which is a variation of the Deferred Model shown earlier in Figure I:18-1:

$$\text{ATA} = \text{Contribution}\{(1 + r_c)^n - [(1 + r_c)^n - 1] \times t_p\}$$

As done earlier with the Deferred Model, we can simplify this model algebraically to obtain:

ADDITIONAL COMMENT

If the 100% Sec. 1202 exclusion applies, t_p in this model will equal zero, and the model reduces to ATA = Contribution $(1 + r_c)^n$ or Contribution $[1 + R_c (1 - t_c)]$.

The C Corporation Model:

$$\text{ATA} = \text{Contribution}[(1 + r_c)^n(1 - t_p) + t_p] \text{ or}$$
$$\text{ATA} = \text{Contribution}\{[1 + R_c(1 - t_c)]^n(1 - t_p) + t_p\}$$

In the first form of this model, the corporation's ATROR (r_c) plays the same role as the BTROR plays in the Deferred Model developed earlier in this chapter. More specifically, in terms used in Example I:18-10, r_c is the appreciation (growth) rate of the shareholder's stock investment, assuming the stock value reflects increases in the corporation's after-tax retained earnings. Thus, the corporation's ATROR functions as the shareholder's BTROR on his or her stock investment. The second form of the C Corporation Model emphasizes that the corporate-level accumulation (the Current Model) is embedded in the shareholder's after-tax accumulation model (the Deferred Model). Topic Review I:18-2 summarizes these models.

Comparing the Pass-Through and C Corporation Models. Given these two models, an owner can compare whether operating as a pass-through entity or a C corporation provides the better result.

EXAMPLE I:18-27 ▶

Assume the following facts. Mark forms Wolfson Corporation by contributing $5 million cash in exchange for the corporation's stock. The corporation expects to earn 18% per year before taxes on this investment. The corporate tax rate is 21%, and Mark's individual tax rate on ordinary income is 35%. If Mark claims the QBI deduction, his effective marginal tax rate is 28% [35% × (1 − 0.20)]. On capital gains other than Sec. 1202 gains, Mark's tax rate is 20%. If Wolfson stock qualifies as small business stock under Sec. 1202, any gain recognized on disposition of the stock after a five-year holding period qualifies for a 100% exclusion. Wolfson can operate either as an S corporation or a C corporation. If the corporation elects S corporation status, each year it will distribute exactly enough cash for Mark to pay taxes on any pass-through income, and it will reinvest the remaining earnings in the business. If the corporation operates as a C corporation, it will make no annual distributions, reinvesting all after-tax earnings in the business. In either case, the corporation will operate for at least six years and then liquidate at the end of the investment horizon. Mark wants to know how long he must operate the corporation to make the C corporation form better than the S corporation form. Table I:18-4 gives Mark's after-tax accumulation for each alternative.

In Table I:18-4, Columns 1 and 2 show results for the S corporation with and without Mark claiming the QBI deduction, and Columns 3 and 4 show results for the C corporation with and without the 100% Sec. 1202 exclusion. The C corporation with the Sec. 1202 exclusion beats both cases of the S corporation for all holding periods because the 21% C corporation tax rate is less than either version of Mark's individual tax rate (35% or 28%). The C corporation without the Sec. 1202 exclusion also beats the S corporation with no QBI deduction for all holding periods. If Mark claims the QBI deduction, however, the C corporation without the Sec.1202 exclusion does not beat the S corporation with the QBI deduction unless the corporation operates for at least 19 years. ◀

ADDITIONAL COMMENT

For qualified small business stock (Sec. 1202 stock) acquired after February 17, 2009 and before September 28, 2010, the exclusion is 75%. For qualified Sec. 1202 stock acquired after September 27, 2010, the exclusion percentage is 100%. In any case, the five-year holding period requirement applies. The text discussion assumes a 100% exclusion if Sec. 1202 applies.

▼ TABLE I:18-4
S Corporation Versus C Corporation

Years of Operation (n)	(1) S Corporation[a] (QBI Deduction)	(2) S Corporation[b] (No QBI Deduction)	(3) C Corporation[c] (100% Exclusion)	(4) C Corporation[d] (No Exclusion)
6	$10,387,669	$ 9,711,561	$11,102,555	$ 9,882,044
7	11,733,911	10,847,814	12,681,338	11,145,071
8	13,254,626	12,117,008	14,484,625	12,587,700
9	14,972,425	13,534,698	16,544,338	14,235,471
10	16,912,852	15,118,257	18,896,943	16,117,555
11	19,104,757	16,887,094	21,584,089	18,267,271
12	21,580,734	18,862,883	24,653,346	20,722,677
13	24,377,597	21,069,841	28,159,052	23,527,242
14	27,536,934	23,535,012	32,163,269	26,730,615
15	31,105,720	26,288,609	36,736,886	30,389,509
16	35,137,021	29,364,376	41,960,871	34,568,697
17	39,690,779	32,800,008	47,927,707	39,342,166
18	44,834,704	36,637,609	54,743,027	44,794,422
19	50,645,282	40,924,209	62,527,486	51,021,989
20	57,208,911	45,712,341	71,418,894	58,135,115
21	64,623,186	51,060,685	81,574,661	66,259,729
22	72,998,350	57,034,786	93,174,578	75,539,662

[a] For all n, $\text{ATA} = \$5{,}000{,}000[1 + 0.18(1 - 0.28)]^n$

[b] For all n, $\text{ATA} = \$5{,}000{,}000[1 + 0.18(1 - 0.35)]^n$

[c] For $n = 1$ through 5, $\text{ATA} = \$5{,}000{,}000\{[1 + 0.18(1 - 0.21)]^n(1 - 0.20) + 0.20\}$

For $n > 5$, $\$5{,}000{,}000[1 + 0.18(1 - 0.21)]^n$

[d] For all n, $\text{ATA} = \$5{,}000{,}000\{[1 + 0.18(1 - 0.21)]^n(1 - 0.20) + 0.20\}$

STOP & THINK

Question: Assume that a pass-through entity and a C corporation earn the same BTROR, that is, $R_f = R_c$. Also assume the Sec. 1202 exclusion does not apply, but remember that the owner's tax rate (t_p) can be his or her ordinary tax rate or $(1 - 0.20)$ times the owner's ordinary tax rate depending on whether or not the owner claims the QBI deduction. Given the following comparisons of the corporate tax rate (t_c) and the owner's tax rate (t_p), can you tell from just looking at the two models which entity form is better from a tax perspective?

Comparison 1: $t_c = t_p$
Comparison 2: $t_c > t_p$
Comparison 3: $t_c < t_p$

Solution: In Comparisons 1 and 2, the pass-through entity is always better than the C corporation (given $R_f = R_c$). In Comparison 3, however, the answer is not obvious. Consider the two models:

Pass-through: $[1 + R_f(1 - t_p)]^n$
C corporation: $[1 + R_c(1 - t_c)]^n(1 - t_p) + t_p$

Notice that, if $R_f = R_c$ and $t_c = t_p$, the bracketed terms in the two models will be equal, which means the pass-through entity accumulation equals the corporate-level accumulation. The C corporation, however, entails additional taxation at the shareholder level,

TOPIC REVIEW I:18-2

Pass-Through and C Corporation Models

Pass-Through Model:

$$\text{ATA} = \text{Contribution}[1 + R_f(1 - t_p)]^n$$

C Corporation Model:

$$\text{ATA} = \text{Contribution}[(1 + r_c)^n(1 - t_p) + t_p]$$

or

$$\text{ATA} = \text{Contribution}\{[1 + R_c(1 - t_c)]^n(1 - t_p) + t_p\}$$

Definitions of Variables:

R_f = Pass-through entity's BTROR
R_c = C corporation's BTROR
t_p = Owner's marginal tax rate (adjusted for capital gain rate or QBI deduction, if applicable)
t_c = C corporation's marginal tax rate
r_c = C corporation's ATROR
n = Investment horizon

which is represented by the terms following the bracketed term. This additional tax makes the C corporation worse than the pass-through entity. If $t_c > t_p$, the bracketed term in the C corporation model accumulates to a lesser amount than does the pass-through model, and the shareholder-level tax just makes matters worse. Thus, the pass-through entity again is the preferred form. Finally, if $t_c < t_p$, the bracketed term in the C corporation model accumulates to a greater amount than does the pass-through model, but the shareholder level tax lessens the overall benefit. However, whether the overall effect causes the C corporation to be better than the pass-through entity depends on how much t_p exceeds t_c and on how long the investment horizon (n) is. Thus, the answer is not obvious.

Example I:18-27 and the above analysis show that the entity choice decision can be a complex one involving personal tax rates, the C corporation tax rate, the Sec. 1202 exclusion, the QBI deduction, the BTROR, and the investment horizon. The pass-through and C corporation models presented in this section can help with that decision because they incorporate the key variables that affect the outcome.

IMPLICIT TAXES AND CLIENTELES

OBJECTIVE 3

Recognize the role of implicit taxes in investment decisions

Several of the investment vehicles we modeled earlier have certain tax benefits compared to other investments. For example, interest earned on tax-exempt investments, such as state and local bonds, is excluded from gross income. The Exempt Model reflects this tax benefit. As another example, assets that generate long-term capital gains also are tax favored. The taxation of the capital gain is deferred until realization, and then the realized gain may be subject to the applicable capital gains tax rate. The Deferred Model, when applied to capital gain assets, reflects this preferential taxation. For the sake of simplicity, however, this section focuses on tax-exempt bonds to introduce the concept of implicit taxes and clientele effects.

Implicit Taxes. Consider what happens in the marketplace for tax-favored assets. Given a choice between a fully-taxable investment and a tax-favored investment, investors will prefer the tax-favored investment, assuming the two investments are equally risky. This preference manifests itself as an increased demand for the tax-favored investment, thereby driving up the asset's price. The increased price, in turn, causes the asset's BTROR to decrease. For example, the BTROR on a bond with an unlimited life (a perpetuity) is as follows:

$$\text{BTROR} = \frac{\text{Annual cash flow}}{\text{Bond's price}}$$

If the bond's price increases, the BTROR must decrease.

The difference between the BTRORs of the fully-taxable and tax-favored investments is an implicit tax, which can be expressed as follows:

$$IT = R_b - R_e$$

In this formula, IT stands for implicit tax, R_b is the BTROR on a fully-taxable benchmark investment, and R_e is the BTROR on a tax-favored investment having the same risk level as the benchmark. (Later in this chapter, we will show the problem with comparing investments of unequal risk.) Dividing the implicit tax by the benchmark BTROR (R_b) converts the implicit tax (IT) to an implicit tax *rate* (t_I), expressed as follows:

$$t_I = \frac{R_b - R_e}{R_b}$$

EXAMPLE I:18-28 ▶ Maria invests $1,000 in a taxable bond that yields a 10% BTROR and another $1,000 in a tax-exempt bond that yields a 7.5% BTROR (i.e., $R_b = 10\%$, and $R_e = 7.5\%$). Maria's marginal tax rate is 25% (i.e., $t = 25\%$). The two investments yield the following earnings each year:

	Taxable Bond	*Tax-Exempt Bond*
Before-tax interest	$100	$75
Minus: Explicit tax on interest	(25)	0
After-tax interest	$ 75	$75

Although the tax-exempt bond is free from explicit taxation, it reflects a 2.5% implicit tax, which is $R_b - R_e = 10\% - 7.5\% = 2.5\%$. Here, we express the implicit tax as a 2.5% reduction in the BTROR. Stated in dollars, the implicit tax is $1,000 × 0.025 = $25. Thus, Maria incurs a $25 explicit tax on the taxable bond and a $25 implicit tax on the tax-exempt bond. Maria's implicit tax *rate* on the tax-exempt bond is 25%, calculated as follows:

$$t_I = \frac{R_b - R_e}{R_b} = \frac{10\% - 7.5\%}{10\%} = 0.25 \text{ or } 25\%$$

Thus, Maria incurs a 25% explicit tax *rate* on the taxable bond and a 25% implicit tax *rate* on the tax-exempt bond.

Maria's ATROR on each bond is 7.5%. For the taxable bond, the ATROR is calculated as follows: $r_b = R_b(1 - t) = 10\%(1 - 0.25) = 7.5\%$. For the tax-exempt bond, the ATROR is the same as the BTROR. ◀

Equilibrium Condition and Clienteles. The degree to which R_e falls in relation to R_b depends on the marginal investor's tax rate. By definition, marginal investors are indifferent between fully-taxable and tax-favored investments. As marginal investors compete for a tax-favored investment, supply and demand forces drive up its price (and reduce its BTROR) to the point where the ATRORs of the fully-taxable and tax-favored investments are equal. That is, in equilibrium for marginal investors, the ATRORs for investments meet the following condition: $r_b = r_e$. (Note that, for tax-exempt bonds, $r_e = R_e$.) For example, in Example I:18-28, Maria is a marginal investor because $r_b = r_e = 7.5\%$. Thus, Maria is indifferent between the two investments.

In Example I:18-28, Maria incurred a 25% tax rate on each investment, explicit on the fully-taxable bond and implicit on the tax-exempt bond. Thus, Maria did not realize a tax benefit on the tax-exempt bond. In fact, the term *tax-exempt* is a misnomer when implicit taxes are considered. The issuer of the tax-exempt bond, however, received a tax subsidy in the form of a reduced interest rate. Therefore, the transaction works as though Maria paid a tax while the bond issuer received a subsidy.

This result leads to the following question: Can any investor benefit from tax-exempt bonds? In a flat-rate tax system where only one tax rate prevails, the answer is no because all investors are marginal investors. In a progressive tax rate system, however, the answer is yes for an investor whose marginal tax rate exceeds that of the marginal investor. In this situation, investors form natural clienteles for the alternative investments.

EXAMPLE I:18-29 ▶ Assume the same facts as in Example I:18-28, where Maria is the indifferent marginal investor. Consider two other investors, Silvia and Bob. Silvia's tax rate is 40%, and Bob's tax rate is 15%. If Silvia invested in a fully-taxable bond, her ATROR would be as follows: $r_b = 10\%(1 - 0.4) = 6\%$. Consequently, Silvia will prefer the tax-exempt bond that yields a 7.5% ATROR (which also equals its BTROR). Silvia's high tax rate puts her in the clientele for tax-exempt bonds. By investing in the tax-exempt bond, Silvia converts her 40% explicit tax rate into a 25% implicit tax rate, thereby giving her the higher ATROR.

If Bob invests in the fully-taxable bond, his ATROR will be as follows: $r_b = 10\%(1 - 0.15) = 8.5\%$. Thus, Bob prefers the fully-taxable bond because he obtains an 8.5% ATROR rather than 7.5% from the tax-exempt bond. Bob's low tax rate puts him in the clientele for taxable bonds. If he mistakenly invests in the tax-exempt bond, he will convert a 15% explicit tax rate into a 25% implicit tax rate. Therefore, he should avoid the tax-exempt bond. ◀

TAX STRATEGY TIP

Example I:18-29 highlights a key planning concept. Investors must consider the ATRORs of investments in making their investment decisions. Doing so will ensure that all tax effects are accounted for, including implicit as well as explicit taxes.

Risky Assets. A key requirement for calculating the implicit tax rate on a tax-favored investment is that the risk level be the same as the benchmark investment. The BTROR of a risky asset has two components, the riskless return and a risk premium. This relationship can be formulated as follows:

$$\tilde{R} = R + P$$

In this formula, $\tilde{R}$ is the risky return, R is the riskless return, and P is the risk premium. Investors who invest in risky assets require this premium as an incentive to make the investment. If the benchmark investment is a fully-taxable, riskless bond, the tax-favored investment's BTROR must be adjusted to remove this risk premium to obtain an accurate measure of the implicit tax rate.

EXAMPLE I:18-30 ▶ A tax-exempt bond issued by Troubled City is highly risky and therefore yields a 12% BTROR, which is composed of a 7% riskless return and a 5% risk premium. A riskless benchmark investment yields a 10% BTROR. Computing the implicit tax rate with the 12% return yields the following incorrect (and negative) implicit tax rate:

$$t_I = \frac{R_b - \tilde{R}_e}{R_b} = \frac{10\% - 12\%}{10\%} = -0.2 \text{ or } -20\%$$

The correct implicit tax rate is calculated with the risk-adjusted return as follows:

$$t_I = \frac{R_b - R_e}{R_b} = \frac{10\% - 7\%}{10\%} = 0.30 \text{ or } 30\%$$ ◀

Summary. Market forces drive down the BTRORs of tax-favored assets. This reduced return is an implicit tax. Thus, potential tax benefits to a marginal investor are competed away, thereby providing an implicit subsidy to the asset's issuer or seller. Investors whose tax rate exceeds that of the marginal investor, however, still can reap some benefit through the clientele effect. Topic Review I:18-3 summarizes the implicit tax rate formula.

TOPIC REVIEW I:18-3

Implicit Taxes

Implicit tax:

$$IT = R_b - R_e$$

Implicit tax rate:

$$t_I = \frac{R_b - R_e}{R_b}$$

Equilibrium condition for marginal investor:

$$\mathbf{r_b = r_e}$$

Definitions of Variables:

IT = Implicit tax
t_I = Implicit tax rate
R_b = BTROR on a fully-taxable benchmark investment
R_e = Risk-adjusted BTROR on a tax-favored investment
r_b = ATROR on a fully-taxable benchmark investment
r_e = Risk-adjusted ATROR on a tax-favored investment

PROBLEM MATERIALS

DISCUSSION QUESTIONS

I:18-1 What is the primary distinguishing feature that causes the Current Model, Deferred Model, and Pension Model to differ?

I:18-2 What is an annualized ATROR, and why is it useful?

I:18-3 Why might an investment in a capital asset be preferable to an investment that is fully taxed currently even though the capital asset's BTROR is less than that of the fully-taxable investment?

I:18-4 Suppose a taxpayer is trying to decide between saving outside an IRA or saving through a traditional IRA. If the taxpayer needs the savings before reaching age 59½, should he or she necessarily avoid the IRA because of the 10% early withdrawal penalty? Why or why not? If the taxpayer must make a withdrawal before age 59½, which IRA might be better, the traditional IRA or the Roth IRA?

I:18-5 How does the length of the investment horizon affect the annualized ATROR of an investment conforming to the Deferred Model?

I:18-6 Under what conditions are the Exempt Model and Pension Model equivalent? Under what conditions would one model perform better than the other? How does the $7,000 limitation on deductible and Roth IRA contributions (for 2025) affect the comparison of these two vehicles?

I:18-7 What characteristics of a C corporation cause the shareholder's stock investment to conform to the Deferred Model?

I:18-8 What is a key factor that drives the decision to convert from a traditional IRA to a Roth IRA?

I:18-9 What are some key factors that affect the decision to operate as a pass-through entity versus a C corporation?

I:18-10 Why might an investment conforming to the Exempt Model have a lower BTROR than would an equivalent-risk investment conforming to the Current Model?

I:18-11 What is an implicit tax, and how does it arise?

I:18-12 What forces cause ATRORs of various investments to be equal for marginal investors?

I:18-13 What is a clientele effect, and what conditions are necessary for it to occur?

I:18-14 An article that appeared in a financial publication several years ago made a statement similar to the following:

"At the highest federal tax rates, interest from private sector investments are taxed at 40%, capital gains at 20%, while interest from state and local debt instruments isn't taxed at all."

What problem do you see with the author's statement?

I:18-15 Why would a flat-rate tax system eliminate clientele effects?

I:18-16 Why might the BTROR on a tax-favored investment be higher than the BTROR on a fully-taxable investment even though implicit tax theory says that it should be lower?

I:18-17 We have discussed implicit taxes using tax-exempt bonds as an example, and we have mentioned capital gains assets as another case where implicit taxes might occur. Give one or two other specific tax provisions that might cause implicit taxes to arise. In so doing, explain:

- How the implicit tax is manifested (e.g., increased prices, reduced returns, increased costs, etc.).
- Who "pays" the implicit tax.
- Who "receives" the implicit subsidy.

PROBLEMS

I:18-18 ***Tax-Exempt Bond.*** Laura, who is in the 35% tax bracket, notices that tax-exempt municipal bonds are yielding a 7% return. What before-tax rate of return on a fully-taxable bond must Laura obtain to make her prefer the taxable bond over the tax-exempt bond?

I:18-19 ***After-Tax Rates of Return.*** Suppose a bond is taxable for both federal and state purposes. Let R_b = the BTROR on the bond, t_{fed} = the federal tax rate, and t_{st} = the state tax rate. Determine the ATROR (i.e., after federal and state taxes) if:

a. The state tax is *not* deductible for either federal or state purposes.

b. The state tax *is* deductible for federal but not for state purposes.

After algebraic simplification, each answer should take the form: $R_b(\quad)$, with the rest of the answer inside the parentheses.

c. After determining the formulas for Parts a and b, determine the ATRORs assuming that the BTROR (R_b) is 8%, the federal tax rate (t_{fed}) is 40%, and the state tax rate (t_{st}) is 6%.

I:18-20 ***Investment Models.*** David can make a single investment in one of three alternatives. The first investment conforms to the Current Model, the second investment conforms to the Deferred Model, and the third investment conforms to the Pension Model. The investment horizon is seven years, and the BTROR for each alternative is 10%. David will incur no penalties upon withdrawal.

a. Assuming David's tax rate will be 15% for all seven years, what is the accumulation and annualized ATROR for each investment? Which alternative should David choose?

b. Assuming David's tax rate will be 15% for the first six years but will be 25% in the seventh year, what is the accumulation and annualized ATROR for each investment? Which alternative should David choose?

I:18-21 ***Investment Models.*** Mark is considering investing in either a tax-exempt municipal bond that yields 7% or a nondeductible IRA that contains investments that yield 10% before taxes. (Mark is ineligible to contribute to a Roth IRA.) Mark's current tax rate is 35%, and he plans to make a single investment now with a 15-year investment horizon.

a. Using after-tax accumulations and annualized ATRORs, show that the nondeductible IRA outperforms the municipal bonds assuming Mark's tax rate remains at 35%. Assume no additional penalty upon withdrawal from the IRA.

b. How high would Mark's tax rate have to rise in Year n to make the municipal bond more attractive than the nondeductible IRA? Assume the 7% and 10% BTRORs remain constant over time.

I:18-22 ***Investment Models and IRAs.*** Brenda has $7,000 of before-tax dollars available for a one-time investment. She is in the 25% bracket and expects to remain in this bracket indefinitely. She can invest directly in a taxable bond yielding 8% before taxes, or she can open an IRA and invest in the bond within the IRA. She knows that she will need the accumulated funds before she reaches age 59½. Thus, if she invests in an IRA, she will incur a 10% penalty on taxable amounts withdrawn from the IRA. Note: The two parts to this problem are best solved using a spreadsheet.

a. If she invests in an IRA that allows immediate deduction of contributed amounts (i.e., a traditional deductible IRA), how many years must she wait before the IRA is a better vehicle than direct investment in the bond outside the IRA?

b. How many years must she wait if she invests in a Roth IRA? Reminder: Withdrawals from a Roth IRA first come from contributions and are a nontaxable return of capital. However, if Brenda withdraws the *entire* accumulation before she attains age 59½, the accumulated earnings will be fully taxable and also subject to the 10% early withdrawal penalty. Hence, in this situation, the Roth IRA operates exactly like a traditional nondeductible IRA (the Deferred Model instead of the Exempt Model).

I:18-23 ***Investment Planning.*** Martha, who is in the 35% tax bracket, has $40,000 of before-tax income with which she wants to make a one-time investment. She wants to put $20,000 of this income in a deductible H.R. 10 plan, and she wants to invest any remaining after-tax income outside the H.R. 10 plan. Assume that Martha has sufficient self-employment income such that her contribution does not exceed the H.R. 10 contribution limit. Two investments are available: (1) a taxable bond yielding a 10% BTROR and (2) a nondividend paying stock that appreciates at a 10% annual rate before taxes. She is considering two alternatives:

1. Have the H.R. 10 plan invest in the stock, and Martha will invest in the bond outside the H.R. 10 plan.
2. Have the H.R. 10 plan invest in the bond, and Martha will invest in the stock outside the H.R. 10 plan.

The investment horizon is ten years with tax rates constant over this period. Capital gains upon sale of stock outside the H.R. 10 plan are taxed at 15%. However, if the stock is placed in the H.R. 10 plan, the H.R. 10 plan will sell the stock after ten years and distribute the proceeds to Martha, triggering ordinary income recognition to Martha. Assume no early withdrawal penalties on H.R. 10 plan distributions. Determine the total after-tax accumulation of Alternative 1 and of Alternative 2. Which of the two alternatives should Martha choose?

I:18-24 ***Roth IRA Versus Deductible IRA.*** Harry wants to contribute either $7,000 (BT$) to a traditional deductible IRA or $7,000 (AT$) to a Roth IRA. His current tax rate is 30% for ordinary income and 15% for capital gains. He expects his IRA investment to earn a 12% BTROR, and he plans to withdraw the IRA accumulation in 25 years, at which time he will be over age 59½. If he contributes to a deductible IRA, he will invest the tax savings from the deduction in a nondividend paying stock that he expects to grow at a 12% BTROR. Harry will sell the stock at the same time he withdraws the IRA accumulation.

a. Compare the two alternatives assuming that, at the time of withdrawal, Harry's tax rate will be 30% for ordinary income and 15% for capital gains.

b. Compare the two alternatives assuming that, at the time of withdrawal, Harry's tax rate will be 15% for ordinary income and 0% for capital gains.

I:18-25 ***Roth IRA Versus Deductible IRA.*** Beth wants to contribute to either a traditional deductible IRA or a Roth IRA. However, she can afford to contribute only $6,300 after-tax dollars to a Roth IRA even though the maximum contribution is $7,000. Alternatively, she can contribute a comparable amount to a deductible IRA plus an outside investment if necessary. (Remember that deductible IRA contributions are made with before-tax dollars and are limited to $7,000.) Beth's current tax rate is 25%, and she expects her tax rate to remain at 25% throughout the investment period. In addition, she expects her IRA investment to earn a 10% BTROR, and she plans to withdraw the IRA accumulation in 30 years, at which time she will be over age 59½. Any outside investment will conform to the Current Model earning a 10% BTROR. Determine the after-tax accumulation from each IRA alternative. Which of the two IRA types will give Beth the greater after-tax accumulation?

I:18-26 ***Multiperiod Investment Strategy.*** Given the following facts and assumptions, determine what investment strategy Karen should follow to maximize accumulations and how much she will have accumulated at the *beginning* of Year 10 (including her last paycheck).

- Karen's ordinary tax rate is 25%, and her long-term capital gains tax rate is 15%. These rates will remain constant over her investment horizon.
- Karen earns $50,500 per year, which she receives on the first day of each year.
- Karen saves all her income after paying income taxes on her earnings. Taxes are payable immediately upon receiving her paycheck.
- At the beginning of each year, Karen can invest her savings in any of three vehicles:
  1. A money market fund yielding 6% per year before taxes,
  2. A traditional deductible IRA that yields 6% per year before taxes, and/or
  3. Capital assets that grow at 5.21% per year before taxes.
- IRA contributions are limited to $7,000 per year and are deductible up to that amount. Assume this limit applies to all years under consideration.
- At the beginning of Year 10, Karen saves no more income. Instead, she withdraws any IRA and/or money market accumulations and sells her capital assets for their accumulated FMV before taxes. She also receives a $50,500 paycheck at the beginning of Year 10.

- IRA accumulations are taxable immediately upon withdrawal with no additional penalty.
- Ignore itemized deductions, standard deductions, exemptions, etc.

I:18-27 ***Roth Conversion Decision.*** Ken (age 47) has a traditional IRA and is considering whether to convert it to a Roth IRA. If he does so, he will pay the conversion tax from a source outside of the IRA. Ken deducted all his contributions to the traditional IRA, whose investments currently are worth $75,000. Regardless of his decision, Ken will cash out the IRA in 16 years. He currently is in a 25% tax bracket but expects his tax rate will be 15% when he cashes out the IRA. Ken can earn a 9% annual before-tax rate of return on investments in an IRA and a 6.75% annual after-tax rate of return on investments outside an IRA. Would it be better for him to retain his existing traditional IRA or convert it to a Roth IRA?

I:18-28 ***Roth Conversion Decision.*** Your client has a traditional deductible IRA to which he has deducted all contributions. Thus, the IRA has zero basis ($B_k = 0$). The client is considering converting to a Roth IRA with the conversion tax to be paid from an outside currently taxable source. In any case, the client intends to cash out of the IRA in n years with no early withdrawal penalty. Using the traditional IRA retention versus Roth conversion models, derive a general formula to help the client determine how high a future tax rate (t_n) must be to cause the Roth conversion to be preferable to retaining the traditional IRA. That is, derive a formula indicating that a Roth conversion is better when:

$$t_n > \text{[right-hand side of formula]}$$

The client has not yet determined the value of any variables (except $B_k = 0$) and just wants as simple a general formula as possible in which the client later can insert actual values.

I:18-29 ***S Corporation Versus C Corporation.*** Amber forms a corporation by contributing $200,000 cash to it in exchange for all the corporation's stock. She is considering whether to have it make an S election. The corporation will invest the funds in assets that produce a 12% annual before-tax rate of return for the next ten years. At the end of each year, the corporation will distribute cash to Amber equal to the taxes she must pay on the corporation's earnings. At the end of the 10-year period, Amber will liquidate the corporation. Her marginal tax rate is 25% for ordinary income and 15% for long-term capital gains. Determine Amber's after-tax accumulation for each of the following situations:

a. The corporation makes an S election, and Amber is not allowed to claim the qualified business income (QBI) deduction for her pass-through income from the corporation.
b. The corporation makes an S election, and Amber is allowed to claim the QBI deduction for her pass-through income from the corporation.
c. The corporation does not make an S election (i.e., it is taxed as a C corporation). Amber thus is not allowed to claim the QBI deduction with respect to the corporation. Recall that the tax rate for C corporations is 21%. Assume no Sec. 1202 exclusion for gain on the sale of small business stock.

I:18-30 ***Proprietorship Versus C Corporation.*** Myron has $10,000 to invest in a business. He can either (1) operate as a sole proprietor or (2) form a regular C corporation by contributing the $10,000 in exchange for corporate stock. In either case, the $10,000 will be invested in business assets and will earn a 10% BTROR for the first five years and an 18% BTROR for years six through 15. All after-tax earnings will be reinvested in the business. If Myron uses the corporate form, the corporation will liquidate at the end of the investment horizon. Myron's personal tax rate is 40%; the corporate tax rate is 21%; and the tax rate on capital gains for individuals is 20% (assume no Sec. 1202 exclusion for gain on the sale of small business stock). Determine whether Myron should operate as a sole proprietor or form a C corporation if the investment horizon is 15 years. For the sole proprietorship, do the analysis with and without the qualified business income (QBI) deduction. Show the after-tax accumulation and annualized after-tax rate of return for each alternative.

I:18-31 ***S Corporation Versus C Corporation.*** Consider the following facts:

$$\begin{aligned} R_f &= R_c = 18\% \\ t_c &= 21\% \\ t_p &= 37\% \text{ for ordinary income} \\ &= 20\% \text{ for capital gains} \\ n &= 6,\ 15,\ \text{or } 50 \text{ years} \end{aligned}$$

Other information:

- The corporation is formed with a $10,000 contribution.
- The corporation pays no dividends.
- The entities reinvest their after-tax earnings.

Using the format below, compare after-tax accumulations for each investment horizon. Should the corporation make the S election for any of these investment horizons?

	Years (n)		
	6	*15*	*50*
S corporation ($t_p = 37\%$ with no QBI ded.)			
C corporation (no Sec. 1202 exclusion)			
S corporation ($t_p = 37\% (1 - 0.20)$ $= 29.6\%$ with QBI ded.)			
C corporation (100% Sec. 1202 exclusion)			

I:18-32 ***Implicit Tax Rates and Clientele Effects.*** Terry's marginal tax rate is 30%. He can invest in a taxable bond yielding 7.5% before taxes. What is the implicit tax rate on a tax-exempt bond of equivalent risk that yields 6%?

a. Which bond should Terry invest in? Why?

b. How would your answer to Part a change if Terry's statutory marginal tax rate were 15%?

I:18-33 ***Implicit Tax Rates and Clientele Effects.*** Consider three taxpayers who are in the following tax brackets:

Alice	25%
Brad	35%
Camille	40%

The BTROR on a benchmark investment is 10% (i.e., $R_b = 10\%$). Compute the equilibrium BTROR and the implicit tax rate on a tax-exempt bond under each of the following three alternative assumptions.

a. Alice is the marginal investor.

b. Brad is the marginal investor.

c. Camille is the marginal investor.

d. Which taxpayer (Alice, Brad, or Camille) would Camille like to see be the marginal investor? Why?

This page intentionally left blank

QUICK REFERENCE: 2025 TAX RATE SCHEDULES AND OTHER KEY NUMBERS

2025 TAX RATE SCHEDULES

INDIVIDUAL TAXPAYERS

Single [§1(c)]:

If taxable income is:	The tax is:
Not over $11,925	10% of taxable income
Over $11,925 but not over $48,475	$1,192.50, plus 12% of the excess over $11,925
Over $48,475 but not over $103,350	$5,578.50 plus 22% of the excess over $48,475
Over $103,350 but not over $197,300	$17,651, plus 24% of the excess over $103,350
Over $197,300 but not over $250,525	$40,199, plus 32% of the excess over $197,300
Over $250,525 but not over $626,350	$57,231, plus 35% of the excess over $250,525
Over $626,350	$188,769.75, plus 37% of the excess over $626,350

Head of Household [§1(b)]:

If taxable income is:	The tax is:
Not over $17,000	10% of taxable income
Over $17,000 but not over $64,850	$1,700 plus 12% of the excess over $17,000
Over $64,850 but not over $103,350	$7,442 plus 22% of the excess over $64,850
Over $103,350 but not over $197,300	$15,912 plus 24% of the excess over $103,350
Over $197,300 but not over $250,500	$38,460 plus 32% of the excess over $197,300
Over $250,500 but not over $626,350	$55,484 plus 35% of the excess over $250,500
Over $626,350	$187,031.50, plus 37% of the excess over $626,350

Married, Filing Jointly and Surviving Spouse [§1(a)]:

If taxable income is:	The tax is:
Not over $23,850	10% of taxable income
Over $23,850 but not over $96,950	$2,385 plus 12% of the excess over $23,850
Over $96,950 but not over $206,700	$11,157 plus 22% of the excess over $96,950
Over $206,700 but not over $394,600	$35,302 plus 24% of the excess over $206,700
Over $394,600 but not over $501,050	$80,398 plus 32% of the excess over $394,600
Over $501,050 but not over $751,600	$114,462 plus 35% of the excess over $501,050
Over $751,600	$202,154.50, plus 37% of the excess over $751,600

Married, Filing Separate [§1(d)]:

If taxable income is:	The tax is:
Not over $11,925	10% of taxable income
Over $11,925 but not over $48,475	$1,192.50 plus 12% of the excess over $11,925
Over $48,475 but not over $103,350	$5,578.50 plus 22% of the excess over $48,475
Over $103,350 but not over $197,300	$17,651, plus 24% of the excess over $103,350
Over $197,300 but not over $250,525	$40,199, plus 32% of the excess over $197,300
Over $250,525 but not over $375,800	$57,231, plus 35% of the excess over $250,525
Over $375,800	$101,077.25, plus 37% of the excess over $375,800

Capital Gains and Dividends

Capital gains and losses are assigned to baskets. Five possible tax rates will apply to most capital gains and losses:

- Ordinary income tax rates (up to 37% in 2025) for gains on assets held one year or less
- 28% rate on collectibles gains and includible Sec. 1202 gains
- Preferential tax rates for gains on assets held for more than one year and qualified dividends based on the taxpayer's taxable income and filing status as shown in the following table:

Preferential Rate	Single	Filing Jointly	Head of Household	Estates & Trusts
0%	Up to $48,350	Up to $96,700	Up to $64,750	Up to $3,250
15%	> $48,350 but ≤ $533,400	> $96,700 but ≤ $600,050	> $64,750 but ≤ $566,700	> $3,250 but ≤ $15,900
20%	Over $533,400	Over $600,050	Over $566,700	Over $15,900

Note: The net investment income of higher income taxpayers (modified AGI greater than $200,000 for single and $250,000 for married filing jointly) also may be subject to an additional tax of 3.8%. Net investment income includes dividends and capital gains, along with other types of investment income.

Social Security Tax—2025

Category	Rate	Dollar Limit
OASDI	6.2%	$176,100
Medicare*	1.45%	First $200,000 of wages ($250,000 for joint returns)
	2.35%	Wages greater than $200,000 ($250,000 for joint returns)

* Only the employee is required to pay the additional Medicare tax on wages above $200,000 ($250,000 for joint returns). The employer pays Medicare tax of 1.45% on all wages.

Self-Employment Tax—2025

Category	Rate	Dollar Limit
OASDI	12.4%	$176,100
Medicare	2.9%	First $200,000 of self-employment income ($250,000 combined self-employment income for joint returns)
	3.8%	Self-employment income greater than $200,000 ($250,000 for joint returns)

Alternative Minimum Tax—2025

If AMTI minus the exemption amount is:		The tax is:	
Over—	But Not Over—		Of the Amount Over—
$0	$239,100*	26%	$0
$239,100*		$62,166* + 28%	$239,100

*$119,550 and $31,083 for married taxpayers filing separately.

AMT exemption amounts (before phase-outs and other adjustments):

Unmarried individuals (other than surviving spouses and heads of households)	$88,100
Married individuals filing joint returns and surviving spouses	137,000
Married individuals filing separate returns	68,500
Estates and trusts	30,700

STANDARD DEDUCTION

Filing Status	
Married individuals filing joint returns and surviving spouses	$30,000
Heads of households	22,500
Unmarried individuals (other than surviving spouses and heads of households)	15,000
Married individuals filing separate returns	15,000
Additional standard deduction for the aged and the blind	
Individual who is married and surviving spouses	1,600*
Individual who is unmarried and not a surviving spouse	2,000*
Taxpayer claimed as dependent on another taxpayer's return: Greater of $1,350 or earned income plus $450.	

*These amounts are $3,200 and $4,000, respectively, for a taxpayer who is both aged and blind.

2025 TAX RATE SCHEDULES

CORPORATIONS—Post-2017: Tax is 21% of taxable income.

Tax rate tables for years pre-2017 can be found on the IRS website at irs.gov.

ESTATES AND TRUSTS:

If taxable income is:	The tax is:
Not over $3,150	10% of taxable income
Over $3,150 but not over $11,450	$315, plus 24% of the excess over $3,150
Over $11,450 but not over $15,650	$2,307, plus 35% of the excess over $11,450
Over $15,650	$3,777, plus 37% of the excess over $15,650

UNIFIED CREDIT AMOUNT FOR ESTATE AND GIFT TAX

Year of Gift/Year of Death	Amount of Credit	Basic Exclusion Amount
1978	$ 34,000	$ 134,000
1979	38,000	147,333
1980	42,500	161,563
1981	47,000	175,625
1982	62,800	225,000
1983	79,300	275,000
1984	96,300	325,000
1985	121,800	400,000
1986	155,800	500,000
1987 through 1997	192,800	600,000
1998	202,050	625,000
1999	211,300	650,000
2000 and 2001	220,550	675,000
2002 and 2003	345,800	1,000,000
2004 and 2005	555,800 (345,800)[a]	1,500,000 (1,000,000)[a]
2006, 2007, and 2008	780,800 (345,800)[a]	2,000,000 (1,000,000)[a]
2009	1,455,800 (345,800)[a]	3,500,000 (1,000,000)[a]
2010	1,730,800[b] (330,800)[a]	5,000,000[b] (1,000,000)[a]
2011	1,730,800	5,000,000
2012	1,772,800	5,120,000
2013	2,045,800	5,250,000
2014	2,081,800	5,340,000
2015	2,117,800	5,430,000
2016	2,125,800	5,450,000
2017	2,141,800	5,490,000
2018	4,417,800	11,180,000
2019	4,505,800	11,400,000
2020	4,577,800	11,580,000
2021	4,625,800	11,700,000
2022	4,769,800	12,060,000
2023	5,113,800	12,920,000
2024	5,389,800	13,610,000
2025	5,541,800	13,990,000

---

[a] The numbers in parentheses represent the credit and exemption equivalent amounts for the gift tax.
[b] This amount applied if the executor opted to have the estate subject to the estate tax and FMV basis rule in 2010.

UNIFIED TRANSFER TAX RATES

For Transfers Made in 1984 Through 2001:*

If the Amount with Respect to Which the Tentative Tax to Be Computed Is:	The Tentative Tax Is:
Not over $10,000	18% of such amount.
Over $10,000 but not over $20,000	$1,800, plus 20% of the excess of such amount over $10,000.
Over $20,000 but not over $40,000	$3,800, plus 22% of the excess of such amount over $20,000.
Over $40,000 but not over $60,000	$8,200, plus 24% of the excess of such amount over $40,000.
Over $60,000 but not over $80,000	$13,000, plus 26% of the excess of such amount over $60,000.
Over $80,000 but not over $100,000	$18,200, plus 28% of the excess of such amount over $80,000.
Over $100,000 but not over $150,000	$23,800, plus 30% of the excess of such amount over $100,000.
Over $150,000 but not over $250,000	$38,800, plus 32% of the excess of such amount over $150,000.
Over $250,000 but not over $500,000	$70,800, plus 34% of the excess of such amount over $250,000.
Over $500,000 but not over $750,000	$155,800, plus 37% of the excess of such amount over $500,000.
Over $750,000 but not over $1,000,000	$248,300, plus 39% of the excess of such amount over $750,000.
Over $1,000,000 but not over $1,250,000	$345,800, plus 41% of the excess of such amount over $1,000,000.
Over $1,250,000 but not over $1,500,000	$448,300, plus 43% of the excess of such amount over $1,250,000.
Over $1,500,000 but not over $2,000,000	$555,800, plus 45% of the excess of such amount over $1,500,000.
Over $2,000,000 but not over $2,500,000	$780,800, plus 49% of the excess of such amount over $2,000,000.
Over $2,500,000 but not over $3,000,000	$1,025,800, plus 53% of the excess of such amount over $2,500,000.
Over $3,000,000	$1,290,800, plus 55% of the excess of such amount over $3,000,000.

* For decedents dying after 2001 and gifts made after 2001, the maximum tax rates are as follows:
Note: The rates in the above schedule still apply to amounts less than the amounts in the second column of the below schedule.

Year	If the Amount with Respect to Which the Tentative Tax to Be Computed Is:	The Tentative Tax Is:
2002	Over $2,500,000	$1,025,800, plus 50% of the excess of such amount over $2,500,000.
2003	Over $2,000,000	$780,800, plus 49% of the excess of such amount over $2,000,000.
2004	Over $2,000,000	$780,800, plus 48% of the excess of such amount over $2,000,000.
2005	Over $2,000,000	$780,800, plus 47% of the excess of such amount over $2,000,000.
2006	Over $2,000,000	$780,800, plus 46% of the excess of such amount over $2,000,000.
2007–2009	Over $1,500,000	$555,800, plus 45% of the excess of such amount over $1,500,000.
2010	Over $500,000**	$155,800, plus 35% of the excess of such amount over $500,000.**
2011–2012	Over $500,000	$155,800, plus 35% of the excess of such amount over $500,000.
2013 and after	Over $1,000,000	$345,800, plus 40% of the excess of taxable amount.

** Gift tax only unless the executor opted to have the estate subject to the estate tax and FMV basis rule in 2010.

2024 TAX TABLES AND RATE SCHEDULES

2025 WITHHOLDING TABLES (PARTIAL)

2024 Tax Table

See the instructions for line 16 to see if you must use the Tax Table below to figure your tax.

Example. A married couple is filing a joint return. Their taxable income on Form 1040, line 15, is $25,300. First, they find the $25,300-25,350 taxable income line. Next, they find the column for married filing jointly and read down the column. The amount shown where the taxable income line and filing status column meet is $2,575. This is the tax amount they should enter in the entry space on Form 1040, line 16.

Sample Table

At Least	But Less Than	Single	Married filing jointly*	Married filing sepa-rately	Head of a house-hold
		Your tax is—			
25,200	**25,250**	2,795	2,563	2,795	2,696

2024 Tax Computation Worksheet—Line 16

CAUTION

See the instructions for line 16 to see if you must use the worksheet below to figure your tax.

Note. If you are required to use this worksheet to figure the tax on an amount from another form or worksheet, such as the Qualified Dividends and Capital Gain Tax Worksheet, the Schedule D Tax Worksheet, Schedule J, Form 8615, or the Foreign Earned Income Tax Worksheet, enter the amount from that form or worksheet in column (a) of the row that applies to the amount you are looking up. Enter the result on the appropriate line of the form or worksheet that you are completing.

Section A—Use if your filing status is **Single.** Complete the row below that applies to you.

Taxable income. If line 15 is—	**(a)** Enter the amount from line 15	**(b)** Multiplication amount	**(c)** Multiply (a) by (b)	**(d)** Subtraction amount	**Tax.** Subtract (d) from (c). Enter the result here and on the entry space on line 16.
At least $100,000 but not over $100,525	$	× 22% (0.22)	$	$ 4,947.00	$
Over $100,525 but not over $191,950	$	× 24% (0.24)	$	$ 6,957.50	$
Over $191,950 but not over $243,725	$	× 32% (0.32)	$	$ 22,313.50	$
Over $243,725 but not over $609,350	$	× 35% (0.35)	$	$ 29,625.25	$
Over $609,350	$	× 37% (0.37)	$	$ 41,812.25	$

Section B—Use if your filing status is **Married filing jointly** or **Qualifying surviving spouse.** Complete the row below that applies to you.

Taxable income. If line 15 is—	**(a)** Enter the amount from line 15	**(b)** Multiplication amount	**(c)** Multiply (a) by (b)	**(d)** Subtraction amount	**Tax.** Subtract (d) from (c). Enter the result here and on the entry space on line 16.
At least $100,000 but not over $201,050	$	× 22% (0.22)	$	$ 9,894.00	$
Over $201,050 but not over $383,900	$	× 24% (0.24)	$	$ 13,915.00	$
Over $383,900 but not over $487,450	$	× 32% (0.32)	$	$ 44,627.00	$
Over $487,450 but not over $731,200	$	× 35% (0.35)	$	$ 59,250.50	$
Over $731,200	$	× 37% (0.37)	$	$ 73,874.50	$

Section C—Use if your filing status is **Married filing separately.** Complete the row below that applies to you.

Taxable income. If line 15 is—	**(a)** Enter the amount from line 15	**(b)** Multiplication amount	**(c)** Multiply (a) by (b)	**(d)** Subtraction amount	**Tax.** Subtract (d) from (c). Enter the result here and on the entry space on line 16.
At least $100,000 but not over $100,525	$	× 22% (0.22)	$	$ 4,947.00	$
Over $100,525 but not over $191,950	$	× 24% (0.24)	$	$ 6,957.50	$
Over $191,950 but not over $243,725	$	× 32% (0.32)	$	$ 22,313.50	$
Over $243,725 but not over $365,600	$	× 35% (0.35)	$	$ 29,625.25	$
Over $365,600	$	× 37% (0.37)	$	$ 36,937.25	$

Section D—Use if your filing status is **Head of household.** Complete the row below that applies to you.

Taxable income. If line 15 is—	**(a)** Enter the amount from line 15	**(b)** Multiplication amount	**(c)** Multiply (a) by (b)	**(d)** Subtraction amount	**Tax.** Subtract (d) from (c). Enter the result here and on the entry space on line 16.
At least $100,000 but not over $100,500	$	× 22% (0.22)	$	$ 6,641.00	$
Over $100,500 but not over $191,950	$	× 24% (0.24)	$	$ 8,651.00	$
Over $191,950 but not over $243,700	$	× 32% (0.32)	$	$ 24,007.00	$
Over $243,700 but not over $609,350	$	× 35% (0.35)	$	$ 31,318.00	$
Over $609,350	$	× 37% (0.37)	$	$ 43,505.00	$

Special Tax Rates for Capital Gains and Dividends for 2024

Capital gains and losses are assigned to baskets. Five possible tax rates will apply to most capital gains and losses:

- Ordinary income tax rates (up to 37% in 2024) for gains on assets held one year or less
- 28% rate on collectibles gains and includible Sec. 1202 gains
- Preferential tax rates for gains on assets held for more than one year and qualified dividends based on the taxpayer's taxable income and filing status as shown in the following table:

Preferential Rate	Single	Filing Jointly	Head of Household	Estates & Trusts
0%	Up to $47,025	Up to $94,050	Up to $63,000	Up to $3,150
15%	> $47,025 but ≤ $518,900	> $94,050 but ≤ $583,750	> $63,000 but ≤ $551,350	> $3,150 but ≤ $15,450
20%	Over $518,900	Over $583,750	Over $551,350	Over $15,450

Note: The net investment income of higher income taxpayers (modified AGI greater than $200,000 for single and $250,000 for married filing jointly) also may be subject to an additional tax of 3.8%. Net investment income includes dividends and capital gains, along with other types of investment income.

*These are rates for the 2024 tax year.
2025 rates are available in the Quick Reference section of this book.

*Most accounting firms maintain a **client file** for each of their clients. Typically, this file contains copies of client letters, memoranda-to-the-file, relevant primary and secondary authorities, and billing information. In our case, the client file for Mercy Hospital would include copies of the following: (1) the December 12 letter to Elizabeth Feghali, (2) the December 9 memorandum-to-the-file, (3) Sec. 119, (4) Reg. Sec. 1.119-1, (5) the *Kowalski* opinion, (6) the *Standard Federal Tax Reporter* annotation, and (7) pertinent billing information. Due to evolving tax laws, the sources in this example may not be fully up to date. However, the process of gathering, evaluating, and communicating findings remains accurate and reflective of standard tax research practices, assuming the cited authorities are current.

Tax Research File

The tax research process entails six steps.

1. Determine the facts
2. Identify the issues
3. Locate applicable authorities
4. Evaluate these authorities
5. Analyze the facts in terms of applicable authorities
6. Communicate conclusions and recommendations to others.

Let us walk through each of these steps.

Determine the Facts Assume that we have determined the facts to be as follows:

> *Mercy Hospital maintains a cafeteria on its premises. In addition, it rents space to MacDougal's, a privately owned sandwich shop. The cafeteria closes at 8:00 p.m. MacDougal's is open 24 hours. Mercy provides meal vouchers to each of its 240 medical employees to enable them to remain on call in case of emergency. The vouchers are redeemable either at the cafeteria or at MacDougal's. Although the employees are not required to remain on or near the premises during meal hours, they generally do. Elizabeth Feghali, Mercy's Chief Administrator, has approached you with the following question: Is the value of a meal voucher includible in the employees' gross income?*

At this juncture, be sure you understand the facts before proceeding further. Remember, researching the wrong facts could produce the wrong results.

Identify the Issues Identifying the issues presupposes a minimum level of proficiency in tax accounting. This proficiency will come with time, effort, and perseverance. The central issue raised by the facts is the taxability of the meal vouchers. A resolution of this issue will hinge on the resolution of other issues raised in the course of the research.

Locate Applicable Authorities For some students, this step is the most difficult in the research process. It raises the perplexing question, "Where do I begin to look?" The answer depends on the tax resources at one's disposal, as well as one's research preferences. Four rules of thumb apply:

1. *Adopt an approach with which you are comfortable, and that you are confident will produce reliable results.*
2. *Always consult the IRC and other primary authorities.*
3. *Be as thorough as possible, taking into consideration time and billing constraints.*
4. *Make sure that the authorities you consult are current.*

One approach is to conduct a topical search. Begin by consulting the index to the Internal Revenue Code (IRC). Then read the relevant IRC section(s). If the language of the IRC is vague or ambiguous, turn to the Treasury Regulations. Read the relevant regulation section that elaborates or expounds on the IRC provision. If the language of the regulation is confusing or unclear, go to a commercial tax service. Read the relevant tax service paragraphs that explain or analyze the statutory and regulatory provisions. For references to other authorities, browse through the footnotes and annotations of the service. Then, consult these authorities directly. Finally, check the currency of the authorities consulted, with the aid of a citator.

If a pertinent court decision or IRS ruling has been called to your attention, consult this authority directly. Alternatively, browse through the status (finding) list of a tax service for references to tax service paragraphs that discuss this authority. Better still, consult a citator or status list for references to court opinions or rulings that cite the authority. If you subscribe to a computerized tax service, conduct a keyword, citation, contents, or topical search. Then, hyperlink to the authorities cited within the text of the documents retrieved. So numerous are the approaches to tax research that one is virtually free to pick and choose. All that is required of the researcher is a basic level of skill and some imagination.

Let us adopt a topical approach to the issue of the meal vouchers. If we consult an index to the IRC, we are likely to find the heading “Meals and Lodging.” Below this heading are likely to be several subheadings, some pertaining to deductions, others to exclusions. Because the voucher issue pertains to an exclusion, let us browse through these subheadings. In so doing, we will notice that most of these subheadings refer to Sec. 119. If we look up this IRC section, we will see the following passage:

Sec. 119. Meals or lodging furnished for the convenience of the employer.

> (a) **Meals and lodging furnished to employee, his spouse, and his dependents, pursuant to employment.**
> There shall be excluded from gross income of an employee the value of any meals or lodging furnished to him . . . by or on behalf of his employer for the convenience of the employer, but only if—
>
> > (1) **in the case of meals, the meals are furnished on the business premises of the employer . . .**
>
> (b) **Special rules. For purposes of subsection (a)—**
>
> > (4) **Meals furnished to employees on business premises where meals of most employees are otherwise excludable.** All meals furnished on the business premises of an employer to such employer’s employees shall be treated as furnished for the convenience of the employer if . . . more than half of the employees to whom such meals are furnished on such premises are furnished such meals for the convenience of the employer.

Section 119 appears to be applicable. It deals with meals furnished to an employee on the business premises of the employer. Our case deals with meal vouchers furnished to employees for redemption at employer-maintained and employer-rented-out facilities. But here, additional issues arise. For purposes of Sec. 119, are meal vouchers the same as “meals”? (Do not assume they are.) Are employer-maintained and employer-rented-out facilities the same as “the business premises of the employer”? (Again, do not assume they are.) And what does the IRC mean by “for the convenience of the employer”? Because the IRC offers no guidance in this respect, let us turn to the Treasury Regulations.

The applicable regulation is Reg. Sec. 1.119-1. How do we know this? Because Treasury Regulation section numbers track the IRC section numbers. Regulation Sec. 1.119-1 is the only regulation under Sec. 119. If we browse through this regulation, we will find the following provision:

> (a) **Meals . . .**
>
> > (2) **Meals furnished without a charge**
> >
> > > (i) Meals furnished by an employer without charge to the employee will be regarded as furnished for the convenience of the employer if such meals are furnished for a substantial noncompensatory business reason of the employer . . .
> > > (ii) (a) Meals will be regarded as furnished for a substantial noncompensatory business reason of the employer when the meals are furnished to the employee during his working hours to have the employee available for emergency call during his meal period . . .
>
> (c) **Business premises of the employer.**
>
> > (1) **In general.** For purposes of this section, the term “business premises of the employer” generally means the place of employment of the employee . . .

Based on a reading of this provision, we might conclude that the hospital meals are furnished “for the convenience of the employer.” Why? Because they are furnished for a “substantial noncompensatory business reason of the employer,” namely, to have the employees available for emergency call during their meal periods. They also are furnished during the employees’ working hours. Moreover, under Sec. 119(b)(4), if more than half the employees satisfy the “for the convenience of the employer” test, all employees will be regarded as satisfying the test. But are the meals furnished on “the business premises of the employer”? Under the regulation, the answer would depend. If the meals are furnished in the hospital cafeteria, they probably are furnished on “the business premises of the employer.” The hospital is the place of employment of the medical employees. The cafeteria is part of the hospital. On the other hand, if the meals are furnished at MacDougal's, they probably are not furnished on "the business premises of the employer." MacDougal's is not the place of employment of the medical employees. Nor is it a part of the hospital. Thus, Reg. Sec. 1.119-1 is enlightening with respect to two statutory terms: "for the convenience of the employer" and "the business premises of the employer." However, it is obscure with respect to the third term, "meals." Because of this obscurity, let us turn to a tax service.

Although the index to the Federal Tax Coordinator does not list "meal vouchers," it does list "cash allowances" as a subtopic under Meals and Lodging. Under the heading for "cash allowances" is a subheading for "in-kind requirement" and a reference to ¶H-1790. Cash allowances for meals and lodging: the "in-kind" requirement for purposes of the exclusion for meals and lodging furnished to employees. If we look up this reference, we will find the following annotation:

> The Supreme Court has held that Code Sec. 119 (which provides an exclusion for certain employer-provided meals, see ¶H-1751 et seq.) does not cover cash payments of any kind. The Supreme Court said that, by its terms, Code Sec. 119 covers meals furnished by the employer, but not cash reimbursements for meals.

The footnote in the annotation refers us to the *Kowalski* case, in which the Supreme Court decided that cash meal allowances received by an employee were not excludible from the employee's income.[1] Is the *Kowalski* case similar to our case? It might be. Let us find out. If we turn to paragraph 9748 of the second 1977 volume of *United States Tax Cases,* we will find the text of the *Kowalski* opinion. A synopsis of this opinion is present below.

In the mid-1970s, the State of New Jersey provided cash meal allowances to its state troopers. The state did not require the troopers to use the allowances exclusively for meals. Nor did it require them to consume their meals on its business premises. One trooper, Robert J. Kowalski, failed to report a portion of his allowance on his tax return. The IRS assessed a deficiency, and Kowalski took the IRS to court. In court, Kowalski argued that the meal allowances were excludible, because they were furnished "for the convenience of the employer." The IRS contended that the allowances were taxable because they amounted to compensation. The Supreme Court took up the case and sided with the IRS. The Court held that the Sec. 119 income exclusion does not apply to cash payments; it applies only to meals in kind.[2]

For the sake of illustration, let us assume that Sec. 119, Reg. Sec. 1.119-1, and the *Kowalski* case are the *only* authorities "on point." How should we evaluate them?

Evaluate Authorities Section 119 is the key authority applicable to our case. It supplies the operative rule for resolving the issue of the meal vouchers. It is vague, however, with respect to three terms: "meals," "business premises of the employer," and "for the convenience of the employer." The principal judicial authority is the *Kowalski* case. It provides an official interpretation of the term "meals." Because the U.S. Supreme Court decided *Kowalski*, the case should be assigned considerable weight. The relevant administrative authority is Reg. Sec. 1.119-1. It expounds on the terms "business premises of the employer" and "for the convenience of the employer." Because neither the IRC nor *Kowalski* explain these terms, Reg. Sec. 1.119-1 should be accorded great weight. But what if *Kowalski* had conflicted with Reg. Sec. 1.119-1? Which should be considered more authoritative? As a general rule, high court decisions "trump" the Treasury Regulations (and all IRS pronouncements for that matter). The more recent the decision, the greater its precedential weight. Had there been no Supreme Court decision and a division of appellate authority, equal weight should have been assigned to each of the appellate court decisions.

Analyze the Facts in Terms of Applicable Authorities Analyzing the facts in terms of applicable authorities involves applying the abstraction of the law to the concreteness of the facts. It entails expressing the generalities of the law in terms of the specifics of the facts. In this process, every legal condition must be satisfied for the result implied by the general rule to ensue. Thus, in our case, the conditions of furnishing "meals," "on the business premises of the employer," and "for the convenience of the employer" must be satisfied for the value of the "meals" to be excluded from the employee's income.

---

[1] *Comm. v. Kowalski, Robert J.*, 40 AFTR 2d 77-6128, 77-2 USTC ¶9748 (USSC, 1977).

[2] At this juncture, the researcher should consult a citator to determine whether *Kowalski* is still "good law," and to locate other authorities that cite *Kowalski*.

When analyzing the facts in terms of case law, the researcher should always draw an *analogy* between case facts and client facts. Likewise, he or she should always draw a *distinction* between case facts and client facts. Remember, under the rule of precedent, a court deciding the client's case will be bound by the precedent of cases involving *similar* facts and issues. By the same token, it will *not* be bound by the precedent of cases involving *dissimilar* facts and issues.

The most useful vehicle for analyzing client facts is the memorandum-to-the-file (see page A-6). The purpose of this document is threefold: first, it assists the researcher in recollecting transactions long transpired; second, it apprises colleagues and supervisors of the nature of one's research; third, it provides "substantial authority" for the tax treatment of a particular item. Let us analyze the facts of our case by way of a memorandum-to-the-file. Notice the format of this document; it generally tracks the steps in the research process itself.

Communicate Conclusions and Recommendations to Others For three practical reasons, research results always should be communicated to the client *in writing*. First, a written communication can be made after extensive revisions. An oral communication cannot. Second, in a written communication, the researcher can delve into the intricacies of tax law. Often, in an oral communication, he or she cannot. Third, a written communication reinforces an oral understanding. Alternatively, it brings to light an oral misunderstanding.

The written communication usually takes the form of a client letter (see page A-7). The purpose of this letter is two-fold: first, it apprises the client of the results of one's research, and second, it recommends to the client a course of action based on these results. A sample client letter is presented below. Notice the organization of this document; it is similar to that of the memorandum-to-the-file.

Memorandum-to-the-File

Date: December 9, 20X5
From: Rosina Havacek
Re: The taxability of meal vouchers furnished by Mercy Hospital to its medical staff.

Facts

[*State only the facts that are relevant to the Issue(s) and necessary for the Analysis.*] Our client, Mercy Hospital ("Mercy"), provides meal vouchers to its medical employees to enable them to remain on emergency call. The vouchers are redeemable at Mercy's onsite cafeteria and at MacDougal's, a privately owned sandwich shop. MacDougal's rents business space from the hospital. Although Mercy does not require its employees to remain on or near its premises during their meal hours, the employees generally do. Elizabeth Feghali, Mercy's Chief Administrator, has asked us to research whether the value of the meal vouchers is taxable to the employees.

Issues

[*Identify the issue(s) raised by the facts. Be specific.*] The taxability of the meal vouchers depends on three issues: first, whether the meals are furnished "for the convenience of the employer"; second, whether they are furnished "on the business premises of the employer"; and third, whether the vouchers are equivalent to cash.

Applicable Law

[*Discuss those legal principles that both strengthen and weaken the client's case. Because the primary authority for tax law is the IRC, begin with the IRC.*] Section 119 provides that the value of meals is excludible from an employee's income if the meals are furnished for the convenience of, and on the business premises of the employer. [*Discuss how administrative and/or judicial authorities expound on statutory terms.*] Under Reg. Sec. 1.119-1, a meal is furnished "for the convenience of the employer" if it is furnished for a "substantial noncompensatory business reason." A "substantial noncompensatory business reason" includes the need to have the employee available for emergency calls during his or her meal period. Under Sec. 119(b)(4), if more than half the employees satisfy the "for the convenience of the employer" test, all employees will be regarded as satisfying the test. Regulation Sec. 1.119-1 defines "business premises of the employer" as the place of employment of the employee.

[*When discussing court cases, present case facts in such a way as to enable the reader to draw an analogy with client facts.*] A Supreme Court case, *Comm. v. Kowalski, Robert J.,* 40 AFTR 2d 77-6128, 77-2 USTC ¶9748 (USSC, 1977), discusses what constitutes "meals" for purposes of Sec. 119. In *Kowalski,* the State of New Jersey furnished cash meal allowances to its state troopers to enable them to eat while on duty. It did not require the troopers to use the allowances exclusively for meals. Nor did it require them to consume their meals on its business premises. One trooper, R.J. Kowalski, excluded the value of his allowances from his income. The IRS disputed this treatment, and Kowalski took the IRS to Court. In Court, Kowalski argued that the allowances were excludible because they were furnished "for the convenience of the employer." The IRS contended that the allowances were taxable because they amounted to compensation. The U.S. Supreme Court took up the case and decided for the IRS. The Court held that the Sec. 119 income exclusion does not apply to payments in cash.

Analysis

[*The analysis should (a) apply applicable law to the facts and (b) address the issue(s). In this section, every proposition should be supported by either authority, logic, or plausible assumptions.*]

Issue 1: The meals provided by Mercy seem to be furnished "for the convenience of the employer." They are furnished to have employees available for emergency call during their meal breaks. This is a "substantial noncompensatory reason" within the meaning of Reg. Sec. 1.119-1.

Issue 2: Although the hospital cafeteria appears to be the "business premises of the employer," MacDougal's does not appear to be. The hospital is the place of employment of the medical employees. MacDougal's is not.

Issue 3: [*In applying case law to the facts, indicate how case facts are similar to/dissimilar from client facts. If the analysis does not support a "yes-no" answer, do not give one.*] Based on the foregoing authorities, it is unclear whether the vouchers are equivalent to cash. On the one hand, they are redeemable only in meals. Thus, they resemble meals-in-kind. On the other hand, they are redeemable at more than one institution. Thus, they resemble cash. Nor is it clear whether a court deciding this case would reach the same conclusion as the Supreme Court did in *Kowalski.* In the latter case, the State of New Jersey provided its meal allowances in the form of cash. It did not require its employees to use the allowances exclusively for meals. Nor did it require them to consume their meals on its business premises. In our case, Mercy provides its meal allowances in the form of vouchers. Thus, it indirectly requires its employees to use the allowances exclusively for meals. On the other hand, it does not require them to consume their meals on its business premises.

Conclusion

[*The conclusion should (a) logically flow from the analysis, and (b) address the issue(s).*] Although it appears that the meals acquired by voucher in the hospital cafeteria are furnished "for the convenience of the employer" and "on the business premises of the employer," it is unclear whether the vouchers are equivalent to cash. If they *are* equivalent to cash, *or* if they are redeemed at MacDougal's, their value is likely to be taxable to the employees. On the other hand, if they are not equivalent to cash, *and* they are redeemed only in the hospital cafeteria, their value is likely to be excludible.

Professional Accounting Associates

Suite 905
Southwest City, Texas 75019

December 12, 20X5

Elizabeth Feghali, Chief Administrator
Mercy Hospital
22650 West Haven Drive
Southwest City, Texas 75527

Dear Ms. Feghali:

[*Introduction. Set a cordial tone.*] It was great to see you at Saturday's football game. If not for that last minute fumble, the Longhorns might have taken the Southeastern Conference championship!

[*Issue/Purpose.*] In our meeting of December 6, you asked us to research whether the value of the meal vouchers that Mercy provides to its medical employees is taxable to the employees. [*Short Answer.*] I regret to inform you that if the vouchers are redeemed at MacDougal's, their value is likely to be taxable to the employees. On the other hand, if the vouchers are redeemed in the hospital cafeteria, their value is likely to be excludible from the employee's income. [*The remainder of the letter should elaborate, support, and qualify this answer.*]

[*Steps taken in deriving conclusion.*] In reaching this conclusion, we consulted relevant provisions of the Internal Revenue Code ("IRC"), applicable Treasury Regulations under the IRC, and a pertinent Supreme Court case. In addition, we reviewed the documents on employee benefits that you submitted to us at our earlier meeting.

[*Facts. State only the facts that are relevant to the issue and necessary for the analysis.*] The facts as we understand them are as follows: Mercy provides meal vouchers to its medical employees to enable them to eat while on emergency call. The vouchers are redeemable either in the hospital cafeteria or at MacDougal's. MacDougal's is a privately owned institution that rents business space from the hospital. Although Mercy's employees are not required to remain on or near the premises during their meal hours, they generally do.

[*Applicable law. State, do not interpret.*] Under the IRC, the value of meals is excludible from an employee's income if two conditions are met: first, the meals are furnished "for the convenience of the employer" and second, they are provided "on the business premises of the employer." Although the IRC does not explain what is meant by "for the convenience of the employer," "business premises of the employer," and "meals," other authorities do. Specifically, the Treasury Regulations define "business premises of the employer" to be the place of employment of the employees. The regulations state that providing meals during work hours to have an employee available for emergency calls is "for the convenience of the employer." Moreover, under the IRC, if more than half the employees satisfy the "for the convenience of the employer" test, all the employees will be regarded as satisfying the test. The Supreme Court has interpreted "meals" to mean food-in-kind. The Court has held that cash allowances do not qualify as "meals."

[*Analysis. Express the generalities of applicable law in terms of the specifics of the facts.*] Clearly, the meals furnished by Mercy are "for the convenience of the employer." They are furnished during the employees' work hours to have the employees available for emergency call. Although the meals provided in the hospital cafeteria appear to be furnished "on the business premises of the employer," the meals provided at MacDougal's do not appear to be. The hospital is the place of employment of the medical employees. MacDougal's is not. What is unclear is whether the meal vouchers are equivalent to food-in-kind. On the one hand, they are redeemable at more than one institution and thus resemble cash allowances. On the other hand, they are redeemable only in meals and thus resemble food-in-kind.

[*Conclusion/Recommendation.*] Because of this lack of clarity, we suggest that you modify your employee benefits plan to allow for the provision of meals-in-kind exclusively in the hospital cafeteria. In this way, you will dispel any doubt that Mercy is furnishing "meals," "for the convenience of the employer," "on the premises of the employer."

[*Closing/Follow Up.*] Please call me at 475-2020 if you have any questions concerning this conclusion. May I suggest that we meet next week to discuss the possibility of revising your employee benefits plan.

Very truly yours,
Professional Accounting Associates

Note: Because of the availability of tax forms from many sources, only a limited number of forms are reprinted in this text. All federal forms are available from the Internal Revenue Service, either in paper form or from the IRS website, http://www.irs.gov. The provided example completes only the Schedule C form and does not include the additional schedules required for a fully filed tax return. The accompanying worksheet outlines the additional forms that would be included in a complete return.

Facts for Sole Proprietorship (Schedule C)

Andrew Lawrence is the sole proprietor of a business that operates under the name Andrew Lawrence Furniture (Business Code 337000). The proprietorship is located at 1234 First Avenue, City, ST 55555. Andrew started the business with a $200,000 capital investment on June 1, 2018. The proprietorship uses the calendar year as its tax year (the same as its proprietor) and the accrual method of accounting. The following information pertains to its 2024 activities:

A trial balance is included as part of the accompanying worksheet. Notes accompanying the account balances are presented below.

1. Cost of goods sold is determined as follows:

Inventory at beginning of year	$ 64,000
Plus: Purchases	340,800
Cost of labor	143,204
Other costs (including $15,000 of depreciation)	97,000
Goods available for sale	$645,004
Minus: Inventory at end of year	(104,800)
Cost of goods sold	$540,204

The proprietorship values its inventory using the first-in, first-out method and historical costs. No change in valuing inventories occurred between the beginning and end of the tax year.

2. The current year depreciation is $27,476 for both book and tax purposes. Of this amount, $15,000 is included in cost of goods sold and inventory.

3. Using its excess funds, the proprietorship has purchased various temporary investments, including a 2% investment in Plaza Corporation stock, 50 shares of Service Corporation stock, and some tax-exempt municipal bonds. The proprietorship has held the Plaza stock for two years and sold it in July for $4,500 more than its $7,000 adjusted basis. Prior to the sale, Plaza paid a $1,000 dividend. The 50 shares of Service stock, which had been purchased during the year, was declared worthless during the year. The proprietorship recovered none of its $2,100 adjusted basis.

4. Employees other than Andrew Lawrence receive limited fringe benefits. One employee also receives a $2,000 contribution to an Individual Retirement Account paid by the proprietorship.

5. Miscellaneous expenses include $150 of expenses related to the production of the dividend income (investment interest expense).

6. The proprietorship paid no estimated taxes.

7. Balance sheet information is not provided for the sole proprietorship because it is not reported on the Schedule C. Balance sheet information, however, can be found on page 4 of the C corporation tax return.

8. For additional information, see Schedule C and the worksheet on page B-5.

SCHEDULE C
(Form 1040)

Department of the Treasury
Internal Revenue Service

Profit or Loss From Business

(Sole Proprietorship)

Attach to Form 1040, 1040-SR, 1040-SS, 1040-NR, or 1041; partnerships must generally file Form 1065.

Go to *www.irs.gov/ScheduleC* for instructions and the latest information.

OMB No. 1545-0074

2024

Attachment Sequence No. **09**

Name of proprietor: Andrew Lawrence

Social security number (SSN): XXX-XX-XXXX

A Principal business or profession, including product or service (see instructions): Manufacturing Furniture

B Enter code from instructions: 3 3 7 0 0 0

C Business name. If no separate business name, leave blank.: Andrew Lawrence Furniture

D Employer ID number (EIN) (see instr.): X X X X X X X X X

E Business address (including suite or room no.): 1234 First Avenue

City, town or post office, state, and ZIP code: City, ST 55555

F Accounting method: (1) ☐ Cash (2) ☒ Accrual (3) ☐ Other (specify)

G Did you "materially participate" in the operation of this business during 2024? If "No," see instructions for limit on losses . ☒ Yes ☐ No

H If you started or acquired this business during 2024, check here . . . ☐

I Did you make any payments in 2024 that would require you to file Form(s) 1099? See instructions . . . ☐ Yes ☒ No

J If "Yes," did you or will you file required Form(s) 1099? . . . ☐ Yes ☐ No

Part I Income

1	Gross receipts or sales. See instructions for line 1 and check the box if this income was reported to you on Form W-2 and the "Statutory employee" box on that form was checked . . . ☐	1	869,658
2	Returns and allowances . . .	2	29,242
3	Subtract line 2 from line 1 . . .	3	840,416
4	Cost of goods sold (from line 42) . . .	4	540,204
5	**Gross profit.** Subtract line 4 from line 3 . . .	5	300,212
6	Other income, including federal and state gasoline or fuel tax credit or refund (see instructions) . . .	6	
7	**Gross income.** Add lines 5 and 6 . . .	7	300,212

Part II Expenses. Enter expenses for business use of your home **only** on line 30.

8	Advertising . . .	8	13,000	18	Office expense (see instructions) .	18	16,000
9	Car and truck expenses (see instructions) . . .	9		19	Pension and profit-sharing plans .	19	2,000
				20	Rent or lease (see instructions):		
10	Commissions and fees .	10		a	Vehicles, machinery, and equipment	20a	36,000
11	Contract labor (see instructions)	11		b	Other business property . . .	20b	
12	Depletion . . .	12		21	Repairs and maintenance . . .	21	4,800
13	Depreciation and section 179 expense deduction (not included in Part III) (see instructions) . . .	13	12,476	22	Supplies (not included in Part III) .	22	
				23	Taxes and licenses . . .	23	9,840
				24	Travel and meals:		
14	Employee benefit programs (other than on line 19) .	14	7,000	a	Travel . . .	24a	4,000
				b	Deductible meals (see instructions)	24b

16	Interest (see instructions):			26	Wages (less employment credits)	26	
a	Mortgage (paid to banks, etc.)	16a		27a	Other expenses (from line 48) . .	27a	52,000
b	Other . . .	16b	8,000	b	Energy efficient commercial bldgs deduction (attach Form 7205) . .	27b	18,250
17	Legal and professional services	17					

28	**Total expenses** before expenses for business use of home. Add lines 8 through 27b . . .	28	184,366
29	Tentative profit or (loss). Subtract line 28 from line 7 . . .	29	115,846
30	Expenses for business use of your home. Do not report these expenses elsewhere. Attach Form 8829 unless using the simplified method. See instructions. **Simplified method filers only:** Enter the total square footage of (a) your home: ____ and (b) the part of your home used for business: ____ . Use the Simplified Method Worksheet in the instructions to figure the amount to enter on line 30 . . .	30	
31	**Net profit or (loss).** Subtract line 30 from line 29. • If a profit, enter on both **Schedule 1 (Form 1040), line 3,** and on **Schedule SE, line 2.** (If you checked the box on line 1, see instructions.) Estates and trusts, enter on **Form 1041, line 3.** • If a loss, you **must** go to line 32.	31	115,846

32 If you have a loss, check the box that describes your investment in this activity. See instructions.

• If you checked 32a, enter the loss on both **Schedule 1 (Form 1040), line 3,** and on **Schedule SE, line 2.** (If you checked the box on line 1, see the line 31 instructions.) Estates and trusts, enter on **Form 1041, line 3.**

• If you checked 32b, you **must** attach **Form 6198.** Your loss may be limited.

32a ☐ All investment is at risk.
32b ☐ Some investment is not at risk.

Schedule C (Form 1040) 2024 Page **2**

Part III Cost of Goods Sold (see instructions)

33 Method(s) used to value closing inventory: **a** ☒ Cost **b** ☐ Lower of cost or market **c** ☐ Other (attach explanation)

34 Was there any change in determining quantities, costs, or valuations between opening and closing inventory? If "Yes," attach explanation ☐ **Yes** ☒ **No**

35	Inventory at beginning of year. If different from last year's closing inventory, attach explanation	35	64,000
36	Purchases less cost of items withdrawn for personal use	36	340,800
37	Cost of labor. Do not include any amounts paid to yourself	37	143,204
38	Materials and supplies	38	
39	Other costs	39	97,000
40	Add lines 35 through 39	40	645,004
41	Inventory at end of year	41	104,800
42	**Cost of goods sold.** Subtract line 41 from line 40. Enter the result here and on line 4	42	540,204

Part IV Information on Your Vehicle. Complete this part **only** if you are claiming car or truck expenses on line 9 and are not required to file Form 4562 for this business. See the instructions for line 13 to find out if you must file Form 4562.

43 When did you place your vehicle in service for business purposes? (month/day/year) 3 / 12 / 23

44 Of the total number of miles you drove your vehicle during 2024, enter the number of miles you used your vehicle for:

a Business 17,000 **b** Commuting (see instructions) 4,500 **c** Other 12,000

45 Was your vehicle available for personal use during off-duty hours? ☒ **Yes** ☐ **No**

46 Do you (or your spouse) have another vehicle available for personal use? ☒ **Yes** ☐ **No**

47a Do you have evidence to support your deduction? ☒ **Yes** ☐ **No**

b If "Yes," is the evidence written? ☒ **Yes** ☐ **No**

Part V Other Expenses. List below business expenses not included on lines 8–26, line 27b, or line 30.

Transportation	10,400
General and administrative	3,000
Bad debts	4,000
Miscellaneous	850
48 **Total other expenses.** Enter here and on line 27a 48	18,250

Andrew Lawrence, Sole Proprietorship Reconciliation of Book and Taxable Income for Year Ending December 31, 2024

	Book Income		Adjustments		Taxable Income				
Account Name	Debit	Credit	Debit	Credit	Debit	Credit	Schedule C	Other Tax Forms	
Sales		$869,658				$869,658	$869,658		
Sales returns & allowances	$ 29,242				$ 29,242		(29,242)		
Cost of sales	540,204				540,204		(540,204)		
Dividends		1,000				1,000		$ 1,000	(Sch. B)
Tax-exempt interest		18,000	$18,000			0			
Gain on July stock sale		4,500				4,500		4,500	(Sch. D)
Worthless stock loss	2,100				2,100			(2,100)	(Sch. D)
Proprietor's salary(a)	36,000			$36,000	0		0	0	
Other salaries	52,000				52,000		(52,000)		
Rentals	36,000				36,000		(36,000)		
Bad debts	4,000				4,000		(4,000)		
Interest:									
Working capital loans	8,000				8,000		(8,000)		
Purchase tax-exempt bonds	2,000			2,000	0				
Employment taxes	8,320				8,320		(8,320)		
Taxes	1,520				1,520		(1,520)		
Repairs	4,800				4,800		(4,800)		
Depreciation(b)	12,476				12,476		(12,476)		
Charitable contributions	12,000				12,000			(12,000)	(Sch. A)
Travel	4,000				4,000		(4,000)		
Meals and entertainment(c)	5,000			4,000	1,000		(1,000)		
Office expenses	16,000				16,000		(16,000)		
Advertising	13,000				13,000		(13,000)		
Transportation expense	10,400				10,400		(10,400)		
General and administrative	3,000				3,000		(3,000)		
Pension plans(d)	2,000				2,000		(2,000)		
Employee benefit programs(e)	7,000				7,000		(7,000)		
Miscellaneous	1,000				1,000		(850)	(150)	(Form 4952)
Net profit/Taxable income	83,096		24,000		107,096				
Total	$893,158	$893,158	$42,000	$42,000	$875,158	$875,158	$115,846		

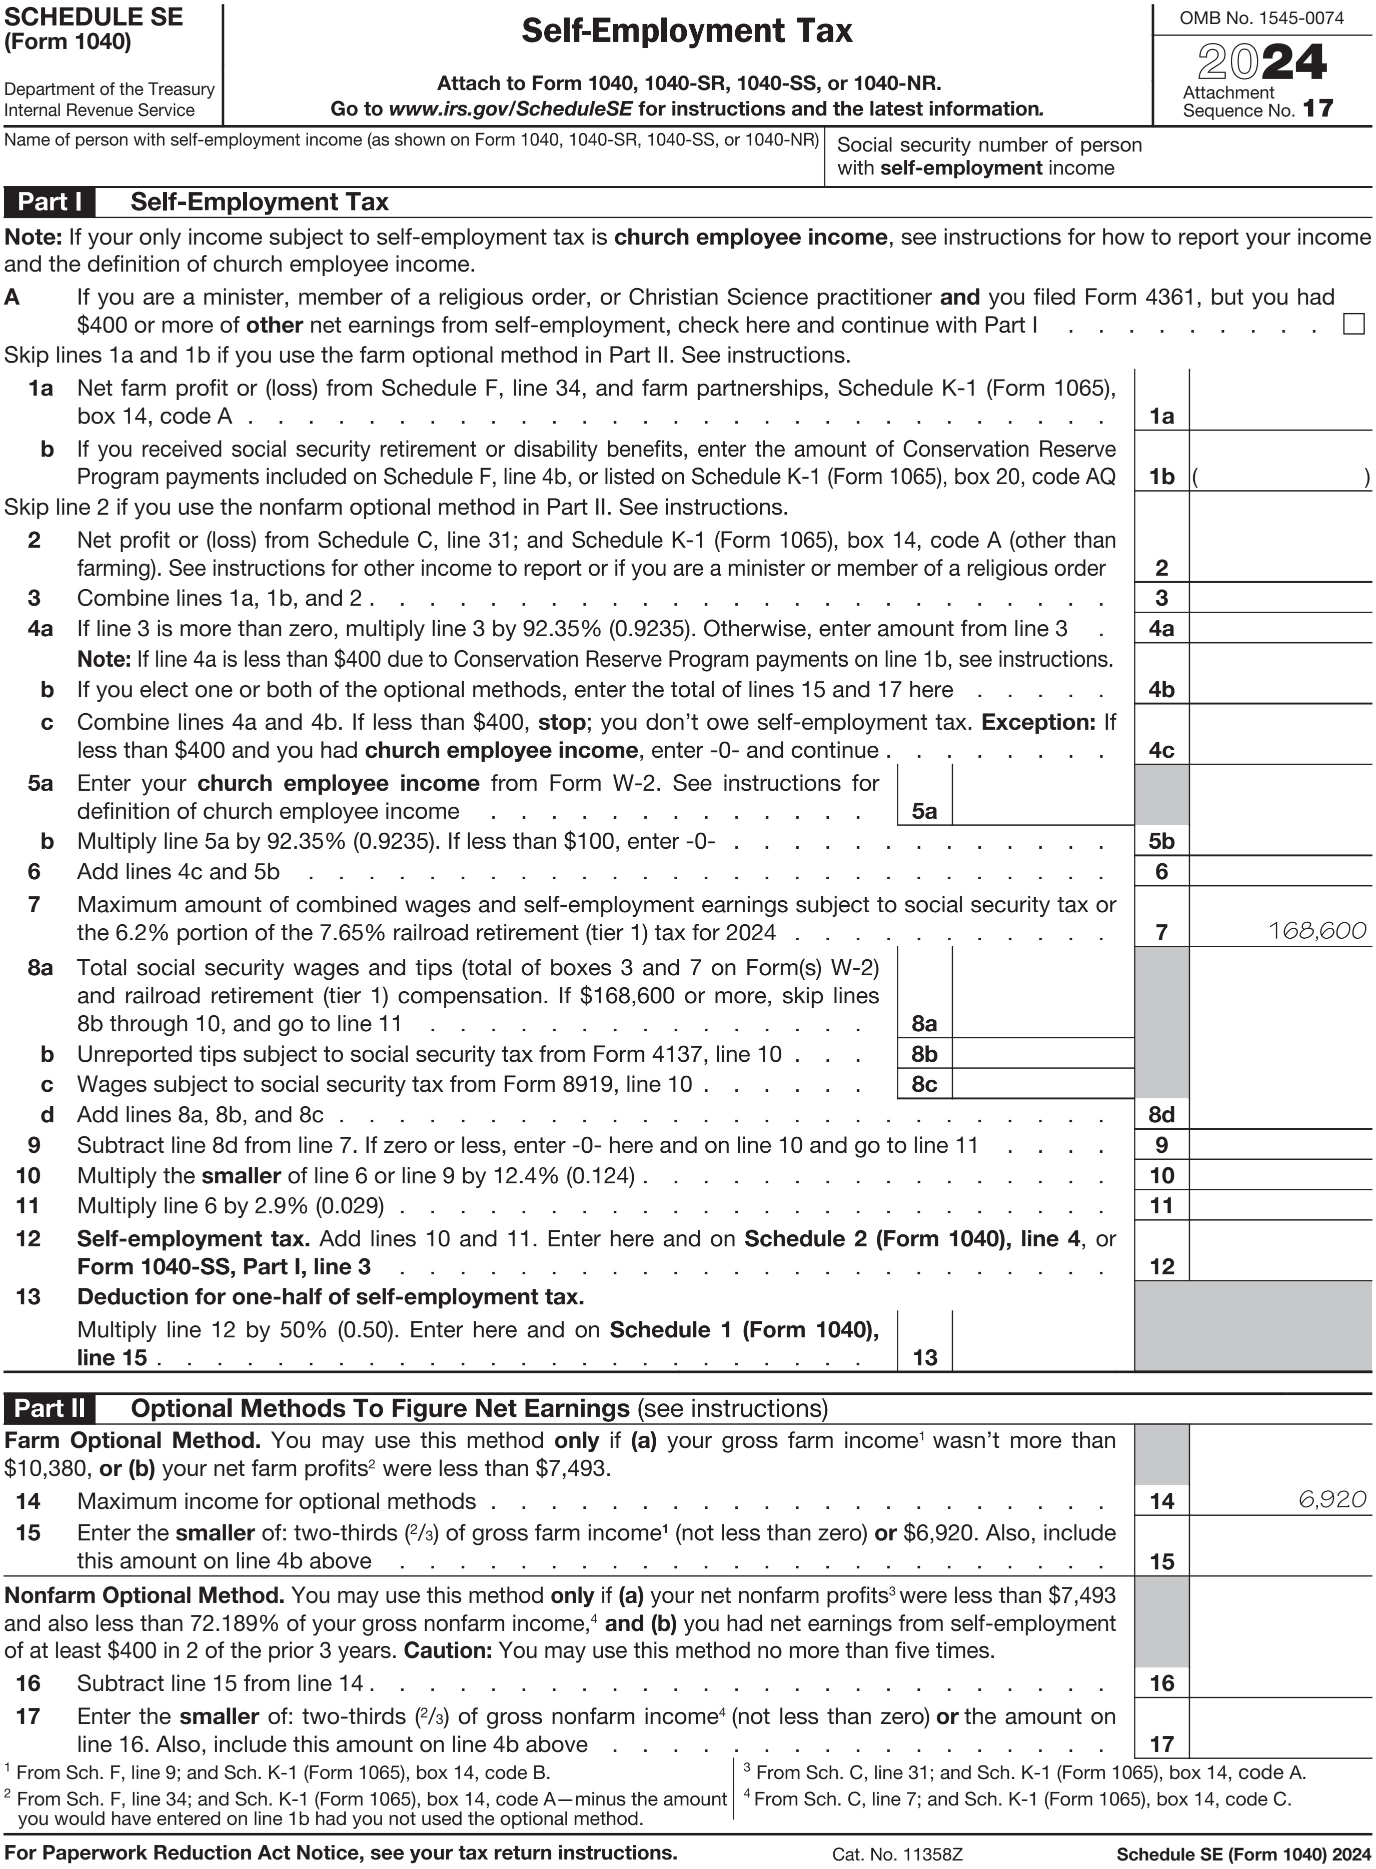
(a) The $3,000 monthly salary for Andrew Lawrence is treated as a withdrawal from the proprietorship and is not deducted on Schedule C. The salary does not reduce Schedule C income and therefore is taxed as self-employment income.

(b) Depreciation is $27,476 = $15,000 = $12,476

(c) Of the $5,000 total, $3,000 is allocated to nondeductible entertainment and $2,000 is allocated to meals incurred in restaurants and is 100% deductible in 2023.

(d) The pension plan expense is the same for book and tax purposes for this business. No pension expenses relate to pensions for the proprietor.

(e) The employee benefit expense is the same for book and tax purposes for this business. None relates to proprietor benefits.



SCHEDULE SE
(Form 1040)

Department of the Treasury
Internal Revenue Service

Self-Employment Tax

Attach to Form 1040, 1040-SR, 1040-SS, or 1040-NR.
Go to *www.irs.gov/ScheduleSE* for instructions and the latest information.

OMB No. 1545-0074
2024
Attachment
Sequence No. **17**

Name of person with self-employment income (as shown on Form 1040, 1040-SR, 1040-SS, or 1040-NR)

Social security number of person with **self-employment** income

Part I Self-Employment Tax

Note: If your only income subject to self-employment tax is **church employee income**, see instructions for how to report your income and the definition of church employee income.

A If you are a minister, member of a religious order, or Christian Science practitioner **and** you filed Form 4361, but you had $400 or more of **other** net earnings from self-employment, check here and continue with Part I . . . . ☐

Skip lines 1a and 1b if you use the farm optional method in Part II. See instructions.

1a	Net farm profit or (loss) from Schedule F, line 34, and farm partnerships, Schedule K-1 (Form 1065), box 14, code A			**1a**	
b	If you received social security retirement or disability benefits, enter the amount of Conservation Reserve Program payments included on Schedule F, line 4b, or listed on Schedule K-1 (Form 1065), box 20, code AQ			**1b**	( )

Skip line 2 if you use the nonfarm optional method in Part II. See instructions.

2	Net profit or (loss) from Schedule C, line 31; and Schedule K-1 (Form 1065), box 14, code A (other than farming). See instructions for other income to report or if you are a minister or member of a religious order			**2**	
3	Combine lines 1a, 1b, and 2			**3**	
4a	If line 3 is more than zero, multiply line 3 by 92.35% (0.9235). Otherwise, enter amount from line 3			**4a**	
	Note: If line 4a is less than $400 due to Conservation Reserve Program payments on line 1b, see instructions.				
b	If you elect one or both of the optional methods, enter the total of lines 15 and 17 here			**4b**	
c	Combine lines 4a and 4b. If less than $400, **stop**; you don't owe self-employment tax. **Exception:** If less than $400 and you had **church employee income**, enter -0- and continue			**4c**	
5a	Enter your **church employee income** from Form W-2. See instructions for definition of church employee income	**5a**			
b	Multiply line 5a by 92.35% (0.9235). If less than $100, enter -0-			**5b**	
6	Add lines 4c and 5b			**6**	
7	Maximum amount of combined wages and self-employment earnings subject to social security tax or the 6.2% portion of the 7.65% railroad retirement (tier 1) tax for 2024			**7**	168,600
8a	Total social security wages and tips (total of boxes 3 and 7 on Form(s) W-2) and railroad retirement (tier 1) compensation. If $168,600 or more, skip lines 8b through 10, and go to line 11	**8a**			
b	Unreported tips subject to social security tax from Form 4137, line 10	**8b**			
c	Wages subject to social security tax from Form 8919, line 10	**8c**			
d	Add lines 8a, 8b, and 8c			**8d**	
9	Subtract line 8d from line 7. If zero or less, enter -0- here and on line 10 and go to line 11			**9**	
10	Multiply the **smaller** of line 6 or line 9 by 12.4% (0.124)			**10**	
11	Multiply line 6 by 2.9% (0.029)			**11**	
12	**Self-employment tax.** Add lines 10 and 11. Enter here and on **Schedule 2 (Form 1040), line 4**, or **Form 1040-SS, Part I, line 3**			**12**	
13	**Deduction for one-half of self-employment tax.** Multiply line 12 by 50% (0.50). Enter here and on **Schedule 1 (Form 1040), line 15**	**13**			

Part II Optional Methods To Figure Net Earnings (see instructions)

Farm Optional Method. You may use this method **only** if **(a)** your gross farm income[1] wasn't more than $10,380, **or (b)** your net farm profits[2] were less than $7,493.

14	Maximum income for optional methods	**14**	6,920
15	Enter the **smaller** of: two-thirds (2/3) of gross farm income[1] (not less than zero) **or** $6,920. Also, include this amount on line 4b above	**15**	

Nonfarm Optional Method. You may use this method **only** if **(a)** your net nonfarm profits[3] were less than $7,493 and also less than 72.189% of your gross nonfarm income,[4] **and (b)** you had net earnings from self-employment of at least $400 in 2 of the prior 3 years. **Caution:** You may use this method no more than five times.

16	Subtract line 15 from line 14	**16**	
17	Enter the **smaller** of: two-thirds (2/3) of gross nonfarm income[4] (not less than zero) **or** the amount on line 16. Also, include this amount on line 4b above	**17**	

---

[1] From Sch. F, line 9; and Sch. K-1 (Form 1065), box 14, code B.

[2] From Sch. F, line 34; and Sch. K-1 (Form 1065), box 14, code A—minus the amount you would have entered on line 1b had you not used the optional method.

[3] From Sch. C, line 31; and Sch. K-1 (Form 1065), box 14, code A.

[4] From Sch. C, line 7; and Sch. K-1 (Form 1065), box 14, code C.

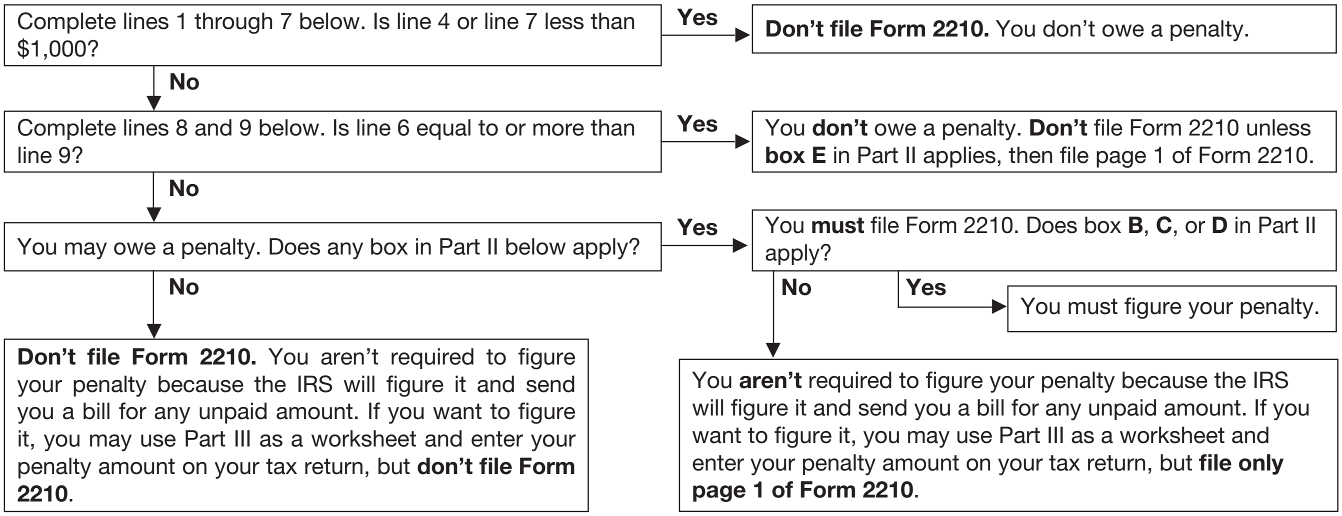
Attachment
Sequence No. **06**

Name(s) shown on tax return

Identifying number

Do You Have To File Form 2210?



Complete lines 1 through 7 below. Is line 4 or line 7 less than $1,000?

Don't file Form 2210. You don't owe a penalty.

Complete lines 8 and 9 below. Is line 6 equal to or more than line 9?

You **don't** owe a penalty. **Don't** file Form 2210 unless **box E** in Part II applies, then file page 1 of Form 2210.

You may owe a penalty. Does any box in Part II below apply?

You **must** file Form 2210. Does box **B**, **C**, or **D** in Part II apply?

You must figure your penalty.

Don't file Form 2210. You aren't required to figure your penalty because the IRS will figure it and send you a bill for any unpaid amount. If you want to figure it, you may use Part III as a worksheet and enter your penalty amount on your tax return, but **don't file Form 2210**.

You **aren't** required to figure your penalty because the IRS will figure it and send you a bill for any unpaid amount. If you want to figure it, you may use Part III as a worksheet and enter your penalty amount on your tax return, but **file only page 1 of Form 2210**.

Part I Required Annual Payment

1	Enter your 2024 tax after credits from Form 1040, 1040-SR, or 1040-NR, line 22. (See the instructions if not filing Form 1040.)			1	
2	Other taxes, including self-employment tax and, if applicable, Additional Medicare Tax and/or Net Investment Income Tax (see instructions)			2	
3	Other payments and refundable credits (see instructions)			3	( )
4	Current year tax. Combine lines 1, 2, and 3. If less than $1,000, **stop**; you don't owe a penalty. **Don't** file Form 2210			4	
5	Multiply line 4 by 90% (0.90)	5			
6	Withholding taxes. **Don't** include estimated tax payments. See instructions			6	
7	Subtract line 6 from line 4. If less than $1,000, **stop**; you don't owe a penalty. **Don't** file Form 2210			7	
8	Maximum required annual payment based on prior year's tax (see instructions)			8	
9	**Required annual payment.** Enter the **smaller** of line 5 or line 8			9	

Next: Is line 9 more than line 6?

☐ **No.** You **don't** owe a penalty. **Don't** file Form 2210 unless box **E** below applies.

☐ **Yes.** You may owe a penalty, but **don't** file Form 2210 unless one or more boxes in Part II below applies.

- If box **B**, **C**, or **D** applies, you must figure your penalty and file Form 2210.
- If box **A** or **E** applies (but not **B**, **C**, or **D**), file only page 1 of Form 2210. You **aren't** required to figure your penalty; the IRS will figure it and send you a bill for any unpaid amount. If you want to figure your penalty, you may use Part III as a worksheet and enter your penalty on your tax return, but **file only page 1 of Form 2210**.

Part II Reasons for Filing. Check applicable boxes. If none apply, don't file Form 2210.

A ☐ You request a **waiver** (see instructions) of your entire penalty. You must check this box and file page 1 of Form 2210, but you aren't required to figure your penalty.

B ☐ You request a **waiver** (see instructions) of part of your penalty. You must figure your penalty and waiver amount and file Form 2210.

C ☐ Your income varied during the year and your penalty is reduced or eliminated when figured using the **annualized income installment method**. You must figure the penalty using Schedule AI and file Form 2210.

D ☐ Your penalty is lower when figured by treating the federal income tax withheld from your income as paid on the dates it was actually withheld, instead of in equal amounts on the payment due dates. You must figure your penalty and file Form 2210.

E ☐ You filed or are filing a joint return for either 2023 or 2024, but not for both years, and line 8 above is smaller than line 5 above. You must file page 1 of Form 2210, but you **aren't** required to figure your penalty (unless box **B**, **C**, or **D** applies).

Form 2210 (2024) Page **2**

Part III Penalty Computation (See the instructions if you're filing Form 1040-NR.)

Section A—Figure Your Underpayment		**Payment Due Dates**			
		(a) 4/15/24	**(b)** 6/15/24	**(c)** 9/15/24	**(d)** 1/15/25
10 **Required installments.** If box C in Part II applies, enter the amounts from Schedule AI, line 27. Otherwise, enter 25% (0.25) of line 9, Form 2210, in each column. For fiscal year filers, see instructions	**10**				
11 Estimated tax paid and tax withheld (see the instructions). For column (a) only, also enter the amount from line 11 on line 15, column (a). If line 11 is equal to or more than line 10 for all payment periods, stop here; you don't owe a penalty. **Don't file Form 2210 unless you checked a box in Part II**	**11**				

Complete lines 12 through 18 of one column before going to line 12 of the next column.

12 Enter the amount, if any, from line 18 in the previous column	**12**				
13 Add lines 11 and 12	**13**				
14 Add the amounts on lines 16 and 17 in the previous column	**14**				
15 Subtract line 14 from line 13. If zero or less, enter -0-. For column (a) only, enter the amount from line 11	**15**				
16 If line 15 is zero, subtract line 13 from line 14. Otherwise, enter -0-	**16**				
17 **Underpayment.** If line 10 is equal to or more than line 15, subtract line 15 from line 10. Then go to line 12 of the next column. Otherwise, go to line 18	**17**				
18 **Overpayment.** If line 15 is more than line 10, subtract line 10 from line 15. Then go to line 12 of the next column	**18**				

Section B—Figure the Penalty (Use the Worksheet for Form 2210, Part III, Section B—Figure the Penalty in the instructions.)

19 **Penalty.** Enter the total penalty from line 14 of the Worksheet for Form 2210, Part III, Section B—Figure the Penalty. Include this amount on Form 1040, 1040-SR, or 1040-NR, line 38; or Form 1041, line 27. **Don't file Form 2210 unless you checked a box in Part II**	**19**	

Form **2210** (2024)

Schedule AI—Annualized Income Installment Method (See the instructions.)

Estates and trusts, **don't** use the period ending dates shown to the right. Instead, use the following: 2/29/24, 4/30/24, 7/31/24, and 11/30/24.		**(a)** 1/1/24–3/31/24	**(b)** 1/1/24–5/31/24	**(c)** 1/1/24–8/31/24	**(d)** 1/1/24–12/31/24

Part I Annualized Income Installments

1 Enter your adjusted gross income for each period. See instructions. (Estates and trusts, enter your taxable income without your exemption for each period.)	**1**				
2 Annualization amounts. (Estates and trusts, see instructions.)	**2**	4	2.4	1.5	1
3 Annualized income. Multiply line 1 by line 2	**3**				
4 If you itemize, enter itemized deductions for the period shown in each column. All others, enter -0-, and skip to line 7. **Exception:** Estates and trusts, skip to line 9	**4**				
5 Annualization amounts	**5**	4	2.4	1.5	1
6 Multiply line 4 by line 5	**6**				
7 In each column, enter the amount of your standard deduction from Form 1040 or 1040-SR. (Form 1040-NR filers, enter -0-. **Exception:** Indian students and business apprentices, see instructions.)	**7**				
8 Enter the **larger** of line 6 or line 7	**8**				
9 Deduction for qualified business income. **Estates and trusts:** Subtract this amount from the amount on line 3, skip line 10, and enter the result on line 11	**9**				
10 Add lines 8 and 9	**10**				
11 Subtract line 10 from line 3	**11**				
12 Form 1040, 1040-SR, or 1040-NR filers, enter -0- in each column. (Estates and trusts, see instructions.)	**12**				
13 Subtract line 12 from line 11. If zero or less, enter -0-	**13**				
14 Figure your tax on the amount on line 13. See instructions	**14**				
15 Self-employment tax from line 36 (complete Part II below)	**15**				
16 Enter other taxes for each payment period including, if applicable, Additional Medicare Tax and/or Net Investment Income Tax. See instructions	**16**				
17 Total tax. Add lines 14, 15, and 16	**17**				
18 For each period, enter the same type of credits as allowed on Form 2210, Part I, lines 1 and 3. See instructions	**18**				
19 Subtract line 18 from line 17. If zero or less, enter -0-	**19**				
20 Applicable percentage	**20**	22.5%	45%	67.5%	90%
21 Multiply line 19 by line 20	**21**				

Complete lines 22–27 of one column before going to line 22 of the next column.

22 Enter the total of the amounts in all previous columns of line 27	**22**				
23 Subtract line 22 from line 21. If zero or less, enter -0-	**23**				
24 Enter 25% (0.25) of line 9 on page 1 of Form 2210 in each column	**24**				
25 Subtract line 27 of the previous column from line 26 of that column	**25**				
26 Add lines 24 and 25	**26**				
27 Enter the **smaller** of line 23 or line 26 here and on Form 2210, Part III, line 10	**27**				

Part II Annualized Self-Employment Tax (Form 1040, 1040-SR, or 1040-NR filers only)

28 Net earnings from self-employment for the period (see instructions)	**28**				
29 Prorated social security tax limit	**29**	$42,150	$70,250	$112,400	$168,600
30 Enter actual wages for the period subject to social security tax or the 6.2% portion of the 7.65% railroad retirement (tier 1) tax. **Exception:** If you filed Form 4137 or Form 8919, see instructions	**30**				
31 Subtract line 30 from line 29. If zero or less, enter -0-	**31**				
32 Annualization amounts	**32**	0.496	0.2976	0.186	0.124
33 Multiply line 32 by the **smaller** of line 28 or line 31	**33**				
34 Annualization amounts	**34**	0.116	0.0696	0.0435	0.029
35 Multiply line 28 by line 34	**35**				
36 Add lines 33 and 35. Enter here and on line 15 above	**36**

Child and Dependent Care Expenses

Attach to Form 1040, 1040-SR, or 1040-NR.
Go to *www.irs.gov/Form2441* for instructions and the latest information.

OMB No. 1545-0074
2024
Attachment
Sequence No. **21**

Name(s) shown on return | **Your social security number**

A You can't claim a credit for child and dependent care expenses if your filing status is married filing separately unless you meet the requirements listed in the instructions under *Married Persons Filing Separately*. If you meet these requirements, check this box . . ☐

B If you or your spouse was a student or was disabled during 2024 and you're entering deemed income of $250 or $500 a month on Form 2441 based on the income rules listed in the instructions under *If You or Your Spouse Was a Student or Disabled*, check this box . ☐

Part I **Persons or Organizations Who Provided the Care—**You **must** complete this part.

If you have more than three care providers, see the instructions and check this box . . . . ☐

1 **(a)** Care provider's name	**(b)** Address (number, street, apt. no., city, state, and ZIP code)	**(c)** Identifying number (SSN or EIN)	**(d)** Was the care provider your household employee in 2024? For example, this generally includes nannies but not daycare centers. (see instructions)	**(e)** Amount paid (see instructions)
			☐ Yes ☐ No	
			☐ Yes ☐ No	
			☐ Yes ☐ No	

Did you receive **dependent care benefits?**
No — Complete only Part II below.
Yes — Complete Part III on page 2 next.

Caution: If the care provider is your household employee, you may owe employment taxes. For details, see the Instructions for Schedule H (Form 1040). If you incurred care expenses in 2024 but didn't pay them until 2025, or if you prepaid in 2024 for care to be provided in 2025, don't include these expenses in column (d) of line 2 for 2024. See the instructions.

Part II **Credit for Child and Dependent Care Expenses**

2 Information about your **qualifying person(s)**. If you have more than three qualifying persons, see the instructions and check this box ☐

(a) Qualifying person's name First	Last	**(b)** Qualifying person's social security number	**(c)** Check here if the qualifying person was over age 12 and was disabled. (see instructions)	**(d) Qualified expenses** you incurred and paid in 2024 for the person listed in column (a)
			☐	
			☐	
			☐	

3 Add the amounts in column (d) of line 2. **Don't** enter more than $3,000 if you had one qualifying person or $6,000 if you had two or more persons. If you completed Part III, enter the amount from line 31 . **3**

4 Enter your **earned income**. See instructions **4**

5 If married filing jointly, enter your spouse's earned income (if you or your spouse was a student or was disabled, see the instructions); **all others**, enter the amount from line 4 . . . . **5**

6 Enter the **smallest** of line 3, 4, or 5 . . . . **6**

7 Enter the amount from Form 1040, 1040-SR, or 1040-NR, line 11 . . . . **7**

8 Enter on line 8 the decimal amount shown below that applies to the amount on line 7.

If line 7 is: Over	But not over	Decimal amount is	**If line 7 is:** Over	But not over	Decimal amount is	**If line 7 is:** Over	But not over	Decimal amount is
$0—	15,000	.35	$25,000—	27,000	.29	$37,000—	39,000	.23
15,000—	17,000	.34	27,000—	29,000	.28	39,000—	41,000	.22
17,000—	19,000	.33	29,000—	31,000	.27	41,000—	43,000	.21
19,000—	21,000	.32	31,000—	33,000	.26	43,000—	No limit	.20
21,000—	23,000	.31	33,000—	35,000	.25			
23,000—	25,000	.30	35,000—	37,000	.24			

8 X.

9a Multiply line 6 by the decimal amount on line 8 . . . . **9a**

b If you paid 2023 expenses in 2024, complete Worksheet A in the instructions. Enter the amount from line 13 of the worksheet here. Otherwise, enter -0- on line 9b and go to line 9c **9b**

c Add lines 9a and 9b and enter the result **9c**

10 Tax liability limit. Enter the amount from the Credit Limit Worksheet in the instructions **10**

11 **Credit for child and dependent care expenses.** Enter the **smaller** of line 9c or line 10 here and on Schedule 3 (Form 1040), line 2 . . . . **11**

Part III Dependent Care Benefits

12	Enter the total amount of **dependent care benefits** you received in 2024. Amounts you received as an employee should be shown in box 10 of your Form(s) W-2. **Don't** include amounts reported as wages in box 1 of Form(s) W-2. If you were self-employed or a partner, include amounts you received under a dependent care assistance program from your sole proprietorship or partnership		**12**	
13	Enter the amount, if any, you carried over from 2023 and used in 2024 during the grace period. See instructions		**13**	
14	If you forfeited or carried over to 2025 any of the amounts reported on line 12 or 13, enter the amount. See instructions		**14**	( )
15	Combine lines 12 through 14. See instructions		**15**	
16	Enter the total amount of **qualified expenses** incurred in 2024 for the care of the **qualifying person(s)**	**16**		
17	Enter the **smaller** of line 15 or 16	**17**		
18	Enter your **earned income**. See instructions	**18**		
19	Enter the amount shown below that applies to you. • If married filing jointly, enter your spouse's earned income (if you or your spouse was a student or was disabled, see the instructions for line 5). • If married filing separately, see instructions. • All others, enter the amount from line 18.	**19**		
20	Enter the **smallest** of line 17, 18, or 19	**20**		
21	Enter $5,000 ($2,500 if married filing separately **and** you were required to enter your spouse's earned income on line 19). However, don't enter more than the maximum amount allowed under your dependent care plan. See instructions	**21**		
22	Is any amount on line 12 or 13 from your sole proprietorship or partnership? ☐ **No.** Enter -0-. ☐ **Yes.** Enter the amount here		**22**	
23	Subtract line 22 from line 15	**23**		
24	**Deductible benefits.** Enter the **smallest** of line 20, 21, or 22. Also, include this amount on the appropriate line(s) of your return. See instructions		**24**	
25	**Excluded benefits.** If you checked "No" on line 22, enter the smaller of line 20 or line 21. Otherwise, subtract line 24 from the smaller of line 20 or line 21. If zero or less, enter -0-		**25**	
26	**Taxable benefits.** Subtract line 25 from line 23. If zero or less, enter -0-. Also, enter this amount on Form 1040, 1040-SR, or 1040-NR, line 1e		**26**	

To claim the child and dependent care credit,
complete lines 27 through 31 below.

27	Enter $3,000 ($6,000 if two or more qualifying persons)	**27**	
28	Add lines 24 and 25	**28**	
29	Subtract line 28 from line 27. If zero or less, **stop**. You can't take the credit. **Exception.** If you paid 2023 expenses in 2024, see the instructions for line 9b	**29**	
30	Complete line 2 on page 1 of this form. **Don't** include in column (d) any benefits shown on line 28 above. Then, add the amounts in column (d) and enter the total here	**30**	
31	Enter the **smaller** of line 29 or 30. Also, enter this amount on line 3 on page 1 of this form and complete lines 4 through 11	**31**

2024
Attachment Sequence No. **26**

Name(s) shown on tax return

Identifying number

SECTION A—Personal Use Property (Use this section to report casualties and thefts of property **not** used in a trade or business or for income-producing purposes. For tax years 2018 through 2025, if you are an individual, casualty or theft losses of personal-use property are deductible only if the loss is attributable to a federally declared disaster. You must use a separate Form 4684 (through line 12) for each casualty or theft event involving personal-use property. **If reporting a qualified disaster loss, see the instructions for special rules that apply before completing this section.**)

If the casualty or theft loss is attributable to a federally declared disaster, check here ☐ and enter the DR-______ or EM-________ declaration number assigned by FEMA. (See instructions.)

1 Description of properties (show type, location (city, state, and ZIP code), and date acquired for each property). Use a separate line for each property lost or damaged from the same casualty or theft. If you checked the box and entered the FEMA disaster declaration number above, enter the ZIP code for the property most affected on the line for Property **A**.

	Type of Property	**City and State**	**ZIP Code**	**Date Acquired**
Property **A**				
Property **B**				
Property **C**				
Property **D**				

		Properties			
		A	**B**	**C**	**D**
2 Cost or other basis of each property	**2**				
3 Insurance or other reimbursement (whether or not you filed a claim) (see instructions) **Note:** If line 2 is **more** than line 3, skip line 4.	**3**				
4 Gain from casualty or theft. If line 3 is **more** than line 2, enter the difference here and skip lines 5 through 9 for that column. See instructions if line 3 includes insurance or other reimbursement you did not claim, or you received payment for your loss in a later tax year	**4**				
5 Fair market value **before** casualty or theft	**5**				
6 Fair market value **after** casualty or theft	**6**				
7 Subtract line 6 from line 5	**7**				
8 Enter the **smaller** of line 2 or line 7	**8**				
9 Subtract line 3 from line 8. If zero or less, enter -0-	**9**				

10 Casualty or theft loss. Add the amounts on line 9 in columns A through D	**10**	
11 Enter $100 ($500 if qualified disaster loss rules apply; see instructions)	**11**	
12 Subtract line 11 from line 10. If zero or less, enter -0-	**12**	
Caution: Use only one Form 4684 for lines 13 through 18.		
13 Add the amounts on line 4 of all Forms 4684	**13**	
14 Add the amounts on line 12 of all Forms 4684. If you have losses not attributable to a federally declared disaster, see the instructions	**14**	
Caution: See instructions before completing line 15.		
15 • If line 13 is **more** than line 14, enter the difference here and on Schedule D. **Do not** complete the rest of this section. • If line 13 is **equal** to line 14, enter -0- here. **Do not** complete the rest of this section. • If line 13 is **less** than line 14, and you have no qualified disaster losses subject to the $500 reduction on line 11 on any Form(s) 4684, enter -0- here and go to line 16. If you have qualified disaster losses subject to the $500 reduction, subtract line 13 from line 14 and enter the smaller of this difference or the amount on line 12 of the Form(s) 4684 reporting those losses. Enter that result here and on Schedule A (Form 1040), line 16; or Schedule A (Form 1040-NR), line 7. If you claim the standard deduction, also include on Schedule A (Form 1040), line 16, the amount of your standard deduction (see the Instructions for Form 1040). Do not complete the rest of this section if all of your casualty or theft losses are subject to the $500 reduction.	**15**	
16 Add lines 13 and 15. Subtract the result from line 14	**16**	
17 Enter 10% of your adjusted gross income from Form 1040, 1040-SR, or 1040-NR, line 11. Estates and trusts, see instructions	**17**	
18 Subtract line 17 from line 16. If zero or less, enter -0-. Also, enter the result on Schedule A (Form 1040), line 15; or Schedule A (Form 1040-NR), line 6. Estates and trusts, enter the result on the "Other deductions" line of your tax return	**18**	

For Paperwork Reduction Act Notice, see instructions. Cat. No. 12997O Form **4684** (2024)

Name(s) shown on tax return. Do not enter name and identifying number if shown on other side.	**Identifying number**

SECTION B—Business and Income-Producing Property

Part I Casualty or Theft Gain or Loss (Use a separate Part I for each casualty or theft.)

19 Description of properties (show type, location, and date acquired for each property). Use a separate line for each property lost or damaged from the same casualty or theft. **See instructions if claiming a loss due to a Ponzi-type investment scheme and Section C is not completed.**

Property **A** ______________________________

Property **B** ______________________________

Property **C** ______________________________

Property **D** ______________________________

		Properties			
		A	**B**	**C**	**D**
20 Cost or adjusted basis of each property	**20**				
21 Insurance or other reimbursement (whether or not you filed a claim). See the instructions for line 3	**21**				
Note: If line 20 is **more** than line 21, skip line 22.					
22 Gain from casualty or theft. If line 21 is **more** than line 20, enter the difference here and on line 29 or line 34, column (c), except as provided in the instructions for line 33. Also, skip lines 23 through 27 for that column. See the instructions for line 4 if line 21 includes insurance or other reimbursement you did not claim, or you received payment for your loss in a later tax year	**22**				
23 Fair market value **before** casualty or theft	**23**				
24 Fair market value **after** casualty or theft	**24**				
25 Subtract line 24 from line 23	**25**				
26 Enter the **smaller** of line 20 or line 25	**26**				
Note: If the property was totally destroyed by casualty or lost from theft, enter on line 26 the amount from line 20.					
27 Subtract line 21 from line 26. If zero or less, enter -0-	**27**				

28 Casualty or theft loss. Add the amounts on line 27. Enter the total here and on line 29 **or** line 34. See instructions . . **28** ________

Part II Summary of Gains and Losses (from separate Parts I)

		(b) Losses from casualties or thefts		
(a) Identify casualty or theft		**(i)** Trade, business, rental, or royalty property	**(ii)** Income-producing property	**(c)** Gains from casualties or thefts includible in income
Casualty or Theft of Property Held One Year or Less				
29		( )	( )	
		( )	( )	
30 Totals. Add the amounts on line 29	**30**	( )	( )	

31 Combine line 30, columns (b)(i) and (c). Enter the net gain or (loss) here and on Form 4797, line 14. If Form 4797 is not otherwise required, see instructions	**31**	
32 Enter the amount from line 30, column (b)(ii), here. Individuals, enter the amount from income-producing property on Schedule A (Form 1040), line 16; or Schedule A (Form 1040-NR), line 7. (Do not include any loss on property used as an employee.) Estates and trusts, partnerships, and S corporations, see instructions	**32**	

Casualty or Theft of Property Held More Than One Year

33 Casualty or theft gains from Form 4797, line 32			**33**	
34		( )	( )	
		( )	( )	
35 Total losses. Add amounts on line 34, columns (b)(i) and (b)(ii)	**35**	( )	( )	

36 Total gains. Add lines 33 and 34, column (c)	**36**	
37 Add amounts on line 35, columns (b)(i) and (b)(ii)	**37**	
38 If the loss on line 37 is **more** than the gain on line 36:		
a Combine line 35, column (b)(i), and line 36, and enter the net gain or (loss) here. Partnerships and S corporations, see the *Note* below. All others, enter this amount on Form 4797, line 14. If Form 4797 is not otherwise required, see instructions	**38a**	
b Enter the amount from line 35, column (b)(ii), here. Individuals, enter the amount from income-producing property on Schedule A (Form 1040), line 16; or Schedule A (Form 1040-NR), line 7. (Do not include any loss on property used as an employee.) Estates and trusts, enter on the “Other deductions” line of your tax return. Partnerships and S corporations, see the *Note* below	**38b**	
39 If the loss on line 37 is **less** than or **equal** to the gain on line 36, combine lines 36 and 37 and enter here. Partnerships, see the *Note* below. All others, enter this amount on Form 4797, line 3	**39**	

Note: Partnerships, enter the amount from line 38a, 38b, or 39 on Form 1065, Schedule K, line 11.
S corporations, enter the amount from line 38a or 38b on Form 1120-S, Schedule K, line 10.

Sequence No. **32**

Name(s) shown on Form 1040, 1040-SR, or 1040-NR

Your social security number

Part I Alternative Minimum Taxable Income (See instructions for how to complete each line.)

1	Enter the amount from Form 1040 or 1040-SR, line 15, if more than zero. If Form 1040 or 1040-SR, line 15, is zero, subtract line 14 of Form 1040 or 1040-SR from line 11 of Form 1040 or 1040-SR and enter the result here. (If less than zero, enter as a negative amount.)	1	
2a	If filing Schedule A (Form 1040), enter the taxes from Schedule A, line 7; otherwise, enter the amount from Form 1040 or 1040-SR, line 12	2a	
b	Tax refund from Schedule 1 (Form 1040), line 1 or line 8z	2b	( )
c	Investment interest expense (difference between regular tax and AMT)	2c	
d	Depletion (difference between regular tax and AMT)	2d	
e	Net operating loss deduction from Schedule 1 (Form 1040), line 8a. Enter as a positive amount	2e	
f	Alternative tax net operating loss deduction	2f	( )
g	Interest from specified private activity bonds exempt from the regular tax	2g	
h	Qualified small business stock, see instructions	2h	
i	Exercise of incentive stock options (excess of AMT income over regular tax income)	2i	
j	Estates and trusts (amount from Schedule K-1 (Form 1041), box 12, code A)	2j	
k	Disposition of property (difference between AMT and regular tax gain or loss)	2k	
l	Depreciation on assets placed in service after 1986 (difference between regular tax and AMT)	2l	
m	Passive activities (difference between AMT and regular tax income or loss)	2m	
n	Loss limitations (difference between AMT and regular tax income or loss)	2n	
o	Circulation costs (difference between regular tax and AMT)	2o	
p	Long-term contracts (difference between AMT and regular tax income)	2p	
q	Mining costs (difference between regular tax and AMT)	2q	
r	Research and experimental costs (difference between regular tax and AMT)	2r	
s	Income from certain installment sales before January 1, 1987	2s	( )
t	Intangible drilling costs preference	2t	
3	Other adjustments, including income-based related adjustments	3	
4	**Alternative minimum taxable income.** Combine lines 1 through 3. (If married filing separately and line 4 is more than $875,950, see instructions.)	4	

Part II Alternative Minimum Tax (AMT)

5 Exemption.

IF your filing status is...	**AND line 4 is not over...**	**THEN enter on line 5...**
Single or head of household	$ 609,350	$ 85,700
Married filing jointly or qualifying surviving spouse	1,218,700	133,300
Married filing separately	609,350	66,650

If line 4 is **over** the amount shown above for your filing status, see instructions. **5**

6	Subtract line 5 from line 4. If more than zero, go to line 7. If zero or less, enter -0- here and on lines 7, 9, and 11, and go to line 10	6	
7	• If you are filing Form 2555, see instructions for the amount to enter. • If you reported capital gain distributions directly on Form 1040 or 1040-SR, line 7; you reported qualified dividends on Form 1040 or 1040-SR, line 3a; **or** you had a gain on both lines 15 and 16 of Schedule D (Form 1040) (as refigured for the AMT, if necessary), complete Part III on the back and enter the amount from line 40 here. • **All others:** If line 6 is $232,600 or less ($116,300 or less if married filing separately), multiply line 6 by 26% (0.26). Otherwise, multiply line 6 by 28% (0.28) and subtract $4,652 ($2,326 if married filing separately) from the result.	7	
8	Alternative minimum tax foreign tax credit (see instructions)	8	
9	Tentative minimum tax. Subtract line 8 from line 7	9	
10	Add Form 1040 or 1040-SR, line 16 (minus any tax from Form 4972), and Schedule 2 (Form 1040), line 1z. Subtract from the result Schedule 3 (Form 1040), line 1 and any negative amount reported on Form 8978, line 14 (treated as a positive number). If zero or less, enter -0-. If you used Schedule J to figure your tax on Form 1040 or 1040-SR, line 16, refigure that tax without using Schedule J before completing this line. See instructions	10	
11	**AMT.** Subtract line 10 from line 9. If zero or less, enter -0-. Enter here and on Schedule 2 (Form 1040), line 2	11	

For Paperwork Reduction Act Notice, see your tax return instructions. Cat. No. 13600G Form **6251** (2024)

Part III Tax Computation Using Maximum Capital Gains Rates

Complete Part III only if you are required to do so by line 7 or by the Foreign Earned Income Tax Worksheet in the instructions.

12 Enter the amount from Form 6251, line 6. If you are filing Form 2555, enter the amount from line 3 of the worksheet in the instructions for line 7 . . . **12**

13 Enter the amount from line 4 of the Qualified Dividends and Capital Gain Tax Worksheet in the Instructions for Form 1040 or the amount from line 13 of the Schedule D Tax Worksheet in the Instructions for Schedule D (Form 1040), whichever applies (as refigured for the AMT, if necessary). See instructions. If you are filing Form 2555, see instructions for the amount to enter . . . **13**

14 Enter the amount from Schedule D (Form 1040), line 19 (as refigured for the AMT, if necessary). See instructions. If you are filing Form 2555, see instructions for the amount to enter . . . **14**

15 If you did not complete a Schedule D Tax Worksheet for the regular tax or the AMT, enter the amount from line 13. Otherwise, add lines 13 and 14, and enter the **smaller** of that result or the amount from line 10 of the Schedule D Tax Worksheet (as refigured for the AMT, if necessary). If you are filing Form 2555, see instructions for the amount to enter . . . **15**

16 Enter the **smaller** of line 12 or line 15 . . . **16**

17 Subtract line 16 from line 12 . . . **17**

18 If line 17 is $232,600 or less ($116,300 or less if married filing separately), multiply line 17 by 26% (0.26). Otherwise, multiply line 17 by 28% (0.28) and subtract $4,652 ($2,326 if married filing separately) from the result **18**

19 Enter:
- $94,050 if married filing jointly or qualifying surviving spouse,
- $47,025 if single or married filing separately, or
- $63,000 if head of household.

} . . **19**

20 Enter the amount from line 5 of the Qualified Dividends and Capital Gain Tax Worksheet or the amount from line 14 of the Schedule D Tax Worksheet, whichever applies (as figured for the regular tax). If you did not complete either worksheet for the regular tax, enter the amount from Form 1040 or 1040-SR, line 15; if zero or less, enter -0-. If you are filing Form 2555, see instructions for the amount to enter . . . **20**

21 Subtract line 20 from line 19. If zero or less, enter -0- . . . **21**

22 Enter the **smaller** of line 12 or line 13 . . . **22**

23 Enter the **smaller** of line 21 or line 22. This amount is taxed at 0% . . . **23**

24 Subtract line 23 from line 22 . . . **24**

25 Enter:
- $518,900 if single,
- $291,850 if married filing separately,
- $583,750 if married filing jointly or qualifying surviving spouse, or
- $551,350 if head of household.

} . . **25**

26 Enter the amount from line 21 . . . **26**

27 Enter the amount from line 5 of the Qualified Dividends and Capital Gain Tax Worksheet or the amount from line 21 of the Schedule D Tax Worksheet, whichever applies (as figured for the regular tax). If you did not complete either worksheet for the regular tax, enter the amount from Form 1040 or 1040-SR, line 15; if zero or less, enter -0-. If you are filing Form 2555, see instructions for the amount to enter . . . **27**

28 Add line 26 and line 27 . . . **28**

29 Subtract line 28 from line 25. If zero or less, enter -0- . . . **29**

30 Enter the smaller of line 24 or line 29 . . . **30**

31 Multiply line 30 by 15% (0.15) . . . **31**

32 Add lines 23 and 30 . . . **32**

If lines 32 and 12 are the same, skip lines 33 through 37 and go to line 38. Otherwise, go to line 33.

33 Subtract line 32 from line 22 . . . **33**

34 Multiply line 33 by 20% (0.20) . . . **34**

If line 14 is zero or blank, skip lines 35 through 37 and go to line 38. Otherwise, go to line 35.

35 Add lines 17, 32, and 33 . . . **35**

36 Subtract line 35 from line 12 . . . **36**

37 Multiply line 36 by 25% (0.25) . . . **37**

38 Add lines 18, 31, 34, and 37 . . . **38**

39 If line 12 is $232,600 or less ($116,300 or less if married filing separately), multiply line 12 by 26% (0.26). Otherwise, multiply line 12 by 28% (0.28) and subtract $4,652 ($2,326 if married filing separately) from the result **39**

40 Enter the **smaller** of line 38 or line 39 here and on line 7. If you are filing Form 2555, do not enter this amount on line 7. Instead, enter it on line 4 of the worksheet in the instructions for line 7 . . . **40**

Form **8283**
(Rev. December 2023)
Department of the Treasury
Internal Revenue Service

Noncash Charitable Contributions

Attach one or more Forms 8283 to your tax return if you claimed a total deduction of over $500 for all contributed property.

Go to *www.irs.gov/Form8283* for instructions and the latest information.

OMB No. 1545-0074

Attachment Sequence No. **155**

Name(s) shown on your income tax return | **Identifying number**

Enter the entity name and identifying number from the tax return where the noncash charitable contribution was originally reported, if different from above.

Name: ____________________ Identifying number: ____________

Check this box if a family pass-through entity made the noncash charitable contribution. See instructions . . . . ☐

Note: Figure the amount of your contribution deduction before completing this form. See your tax return instructions.

Section A. Donated Property of $5,000 or Less and Publicly Traded Securities—List in this section **only** an item (or a group of similar items) for which you claimed a deduction of $5,000 or less. Also list publicly traded securities and certain other property even if the deduction is more than $5,000. If you need more space, attach a statement. See instructions.

1	**(a)** Name and address of the donee organization	**(b)** If donated property is a vehicle (see instructions), check the box. Also enter the vehicle identification number (unless Form 1098-C is attached).	**(c)** Description and condition of donated property (For a vehicle, enter the year, make, model, and mileage. For securities and other property, see instructions.)
A		☐	
B		☐	
C		☐	
D		☐	

Note: If the amount you claimed as a deduction for an item is $500 or less, you do not have to complete columns (e), (f), and (g).

	(d) Date of the contribution	**(e)** Date acquired by donor (mo., yr.)	**(f)** How acquired by donor	**(g)** Donor's cost or adjusted basis	**(h)** Fair market value (see instructions)	**(i)** Method used to determine the fair market value
A						
B						
C						
D						

Section B. Donated Property Over $5,000 (Except Publicly Traded Securities, Vehicles, Intellectual Property or Inventory Reportable in Section A)—Complete this section for one item (or a group of similar items) for which you claimed a deduction of more than $5,000 per item or group (except contributions reportable in Section A). Provide a separate form for each item donated unless it is part of a group of similar items. A qualified appraisal is required for items reportable in Section B and in certain cases must be attached. See instructions.

Part I Information on Donated Property

2 Check the box that describes the type of property donated. See instructions for definitions.

- **a** ☐ Art (contribution of $20,000 or more)
- **b** ☐ Qualified conservation contribution
  - **b(1)** ☐ Certified historic structure
  - NPS # ____________
- **c** ☐ Art (contribution of less than $20,000)
- **d** ☐ Other real estate
- **e** ☐ Equipment
- **f** ☐ Securities
- **g** ☐ Collectibles
- **h** ☐ Intellectual property
- **i** ☐ Vehicles
- **j** ☐ Clothing and household items
- **k** ☐ Digital assets
- **l** ☐ Other

3	**(a)** Description of donated property (if you need more space, attach a separate statement)	**(b)** If any tangible personal property or real property was donated, give a brief summary of the overall physical condition of the property at the time of the gift.	**(c)** Appraised fair market value
A			
B			
C			

	(d) Date acquired by donor (mo., yr.)	**(e)** How acquired by donor	**(f)** Donor's cost or adjusted basis	**(g)** For bargain sales, enter amount received	**(h)** Qualified conservation contribution relevant basis (see instructions)	**(i)** Amount claimed as a deduction (see instructions)
A						
B

For Paperwork Reduction Act Notice, see separate instructions. Cat. No. 62299J Form **8283** (Rev. 12-2023)

Name(s) shown on your income tax return	**Identifying number**

Part II Partial Interests and Restricted Use Property (Other Than Qualified Conservation Contributions)—

Complete lines 4a through 4e if you gave less than an entire interest in a property listed in Section B, Part I. Complete lines 5a through 5c if conditions were placed on a contribution listed in Section B, Part I; also attach the required statement. See instructions.

4a Enter the letter from Section B, Part I that identifies the property for which you gave less than an entire interest ______
If Section B, Part II applies to more than one property, attach a separate statement.

b Total amount claimed as a deduction for the property listed in Section B, Part I: **(1)** For this tax year . . ______
(2) For any prior tax years ______

c Name and address of each organization to which any such contribution was made in a prior year (complete only if different from the donee organization in Section B, Part V, below):

Name of charitable organization (donee)

Address (number, street, and room or suite no.)	City or town, state, and ZIP code

d For tangible property, enter the place where the property is located or kept ______

e Name of any person, other than the donee organization, having actual possession of the property ______

		Yes	**No**
5a	Is there a restriction, either temporary or permanent, on the donee's right to use or dispose of the donated property?		
b	Did you give to anyone (other than the donee organization or another organization participating with the donee organization in cooperative fundraising) the right to the income from the donated property or to the possession of the property, including the right to vote donated securities, to acquire the property by purchase or otherwise, or to designate the person having such income, possession, or right to acquire?		
c	Is there a restriction limiting the donated property for a particular use?		

Part III Taxpayer (Donor) Statement—List each item included in Section B, Part I above that the appraisal identifies as having a value of $500 or less. See instructions.

I declare that the following item(s) included in Section B, Part I above has to the best of my knowledge and belief an appraised value of not more than $500 (per item). Enter identifying letter from Section B, Part I and describe the specific item. See instructions.

Signature of taxpayer (donor) Date

Part IV Declaration of Appraiser—See instructions.

I declare that I am not the donor, the donee, a party to the transaction in which the donor acquired the property, employed by, or related to any of the foregoing persons, or married to any person who is related to any of the foregoing persons. And, if regularly used by the donor, donee, or party to the transaction, I performed the majority of my appraisals during my tax year for other persons.

Also, I declare that I perform appraisals on a regular basis; and that because of my qualifications as described in the appraisal, I am qualified to make appraisals of the type of property being valued. I certify that the appraisal fees were not based on a percentage of the appraised property value. Furthermore, I understand that a false or fraudulent overstatement of the property value as described in the qualified appraisal or this Form 8283 may subject me to the penalty under section 6701(a) (aiding and abetting the understatement of tax liability). I understand that my appraisal will be used in connection with a return or claim for refund. I also understand that, if there is a substantial or gross valuation misstatement of the value of the property claimed on the return or claim for refund that is based on my appraisal, I may be subject to a penalty under section 6695A of the Internal Revenue Code, as well as other applicable penalties. I affirm that I have not been at any time in the three-year period ending on the date of the appraisal barred from presenting evidence or testimony before the Department of the Treasury or the Internal Revenue Service pursuant to 31 U.S.C. 330(c).

Sign Here	Appraiser signature	Date
	Appraiser name	Title

Business address (including room or suite no.)	**Identifying number**
City or town, state, and ZIP code	

Part V Donee Acknowledgment—See instructions.

This charitable organization acknowledges that it is a qualified organization under section 170(c) and that it received the donated property as described in Section B, Part I, above on the following date ______

Furthermore, this organization affirms that in the event it sells, exchanges, or otherwise disposes of the property described in Section B, Part I (or any portion thereof) within 3 years after the date of receipt, it will file **Form 8282**, Donee Information Return, with the IRS and give the donor a copy of that form. This acknowledgment does not represent agreement with the claimed fair market value.

Does the organization intend to use the property for an unrelated use? . . . . ☐ **Yes** ☐ **No**

Name of charitable organization (donee)	**Employer identification number**	
Address (number, street, and room or suite no.)	City or town, state, and ZIP code	
Authorized signature	Title	Date

Passive Activity Loss Limitations

See separate instructions.
Attach to Form 1040, 1040-SR, or 1041.
Go to *www.irs.gov/Form8582* for instructions and the latest information.

OMB No. 1545-1008
2024
Attachment Sequence No. 858

Name(s) shown on return

Identifying number

Part I 2024 Passive Activity Loss

Caution: Complete Parts IV and V before completing Part I.

Rental Real Estate Activities With Active Participation (For the definition of active participation, see ***Special Allowance for Rental Real Estate Activities*** in the instructions.)

1a	Activities with net income (enter the amount from Part IV, column (a))	**1a**			
b	Activities with net loss (enter the amount from Part IV, column (b))	**1b**	( )		
c	Prior years' unallowed losses (enter the amount from Part IV, column (c))	**1c**	( )		
d	Combine lines 1a, 1b, and 1c			**1d**	

All Other Passive Activities

2a	Activities with net income (enter the amount from Part V, column (a))	**2a**			
b	Activities with net loss (enter the amount from Part V, column (b))	**2b**	( )		
c	Prior years' unallowed losses (enter the amount from Part V, column (c))	**2c**	( )		
d	Combine lines 2a, 2b, and 2c			**2d**	
3	Combine lines 1d and 2d and subtract any prior year unallowed CRD. See instructions. If this line is zero or more, stop here and include this form with your return; all losses are allowed, including any prior year unallowed losses entered on line 1c or 2c. Report the losses on the forms and schedules normally used			**3**	

If line 3 is a loss and:
- Line 1d is a loss, go to Part II.
- Line 2d is a loss (and line 1d is zero or more), skip Part II and go to line 10.

Caution: If your filing status is married filing separately and you lived with your spouse at any time during the year, **do not** complete Part II. Instead, go to line 10.

Part II Special Allowance for Rental Real Estate Activities With Active Participation

Note: Enter all numbers in Part II as positive amounts. See instructions for an example.

4	Enter the **smaller** of the loss on line 1d or the loss on line 3			**4**	
5	Enter $150,000. If married filing separately, see instructions	**5**			
6	Enter modified adjusted gross income, but not less than zero. See instructions	**6**			
	Note: If line 6 is greater than or equal to line 5, skip lines 7 and 8 and enter -0- on line 9. Otherwise, go to line 7.				
7	Subtract line 6 from line 5	**7**			
8	Multiply line 7 by 50% (0.50). **Do not** enter more than $25,000. If married filing separately, see instructions			**8**	
9	Enter the **smaller** of line 4 or line 8. If line 3 includes any CRD, see instructions			**9**	

Part III Total Losses Allowed

10	Add the income, if any, on lines 1a and 2a and enter the total	**10**	
11	**Total losses allowed from all passive activities for 2024.** Add lines 9 and 10. See instructions to find out how to report the losses on your tax return	**11**	

Part IV Complete This Part Before Part I, Lines 1a, 1b, and 1c. See instructions.

Name of activity	Current year		Prior years	Overall gain or loss	
	(a) Net income (line 1a)	**(b)** Net loss (line 1b)	**(c)** Unallowed loss (line 1c)	**(d)** Gain	**(e)** Loss
Total. Enter on Part I, lines 1a, 1b, and 1c					

For Paperwork Reduction Act Notice, see instructions. Cat. No. 63704F Form **8582** (2024)

Part V **Complete This Part Before Part I, Lines 2a, 2b, and 2c.** See instructions.

Name of activity	Current year		Prior years	Overall gain or loss	
	(a) Net income (line 2a)	**(b)** Net loss (line 2b)	**(c)** Unallowed loss (line 2c)	**(d)** Gain	**(e)** Loss
Total. Enter on Part I, lines 2a, 2b, and 2c					

Part VI **Use This Part if an Amount Is Shown on Part II, Line 9.** See instructions.

Name of activity	Form or schedule and line number to be reported on (see instructions)	**(a)** Loss	**(b)** Ratio	**(c)** Special allowance	**(d)** Subtract column (c) from column (a).
Total			1.00		

Part VII **Allocation of Unallowed Losses.** See instructions.

Name of activity	Form or schedule and line number to be reported on (see instructions)	**(a)** Loss	**(b)** Ratio	**(c)** Unallowed loss
Total			1.00	

Part VIII **Allowed Losses.** See instructions.

Name of activity	Form or schedule and line number to be reported on (see instructions)	**(a)** Loss	**(b)** Unallowed loss	**(c)** Allowed loss
Total				

Part IX **Activities With Losses Reported on Two or More Forms or Schedules.** See instructions.

Name of activity:	**(a)**	**(b)**	**(c)** Ratio	**(d)** Unallowed loss	**(e)** Allowed loss
Form or schedule and line number to be reported on (see instructions):					
1a Net loss plus prior year unallowed loss from form or schedule . .					
b Net income from form or schedule					
c Subtract line 1b from line 1a. If zero or less, enter -0-					
Form or schedule and line number to be reported on (see instructions):					
1a Net loss plus prior year unallowed loss from form or schedule . .					
b Net income from form or schedule					
c Subtract line 1b from line 1a. If zero or less, enter -0-					
Form or schedule and line number to be reported on (see instructions):					
1a Net loss plus prior year unallowed loss from form or schedule . .					
b Net income from form or schedule					
c Subtract line 1b from line 1a. If zero or less, enter -0-					
Total			**1.00**		

Form **8615**

Department of the Treasury
Internal Revenue Service

Tax for Certain Children Who Have Unearned Income

Attach only to the child's Form 1040 or 1040-NR.
Go to *www.irs.gov/Form8615* for instructions and the latest information.

OMB No. 1545-0074
2024
Attachment Sequence No. **33**

Child's name shown on return | **Child's social security number**

A Parent's name (first, initial, and last). **Caution:** See instructions before completing. | **B Parent's social security number**

C Parent's filing status (check one):
☐ Single ☐ Married filing jointly ☐ Married filing separately ☐ Head of household ☐ Qualifying surviving spouse

Part I Child's Net Unearned Income

1 Enter the child's unearned income. See instructions **1**

2 If the child **did not** itemize deductions on **Schedule A** (Form 1040) or **Schedule A** (Form 1040-NR), enter $2,600. Otherwise, see instructions **2**

3 Subtract line 2 from line 1. If zero or less, **stop**; do not complete the rest of this form but **do** attach it to the child's return **3**

4 Enter the child's **taxable income** from Form 1040 or 1040-NR, line 15. If the child files Form 2555, see the instructions **4**

5 Enter the **smaller** of line 3 or line 4. If zero, **stop**; do not complete the rest of this form but **do** attach it to the child's return **5**

Part II Tentative Tax Based on the Tax Rate of the Parent

6 Enter the parent's **taxable income** from Form 1040 or 1040-NR, line 15. If zero or less, enter -0-. If the parent files Form 2555, see the instructions **6**

7 Enter the total, if any, from Forms 8615, line 5, of **all other** children of the parent named above. **Do not** include the amount from line 5 above **7**

8 Add lines 5, 6, and 7. See instructions **8**

9 Enter the tax on the amount on line 8 based on the **parent's** filing status above. See instructions. If the Qualified Dividends and Capital Gain Tax Worksheet, Schedule D Tax Worksheet, or Schedule J (Form 1040) is used to figure the tax, check here . . . . ☐ **9**

10 Enter the parent's tax from Form 1040 or 1040-NR, line 16, minus any alternative minimum tax. **Do not** include any tax from **Form 4972** or **Form 8814**, or any tax from the recapture of an education credit. If the parent files Form 2555, see the instructions. If the Qualified Dividends and Capital Gain Tax Worksheet, Schedule D Tax Worksheet, or Schedule J (Form 1040) was used to figure the tax, check here . . . . ☐ **10**

11 Subtract line 10 from line 9 and enter the result. If line 7 is blank, also enter this amount on line 13 and go to **Part III** **11**

12a Add lines 5 and 7 . . . . **12a**

b Divide line 5 by line 12a. Enter the result as a decimal (rounded to at least three places) . . . . **12b** × .

13 Multiply line 11 by line 12b **13**

Part III Child's Tax—If lines 4 and 5 above are the same, enter -0- on line 15 and go to line 16.

14 Subtract line 5 from line 4 . . . . **14**

15 Enter the tax on the amount on line 14 based on the **child's** filing status. See instructions. If the Qualified Dividends and Capital Gain Tax Worksheet, Schedule D Tax Worksheet, or Schedule J (Form 1040) is used to figure the tax, check here . . . . ☐ **15**

16 Add lines 13 and 15 . . . . **16**

17 Enter the tax on the amount on line 4 based on the **child's** filing status. See instructions. If the Qualified Dividends and Capital Gain Tax Worksheet, Schedule D Tax Worksheet, or Schedule J (Form 1040) is used to figure the tax, check here . . . . ☐ **17**

18 Enter the **larger** of line 16 or line 17 here and on the **child's** Form 1040 or 1040-NR, line 16. If the child files Form 2555, see the instructions **18**

For Paperwork Reduction Act Notice, see your tax return instructions. Cat. No. 64113U Form **8615** (2024)

	b. 15-year, 20-year	150% DB or elect straight-line	150% DB or elect straight-line[d]	1, 2, 3, 4, 5	
	3. Luxury automobile limitations			6	
	Real Property:				
	1. Accounting convention	Mid-month	Mid-month		
	2. Life and method				
	a. Residential rental property	27.5 years, straight-line	30 years straight-line	7	11
	b. Nonresidential real property	39 years, straight-line[e]	40 years straight-line	8	11

	Characteristics	ACRS
ACRS[f]	Personal Property:	
	1. Accounting convention	Half-year
	2. Life and method	
	a. 3-year, 5-year, 10-year, 15-year	150% DB or elect straight-line
	Real Property:	
	1. Accounting convention	First of month or mid-month
	2. Life	
	a. 15-year property	Placed in service after 12/31/80 and before 3/16/84
	b. 18-year property	Placed in service after 3/15/84 and before 5/9/85
	c. 19-year property	Placed in service after 5/8/85 and before 1/1/87
	3. Method	
	a. All but low-income housing	175% DB or elect straight-line
	b. Low-income housing property	200% DB or elect straight-line

[a] All depreciation tables in this appendix are based upon tables contained in Rev. Proc. 87-57, as amended.

[b] General and ADS tables are available for property lives from 2.5 to 50.0 years using the straight-line method. These tables are contained in Rev. Proc. 87-57 and are only partially reproduced here.

[c] The mid-quarter tables are available in Rev. Proc. 87-57, but are not reproduced here.

[d] Special recovery periods are assigned certain MACRS properties under the alternative depreciation system.

[e] A 31.5-year recovery period applied to nonresidential real property placed in service under the MACRS rules prior to May 13, 1993 (see Table 8).

[f] ACRS was effective for years 1981–1986. ACRS tables are no longer reproduced here.

APPENDIX

D

GLOSSARY

Ability to pay A concept in taxation that holds that taxpayers be taxed according to their ability to pay such taxes, that is, taxpayers who have sufficient financial resources should pay the tax. This concept is an integral part of vertical equity.

Accelerated Cost Recovery System (ACRS) Established by ERTA in 1981, the ACRS provides an accelerated depreciation and shorter cost-recovery period for real and personal property. The Tax Reform Act of 1986 changed the previously allowed depreciation tables and assigned recovery periods that approach the asset's true economic life. The current depreciation system is referred to as MACRS.

Accounting method The method of determining the taxable year in which income and expenses are reported for tax purposes. Generally, the same method must be used for tax purposes as is used for keeping books and records. The accounting treatment used for any item of income or expense and of specific items (e.g., installment sales and contracts) is included in this term. See also each specific accounting method.

Accounting period The period of time, usually 12 months, used by taxpayers to compute their taxable income. Taxpayers who do not keep records must use a calendar year. Taxpayers who do keep books and records may choose between a calendar year or a fiscal year. The accounting period election is made on the taxpayer's first filed return and cannot be changed without IRS consent. The accounting period may be less than 12 months if it is the taxpayer's first or final return or if the taxpayer is changing accounting periods. Certain restrictions upon the use of a fiscal year apply to partnerships, S corporations, and personal service corporations.

Accountable plan A type of employee reimbursement plan that meets two tests, (1) substantiation, and (2) return of excess reimbursement. Under an accountable plan, reimbursements are excluded from the employee's gross income and the expenses are not deductible by the employee.

Accrual method of accounting Accounting method under which income is reported and expenses are deducted when (1) all events have occurred that fix the taxpayer's right to receive the income and (2) the amount of the item can be determined with reasonable accuracy.

Accumulated earnings tax This penalty tax is intended to discourage companies from retaining excessive amounts of earnings if the funds are invested in earnings that are unrelated to the business's needs. The current tax rate is 20%.

Acquiescence policy IRS policy of announcing whether it agrees or disagrees with a regular Tax Court decision. Such statements are not issued for every case.

ACRS See Accelerated Cost Recovery System.

Active income Income that is produced by the taxpayer's involvement or participation—wages, salaries, and other business income—is considered active income. It is the opposite of passive income.

Additional depreciation The excess of the actual amount of accelerated depreciation (or cost-recovery deductions under ACRS) over the amount of depreciation that would be deductible under the straight-line method. Such depreciation applies to Section 1250 depreciable real property acquired prior to 1987.

Adjusted gross income (AGI) A measure of income that falls between gross income and taxable income. It is the income amount that is used as the basis for calculating the floor or the ceiling for numerous other tax computations.

Adjusted sales price The amount realized from the sale of a residence less any fixing-up expenses.

Administrative pronouncement Treasury Department or IRS statement that interprets provisions of the IRC. Such pronouncements may be in the form of Treasury Regulations, revenue rulings, or revenue procedures.

Ad valorem tax A tax based on the value of real property or personal property. Typically, these taxes are levied at the time of a transaction, as is the case with a sales tax or a value-added tax (VAT). However, the taxes can also be levied annually, as with a real estate tax that a local government levies annually on the value of property.

AGI See Adjusted gross income.

Alimony Payments made pursuant to divorce or separation or written agreement between spouses subject to conditions specified in the tax law. Alimony payments (as contrasted to property settlements) are deductible for AGI by the payor and are included in the gross income of the recipient if the divorce agreement was finalized by December 31, 2018. For agreements after this date, the payor is not able to deduct alimony payments, and the recipient does not include the payments in gross income.

All-events test Rule holding that an accrual basis taxpayer must report an item of income (1) when all events have occurred that fix the taxpayer's right to receive the item of income and (2) when the amount of the item can be determined with reasonable accuracy. This test is not satisfied until economic performance has taken place.

Alternative minimum tax (AMT) Applies to individuals and estates and trusts only if the tentative minimum tax (TMT) exceeds the taxpayer's regular tax liability. Most taxpayers are not subject to this tax.

Amount realized The amount realized equals the sum of money plus the fair market value of all other property received from the sale or other disposition of the property less any selling expenses (e.g., commissions, advertising, deed preparation costs, and legal expenses) incurred in connection with the sale.

AMT See Alternative minimum tax.

Annotated tax service A multivolume tax commentary organized by IRC section number. The IRC-arranged subdivisions contain the IRC provision, related Treasury Regulations, publisher-provided commentary and explanations, and annotations that summarize related cases and IRS pronouncements. The service has a topical index to assist research.

Announcement Information release issued by the IRS to provide a technical explanation of a current tax issue. Announcements are aimed at tax practitioners rather than the general public.

Annual accounting period See Accounting period.

Annuity A series of regular payments that will continue for either a fixed period of time or until the death of the recipient. Pensions are usually paid in this way.

Applicable federal rate The rate determined monthly by the federal government which is based on the rate paid by the government on borrowed funds. The rate varies with the term of the loan. Thus, short-term loans are for a period of under three years, mid-term loans are for over three years and under nine years, and long-term loans are for over nine years.

Average tax rate The taxpayer's total tax liability divided by the amount of his taxable income.

Backup withholding A modified withholding system intended to prevent abusive noncompliance situations.

Bad debt Bona fide debt that is uncollectible because it is worthless. Such debts are further characterized as "business bad debts," which give rise to an ordinary deduction, and "nonbusiness bad debts," which are treated as a short-term capital loss. A determination of whether a debt is worthless is made by reference to all the pertinent evidence (e.g., the debtor's general financial condition and whether the debt is secured by collateral). Such debts are deductible subject to certain requirements.

Bona fide debt A debt that (1) arises from a valid and enforceable obligation to pay a fixed or determinable sum of money and (2) results in a debtor-creditor relationship.

Bonus depreciation Special first year depreciation on qualified property (non-real estate) placed in service during the year. The percentage of bonus depreciation has varied over time. The most recent legislation allows 40% bonus depreciation for property placed in service in 2025.

Boot Cash and nonlike-kind property given to complete an exchange of like-kind property where the property exchanged is not of equal value. Gain on the exchange is limited to the amount of boot received.

Brother-sister controlled group A group of two or more corporations controlled by five or fewer individuals. There are two definitions, a 80%-50% definition and a 50%-only definition. The definition to be used depends on the specific application.

Business bad debt See Bad debt.

Cafeteria plan Employer-financed plan that offers employees the option of choosing cash or statutory nontaxable fringe benefits (other than scholarships, fellowships, and Sec. 132 benefits such as discounts on merchandise). Such plans may not discriminate in favor of highly compensated individuals or their dependents or spouses.

Capital addition See Capital expenditure.

Capital asset This category of assets includes all assets except inventory, notes and accounts receivable, and depreciable property or land used in a trade or business (e.g., property, plant, and machinery).

Capital expenditure An expenditure that adds to the value of, substantially prolongs the useful life of, or adapts the property to a new or different use qualifies as a capital expenditure.

Capital gain Gain realized on the sale or exchange of a capital asset.

Capital gain dividend A distribution by a regulated investment company (i.e., a mutual fund) of capital gains realized from the sale of investments in the fund. Such dividends also include undistributed capital gains allocated to the shareholders.

Capital gain property Property that is contributed to a public charity upon which a long-term capital gain would be recognized if that property was sold at its fair market value.

Capital loss Loss realized on the sale or exchange of a capital asset.

Capital recovery A capital recovery amount is a deduction for depreciation or cost recovery. It is a factor in the determination of a property's adjusted basis.

Cash method of accounting Accounting method that requires the taxpayer to report income for the taxable year in which payments are actually or constructively received. Expenses are reported in the year they are paid. Most individuals and service businesses (i.e., businesses without inventories) use this method. Small businesses with inventories that have average annual gross receipts for the prior three tax years that do not exceed $31 million (for 2025) may also use the cash method.

Cash receipts and disbursements method of accounting See Cash method of accounting.

Casualty loss Loss that arises from an identifiable event that was sudden, unexpected, or unusual (e.g., fire, storm, shipwreck, other casualty, or theft). Subject to certain limitations and restrictions, individuals may deduct such losses from AGI if they are attributable to a federally declared disaster. Business casualty losses are deductible for AGI.

C corporation Form of business entity that is taxed as a separate tax-paying entity. Its income is subject to an initial tax at the corporate level. Its shareholders are subject to a second tax when dividends are paid from the corporation's earnings and profits. Under certain conditions, S corporation status may be elected for tax purposes. C corporations are sometimes referred to as "regular corporations."

Certiorari An appeal from a lower court (i.e., a federal court of appeals) that the U.S. Supreme Court agrees to hear. Such appeals, which are made as a writ of certiorari, generally are not granted unless (1) a constitutional issue needs to be decided or (2) a conflict among the lower court decisions must be clarified.

Charitable contribution deduction Contributions of money or property made to qualified organizations (i.e., public charities and private nonoperating foundations) may be deducted from AGI. The amount of the deduction depends upon (1) the type of charity receiving the contribution, (2) the type of property contributed, and (3) other limitations mandated by the tax law. See also Unrelated use property.

Child tax credit A credit for individual taxpayers of $2,000 for each qualifying child under age 17 plus $500 for each other dependent.

Circular 230 Rules and standards issued by the Treasury Department regarding practice before the IRS.

Class life A useful life for depreciable property that is specified by the IRS. Class life is used to determine a depreciable property's MACRS property class.

Closed-fact or tax compliance situation Situation or transaction in which the facts have already occurred. In such situations, the tax advisor's task is to analyze the facts to determine the appropriate tax treatment.

Closely held C corporation For purposes of the at risk rules, a closely held C corporation is defined as a corporation where more than 50% of the stock is owned by five or fewer individuals at any time during the last half of the corporation's taxable year. These individuals may or may not be members of the same family.

Community income In any of the eight community property states, such income consists of the income from the personal efforts, investments, etc. of either spouse. Community income belongs equally to both spouses.

Compensation Payment for personal services. Salaries, wages, fees, commissions, tips, bonuses, and specialized forms of compensation such as director's fees and jury's fees fall into this category. However, certain fringe benefits and some foreign-earned income are not taxed.

Completed contract method of accounting Accounting method for long-term contracts undertaken by smaller companies. Income from the contract is reported in the taxable year in which the contract is completed. The completed contract method is limited to construction contracts undertaken by smaller companies.

Congressional intent What Congress intended by a particular statutory term, phrase, or provision as gleaned from House and Senate committee reports, records of committee hearings, and transcripts of floor debates.

Constant interest rate method Used to amortize the original issue discount ratably over the life of the bond, this method determines the amount of interest income by multiplying the interest yield to maturity by the adjusted issue price.

Constructive dividend Distribution that is intended to result in a deduction to the corporation. For example, excessive salary payments to shareholder-employees may be recharacterized as nondeductible dividends to the corporation to the extent that such amounts are not reasonable. The excess amount may be treated as dividend income to the shareholder-employees rather than as compensation provided that certain conditions are met.

Constructive receipt doctrine Rule holding that cash method taxpayers cannot turn their backs on the receipt of income if the funds are unqualifiedly made available.

Constructive stock ownership Shares that are indirectly or deemed to be owned by another shareholder due to related party situations.

Contributory pension plan A qualified pension plan to which employees make voluntary contributions.

Controlled group A controlled group is two or more separately incorporated businesses owned by the same individuals or entities. Such groups may consist of parent-subsidiary corporations, brother-sister corporations, or a combination of both (combined group).

Cost The amount paid for property in cash or the fair market value of the property given in exchange. The costs of acquiring the property and preparing it for use are included in the cost of the property.

Cost depletion method Calculation of the depletion of an asset (e.g., oil and gas properties) under which the asset's adjusted basis is divided by the estimated recoverable units to arrive at a per-unit depletion. This amount is then multiplied by the number of units sold to determine the cost depletion. This method may be alternated with the percentage depletion method as long as the calculation takes that into account.

Current year's exclusion The amount of the annuity payment that is excluded from gross income. This amount is determined by multiplying the exclusion ratio by the amount received during the year.

Customs duties A federal excise tax on imported goods.

Deductions for AGI Expenses one would see on an income statement prepared for financial accounting purposes, for example, compensation paid to employees, repairs to business property, and depreciation expenses. Certain nonbusiness deductions (e.g., deductible payments to an individual retirement account (IRA)) are also deductible for AGI.

Deductions from AGI Generally, deductions are allowed for certain personal expenses such as medical deductions and charitable contributions which are referred to as itemized deductions. Alternatively, individuals may deduct the standard deduction.

Deferred compensation Methods of compensating employees based upon their current service where the benefits are deferred until future periods (e.g., a pension plan).

Defined benefit pension plan Qualified pension plan which establishes a contribution formula based upon actuarial techniques that are intended to fund a fixed retirement benefit amount. Thus, the amount that will be available at the time of retirement is determined when the contributions are made.

Defined contribution pension plan Qualified pension plan under which a separate account is maintained for each participant and fixed amounts are contributed based upon a specific percentage-of-compensation formula. The retirement benefits are based on the value of the participant's account at the time of retirement. Defined contribution plans for self-employed individuals are referred to as H.R. 10 plans.

Dependent care assistance program Employer-financed programs that provide care for an employee's children or other dependents. An employee may exclude up to $5,000 from gross income although the ceiling amount (i.e., $3,000 or $6,000) on the child care credit is reduced by the amount of assistance that is excluded from gross income.

DIF See Discriminant Function System.

Discriminant Function System (DIF) System used by the IRS to select individual returns for audit. This system is intended to identify those tax returns which are most likely to contain errors.

Dividends-received deduction The deduction on dividends received by corporate shareholders that attempts to mitigate the triple taxation that would occur if one corporation paid dividends to a corporate shareholder who, in turn, distributed such amounts to its individual shareholders. Certain restrictions and limitations apply to this deduction.

E&P See Earnings and profits.

Earned income credit (EIC) A refundable credit that encourages lower income individuals to become gainfully employed. The credit is based on the individual's earned income.

Earnings and profits (E&P) A measure of the corporation's ability to pay a dividend from its current and accumulated earnings without an impairment of capital.

Economic performance test Economic performance occurs when the property or services to be provided are actually delivered.

Education expense Subject to certain limitations and restrictions, education expenses are deductible if they are incurred to improve or maintain the individual's existing skills.

Effective tax rate The taxpayer's total tax liability divided by his total economic income.

Electronic filing The method of filing a tax return with the IRS by electronic means instead of paper forms.

Employee achievement award Award given under circumstances that does not create a likelihood that it is really disguised compensation. It must be in the form of tangible personal property (other than cash) and be valued at no more than $400.

Employee stock ownership plan (ESOP) A qualified stock bonus plan or combined stock bonus plan and money purchase pension plan. ESOP's are funded by contributions of the employer's stock which are held for the employees' benefit.

Employment taxes Social security (FICA) and federal and state unemployment compensation taxes.

ESOP See Employee stock ownership plan.

Estate tax Part of the federal unified transfer tax system, this tax is based upon the total property transfers an individual makes during his lifetime and at death.

Excess business loss Noncorporate taxpayers must limit their excess business losses to the aggregate deductions for the year attributable to trades and businesses, over the sum of aggregate gross income or gain attributable to such trades or business, plus $313,000 ($626,000 for married taxpayers filing jointly) in 2025. Any disallowed excess loss carries over as a net operating loss.

Excess depreciation See Additional depreciation.

Exchange A transaction in which one receives a reciprocal transfer of property rather than cash and/or a cash equivalent.

Excise taxes Federal tax on alcohol, gasoline, telephone usage, oil and gas production, etc. State and local governments may impose similar taxes on goods and services.

Exclusion Any item of income that the tax law says is not taxable.

Exclusion ratio The portion of the annuity payment that is excluded from taxation. This amount equals the investment in the contract (its cost) divided by the expected return from the annuity.

Expected return The amount which a taxpayer can expect to receive from an annuity. It is determined by multiplying the amount of the annuity's annual payment by the expected return multiple.

Expected return multiple The number of years that the annuity is expected to continue. This amount may be a stated term or for the remainder of the taxpayer's life.

Fair market value (FMV) This amount is the price at which property would change hands between a willing buyer and a willing seller where neither party is under any compulsion to buy or sell.

Federal estate tax See Estate tax.

Federal Insurance Contributions Act See FICA.

FICA Tax withheld through the payment of payroll taxes, FICA is intended to finance social security benefits for individuals who are not self-employed. Employees and employers contribute matching amounts until a federally set annual earnings ceiling is reached. At that time, no further contributions need be made for that year. No ceiling exists for the hospital insurance (HI) portion of the tax. Self-employed individuals are subject to self-employment tax and currently receive a deduction for AGI income tax deduction equal to 50% of their self-employment tax payments.

Field audit procedure Audit procedure generally used by the IRS for corporations or individuals engaged in a trade or business and conducted at either the taxpayer's place of business or his tax advisor's office. Generally, several items on the tax return are examined.

First-in, first-out (FIFO) method of inventory valuation This flow of cost method assumes that the first goods purchased will be the first goods sold. Thus, the ending inventory consists of the last goods purchased.

Fiscal year An annual accounting period that ends on the last day of any month other than December. A fiscal year may be elected by taxpayers that keep books and records, such as businesses.

Flat tax See Proportional tax.

Foreign-earned income An individual's earnings from personal services rendered in a foreign country.

Foreign tax credit Tax credit given to mitigate the possibility of double taxation faced by U.S. taxpayers earning foreign income.

Former passive activity An activity that was formerly considered passive, but which is not considered to be passive with respect to the taxpayer for the current year.

Forum shopping The ability to consider differing precedents in choosing the forum for litigation.

Franchise tax State tax levy sometimes based upon a weighted average formula consisting of net worth, income, and sales.

Functional-use test A test used to determine whether property is considered similar or related in service or use for purposes of involuntary conversions of property under Sec. 1033. The functional-use test requires that the replacement property be functionally the same as the converted property.

GAAP See Generally Accepted Accounting Principles.

Gain realized See Realized gain.

General business credit Special credit category consisting of tax credits commonly available to businesses. The more significant credit items are (1) the investment tax credit, (2) the work opportunity credit, (3) the research credit, (4) the low-income housing credit, (5) the empowerment zone employment credit, (6) the disabled access credit.

Generally Accepted Accounting Principles (GAAP) The accounting principles that govern the preparation of financial reports to shareholders. GAAP does not apply to the tax treatment unless the method clearly reflects income. It is used only when the regulations do not specify the treatment of an item or when the regulations provide more than one alternative accounting method.

Gift tax A tax that is imposed upon the donor for transfers that are not supported by full and adequate consideration. A $19,000 annual exclusion is allowed per donee for 2025 ($18,000 for 2024).

Goodwill The excess of the purchase price of a business over the fair market value of all identifiable assets acquired.

Gross income All income received in cash, property, or services, from whatever source derived and from which the taxpayer derives a direct economic benefit.

Gross tax For income tax purposes, the amount determined by multiplying taxable income by the appropriate tax rate(s). The gross tax may also be found in the appropriate tax table for the taxpayer's filing status.

Half-year convention An assumption with respect to depreciation that assumes that all asset acquisitions and dispositions are made at the midpoint of the tax year.

Health Savings Account Accounts that may be contributed to a fund by eligible individuals to enable such individuals to accumulate funds on a tax-free basis to pay qualified medical expenses. These accounts may only be set up by individuals who are covered under a high-deductible health plan and, within limits, are tax-deductible.

Holding period The length of time an asset is held before it is disposed of. This period is used to determine whether the gain or loss is long- or short-term.

Horizontal equity A concept in taxation that refers to the notion that similarly situated taxpayers should be treated equally under the tax law.

H.R. 10 plan Special retirement plan rules applicable to self-employed individuals. Such plans are often referred to as "Keogh plans."

Hybrid method of accounting Accounting method that combines the cash and accrual methods. Under this method, taxpayers can report sales and purchases under the accrual method and other income and expense items under the cash method. See also the cash method of accounting and the accrual method of accounting.

IDCs See Intangible drilling and development costs.

Imputed interest rule This rule reallocates the payments received in an installment sale between interest (fully taxable) and principal (only gain is taxable). To avoid this, the stated interest rate must equal at least 100% of the applicable federal rate as determined monthly according to the rate paid by the government on borrowed funds.

Incentive stock option (ISO) plan Stock option plan that allows executives to receive a proprietary interest in the corporation. The option to participate in this type of plan must be exercised according to certain requirements and must follow certain procedures.

Income The economic concept of income measures the amount an individual can consume during a period and remain as well off at the end of the period as at the beginning. The accounting concept of income is a measure of the income that is realized in a transaction. The tax concept of income is close to the accounting concept. It includes both taxable and nontaxable income from any source. However, it does not include a return of capital.

Incrementalism A concept in taxation that described how the tax law has been changed or modified over the years. Under incrementalism, the tax law is changed on an incremental basis rather than a complete revision basis.

Indeterminate market value If the market value of the property in question cannot be determined by the usual methods, the "open transaction" doctrine may be applied and the tax consequences may be deferred until the transaction is closed. Alternatively, the property may be valued by using the fair market value of the property that is given in the exchange (e.g., the value of the services rendered).

Individual retirement account (IRA) Contribution for AGI that is deductible if (1) neither the taxpayer nor his spouse are active participants in an employer-sponsored retirement plan or (2) certain income limitations are met. Taxpayers who do not meet these requirements may make nondeductible IRA contributions. See also Roth IRA.

Innocent spouse rule Rule that exempts a spouse from penalty or liability for the tax if such spouse had no knowledge of nor reason to know about an item of community income.

Installment sale Any disposition of property which involves receiving at least one payment after the close of the taxable year in which the sale occurs.

Installment sale method of accounting Taxpayers may use this method of accounting to reduce the tax burden from gains on the sale of property paid for in installments. Under this method, payment of the tax is deferred until the sale proceeds are collected. This method is not applicable to sales of publicly traded property or to losses.

Intangible drilling and development costs (IDCs) Expenditures made by an operator for wages, fuel, repairs, hauling supplies, and so forth, incident to and necessary for the preparation and drilling of oil and gas wells.

Intangible property Property that does not have physical substance, such as goodwill, patents, stocks and bonds, etc.

Interest The cost charged by a lender for the use of money. For example, finance charges, loan discounts, premiums, loan origination fees, and points paid by a buyer to obtain a mortgage loan are all interest expenses. The deductibility of the expense depends upon the purpose for which the indebtedness was incurred.

Internal Revenue Code (IRC) The primary legislative source and authority for tax research, planning, and compliance activities.

Internal Revenue Service (IRS) The branch of the Treasury Department that is responsible for administering the federal tax law.

Interpretative regulations Treasury Regulations that serve to broadly interpret the provisions of the Internal Revenue Code.

***Inter vivos* gifts** Gifts made during the donor's life-time.

Investment expenses All deductions other than interest that are directly connected with the production of investment income.

Investment income Gross income from property held for investment and any net gain attributable to the disposition of such property. See also Net investment income.

Investment interest Interest expense on indebtedness incurred to purchase or carry property held for investment (e.g., income from interest, dividends, annuities, and royalties). Interest expenses incurred from passive activities are not subject to the investment interest limitations and interest incurred to purchase or carry tax-exempt securities is not deductible. Interest incurred from passive activities is subject to the passive activity loss limitation rules.

Involuntary conversion Such a conversion occurs when property is compulsorily converted into money or other property due to theft, seizure, requisition, condemnation, or partial or complete destruction. For example, an involuntary conversion occurs when the government exercises its right of eminent domain.

IRA See Individual retirement account.

IRC See Internal Revenue Code.

IRS See Internal Revenue Service.

ISO See Incentive stock option.

Itemized deductions Also known as "deductions from AGI," these personal expenditures are allowable for such items as medical expenses, state and local taxes, charitable contributions, interest on a personal residence, and certain casualty losses. There are specific requirements for and limitations on the deductibility of each of these items. In addition, typically only those taxpayers whose total itemized deductions exceed the standard deduction amount will itemize their deductions.

Joint income Income from jointly held property.

Judicial decisions Decisions of a court of law.

Keogh plan Retirement plan for self-employed individuals. This type of plan is also known as an "H.R. 10 plan."

LCM See Lower of cost or market method of inventory valuation.

Legislative reenactment doctrine Rule holding that Congress's failure to change the wording in the IRC over an extended period signifies that Congress has approved the treatment provided in Treasury Regulations.

Legislative regulations Treasury Regulations issued at the mandate of the Internal Revenue Code. Legislative regulations have a higher degree of authority than interpretative regulations.

Letter ruling Letter rulings originate from the IRS at the taxpayer's request. They describe how the IRS will treat a proposed transaction. It is only binding on the person requesting the ruling providing the taxpayer completes the transaction as proposed in the ruling. Those of general interest are published as revenue rulings.

LIFO method of inventory valuation This method assumes a last-in, first out flow of cost. It results in the lowest taxable income during periods of inflation because it shows the lowest inventory value. Price indexes are used for the valuation. The information in these indexes is grouped into groups (pools) of similar items. See also Simplified LIFO method.

Like-kind exchange A direct exchange of like-kind property. The transferred property and the received property must be held for productive use either (1) in a trade or business or (2) as an investment. Nonrecognition of gain or loss is mandatory. Certain like-kind exchanges between related parties are restricted if either party disposes of the property within two years of the exchange.

Like-kind property Real property that is exchanged for other real property, if the property exchanged had been held for productive use in a trade or business or for investment and the property received is so held.

Limited liability company (LLC) A corporation that is generally taxed under the partnership rules. Although similar to an S corporation, there is no limit to (1) the number of shareholders, (2) the number of classes of stock, or (3) the types of investments in related entities.

Limited liability partnership (LLP) Taxed as a partnership but enjoys limited liability under state partnership laws (i.e., individual partners are liable for their own acts and acts of persons under their direction and control but not for negligence or misconduct by other partners).

Liquidating distribution A distribution that liquidates a partner's entire partnership interest due to retirement, death, or other business reason. Such distributions result in a capital gain or loss to the partner whose interest is liquidated. In a corporate liquidation, the liquidating corporation generally recognizes gains and losses on the distribution of the properties and its shareholders recognize capital gain or loss on the surrender of their stock.

Long-term capital gain (LTCG) Gain realized on the sale or exchange of a capital asset held longer than one year.

Long-term capital loss (LTCL) Loss realized on the sale or exchange of a capital asset held longer than one year.

Long-term contracts Building, manufacturing, installation, and construction contracts that are not completed in the same taxable year in which they are entered into. Service contracts do not qualify as long-term contracts. See also Completed contract method of accounting.

Look-back interest Interest that is assessed on any additional tax that would have been paid if the actual total cost of the contract was used to calculate the tax rather than the estimated cost. Thus, it is applicable to any contract or portion of a contract that is accounted for under either the hybrid or percentage of completion method of accounting.

Lower of cost or market method (LCM) of inventory valuation The valuation method is available to all taxpayers other than those using LIFO valuation. It is applied to each separate item in the inventory.

Marginal tax rate The tax that is applied to an incremental amount of taxable income that is added to the tax base. This rate can be used to measure the tax effect of a proposed transaction. Currently, the highest marginal tax rate for individuals is 37%.

Market value This term refers to replacement cost under the lower of cost or market inventory method. That is, it is the price at which the taxpayer can replace the goods in question. See also Fair market value.

Material participation The level of participation by a taxpayer in an activity that determines whether the activity is either passive or active. If a taxpayer does not meet the material participation requirements, the activity is treated as a passive activity.

Medical expense deduction Unreimbursed medical expenses incurred for medical procedures or treatments that are (1) legal in the locality in which they are performed and (2) incurred for the purpose of alleviating a physical or mental defect or illness that affects the body's structure or function are deductible from AGI. Out-of-pocket travel costs incurred while en route to a medical facility, certain capital expenditures affecting the sick person, premiums for medical insurance, and in-patient hospital care are also deductible. Certain restrictions and limitations apply to this deduction.

Memorandum (memo) decision Decision issued by the Tax Court dealing with a factual variation on a matter where the law already has been decided in an earlier case.

Method of accounting See Accounting method.

Miscellaneous itemized deductions Certain unreimbursed employee expenses (e.g., required uniforms, travel, entertainment, and so on) fell into this category. Miscellaneous itemized deductions also included certain investment expenses, appraisal fees for charitable contributions and fees for tax return preparation. The nature of the deduction depends on whether the taxpayer is an employee or a self-employed individual. These expenses have been suspended for tax years 2018–2025 for employees.

Modified percentage of completion method A variation of the regular percentage of completion method where an election may be made to defer reporting profit from a long-term contract until at least 10% of the estimated total cost has been incurred.

Moving expense Expenses incurred in relation to employment-related job transfers. For most taxpayers, with exception for the military, these expenses are no longer allowed after 2017.

Necessary expense Expense that is deductible under Sec. 162 because it is appropriate and helpful in the taxpayer's business. Such expenses must also qualify as ordinary.

Net business interest The business interest that can be deducted in a given tax year is limited to the sum of three amounts: (1) business interest income, (2) 30% of adjusted taxable income (but not less than zero), and (3) floor plan financing interest for automobiles. For partnerships and S corporations, the limitation is applied at the entity level.

Net investment income The excess of the taxpayer's investment income over his investment expenses. See also Investment income.

Net operating loss (NOL) A net operating loss occurs when business expenses exceed business income for any taxable year. Such losses incurred after 2017 may be carried forward indefinitely and may be subject to the 80% of taxable income limitation in the carryover year.

Net unearned income The amount of unearned income of a child under age 18 (or certain other children under age 24) that is taxed at special rates based on the parents' marginal tax rate.

News release An administrative pronouncement concerning an issue the IRS thinks the general public will be interested in. Such releases are issued in lay terms.

NOL See Net operating loss.

Nonbusiness bad debt See Bad debt.

Noncontributory pension plan Only the employer makes contributions to this type of pension plan.

Nonliquidating distribution Distribution that reduces but does not eliminate, a partner's partnership interest. Such distributions are generally treated as tax-free returns of capital.

Nonqualified deferred compensation plan Type of plan used by employer to provide incentives or supplementary retirement benefits for executives. Such plans are not subject to the nondiscrimination and vesting rules.

Nonqualified stock option Stock option that does not meet the requirements for an incentive stock option.

Nonrefundable tax credit Allowances, such as the dependent child care credit, that have been created for various social, economic, and political reasons. The tax credits in this category do not result from payments made to the government in advance. Thus, they can be deducted from the tax, but they are not payable to the taxpayer in situations where the credit exceeds the tax.

Notice An interpretation by the IRS that provides guidance concerning how to interpret a statute, perhaps one recently enacted.

Office audit procedure IRS audit of a specific item on an individual's tax return. An office audit takes place at the IRS branch office.

Open-fact or tax-planning situation Situation or transaction in which the facts have not yet occurred. In such situations, the tax advisor's task is to plan for the facts or shape them so as to produce a favorable tax result.

Ordinary expense An expense that is deductible because it is reasonable in amount and bears a reasonable and proximate relationship to the income-producing activity or property.

Ordinary income property For purposes of the charitable contribution deduction, any property that would result in the recognition of ordinary income if the property were sold. Such property includes inventory, works of art or manuscripts created by the taxpayer, capital assets that have been held for one year or less, and Section 1231 property that results in ordinary income due to depreciation recapture.

Organizational expenditures The amortizable legal, accounting, filing, and other fees incidental to organizing a partnership or a corporation.

Parent-subsidiary controlled group To qualify, a common parent must own at least 80% of the stock of at least one subsidiary corporation and at least 80% of each other component member of the controlled group must be owned by other members of the controlled group.

Partnership Syndicate, group pool, joint venture, or other unincorporated organization which carries on a business or financial operation or venture.

Partnership interest The capital and/or profits interest in a partnership received in exchange for a contribution of properties or services (e.g., money or business equipment). The nature of a partnership interest is similar to that of corporate stock.

Passive activity To define what constitutes a passive activity for the purpose of applying the passive loss rules, it is necessary to (1) identify what constitutes an activity and (2) determine whether the taxpayer has materially participated in the activity. Temp. Reg. Sec. 1.469-4T contains detailed rules for making these determinations.

Passive income Income from an activity that does not require the taxpayer's material involvement or participation. Thus, income from tax shelters and rental activities fall into the category.

Passive loss Loss generated from a passive activity. Such losses are computed separately. They may be used to offset income from other passive activities, but may not be used to offset either active or portfolio income.

Percentage depletion method Depletion method for assets such as oil and gas that is equal to a specified percentage times the gross income from the property but which may not exceed 100% of the taxable income before depletion is deducted. Lease bonuses, advance royalties, and other amounts payable without regard to production may not be included in the calculation. This method is only available to small oil and gas producers and royalty owners and for certain mineral properties.

Percentage of completion method of accounting Accounting method generally used for long-term contracts under which income is reported in proportion to the amount of work that has been completed in a given year.

Personal holding company (PHC) A closely held corporation (1) that has five or fewer individuals who own more than 50% of the corporation's outstanding stock at any time during the last half of its taxable year and (2) whose PHC income equals at least 60% of the corporation's adjusted gross income for the tax year. Certain corporations (e.g., S corporations) are exempt from this definition.

Personal holding company tax This tax is equal to 20% of the undistributed personal holding company income. It is intended to prevent closely held companies from converting an operating company into a nonoperating investment company.

Personal interest All interest other than active business interest, investment interest, interest incurred in a passive activity, qualified residence interest, and interest incurred when paying the estate tax on an installment basis. Personal interest is currently treated as a nondeductible personal expenditure. See also Interest.

Personal property Property that is other than real property, such as equipment.

Personal service corporation (PSC) A regular C corporation whose principal activity is the performance of personal services that are substantially performed by owner-employees who own more than 10% of the value of the corporation's stock.

PHC See Personal holding company.

Portfolio income Dividends, interest, annuities, and royalties not derived in the ordinary course of business. Gains and losses on property that produces portfolio income are included in such income.

Premium tax credit A personal tax credit for a portion of the cost of a taxpayer's health insurance premiums. To be eligible for the credit, the taxpayer must have household income between 100% and 400% of the federal poverty line. The credit is based on the excess of the qualifying premiums over what is deemed to be affordable based on the taxpayer's household income.

Primary citation The highest level official reporter that reports a particular case.

Principal partner A partner owning 5% or more of the partnership profits and capital interests.

Principal residence The residence that the taxpayer occupies most of the time.

Private activity bond Obligation issued by a state of local government to finance nongovernmental activities (e.g., a sports arena).

Production of income An activity of the taxpayer that is generally related to investment activities or matters connected with the determination of any tax. Generally, these expenses are not deductible, although in some instances they may be allowed *for AGI*, such as expenses connected with rental property.

Profit-sharing plan A qualified defined benefit plan which may be established in lieu of or in addition to a qualified pension plan. Contributions to a profit-sharing plan are usually based upon profits. Incidental benefits may or may not be included. In addition, the plan must meet certain requirements concerning determination of the amount and timing of the employer's contribution, how the employee wants to receive the employer's contribution, vesting, and forfeitures.

Progressive rate Tax that increases as the taxpayer's taxable income increases. The U.S. income tax on individual taxpayers is an example of a progressive tax.

Property settlement The division of property between spouses upon their separation or divorce.

Property tax Federal, state, or local tax levied on real and/or personal property (e.g., securities, a personal automobile).

Proportional tax A method of taxation under which the tax rate is the same for all taxpayers regardless of their income. State and local sales taxes are examples of this form of tax.

Proposed regulations Issued following changes in the tax law. May or may not be amended after hearings are conducted and comments received. Proposed regulations are not binding on taxpayers.

PSC See Personal service corporation.

Qualified business income deduction This deduction for the taxpayer's qualified income from a partnership, S corporation, or sole proprietorship is designed to bring the tax rates on these businesses more in line with the reduced rates for C corporations after 2017. The deduction reduces taxable income and is generally limited to the 20% of the lesser of qualified business income or excess taxable income (before considering the qualified business income deduction).

Qualified pension plan Pension plan that includes (1) systematic and definite payments made to a pension trust based upon actuarial methods and (2) usually provides for incidental benefits such as disability, or medical insurance benefits.

Qualified plan award Employee achievement awards given under a written plan or program that does not discriminate in favor of highly compensated employees. Such awards must be in the form of tangible personal property other than cash and be worth no more than $1,600.

Qualified residence interest Interest on an indebtedness which is secured by the taxpayer's qualified residence when it is paid or accrued. A taxpayer may have two qualified residences: a principal residence and a residence that he has personally used more than the greater of 14 days or 10% of the rental days during the year.

Qualifying child One type of dependent. Four tests must be met to be a qualifying child: relationship, age, abode, and support.

Qualifying relative One type of dependent. Three tests must be met to be a qualifying relative: relationship, gross income, and support tests.

Readily ascertainable fair market value The fair market value of nonqualified stock options can be readily ascertained where the option is traded on an established options exchange.

Real property Property that is land or any structure permanently attached to the land, such as buildings.

Realized gain or loss The gain or loss computed by taking the amount realized from a sale of property and subtracting the property's adjusted basis.

Recovery of basis doctrine Rule that allows taxpayers to recover the basis of an asset without being taxed. Such amounts are considered a return of capital.

Refundable tax credit See Tax credit.

Regressive tax A form of taxation under which the tax rate decreases as the tax base (e.g., income) increases.

Regular corporation See C corporation.

Regular decision Tax Court decision that is issued on a particular issue for the first time.

Regulation See Treasury Regulation.

Replacement property Property that is acquired to replace converted property in order to retain nonrecognition of gain status. Such property must generally be functionally the same as the converted property. For example, a business machine must be replaced with a similar business machine. There are exceptions to this rule: The taxpayer-use test applies to the involuntary conversion of rental property owned by an investor; condemnations of real property held for business or investment use may be replaced by like-kind property.

Residential rental property Property from which at least 80% of the gross rental income is rental from dwelling units. Residential units include manufactured homes that are used for rental purposes, but not hotels, motels, or other establishments for transient use.

Restricted property plan Such plans are used to attract and retain key executives by giving them an ownership interest in the corporation. The income recognition rules contained in Sec. 83 govern this type of plan.

Revenue Amounts received by the taxpayer from any source. It includes both taxable and nontaxable amounts and items that are a return of capital. Although closely related to income or gross income, differences between these items do exist.

Revenue procedure Issued by the national office of the IRS and reflects the IRS's position on procedural aspects of tax practice issues. Revenue procedures are published in the *Cumulative Bulletin*.

Revenue ruling Issued by the national office of the IRS and reflects the IRS's interpretation of a narrow tax issue. Revenue rulings, which are published in the *Cumulative Bulletin*, have less weight than the Treasury Regulations.

Roth IRA An IRA in which the contributions are nondeductible, but distributions generally are not subject to tax. Therefore, all earnings in a Roth IRA are not subject to taxation.

Royalties Ordinary income arising from amounts paid for the right to use property that belongs to another and is transferred for valuable consideration (e.g., a patent right where substantially all rights are transferred).

Sale A transaction where one receives cash and/or the equivalent of cash, including the assumption of debt, in exchange for an asset.

Sales tax State or local tax on purchases. Generally, food items and medicines are exempt from such tax.

S corporation Small business corporations may elect S corporation status if they meet the 100-shareholder limitation, the type of shareholder restrictions, and the one class of stock restriction. Taxation of such corporations parallels the tax rules that apply to partnerships.

Secondary citation Citation to a secondary source (i.e., an unofficial reporter) for a particular case.

Section 401(k) plan Type of plan that is often used to supplement a company's regular qualified pension and profit-sharing plan. Such plans, which generally contain a salary reduction feature, permit the employer to receive either cash or an equivalent contribution to the company's profit-sharing plan. The amount of the contribution is limited.

Section 444 election Personal service corporations, partnerships, and S corporations that are unable to otherwise elect a fiscal year instead of their required tax year, under Sec. 444 can elect a fiscal year as their taxable year.

Section 1231 property Real or depreciable property that is (1) held for more than one year and (2) used in a trade or business. Certain property, such as inventory, U.S. government publications, copyrights, literary, musical, or artistic compositions, and letters, are excluded from this definition.

Section 1245 property Certain property subject to depreciation and, in some cases, amortization. Depreciable personal property such as equipment is Section 1245 property. However, most real property is not.

Section 1250 property Any real property that (1) is not Section 1245 property and (2) is subject to a depreciation allowance.

Security A long-term debt obligation. Long-term is generally defined as 10 years or more.

Self-employment tax A tax imposed on self-employed individuals. The SE is comprised of two parts, (1) 12.4% for Social Security taxes (limited to a maximum amount of SE income) and (2) 2.9% for Medicare taxes (no limit on SE income). For 2025, the maximum SE income subject to the tax is $176,100 ($168,600 in 2024). The Medicare tax increases to 3.8% once the self-employment income exceeds a threshold ($200,000 for single taxpayers; $250,000 for married taxpayers).

Separate property All property that is owned before marriage and any gifts or inheritances acquired after marriage are separate property. This distinction depends on the state of residence. However, it is possible even in community property states.

Severance damages Compensation for a decline in the value of the property remaining after part of the taxpayer's property is condemned. The IRS considers such damages analogous to the proceeds from property insurance.

Shifting income The process of transferring income from one family member to another. Methods for shifting income include gifts of stock or bonds to family members who are in lower tax brackets.

Short sale An investment activity where an investor sells a security at its current price and purchases the same security at a future date. A short sale is generally used when the price of a security is expected to decline.

Short-term capital gain (STCG) Gain realized on the sale or exchange of a capital asset held for one year or less.

Short-term capital loss (STCL) Loss realized on the sale or exchange of a capital asset held for one year or less.

Simplified LIFO method This method of inventory valuation allows taxpayers to use a single LIFO pool rather than multiple pools. See also LIFO method.

Small cases procedure When taxes of $50,000 or less are in question for a particular year, the taxpayer may opt to have the case heard by a special commissioner rather than the regular Tax Court. The decision of the commissioner cannot be appealed.

Social Security benefits These benefits include (1) the basic monthly retirement and disability benefits paid under social security and (2) tier-one railroad retirement benefits.

Sole proprietorship Form of business entity owned by an individual who reports all items of income, expense, on his individual return on Schedule C.

Specific write-off method of accounting Method of accounting used for bad debts. Under this method, the taxpayer deducts each bad debt individually as it becomes worthless. This is the only allowable accounting method for bad debts arising after 1986.

Splitting income The process of creating additional taxable entities, especially corporations, in order to reduce an individual's effective tax rate.

SSTS See Statements on Standards for Tax Services.

Standard deduction A floor amount set by Congress to simplify the tax computation. It is used by taxpayers who do not have enough deductions to itemize. The amount of the deduction varies according to the taxpayer's filing status, age, and vision. Taxpayers who use this standard deduction are not required to keep records.

State corporate income tax See Franchise tax.

Statements on Standards for Tax Services (SSTS) Ethical standards of practice and compliance set by the Tax Section of the American Institute of Certified Public Accountants. The AICPA enforces these standards, and thus they have a great deal of influence on ethics in tax practice.

Statute of limitations A period of time as provided by law in which a taxpayer's return may not be changed either by the IRS or the taxpayer. The Statute of Limitations is generally three years from the later of the date the tax return is filed or its due date. There is no Statute of Limitations for a fraudulent return.

Stock bonus plan A special type of defined benefit plan under which the employer's stock is contributed to a trust. The stock is then allocated and distributed to the participants. See also Employee stock ownership plan.

Stock dividend A dividend paid in the form of stock in the corporation issuing the dividend.

Stock option plan This category includes incentive stock options and nonqualified stock option arrangements. Such plans are used to attract and retain key employees.

Substance-over-form doctrine Judicial weighing of a transaction's economic substance more heavily than its legal form.

Surviving spouse A special filing status available to widows and widowers who file a joint return for the year his or her spouse dies and for the following two years. The surviving spouse may not have remarried, must be a U.S. citizen or resident, have qualified to file a joint return for the year, and must have at least one dependent child living at home during the year.

Syndication fees The nonamortizable fees (e.g., brokerage and registration fees) incurred to promote and market partnership interests. Such fees are generally associated with tax-sheltered limited partnership interests.

Tangible property Property that has physical substance, such as land, buildings, natural resources, equipment, etc.

Tax A mandatory assessment levied under the authority of a political entity for the purpose of raising revenue to be used for public or governmental purposes. Such taxes may be levied by the federal, state, or local government.

Taxable income For individuals, taxable income is adjusted gross income reduced by deductions from adjusted gross income.

Tax base The amount to which the tax rate is applied to determine the tax due. For income tax purposes, the tax base is taxable income.

Tax benefit rule Recovery of an amount in a subsequent year that produced a tax benefit in a prior year and is thus taxable to the recipient.

Tax credit Amount that can be deducted from the gross tax to arrive at the net tax due or refund due. Prepaid amounts, that is, amounts paid to the government during the year, are tax credits. Such prepaid amounts are often referred to as "refundable credits."

Tax-deferred bonds Bonds on which the interest is not subject to current taxation but is deferred to a future period of time, such as Series EE U.S. Savings Bonds.

Tax-exempt bonds Bonds on which the interest is completely exempt from federal income taxation, such as state and municipal bonds.

Tax law The tax law is comprised of the Internal Revenue Code, administrative and judicial interpretations, and the committee reports issued by the Congressional committees involved in the legislative process.

Taxpayer-use test A test used to determine whether property is considered similar or related in service or use for purposes of involuntary conversions of property. This test is used by owner-investors (as opposed to owner-users) of property.

Tax research Search for the best possible solution to a problem involving either a proposed or completed transaction.

Tax services Multivolume commentaries on the tax law. Generally, these commentaries contain copies of the Internal Revenue Code and the Treasury Regulations. Also included are editorial comments prepared by the publisher of the tax service, current matters, and a cross-reference to various government promulgations and judicial decisions. Most tax services now are available on the Internet.

Tax shelter Passive activity which may lack economic substance other than creating tax deductions and credits that enable taxpayers to reduce or eliminate the income tax liability from their regular business activities. Section 469 restricts the current use of deductions and credits arising from passive activities.

Tax treaties Bilateral agreements entered into between two nations that address tax and other matters. Treaties provide for modifications to the basic tax laws involving residents of the two countries (e.g., reductions in the withholding rates).

Tax year See Accounting period.

Technical advice memorandum Such memoranda are administrative interpretations issued in the form of letter ruling. Taxpayers may request them if they need guidance about the tax treatment of complicated technical matters which are being audited.

Temporary regulations Regulations issued by the Treasury Department relating to an IRC provision to provide guidance for taxpayers pending the issuance of the final regulations. Such regulations are effective for a limited period of time, usually three years, and are also required to be issued as proposed regulations. Issuance of temporary regulations is not preceded by a public hearing on their substance. They are binding upon taxpayers and have the same precedential value as final regulations.

Testamentary gift Transfer of property made at the death of the donor (i.e., bequests, devises, and inheritances).

Topical tax service A multivolume tax commentary organized by topic. Topics might include, for example, deferred compensation, Type A reorganizations, or S corporations. These volumes are an excellent place to begin research in an unfamiliar area.

Total economic income The amount of the taxpayer's income, including exclusions and deductions from the tax base (e.g., tax-exempt bonds), is categorized as total economic income.

Trade or business A business activity of the taxpayer in which deductions are allowed as for AGI deductions.

Transportation expense The deductibility of this type of expense depends upon whether it is trade- or business-related, or whether it is related to the production of income. Commuting expenses are nondeductible. See also Travel expense.

Travel expense Such expenses include transportation, meals, and lodging incurred in the pursuit of a trade, business, or employment-related activity. There are limitations and restrictions on the deductibility of these expenses. See also Transportation expense.

Treasury Regulations The principal administrative source of the federal tax law, these regulations reflect the Treasury's and the IRS's interpretation of the Internal Revenue

Code. They may be either legislative or interpretative and they may be issued in either proposed, temporary, or final form.

Unfunded deferred compensation plan This type of plan is used for highly compensated employees who wish to defer the recognition of income until future periods. Funding is generally accomplished through an escrow account for the employee's benefit.

Uniform Capitalization rules (UNICAP) The requirements under the tax law for determining inventory cost. Under UNICAP certain indirect overhead costs are required to be included in inventory for tax purposes which are generally not included for financial accounting.

Unrelated use property Capital gain property which is also tangible personal property and which is contributed to a public charity for a use that is unrelated to the charity's function. The contribution deduction (from AGI) for such property is equal to the property's fair market value minus the capital gain that would be recognized if the property was sold at that value.

Unreported decision District Court decisions that are not officially reported in the Federal Supplement. Such decisions may be reported in secondary reporters that report only tax-related cases.

Vertical equity A concept in taxation that provides that the incidence of taxation should be borne by taxpayers who have the ability to pay the tax. Taxpayers who are not similarly situated should be treated differently under the tax law.

Wash sale A wash sale results when the taxpayer (1) sells stock or securities and (2) purchases substantially identical stock or securities within the 61-day period extending from 30 days before the date of sale to 30 days after the date of sale.

Wealth transfer tax A tax imposed upon the value of property transferred during one's lifetime (i.e., a gift tax) or upon the death of the transferor (i.e., an estate tax). The tax is imposed upon the transferor of property or upon the estate.

Writ of certiorari A petition to the U.S. Supreme Court to request that the Court agree to hear a case. A writ of certiorari is requested by the party (IRS or taxpayer) that lost at the Court of Appeals level.

PREFACE xiv

CHAPTER 1

▶ TAX RESEARCH 1-1

Overview of Tax Research 1-2

Steps in the Tax Research Process 1-3

Importance of the Facts to the Tax Consequences 1-5

- Creating a Factual Situation Favorable to the Taxpayer 1-6

The Sources of Tax Law 1-7

- The Legislative Process 1-7
- The Internal Revenue Code 1-8
- Treasury Regulations 1-9
- Administrative Pronouncements 1-11
- Judicial Decisions 1-14
- Tax Treaties 1-24
- Tax Periodicals 1-24

Tax Services 1-25

The Internet as a Research Tool 1-26

- Keyword Searches 1-27
- Search by Citation 1-28
- Noncommercial Internet Services 1-28

Citators 1-28

- Using the Citator 1-30

Professional Guidelines for Tax Services 1-30

- Treasury Department *Circular 230* 1-30
- AICPA'S Statements on Standards for Tax Services 1-30
- SSTS NO. 1 – *General Standards for Members Providing Tax Services* 1-31
- SSTS NO. 2 – *Standards for Members Providing Tax Compliance Services* 1-32
- SSTS NO. 3 – *Standards for Members Providing Tax Consulting Services* 1-33
- SSTS NO. 4 – *Standards for Members Providing Tax Representation Services* 1-34

Sample Work Papers and Client Letter 1-34

Problem Materials 1-35

- Discussion Questions 1-35
- Problems 1-36
- Comprehensive Problem 1-38
- Tax Strategy and Critical Thinking Problem 1-39
- Case Study Problem 1-39
- Tax Research Problems 1-39

CHAPTER 2

▶ CORPORATE FORMATIONS AND CAPITAL STRUCTURE 2-1

Organization Forms Available 2-2

- Sole Proprietorships 2-2
- Partnerships 2-3
- Corporations 2-5
- Limited Liability Companies 2-8
- Limited Liability Partnerships 2-8

Check-the-Box Regulations 2-8

Legal Requirements and Tax Considerations Related to Forming a Corporation 2-9

- Legal Requirements 2-9
- Tax Considerations 2-9

Section 351: Deferring Gain or Loss Upon Incorporation 2-12

- The Property Requirement 2-12
- The Control Requirement 2-13
- The Stock Requirement 2-16
- Effect of Sec. 351 on the Transferors 2-16
- Tax Consequences to Transferee Corporation 2-20
- Assumption of the Transferor's Liabilities 2-22
- Other Considerations in a Sec. 351 Exchange 2-25

Choice of Capital Structure 2-27

- Characterization of Obligations as Debt or Equity 2-27
- Debt Capital 2-28
- Equity Capital 2-29
- Capital Contributions by Shareholders 2-29
- Capital Contributions by Nonshareholders 2-31

Worthlessness of Stock or Debt Obligations 2-32

- Securities 2-32
- Unsecured Debt Obligations 2-33

Tax Planning Considerations 2-34

- Avoiding Sec. 351 2-34

Compliance and Procedural Considerations 2-36

- Reporting Requirements Under Sec. 351 2-36

Problem Materials 2-36

- Discussion Questions 2-36
- Issue Identification Questions 2-37
- Problems 2-38
- Comprehensive Problems 2-43
- Tax Strategy and Critical Thinking Problems 2-44
- Case Study Problems 2-45
- Tax Research Problems 2-46

CHAPTER 3

▶ THE CORPORATE INCOME TAX 3-1

Corporate Elections 3-2

- Choosing a Calendar or Fiscal Year 3-2
- Accounting Methods 3-4

Determining a Corporation's Taxable Income and Tax Liability 3-5

- Corporate Tax Rate 3-5
- Sales and Exchanges of Property 3-5
- Business Expenses 3-8
- Special Deductions 3-14
- Exceptions for Closely Held Corporations 3-20

Controlled Groups of Corporations 3-21

- What Is a Controlled Group? 3-22

Application of the Controlled Group Test 3-25
Special Rules Applying to Controlled Groups 3-25
Consolidated Tax Returns 3-26

Tax Planning Considerations 3-27
Compensation Planning for Shareholder-Employees 3-27

Compliance and Procedural Considerations 3-29
Estimated Taxes 3-29
Requirements for Filing and Paying Taxes 3-33
When the Return Must Be Filed 3-33
Tax Return Schedules 3-33

Financial Statement Implications 3-38
Scope, Objectives, and Principles of ASC 740 3-38
Temporary Differences 3-39
Deferred Tax Assets and the Valuation Allowance 3-39
Accounting for Uncertain Tax Positions 3-40
Balance Sheet Classification 3-41
Tax Provision Process 3-41
Comprehensive Example – Year 1 3-42
Comprehensive Example – Year 2 3-45
Other Transactions 3-49

Problem Materials 3-49
Discussion Questions 3-49
Issue Identification Questions 3-50
Problems 3-51
Comprehensive Problem 3-58
Tax Strategy and Critical Thinking Problems 3-59
Tax Form/Return Preparation Problems 3-60
Case Study Problems 3-65
Tax Research Problems 3-66

CHAPTER 4

▶ CORPORATE NONLIQUIDATING DISTRIBUTIONS 4-1

Nonliquidating Distributions in General 4-2

Earnings and Profits (E&P) 4-3
Current Earnings and Profits 4-3
Distinction Between Current and Accumulated E&P 4-6

Nonliquidating Property Distributions 4-8
Consequences of Nonliquidating Property Distributions to the Shareholders 4-8
Consequences of Property Distributions to the Distributing Corporation 4-9
Constructive Dividends 4-11

Stock Dividends and Stock Rights 4-13
Nontaxable Stock Dividends 4-14
Nontaxable Stock Rights 4-14
Effect of Nontaxable Stock Dividends on the Distributing Corporation 4-15
Taxable Stock Dividends and Stock Rights 4-15

Stock Redemptions 4-16
Tax Consequences of the Redemption to the Shareholder 4-17
Attribution Rules 4-18
Substantially Disproportionate Redemptions 4-20
Complete Termination of the Shareholder's Interest 4-21
Redemptions Not Essentially Equivalent to a Dividend 4-23
Partial Liquidations 4-23
Redemptions to Pay Death Taxes 4-25
Effect of Redemptions on the Distributing Corporation 4-26

Preferred Stock Bailouts 4-27
Sec. 306 Stock Defined 4-28
Dispositions of Sec. 306 Stock 4-28
Redemptions of Sec. 306 Stock 4-29
Exceptions to Sec. 306 Treatment 4-30

Stock Redemptions by Related Corporations 4-30
Brother-Sister Corporations 4-30
Parent-Subsidiary Corporations 4-32

Tax Planning Considerations 4-33
Avoiding Unreasonable Compensation 4-33
Bootstrap Acquisitions 4-34
Timing of Distributions 4-35

Compliance and Procedural Considerations 4-36
Corporate Reporting of Nondividend Distributions 4-36
Obtaining Waiver of Family Attribution Rules 4-36

Problem Materials 4-37
Discussion Questions 4-37
Issue Identification Questions 4-38
Problems 4-39
Comprehensive Problem 4-45
Tax Strategy and Critical Thinking Problem 4-46
Case Study Problems 4-46
Tax Research Problems 4-47

CHAPTER 5

▶ OTHER CORPORATE TAX LEVIES 5-1

Use of C Corporation to Avoid Income Taxes 5-2

Personal Holding Company Tax 5-3
Stock Ownership Requirement 5-4
Passive Income Requirement 5-4
Calculating the PHC Tax 5-8
Avoiding the PHC Designation and Tax Liability by Making Dividend Distributions 5-10
PHC Tax Calculation 5-11

Accumulated Earnings Tax 5-12
Corporations Subject to the Accumulated Earnings Tax 5-12
Reasonable Needs of the Business 5-14
Calculating the Accumulated Earnings Tax 5-17
Comprehensive Example 5-20

Book Minimum Tax 5-21
Adjusted Financial Statement Income 5-21
Applicable Corporations 5-22
Tax Credits 5-23

Tax Planning Considerations 5-24
Avoiding the Personal Holding Company Tax 5-24
Avoiding the Accumulated Earnings Tax 5-25

Compliance and Procedural Considerations 5-25
Personal Holding Company Tax 5-25
Accumulated Earnings Tax 5-26
Book Minimum Tax 5-26

Problem Materials 5-26
Discussion Questions 5-26
Issue Identification Questions 5-28
Problems 5-28

Comprehensive Problem 5-34
Tax Strategy and Critical Thinking Problems 5-34
Case Study Problems 5-35
Tax Research Problems 5-35

CHAPTER 6

▶ CORPORATE LIQUIDATING DISTRIBUTIONS 6-1

Overview of Corporate Liquidations 6-2
- The Shareholder 6-2
- The Corporation 6-3
- Definition of a Complete Liquidation 6-4

General Liquidation Rules 6-5
- Effects of Liquidating on the Shareholders 6-5
- Effects of Liquidating on the Liquidating Corporation 6-6

Liquidation of a Controlled Subsidiary 6-10
- Overview 6-10
- Requirements 6-11
- Effects of Liquidating on the Shareholders 6-12
- Effects of Liquidating on the Subsidiary Corporation 6-13

Special Reporting Issues 6-15
- Pertaining to Shareholders 6-15
- Pertaining to the Liquidating Corporation 6-16

Recognition of Gain or Loss When Property Is Distributed in Retirement of Debt 6-17
- General Rule 6-17
- Satisfaction of the Subsidiary's Debt Obligations 6-17

Tax Planning Considerations 6-18
- Timing the Liquidation Transaction 6-18
- Recognition of Ordinary Losses When a Liquidation Occurs 6-19
- Obtaining 80% Ownership to Achieve Sec. 332 Benefits 6-19
- Avoiding Sec. 332 to Recognize Losses 6-20

Compliance and Procedural Considerations 6-20
- General Liquidation Procedures 6-20
- Section 332 Liquidations 6-21
- Plan of Liquidation 6-21

Problem Materials 6-21
- Discussion Questions 6-21
- Issue Identification Questions 6-23
- Problems 6-24
- Comprehensive Problem 6-30
- Tax Strategy and Critical Thinking Problems 6-31
- Case Study Problems 6-33
- Tax Research Problems 6-34

CHAPTER 7

▶ CORPORATE ACQUISITIONS AND REORGANIZATIONS 7-1

Taxable Acquisition Transactions 7-2
- Asset Acquisitions 7-2
- Stock Acquisitions 7-4

Comparison of Taxable and Nontaxable Acquisitions 7-10
- Taxable and Nontaxable Asset Acquisitions 7-10
- Comparison of Taxable and Nontaxable Stock Acquisitions 7-11

Types of Reorganizations and Their Tax Consequences 7-14
- The Target or Transferor Corporation 7-14
- The Acquiring or Transferee Corporation 7-15
- Shareholders and Security Holders 7-16

Acquisitive Reorganizations 7-19
- Type A Reorganization 7-19
- Type C Reorganization 7-25
- Type D Reorganization 7-28
- Type B Reorganization 7-29
- Type G Reorganization 7-33

Divisive Reorganizations 7-33
- Divisive Type D Reorganization 7-33
- Divisive Type G Reorganization 7-38

Other Reorganizations 7-38
- Type E Reorganization 7-38
- Type F Reorganization 7-40

Judicial Restrictions on the Use of Corporate Reorganizations 7-40
- Continuity of Interest 7-41
- Continuity of Business Enterprise 7-41
- Business Purpose Requirement 7-42
- Step Transaction Doctrine 7-42

Tax Attributes 7-43
- Assumption of Tax Attributes 7-43
- Limitation on Use of Tax Attributes 7-43

Tax Planning Considerations 7-46
- Why Use a Reorganization Instead of a Taxable Transaction? 7-46
- Avoiding the Reorganization Provisions 7-47

Compliance and Procedural Considerations 7-47
- Section 338 Election 7-47
- Plan of Reorganization 7-47
- Party to a Reorganization 7-48
- Ruling Requests 7-48

Financial Statement Implications 7-48
- Taxable Asset Acquisition 7-48
- Nontaxable Asset Acquisition 7-49
- Stock Acquisition 7-50
- Pricing the Acquisition 7-50
- Net Operating Losses 7-51

Problem Materials 7-51
- Discussion Questions 7-51
- Issue Identification Questions 7-52
- Problems 7-53
- Comprehensive Problem 7-61
- Tax Strategy and Critical Thinking Problems 7-62
- Case Study Problems 7-63
- Tax Research Problems 7-64

CHAPTER 8

▶ CONSOLIDATED TAX RETURNS 8-1

Definition of an Affiliated Group 8-2
- Requirements 8-2
- Comparison with Controlled Group Definitions 8-4

Consolidated Tax Return Election 8-4
- Consolidated Return Regulations 8-4
- Termination of Consolidated Tax Return Filing 8-5

Consolidated Taxable Income 8-6
- Accounting Periods and Methods 8-6
- Income Included in the Consolidated Tax Return 8-6
- Calculation of Consolidated Taxable Income and Tax 8-8

Intercompany Transactions 8-8
- Basic Concepts 8-8
- Matching and Acceleration Rules 8-10
- Applications of Matching and Acceleration Rules 8-12
- Relevance of Matching and Acceleration Rules 8-18

Items Computed on a Consolidated Basis 8-18
- Charitable Contributions Deduction 8-19
- Net Sec. 1231 Gain or Loss 8-19
- Capital Gains and Losses 8-19
- Dividends-Received Deduction 8-20
- Regular Tax Liability 8-22
- Tax Credits 8-22
- Estimated Tax Payments 8-23

Net Operating Losses (NOLs) 8-24
- Current Year NOL 8-25
- Carryovers of Consolidated NOLs 8-25
- Special Loss Limitations 8-26

Stock Basis Adjustments 8-31
- Tiering Up of Stock Basis Adjustments 8-33
- Excess Loss Account 8-33

Tax Planning Considerations 8-33
- Advantages of Filing a Consolidated Tax Return 8-33
- Disadvantages of Filing a Consolidated Tax Return 8-34

Compliance and Procedural Considerations 8-34
- The Basic Election and Return 8-34
- Parent Corporation as Agent for the Consolidated Group 8-35
- Separate Entity Treatment of Intercompany Transactions 8-36
- Liability for Taxes Due 8-36

Financial Statement Implications 8-36
- Intercompany Transactions 8-36
- SRLY Losses 8-38

Problem Materials 8-39
- Discussion Questions 8-39
- Issue Identification Questions 8-40
- Problems 8-41
- Comprehensive Problems 8-48
- Tax Strategy and Critical Thinking Problems 8-49
- Tax Form/Return Preparation Problem 8-50
- Case Study Problem 8-51
- Tax Research Problems 8-51

CHAPTER 9

▶ PARTNERSHIP FORMATION AND OPERATION 9-1

Definition of a Partnership 9-2
- General and Limited Partnerships 9-2

Overview of Taxation of Partnership Income 9-4
- Partnership Profits and Losses 9-4
- The Partner's Basis 9-4
- Partnership Distributions 9-5

Tax Implications of Formation of a Partnership 9-5
- Contribution of Property 9-6
- Contribution of Services 9-10
- Organizational and Syndication Expenditures 9-12

Partnership Elections 9-12
- Partnership Tax Year 9-12
- Other Partnership Elections 9-15

Partnership Reporting of Income 9-16
- Partnership Taxable Income 9-16
- Separately Stated Items 9-16
- Partnership Ordinary Income 9-17
- Special Deductions and Limitations 9-17

Partner Reporting of Income 9-20
- Partner's Distributive Share 9-20
- Special Allocations 9-21

Basis for Partnership Interest 9-24
- Beginning Basis 9-24
- Effects of Liabilities 9-24
- Effects of Operations 9-27

Special Loss Limitations 9-29
- At-Risk Loss Limitation 9-29
- Passive Activity Limitations 9-29
- Limitation on Excess Business Losses 9-30

Transactions Between a Partner and the Partnership 9-31
- Sales of Property 9-31
- Guaranteed Payments 9-32

Family Partnerships 9-33
- Capital Ownership 9-33
- Donor-Donee Allocations of Income 9-34

Tax Planning Considerations 9-35
- Timing of Loss Recognition 9-35
- Guaranteed Payments 9-35

Compliance and Procedural Considerations 9-36
- Reporting to the IRS and the Partners 9-36
- IRS Audit Procedures 9-37

Problem Materials 9-38
- Discussion Questions 9-38
- Issue Identification Questions 9-39
- Problems 9-40
- Comprehensive Problems 9-48
- Tax Strategy and Critical Thinking Problem 9-49
- Tax Form/Return Preparation Problems 9-50
- Case Study Problems 9-54
- Tax Research Problems 9-55

CHAPTER 10

▶ SPECIAL PARTNERSHIP ISSUES 10-1

Nonliquidating Distributions 10-2
- Recognition of Gain 10-2
- Basis Effects of Distributions 10-4
- Holding Period and Character of Distributed Property 10-7

Nonliquidating Distributions with Sec. 751 10-7
- Section 751 Assets Defined 10-7
- Exchange of Sec. 751 Assets and Other Property 10-9

Liquidating or Selling a Partnership Interest 10-11
- Liquidating Distributions 10-12
- Sale of a Partnership Interest 10-16

Other Partnership Termination Issues 10-19
- Retirement or Death of a Partner 10-19
- Exchange of a Partnership Interest 10-20

Income Recognition and Transfers of a Partnership Interest 10-22
Termination of a Partnership 10-22
Mergers and Consolidations 10-23
Division of a Partnership 10-24
Optional and Mandatory Basis Adjustments 10-24
Adjustments on Transfers 10-25
Adjustments on Distributions 10-27
Special Forms of Partnerships 10-28
Tax Shelters and Limited Partnerships 10-28
Publicly Traded Partnerships 10-28
Limited Liability Companies 10-29
Limited Liability Partnerships 10-30
Limited Liability Limited Partnership 10-31
Tax Planning Considerations 10-31
Liquidating Distribution or Sale to Partners 10-31
Problem Materials 10-32
Discussion Questions 10-32
Issue Identification Questions 10-33
Problems 10-33
Comprehensive Problems 10-43
Tax Strategy and Critical Thinking Problem 10-44
Case Study Problem 10-44
Tax Research Problems 10-45

CHAPTER 11

▶ S CORPORATIONS 11-1
Should an S Election Be Made? 11-3
Advantages of S Corporation Treatment 11-3
Disadvantages of S Corporation Treatment 11-3
S Corporation Requirements 11-4
Shareholder-Related Requirements 11-4
Corporation-Related Requirements 11-5
Election of S Corporation Status 11-7
Making the Election 11-8
Termination of the Election 11-9
S Corporation Operations 11-13
Taxable Year 11-13
Accounting Method Elections 11-14
Ordinary Income or Loss and Separately Stated Items 11-14
Special S Corporation Taxes 11-15
Taxation of the Shareholder 11-19
Income Allocation Procedures 11-19
Income Pass-Through to Shareholders 11-20
Loss and Deduction Pass-Through to Shareholders 11-21
Family S Corporations 11-25
Basis Adjustments 11-25
Basis Adjustments to S Corporation Stock 11-25
Basis Adjustments to Shareholder Debt 11-27
S Corporation Distributions 11-28
Corporations Having No Earnings and Profits 11-28
Corporations Having Accumulated Earnings and Profits 11-29
Other Rules 11-33
Tax Preference Items and Other AMT Adjustments 11-34
Transactions Involving Shareholders and Other Related Parties 11-34
Fringe Benefits Paid to a Shareholder-Employee 11-34
Tax Planning Considerations 11-35
Election to Allocate Income Based on the S Corporation's Accounting Methods 11-35
Increasing the Benefits from S Corporation Losses 11-36
Salary Levels 11-37
Passive Income Requirements 11-37
Compliance and Procedural Considerations 11-38
Making the Election 11-38
Filing the Corporate Tax Return 11-39
Estimated Tax Payments 11-39
Consistency Rules 11-40
Sample S Corporation Tax Return 11-40
Problem Materials 11-41
Discussion Questions 11-41
Issue Identification Questions 11-42
Problems 11-43
Comprehensive Problems 11-49
Tax Strategy and Critical Thinking Problems 11-51
Tax Form/Return Preparation Problems 11-51
Case Study Problem 11-54
Tax Research Problems 11-54

CHAPTER 12

▶ THE GIFT TAX 12-1
The Unified Transfer Tax System 12-2
History and Purpose of Transfer Taxes 12-2
Unified Rate Schedule 12-3
Impact of Taxable Gifts on Death Tax Base 12-3
Unified Credit 12-3
Gift Tax Formula 12-4
Determination of Gifts 12-4
Exclusions and Deductions 12-4
Gift-Splitting Election 12-4
Cumulative Nature of Gift Tax 12-6
Unified Credit 12-6
Transfers Subject to the Gift Tax 12-7
Transfers for Inadequate Consideration 12-7
Statutory Exemptions from the Gift Tax 12-8
Cessation of Donor's Dominion and Control 12-10
Valuation of Gifts 12-11
Gift Tax Consequences of Certain Transfers 12-13
Exclusions 12-16
Amount of the Exclusion 12-16
Present Interest Requirement 12-16
Gift Tax Deductions 12-18
Marital Deduction 12-19
Charitable Contribution Deduction 12-21
The Gift-Splitting Election 12-22
Computation of the Gift Tax Liability 12-23
Effect of Previous Taxable Gifts 12-23
Unified Credit Available 12-24
Comprehensive Illustration 12-25
Basis Considerations for a Lifetime Giving Plan 12-26
Property Received by Gift 12-26
Property Received at Death 12-27
Below-Market Loans: Gift and Income Tax Consequences 12-28
General Rules 12-28
De Minimis Rules 12-28

Tax Planning Considerations 12-29
- Tax-Saving Features of *Inter Vivos* Gifts 12-29
- Negative Aspects of Gifts 12-30

Compliance and Procedural Considerations 12-30
- Filing Requirements 12-30
- Due Date 12-31
- Gift-Splitting Election 12-31
- Liability for Tax 12-31
- Determination of Value 12-32
- Statute of Limitations 12-32

Problem Materials 12-33
- Discussion Questions 12-33
- Issue Identification Questions 12-34
- Problems 12-34
- Comprehensive Problem 12-37
- Tax Strategy and Critical Thinking Problems 12-38
- Tax Form/Return Preparation Problems 12-38
- Case Study Problems 12-39
- Tax Research Problems 12-39

CHAPTER 13

▶ THE ESTATE TAX 13-1

Estate Tax Formula 13-2
- Gross Estate 13-2
- Deductions 13-3
- Adjusted Taxable Gifts and Tax Base 13-4
- Tentative Tax on Estate Tax Base 13-4
- Reduction for Post-1976 Gift Taxes 13-4
- Unified Credit 13-5

The Gross Estate: Valuation 13-6
- Date-of-Death Valuation 13-6
- Alternate Valuation Date 13-7

The Gross Estate: Inclusions 13-8
- Comparison of Gross Estate with Probate Estate 13-9
- Property in Which the Decedent Had an Interest 13-9
- Dower or Curtesy Rights 13-10
- Transferor Provisions 13-10
- Annuities and Other Retirement Benefits 13-13
- Jointly Owned Property 13-14
- General Powers of Appointment 13-15
- Life Insurance 13-16
- Consideration Offset 13-17
- Recipient Spouse's Interest in QTIP Trust 13-17

Deductions 13-18
- Debts and Funeral and Administration Expenses 13-18
- Losses 13-19
- Charitable Contribution Deduction 13-19
- Marital Deduction 13-20

Computation of Tax Liability 13-23
- Taxable Estate and Tax Base 13-23
- Tentative Tax and Reduction for Post-1976 Gift Taxes 13-23
- Unified Credit 13-23
- Portability Between Spouses of Exemption Amount 13-24
- Other Credits 13-24
- Comprehensive Illustration 13-25

Liquidity Concerns 13-28
- Deferral of Payment of Estate Taxes 13-28
- Stock Redemptions to Pay Death Taxes 13-29
- Special Use Valuation of Farm Real Property 13-29

Generation-Skipping Transfer Tax 13-30

Tax Planning Considerations 13-31
- Use of *Inter Vivos* Gifts 13-32
- Use of Basic Exclusion Amount 13-32
- What Size Marital Deduction Is Best? 13-33
- Use of Disclaimers 13-33
- Role of Life Insurance 13-33
- Qualifying the Estate for Installment Payments 13-34
- Where to Deduct Administration Expenses 13-34

Compliance and Procedural Considerations 13-35
- Filing Requirements 13-35
- Due Date 13-35
- Valuation 13-35
- Election of Alternate Valuation Date 13-35

Problem Materials 13-36
- Discussion Questions 13-36
- Issue Identification Questions 13-37
- Problems 13-37
- Comprehensive Problems 13-41
- Tax Strategy and Critical Thinking Problems 13-42
- Tax Form/Return Preparation Problems 13-43
- Case Study Problems 13-44
- Tax Research Problems 13-45

CHAPTER 14

▶ INCOME TAXATION OF TRUSTS AND ESTATES 14-1

Basic Concepts 14-2
- Inception of Trusts 14-2
- Inception of Estates 14-2
- Reasons for Creating Trusts 14-3
- Basic Principles of Fiduciary Taxation 14-3

Principles of Fiduciary Accounting 14-4
- The Importance of Identifying Income and Principal 14-4
- Principal and Income: The Uniform Act 14-5
- Categorization of Depreciation 14-6

Formula for Taxable Income and Tax Liability 14-7
- Gross Income 14-7
- Deductions for Expenses 14-7
- Distribution Deduction 14-9
- Personal Exemption 14-9
- Credits 14-10

Distributable Net Income 14-10
- Significance of DNI 14-10
- Definition of DNI 14-11
- Manner of Computing DNI 14-11

Determining a Simple Trust's Taxable Income 14-13
- Allocation of Expenses to Tax-Exempt Income 14-14
- Determination of DNI and the Distribution Deduction 14-15
- Tax Treatment for Beneficiary 14-15

  - Shortcut Approach to Proving Correctness of Taxable Income 14-16
  - Effect of a Net Operating Loss 14-16
  - Effect of a Net Capital Loss 14-16
  - Comprehensive Illustration: Determining a Simple Trust's Taxable Income 14-17
- **Determining Taxable Income for Complex Trusts and Estates 14-19**
  - Determination of DNI and the Distribution Deduction 14-20
  - Tax Treatment for Beneficiary 14-21
  - Effect of a Net Operating Loss 14-24
  - Effect of a Net Capital Loss 14-24
  - Comprehensive Illustration: Determining a Complex Trust's Taxable Income 14-24

ABOUT THE EDITORS

Luke E. Richardson

Luke E. Richardson is an Associate Professor of Instruction and Kerkering Barberio Fellow in the Lynn Pippenger School of Accountancy at the University of South Florida. He received undergraduate and graduate degrees in accounting from the University of South Florida and a J.D. from the Stetson University College of Law. Professor Richardson, a CPA and lawyer in Florida, worked with Deloitte prior to his current role. He teaches several courses in taxation of individuals and business entities. Outside the classroom, he serves as a faculty advisor for the Delta Gamma chapter of Beta Alpha Psi and continues in his professional practice. Professor Richardson has published articles in practitioner journals such as *Tax Notes, The Tax Adviser*, and the *Journal of Accountancy*.

Mitchell Franklin

Mitchell Franklin PhD., CPA is the Distinguished Jack Collins ‘60 Chair in Accounting and Professor of Accounting at Le Moyne College, Madden College of Business and Economics, in Syracuse, New York. His research interests explore the impact of tax policies on individual and business decisions, as well as pedagogical issues in both financial accounting and taxation. Dr. Franklin has published over fifty articles in journals that include *Issues in Accounting Education, Advances in Accounting Education, Journal of Taxation, Tax Notes*, and *The Tax Adviser*. Dr. Franklin presently serves on the editorial board of *Issues in Accounting Education* and is an associate editor for *The Accounting Educators’ Journal*. Professionally, Dr. Franklin previously served as President of the American Accounting Association Northeast Region and served as Chair of the 2023 American Taxation Association Conference for Teaching and Learning. Prior to joining Le Moyne College, Dr. Franklin served on the accounting faculty at the Syracuse University, Whitman School of Management for fifteen years.

ABOUT THE AUTHORS

David S. Hulse

David S. Hulse is a Professor Emeritus of Accountancy at the University of Kentucky, where he taught introductory and corporate taxation courses. He received an undergraduate degree from Shippensburg University, an M.S. from Louisiana State University, and a Ph.D. from the Pennsylvania State University. Professor Hulse has published a number of articles on tax issues in academic and professional journals, including *The Journal of the American Taxation Association, Advances in Taxation, the Journal of Financial Service Professionals,* the *Journal of Financial Planning,* and *Tax Notes.*

Richard J. Joseph

Richard J. Joseph is Interim Dean at the University of San Diego Knauss School of Business. He has served as President and Chief Executive Officer of Babson Global, Inc., a wholly owned education subsidiary of Babson College, Provost-for-Term and Chief Academic Officer of Bryant University, and a member of the Tax Faculty and Administration of The University of Texas at Austin. Before embarking on his academic career, Dr. Joseph worked as an international banker at Citibank, Riyadh; an investment banker at Lehman Brothers, New York; a securities trader at Becker Paribas, Dallas, and Bear Stearns, New York; and a mergers and acquisitions lawyer for the Bass Group, Fort Worth. A graduate *magna cum laude* of Harvard College, Oxford University, and The University of Texas at Austin School of Law, Dr. Joseph is author of *Bridging the Gap Between the Abundance of American Higher Education Talent and the Immense Foreign Demand for It* (Oxford University Press), co-editor and co-author of the *Handbook of Mergers and Acquisitions* (Oxford University Press), and author of *The Origins of the American Income Tax* (Syracuse University Press). He has written numerous commentaries in the *Financial Times, The Christian Science Monitor, Tax Notes,* and *Tax Notes International*.

Russell Tietz

Russell Tietz, MBA, CPA recently retired from the University of Mount Union and was granted the status of Emeritus Associate Professor of Accounting. Professor Tietz taught Federal Taxation, Financial Accounting, and Advanced Accounting at Mount Union. Prior to joining Mount Union in 2013, he taught undergraduate and graduate level classes at Walsh University, Kent State University, and the University of Akron. Professor Tietz had over 30 years of professional experience in public accounting and industry prior to making the transition to full-time educator in 2013. His career included work in external auditing, internal auditing, financial reporting, accounting research, and business planning. Professor Tietz has also owned his own tax practice for over twenty years. He drew on his experience to bring practical examples into the classroom to aid the learning process for his students. He has a B.S. in Accounting and an MBA in Finance, both from the University of Akron, and is a CPA in Ohio.

PREFACE

New to this Edition

INDIVIDUALS

- The latest tax rulings and regulations bring currency to your course.
- A complete refresh of the material to include the most recent laws passed and their implications helps prepare students for their field. Updates include the following:
  - Real-world examples relating the text material to events, cases, and statistics (some from the IRS's Statistics of Income) occurring in tax and business environments.
  - Significant court cases and IRS rulings and procedures during 2024 and early 2025, for information that was available at the time of update.
  - All tax rate schedules to reflect rate and inflation adjustments for 2025.
  - End-of-chapter tax return problems revised to 2024.
  - All end-of-chapter problems to reflect the most recent changes in tax law as of the time of publication.
- All thresholds for the 2024 tax year have been updated.
- All form-related problems have been updated to the most recent available tax forms at the time of publication.

CORPORATIONS

- Updates to content and problem materials in all chapters affected by tax legislation and subsequent administrative guidance or judicial decisions announced in 2024 and early 2025, at the time of content updates.
- Updates to tax rate schedules and other figures affected by law changes and inflation adjustments for 2024.
- Updates to tax return problems to feature 2024 tax forms (the most recent available at time of publication).
- Updates to wording in several chapters as part of an effort to convey material more accurately and concisely.

Solving Teaching and Learning Challenges

The Franklin/Richardson 2026 Series in Federal Taxation is appropriate for use in any undergraduate course in federal taxation, and comes in a choice of three volumes:

- Federal Taxation 2026: Individuals
- Federal Taxation 2026: Corporations, Partnerships, Estates & Trusts (the companion book to Individuals)
- Federal Taxation 2026: Comprehensive (available in eTextbook only; all chapters from both Individuals and Corporations volumes)

- The *Individuals* volume covers *all* entities, although the treatment is often briefer than in the *Corporations* and *Comprehensive* volumes. The Individuals volume, therefore, is appropriate for colleges and universities that require only one semester of taxation as well as those that require more than one semester of taxation. Further, this volume adapts the suggestions of the Model Tax Curriculum as promulgated by the American Institute of Certified Public Accountants.
- The *Corporations, Partnerships, Estates & Trusts* and *Comprehensive* volumes contain much more extensive coverage of entities and multiple comprehensive tax return problems. Problem C:3-66 contains the comprehensive corporate tax return, Problem C:9-59 contains the comprehensive partnership tax return, and Problem C:11-62 contains the comprehensive S corporation tax return. Problem C:11-62 is based on the same facts as Problem C:9-59 so that students can compare the returns for these two entities.
- The *Corporations, Partnerships, Estates & Trusts* and *Comprehensive* volumes contain sections called Financial Statement Implications, which discuss the implications of Accounting Standards Codification (ASC) 740. The main discussion of accounting for income taxes appears in Chapter C:3. The financial statement implications of other transactions appear in Chapters C:7 and C:8.

Real-World Approach

The Pearson 2026 Series in Federal Taxation has an appropriate blend of technical content of the tax law with a high level of readability for students. It is focused on enabling students to apply tax principles within the chapter to real-life situations using many strong pedagogical aids:

Real-World Example

These comments relate the text material to events, cases, and statistics occurring in the tax and business environment. The statistical data presented in some of these comments are taken from the IRS's Statistics of Income at www.irs.gov.

Book-to-Tax Accounting Comparison

These comments compare the tax discussion in the text to the accounting and/or financial statement treatment of this material. Also, the last section of Chapter C:3 discusses the financial statement implications of federal income taxes.

What Would You Do in This Situation?

Unique to the Franklin/Richardson series, these boxes place students in a decision-making role. The boxes include many *controversies* that are as yet unresolved or are currently being considered by the courts. These boxes make extensive use of **Ethical Material** as they represent choices that may put the practitioner at odds with the client.

Stop & Think

These “speed bumps” encourage students to pause and apply what they have just learned. Solutions for each issue are provided in the box.

Ethical Point

These comments provide the ethical implications of material discussed in the adjoining text. Students apply what they have just learned.

Tax Strategy Tip

These comments suggest tax planning ideas related to material in the adjoining text.

Additional Comment

These comments provide supplemental information pertaining to the adjacent text.

Instructor Teaching Resources

This program comes with the following teaching resources.

Supplements available to instructors at www.pearsonhighered.com/pearsontax	Features of the Supplement
Instructor’s Resource Manual authored by Mitchell Franklin from Le Moyne College and Joshua G. Coyne, Ph.D.	• Sample syllabi • Instructor outlines • Information regarding problem areas for students • Solutions to the tax form/tax return preparation problems
Instructor’s Solutions Manual authored by Mitchell Franklin from Le Moyne College and Luke E. Richardson from University of South Florida	• Solutions to discussion questions • Solutions to problems • Solutions to comprehensive and tax strategy problems
Test Bank authored by Anthony Masino, JD, CPA, and Kate Demarest from University of Baltimore	Over 1,500 multiple-choice, true/false, short-answer, essays, and worked problems. • Type (Multiple-choice, true/false, short-answer, essay) • Page references to where content is found in the text
Computerized TestGen	TestGen allows instructors to: • Customize, save, and generate classroom tests • Edit, add, or delete questions from the Test Item Files • Analyze test results • Organize a database of tests and student results.
PowerPoint Presentations authored by Michael P. Griffin from University of Massachusetts Dartmouth	Slides include key graphs, tables, and equations in the textbook. PowerPoints meet accessibility standards for students with disabilities. Features include, but not limited to: • Keyboard and Screen Reader access • Alternative text for images • High color contrast between background and foreground colors
TaxAct 2024 Professional Software	Available for download with Individuals, Corporations, and Comprehensive Texts—please contact your Pearson representative for assistance with the registration process. This user-friendly tax preparation program includes more than 80 tax forms, schedules, and worksheets. TaxAct calculates returns and alerts the user to possible errors or entries. Consists of Forms 990, 1040, 1041, 1065, 1120, and 1120-S.

Acknowledgments

Our policy is to provide annual editions and to prepare timely updated supplements when major tax revisions occur. We are most appreciative of the suggestions made by outside reviewers because these extensive review procedures have been valuable to the authors and editors during the revision process.

We also are grateful to the various graduate assistants, doctoral students, and colleagues who have reviewed the text and supplementary materials and checked solutions to maintain a high level of technical accuracy. In particular, we would like to acknowledge the following colleagues who assisted in the preparation of supplemental materials for this text: Joshua G. Coyne, Ph.D.; Kate Demarest, University of Baltimore; Anthony Masino, JD, CPA; Brian Hogan, University of Pittsburgh; Michael P. Griffin, University of Massachusetts Dartmouth; and Nancy Osborne, University of Massachusetts Dartmouth.

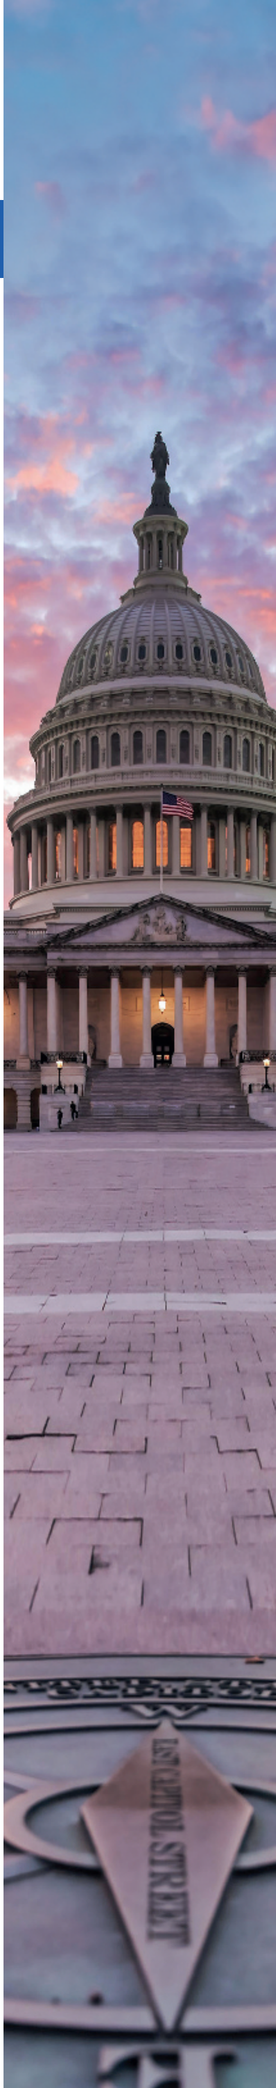
In addition, we want to thank Merle M. Erickson, M. L. Hanlon, Edward L. Maydew, and Terry J. Shevlin for allowing us to use the model discussed in their text, *Scholes & Wolfson’s Taxes and Business Strategy*, as the basis for material in Chapter I:18.

Please send any comments to Mitchell Franklin or Luke E. Richardson.

CHAPTER

1

TAX RESEARCH



James Byard/Zoonar GmbH/Alamy Stock Photo

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Distinguish between closed fact and open fact tax situations
2. Describe the steps in the tax research process
3. Explain how the facts influence tax consequences
4. Identify the sources of tax law and assess the authoritative value of each
5. Consult tax services to research an issue
6. Apply the basics of Internet-based tax research
7. Use a citator to assess tax authorities
8. Describe the professional guidelines that CPAs in tax practice should follow
9. Prepare work papers and communicate to clients

CHAPTER OUTLINE

Overview of Tax Research...1-2
Steps in the Tax Research Process...1-3
Importance of the Facts to the Tax Consequences...1-5
The Sources of Tax Law...1-7
Tax Services...1-25
The Internet as a Research Tool...1-26
Citators...1-28
Professional Guidelines for Tax Services...1-30
Sample Work Papers and Client Letter...1-34

This chapter introduces the reader to the tax research process. Its major focus is the sources of the tax law (i.e., the Internal Revenue Code and other tax authorities) and the relative weight given to each source. The chapter describes the steps in the tax research process and places particular emphasis on the importance of the facts to the tax consequences. It also describes the features of frequently used tax services and computer-based tax research resources. Finally, it explains how to use a citator.

The end product of the tax research process—the communication of results to the client—also is discussed. This text uses a hypothetical set of facts to provide a comprehensive illustration of the process. Sample work papers demonstrating how to document the results of research are included in Appendix A. The text also discusses two types of professional guidelines for CPAs in tax practice: the American Institute of Certified Public Accountants' (AICPA's) *Statements on Standards for Tax Services* (referenced in Appendix E) and Treasury Department *Circular 230*.

OVERVIEW OF TAX RESEARCH

OBJECTIVE 1

Distinguish between closed fact and open fact tax situations

Tax research is the process of solving tax-related problems by applying tax law to specific sets of facts. Sometimes it involves researching several issues and often is conducted to formulate tax policy. For example, policy-oriented research would determine how far the level of charitable contributions might decline if such contributions were no longer deductible. Economists usually conduct this type of tax research to assess the effects of government policy.

Tax research also is conducted to determine the tax consequences of transactions to specific taxpayers. For example, client-oriented research would determine whether Smith Corporation could deduct a particular expenditure as a trade or business expense. Accounting and law firms generally engage in this type of research on behalf of their clients.

This chapter deals only with client-oriented tax research, which occurs in two contexts:

ADDITIONAL COMMENT

Closed-fact situations afford the tax advisor the least amount of flexibility. Because the facts are already established, the tax advisor must develop the best solution possible within certain predetermined constraints.

1. **Closed fact or tax compliance situations:** The client contacts the tax advisor after completing a transaction or while preparing a tax return. In such situations, the tax consequences are fairly straightforward because the facts cannot be modified to obtain different results. Consequently, tax saving opportunities may be lost.

EXAMPLE C:1-1 ▶ Tom informs Carol, his tax advisor, that on November 4 of the current year, he sold land held as an investment for $500,000 cash. His basis in the land was $50,000. On November 9, Tom reinvested the sales proceeds in another plot of investment property costing $500,000. This is a closed fact situation. Tom wants to know the amount and the character of the gain (if any) he must recognize. Because Tom solicits the tax advisor's advice after the sale and reinvestment, the opportunity for tax planning is limited. For example, the possibility of deferring taxes by using a like-kind exchange or an installment sale is lost. ◀

ADDITIONAL COMMENT

Open-fact or tax-planning situations give a tax advisor flexibility to structure transactions to accomplish the client's objectives. In this type of situation, a creative tax advisor can save taxpayers dollars through effective tax planning.

2. **Open fact or tax planning situations:** Before structuring or concluding a transaction, the client contacts the tax advisor to discuss tax planning opportunities. Tax-planning situations generally are more difficult and challenging because the tax advisor must consider the client's tax and nontax objectives. Most clients will not engage in a transaction if it is inconsistent with their nontax objectives, even though it produces tax savings.

EXAMPLE C:1-2 ▶ Diane is a widow with three children and five grandchildren and at present owns property valued at $30 million. She seeks advice from Carol, her tax advisor, about how to minimize her estate taxes and convey the greatest value of property to her descendants. This is an open-fact situation. Carol could advise Diane to leave all but $13.99 million of her property to a charitable organization so that her estate would owe no estate taxes. Although this recommendation would eliminate Diane's estate taxes, Diane is likely to reject it because she wants her children or grandchildren to be her primary beneficiaries. Thus, reducing estate taxes to zero is inconsistent with her objective of allowing her descendants to receive as much after-tax wealth as possible. ◀

TAX STRATEGY TIP

Taxpayers should make investment decisions based on after-tax rates of return or after-tax cash flows.

When conducting research in a tax planning context, the tax professional should keep a number of points in mind. First, the objective is not to minimize taxes per se but rather to maximize a taxpayer's after-tax return. For example, if the federal income tax rate is a constant 30%, an investor should not buy a tax-exempt bond yielding 5% when he or she could buy a corporate bond of equal risk that yields 9% before tax and 6.3% after tax. This is the case even though his or her explicit taxes (actual tax liability) would be minimized by investing in the tax-exempt bond.[1] Second, taxpayers typically do not engage in unilateral or self-dealing transactions; thus, the tax ramifications for all parties to the transaction should be considered. For example, in the executive compensation context, employees may prefer to receive incentive stock options (because they will not recognize income until they sell the stock), but the employer may prefer to grant a different type of option (because the employer cannot deduct the value of incentive stock options upon issuance). Thus, the employer might grant a different number of options if it uses one type of stock option versus another type as compensation. Third, taxes are but one cost of doing business. In deciding where to locate a manufacturing plant, for example, factors more important to some businesses than the amount of state and local taxes paid might be the proximity to raw materials, good transportation systems, the cost of labor, the quantity of available skilled labor, and the quality of life in the area. Fourth, the time for tax planning is not restricted to the beginning date of an investment, contract, or other arrangement. Instead, the time extends throughout the duration of the activity. As tax rules change or as business and economic environments change, the tax advisor must reevaluate whether the taxpayer should hold onto an investment and must consider the transaction costs of any alternatives.

ADDITIONAL COMMENT

It is important to consider nontax as well as tax objectives. In many situations, the nontax considerations outweigh the tax considerations. Thus, the plan eventually adopted by a taxpayer may not always be the best when viewed strictly from a tax perspective.

One final note: the tax advisor should always bear in mind the financial accounting implications of proposed transactions. An answer that may be desirable from a tax perspective may not always be desirable from a financial accounting perspective. Though interrelated, the two fields of accounting have different orientations and different objectives. Tax accounting is oriented primarily to the Internal Revenue Service (IRS). Its objectives include calculating, reporting, and predicting one's tax liability according to legal principles. Financial accounting is oriented primarily to shareholders, creditors, managers, and employees. Its objectives include determining, reporting, and predicting a business's financial position and operating results according to Generally Accepted Accounting Principles. Because tax and financial accounting objectives may differ, planning conflicts could arise. For example, management might be reluctant to engage in tax reduction strategies that also reduce book income and reported earnings per share. Success in any tax practice, especially at the managerial level, requires consideration of both sets of objectives and orientations.

STEPS IN THE TAX RESEARCH PROCESS

OBJECTIVE 2

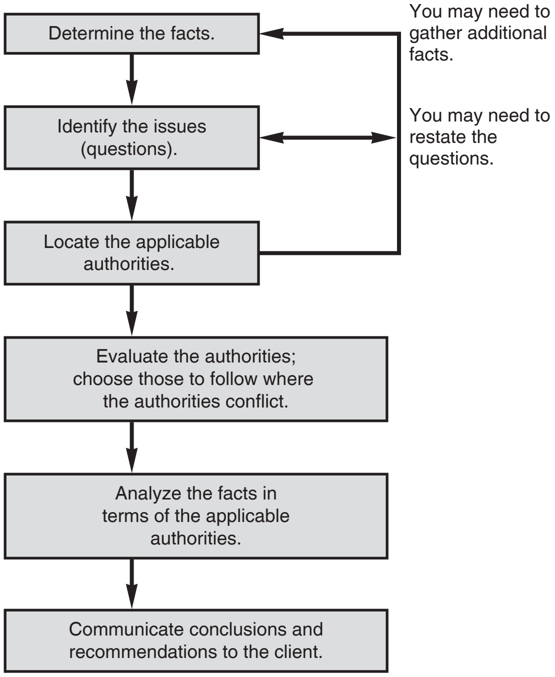
Describe the steps in the tax research process

In both open- and closed-fact situations, the tax research process involves six basic steps:

1. Determine the facts.
2. Identify the issues (questions).
3. Locate the applicable authorities.
4. Evaluate the authorities and choose those to follow where the authorities conflict.
5. Analyze the facts in terms of the applicable authorities.
6. Communicate conclusions and recommendations to the client.

---

[1] For an excellent discussion of explicit and implicit taxes and tax planning see M. M. Erickson, M. L. Hanlon, E. L. Maydew, and T. J. Shevlin, *Scholes & Wolfson's Taxes and Business Strategy* (Cambridge Business Publishers, 2020). Also see *Pearson's Federal Taxation: Individuals*, Chapter I:18. An example of an implicit tax is the excess of the before-tax earnings on a taxable bond over the risk-adjusted before-tax earnings on a tax-favored investment (e.g., a municipal bond).



Determine the facts.
Identify the issues (questions).
Locate the applicable authorities.
Evaluate the authorities; choose those to follow where the authorities conflict.
Analyze the facts in terms of the applicable authorities.
Communicate conclusions and recommendations to the client.
You may need to gather additional facts.
You may need to restate the questions.

FIGURE C:1-1 ▶ Steps in the Tax Research Process

ADDITIONAL COMMENT

The steps of tax research provide an excellent format for a written tax communication. For example, a good format for a client memo includes (1) statement of facts, (2) list of issues, (3) discussion of relevant authority, (4) analysis, and (5) recommendations to the client of appropriate actions based on the research results.

Although the above outline suggests a linear approach, the tax research process often is circular. That is, it does not always proceed step-by-step. Figure C:1-1 illustrates a more accurate process, and Appendix A provides a comprehensive example of this process.

In a closed-fact situation, the facts have already occurred, and the tax advisor's task is to analyze them to determine the appropriate tax treatment. In an open-fact situation, by contrast, the facts have not yet occurred, and the tax advisor's task is to plan for them or shape them so as to produce a favorable tax result. The tax advisor performs the latter task by reviewing the relevant legal authorities, particularly court cases and IRS rulings, all the while bearing in mind the facts of those cases or rulings that produced favorable results compared with those that produced unfavorable results. For example, if a client wants to realize an ordinary loss (as opposed to a capital loss) on the sale of several plots of land, the tax advisor might consult cases involving similar land sales. The advisor might attempt to distinguish the facts of those cases in which the taxpayer realized an ordinary loss from the facts of those cases in which the taxpayer realized a capital loss. The advisor then might recommend that the client structure the transaction based on the fact pattern in the ordinary loss cases.

TYPICAL MISCONCEPTION

Many taxpayers think the tax law is all black and white. However, most tax research deals with gray areas. Ultimately, when confronted with tough issues, the ability to develop strategies that favor the taxpayer and then to find relevant authority to support those strategies will make a successful tax advisor. Thus, recognizing planning opportunities and avoiding potential traps is often the real value added by a tax advisor.

Often, tax research involves a question to which no clearcut, unequivocally correct answer exists. In such situations, probing a related issue might lead to a solution pertinent to the central question. For example, in researching whether the taxpayer may deduct a loss as ordinary instead of capital, the tax advisor might research the related issue of whether the presence of an investment motive precludes classifying a loss as ordinary. The solution to that issue might be relevant to the central question of whether the taxpayer may deduct the loss as ordinary.

Identifying the issue(s) to be researched often is the most difficult step in the tax research process. In some instances, the client defines the issue(s) for the tax advisor, such as where the client asks, "May I deduct the costs of a winter trip to Florida recommended by my physician?" In other instances, the tax advisor, after reviewing the documents submitted to him or her by the client, identifies and defines the issue(s) himself or herself. Doing so presupposes a firm grounding in tax law.[2]

---

[2] Often, in an employment context, supervisors define the questions to be researched and the authorities that might be relevant to the tax consequences.

Once the tax advisor locates the applicable legal authorities, he or she might have to obtain additional information from the client. Example C:1-3 illustrates the point. The example assumes that all relevant tax authorities are in agreement.

EXAMPLE C:1-3 ▶ Mark calls his tax advisor, Al, and states that he (1) incurred a loss on renting his beach cottage during the current year and (2) wonders whether he may deduct the loss. He also states that he, his wife, and their minor child occupied the cottage only eight days during the current year.

This is the first time Al has dealt with the Sec. 280A vacation home rules. On reading Sec. 280A(d), Al learns that a loss is *not* deductible if the taxpayer used the residence for personal purposes for longer than the greater of (1) 14 days or (2) 10% of the number of days the unit was rented at a fair rental value. He also learns that the property is *deemed* to be used by the taxpayer for personal purposes on any days on which it is used by any member of his or her family (as defined in Sec. 267(c)(4)). The Sec. 267(c)(4) definition of family members includes brothers, sisters, spouse, ancestors (e.g., parents and grandparents), or lineal descendants (e.g., children and grandchildren).

Mark's eight-day use is not long enough to make the rental loss nondeductible. However, Al must inquire about the number of days, if any, Mark's brothers, sisters, or parents used the property. (He already knows about use by Mark, his spouse, and his lineal descendants.) In addition, Al must find out how many days the cottage was rented to other persons at a fair rental value. Upon obtaining the additional information, Al proceeds to determine how to calculate the deductible expenses. Al then derives his conclusion concerning the deductible loss, if any, and communicates it to Mark. (This example assumes the passive activity and at-risk rules restricting a taxpayer's ability to deduct losses from real estate activities will not pose a problem for Mark. See *Pearson's Federal Taxation: Individuals*, Chapter I:9 for a comprehensive discussion of these topics.) ◀

Many firms require that a researcher's conclusions be communicated to the client in writing. Members or employees of such firms may answer questions orally, but their oral conclusions should be followed by a written communication. According to the AICPA's *Statements on Standards for Tax Services* (referenced in Appendix E),

> Although oral advice may serve a taxpayer's needs appropriately in routine matters or in well-defined areas, written communications are recommended in important, unusual, substantial dollar value, or complicated transactions. The member may use professional judgment about whether, subsequently, to document oral advice.[3]

In addition, Treasury Department *Circular 230* covers all written advice communicated to clients. These requirements are more fully discussed at the end of this chapter and in Chapter C:15.

IMPORTANCE OF THE FACTS TO THE TAX CONSEQUENCES

OBJECTIVE 3

Explain how the facts influence tax consequences

Many terms and phrases used in the Internal Revenue Code (IRC) and other tax authorities are vague or ambiguous. Some provisions conflict with others or are difficult to reconcile, creating for the researcher the dilemma of deciding which rules are applicable and which tax results are proper. For example, as a condition to claiming another person as a dependent, the taxpayer must provide a certain level of support for such person.[4] Neither the IRC nor the Treasury Regulations define "support." This lack of definition could be problematic. For example, if the taxpayer purchased a used automobile costing $8,000 for an elderly parent whose only source of income is $7,800 in Social Security benefits, the question of whether the expenditure constitutes support would arise. The tax advisor would have to consult court opinions, revenue rulings, and other IRS pronouncements to ascertain the legal meaning of the term "support." Only after thorough research would the meaning of the term become clear.

---

[3] AICPA, *Statement on Standards for Tax Services*, No. 3, "Standards for Members Providing Tax Consulting Services," 2024, para 3.1.7.

[4] Sec. 152(e)(1)(A) and Sec. 152(d)(1)(C).

In other instances, the legal language is quite clear, but a question arises as to whether the taxpayer's transaction conforms to a specific pattern of facts that gives rise to a particular tax result. Ultimately, the peculiar facts of a transaction or event determine its tax consequences. A change in the facts can significantly change the consequences. Consider the following illustrations:

> **Illustration One**
> *Facts:* A holds stock, a capital asset, that he purchased two years ago at a cost of $1,000. He sells the stock to B for $920. What are the tax consequences to A?
> *Result:* Under Sec. 1001, A realizes an $80 capital loss. He recognizes this loss in the current year. A must offset the loss against any capital gains recognized during the year. Any excess loss is deductible from ordinary income up to a $3,000 annual limit.
> *Change of Facts:* A is B's son.
> *New Result:* Under Sec. 267, A and B are related parties. Therefore, A may not recognize the realized loss. However, B may use the loss if she subsequently sells the stock at a gain.
>
> **Illustration Two**
> *Facts:* C donates to State University ten acres of land that she purchased two years ago for $10,000. The fair market value (FMV) of the land on the date of the donation is $25,000. C's adjusted gross income is $100,000. What is C's charitable contribution deduction?
> *Result:* Under Sec. 170, C is entitled to a $25,000 charitable contribution deduction (i.e., the FMV of the property unreduced by the unrealized long-term gain).
> *Change of Facts:* C purchased the land 11 months ago.
> *New Result:* Under the same IRC section, C is entitled to only a $10,000 charitable contribution deduction (i.e., the FMV of the property reduced by the unrealized short-term gain).
>
> **Illustration Three**
> *Facts:* Acquiring Corporation pays Target Corporation's shareholders one million shares of Acquiring voting stock. In return, Target's shareholders tender 98% of their Target voting stock. The acquisition is for a bona fide business purpose. Acquiring continues Target's business. What are the tax consequences of the exchange to Target's shareholders?
> *Result:* Because the transaction qualifies as a reorganization under Sec. 368(a)(1)(B), Target's shareholders are not taxed on the exchange, which is solely for Acquiring voting stock.
> *Change of Facts:* In the transaction, Acquiring purchases the remaining 2% of Target's shares with cash.
> *New Result:* Under the same IRC provision, Target's shareholders are now taxed on the exchange, which is not solely for Acquiring voting stock.

CREATING A FACTUAL SITUATION FAVORABLE TO THE TAXPAYER

TYPICAL MISCONCEPTION

Many taxpayers believe tax practitioners spend most of their time preparing tax returns. In reality, providing tax advice that accomplishes the taxpayer's objectives is one of the most important responsibilities of a tax advisor. This latter activity is tax consulting as compared to tax compliance.

Based on his or her research, a tax advisor might recommend to a taxpayer how to structure a transaction or plan an event so as to increase the likelihood that related expenses will be deductible. For example, suppose a taxpayer is assigned a temporary task in a location (City Y) different from the location (City X) of his or her permanent employment. Suppose also that the taxpayer wants to deduct the meal and lodging expenses incurred in City Y as well as the cost of transportation thereto. To do so, the taxpayer must establish that City X is his or her tax home and that he or she temporarily works in City Y. (Section 162 provides that a taxpayer may deduct travel expenses while "away from home" on business. A taxpayer is deemed to be "away from home" if his or her employment at the new location does not exceed one year, i.e., it is "temporary.") Suppose the taxpayer wants to know the tax consequences of his or her working in City Y for ten months and then, within that ten-month period, finding permanent employment in City Y. What is tax research likely to reveal?

Tax research will lead to an IRS ruling stating that, in such circumstances, the employment will be deemed to be temporary until the date on which the realistic expectation about the temporary nature of the assignment changes.[5] After this date, the employment will be deemed to be permanent, and travel expenses relating to it will be nondeductible. Based on this finding, the tax advisor might advise the taxpayer to postpone his or her permanent job search in City Y until the end of the ten-month period and simply treat his or her assignment as temporary. So doing would lengthen the time he or she is deemed to be "away from home" on business and thus increase the amount of meal, lodging, and transportation costs deductible as travel expenses. The taxpayer should compare the tax savings to any additional personal costs of maintaining two residences.

THE SOURCES OF TAX LAW

OBJECTIVE 4

Identify the sources of tax law and assess the authoritative value of each

The language of the IRC is general; that is, it prescribes the tax treatment of broad categories of transactions and events. The reason for the generality is that Congress can neither foresee nor provide for every conceivable transaction or event. Even if it could, doing so would render the statute narrow in scope and inflexible in application. Accordingly, interpretations of the IRC—both administrative and judicial—are necessary. Administrative interpretations are provided in Treasury Regulations, revenue rulings, revenue procedures, and several other pronouncements discussed later in this chapter. Judicial interpretations are presented in court opinions. The term *tax law* as used by most tax advisors encompasses administrative and judicial interpretations in addition to the IRC. It also includes the meaning conveyed in reports issued by Congressional committees involved in the legislative process.

THE LEGISLATIVE PROCESS

Tax legislation begins in the House of Representatives. Initially, a tax proposal is incorporated in a bill. The bill is referred to the House Ways and Means Committee, which is charged with reviewing all tax legislation. The Ways and Means Committee holds hearings in which interested parties, such as the Treasury Secretary and IRS Commissioner, testify. At the conclusion of the hearings, the Ways and Means Committee votes to approve or reject the measure. If approved, the bill goes to the House floor where it is debated by the full membership. If the House approves the measure, the bill moves to the Senate where it is taken up by the Senate Finance Committee. Like Ways and Means, the Finance Committee holds hearings in which Treasury officials, tax experts, and other interested parties testify. If the committee approves the measure, the bill goes to the Senate floor where it is debated by the full membership. Upon approval by the Senate, it is submitted to the President for his or her signature. If the President signs the measure, the bill becomes public law. If the President vetoes it, Congress can override the veto by at least a two-thirds majority vote in each chamber.

Generally, at each stage of the legislative process, the bill is subject to amendment. If amended, and if the House version differs from the Senate version, the bill is referred to a House-Senate conference committee.[6] This committee attempts to resolve the differences between the House and Senate versions. Ultimately, it submits a compromise version of the measure to each chamber for its approval. Such referrals are common. For example, in 1998 the House and Senate disagreed over what the taxpayer must do to shift the burden of proof to the IRS. The House proposed that the taxpayer assert a "reasonable dispute" regarding a taxable item. The Senate proposed that the taxpayer introduce "credible evidence" regarding the item. A conference committee was appointed to resolve the differences. This committee ultimately adopted the Senate proposal, which was later approved by both chambers.

ADDITIONAL COMMENT

Committee reports can be helpful in interpreting new legislation because they indicate the intent of Congress. With the proliferation of tax legislation, committee reports have become especially important because the Treasury Department often is unable to draft the needed regulations in a timely manner.

After approving major legislation, the Ways and Means Committee and Senate Finance Committee usually issue official reports. These reports, published by the U.S. Government Printing Office (GPO) as part of the *Cumulative Bulletin* and as separate documents, explain the committees' reasoning for approving (and/or amending) the legislation.[7] In addition, the GPO publishes records of both the committee hearings and transcripts of the floor debates. The records are published as separate House or Senate documents. The transcripts are incorporated in the *Congressional Record* for the day of the debate. In tax research, these records, reports, and transcripts are useful in deciphering the meaning of the statutory language. Where this language is ambiguous or vague, and the courts have not interpreted it, the documents can shed light on **Congressional intent**, i.e., what Congress *intended* by a particular term, phrase, or provision.

---

[6] The size of a conference committee can vary. It is made up of an equal number of members from the House and the Senate.

[7] The *Cumulative Bulletin* is described in the discussion of revenue rulings on page C:1-12.

EXAMPLE C:1-4 ▶ In 1998, Congress passed legislation concerning shifting the burden of proof to the IRS. This legislation was codified in Sec. 7491. The question arises as to what constitutes "credible evidence" because the taxpayer must introduce such evidence to shift the burden of proof to the IRS. Section 7491 does not define the term. Because the provision was relatively new, few courts had an opportunity to interpret what "credible evidence" means. In the absence of relevant statutory or judicial authority, the researcher might have looked to the committee reports to ascertain what Congress intended by the term. Senate Report No. 105-174 states that "credible evidence" means evidence of a quality, which, "after critical analysis, the court would find sufficient upon which to base a decision on the issue if no contrary evidence were submitted."[8] This language suggests that Congress intended the term to mean evidence of a kind sufficient to withstand judicial scrutiny. Such a meaning should be regarded as conclusive in the absence of other authority. ◀

THE INTERNAL REVENUE CODE

The IRC, which comprises Title 26 of the United States Code, is the foundation of all tax law. First codified (i.e., organized into a single compilation of revenue statutes) in 1939, the tax law was recodified in 1954. The IRC was known as the Internal Revenue Code of 1954 until 1986, when its name was changed to the Internal Revenue Code of 1986. Whenever changes to the IRC are approved, the old language is deleted and new language added. Thus, the IRC is organized as an integrated document, and a researcher need not read through the relevant parts of all previous tax bills to find the current version of the law. Nevertheless, a researcher must be sure that he or she is working with the law in effect when a particular transaction occurred.

ADDITIONAL COMMENT

The various tax services, discussed later in this chapter, provide IRC histories for researchers who need to work with prior years' tax law.

The IRC contains provisions dealing with income taxes, estate and gift taxes, employment taxes, alcohol and tobacco taxes, and other excise taxes. Organizationally, the IRC is divided into subtitles, chapters, subchapters, parts, subparts, sections, subsections, paragraphs, subparagraphs, and clauses. Subtitle A contains rules relating to income taxes, and Subtitle B deals with estate and gift taxes. A set of provisions concerned with one general area constitutes a subchapter. For example, the topics of corporate distributions and adjustments appear in Subchapter C, and topics relating to partners and partnerships appear in Subchapter K. Figure C:1-2 presents the organizational scheme of the IRC.

An IRC section contains the operative provisions to which tax advisors most often refer. For example, they speak of "Sec. 351 transactions," "Sec. 306 stock," and "Sec. 1231 gains and losses." Although a tax advisor need not know all the IRC sections, paragraphs, and parts, he or she must be familiar with the IRC's organizational scheme to read and interpret it correctly. The language of the IRC is replete with cross-references to titles, paragraphs, subparagraphs, and so on.

EXAMPLE C:1-5 ▶ Section 7701, a definitional section, begins, "When used in this title. . ." and then provides a series of definitions. Because of this broad reference, a Sec. 7701 definition applies for all of Title 26; that is, it applies for purposes of the income tax, estate and gift tax, excise tax, and other taxes governed by Title 26. ◀

EXAMPLE C:1-6 ▶ Section 302(b)(3) allows taxpayers whose stock holdings are completely terminated in a redemption (a corporation's purchase of its stock from one or more of its shareholders) to receive capital gain treatment on the excess of the redemption proceeds over the stock's basis instead of ordinary income treatment on the entire proceeds. Section 302(c)(2)(A) states, "In the case of a distribution described in subsection (b)(3), section 318(a)(1) shall not apply if. . . ." Further, Sec. 302(c)(2)(C)(i) indicates "Subparagraph (A) shall not apply to a distribution to any entity unless. . . ." Thus, in determining whether a taxpayer will receive capital gain treatment in a stock redemption, a tax advisor must be able to locate and interpret various cross-referenced IRC sections, subsections, paragraphs, subparagraphs, and clauses. ◀

Overall Scheme

- Title 26. All matters concerned with taxation
  - Subtitle A. Income taxes
    - Chapter 1. Normal taxes and surtaxes
      - Subchapter A. Determination of tax liability
        - Part I. Tax on individuals
          - Sec. 1. Tax imposed

Scheme for Sections, Subsections, etc.

FIGURE C:1-2 ▶ Organizational Scheme of the Internal Revenue Code

TREASURY REGULATIONS

The Treasury Department issues regulations that expound upon the IRC. **Treasury Regulations** often provide examples with computations that assist the reader in understanding how IRC provisions apply. Treasury Regulations are formulated on the basis of Treasury Decisions (T.D.s). The numbers of the Treasury Decisions that form the basis of a Treasury Regulation usually are found in the notes at the end of the regulation.

Because of frequent IRC changes, the Treasury Department does not always update the regulations in a timely manner. Consequently, when consulting a regulation, a tax advisor should check its introductory or end note to determine when the regulation was adopted. If the regulation was adopted before the most recent revision of the applicable IRC section, the regulation should be treated as authoritative to the extent consistent with the revision. Thus, for example, if a regulation issued before the passage of an IRC amendment specifies a dollar amount, and the amendment changed the dollar amount, the regulation should be regarded as authoritative in all respects except for the dollar amount.

Proposed, Temporary, and Final Regulations. A Treasury Regulation is first issued in proposed form to the public, which is given an opportunity to comment on it. Parties most likely to comment are individual tax practitioners and representatives of organizations such as the American Bar Association, the Tax Division of the AICPA, and the American Taxation Association. The comments may suggest that the proposed rules could affect taxpayers more adversely than Congress had anticipated. In drafting a final regulation, the Treasury Department generally considers the comments and may modify the rules accordingly. If the comments are favorable, the Treasury Department usually finalizes the regulation with minor revisions. If the comments are unfavorable, it usually finalizes the regulation with major revisions or allows the proposed regulation to expire.

Proposed regulations are just that—proposed. Consequently, they carry no more authoritative weight than do the arguments of the IRS in a court brief. Nevertheless, they represent the Treasury Department's official interpretation of the IRC. By contrast, **temporary regulations** are binding on the taxpayer. Effective as of the date of their publication, they often are issued immediately after passage of a major tax act to guide taxpayers and their advisors on procedural or computational matters. Regulations issued as temporary are concurrently issued as proposed. Because their issuance is not preceded by a public comment period, they are regarded as somewhat less authoritative than final regulations.

Once finalized, regulations can be effective the earliest of (1) the date they were filed with the *Federal Register,* a daily publication that contains federal government pronouncements; (2) the date temporary regulations preceding them were first published in the *Federal Register*; or (3) the date on which a notice describing the expected contents of the regulation was issued to the public.[9] For changes to the IRC enacted after July 29, 1996, the Treasury Department generally cannot issue regulations with retroactive effect.

Interpretative and Legislative Regulations. In addition to being officially classified as proposed, temporary, or final, Treasury Regulations are unofficially classified as interpretative or legislative. **Interpretative regulations** are issued under the general authority of Sec. 7805 and, as the name implies, merely make the IRC's statutory language easier to understand and apply. In addition, they often illustrate various computations. **Legislative regulations**, by contrast, arise where Congress delegates its rule-making authority to the Treasury Department. When Congress believes it lacks the expertise necessary to deal with a highly technical matter, it instructs the Treasury Department to set forth substantive tax rules relating to the matter.

Whenever the IRC contains language such as "The Secretary shall prescribe such regulations as he may deem necessary" or "under regulations prescribed by the Secretary," the regulations interpreting the IRC provision are legislative. The consolidated tax return regulations are an example of legislative regulations. In Sec. 1502, Congress delegated to the Treasury Department authority to issue regulations that determine the tax liability of a group of affiliated corporations filing a consolidated tax return. As a precondition to filing such a return, the corporations must consent to follow the consolidated return regulations.[10] Such consent generally precludes the corporations from later arguing in court that the regulatory provisions are invalid.

Authoritative Weight. Final Treasury Regulations are presumed to be valid and have almost the same authoritative weight as the IRC. Despite this presumption, taxpayers occasionally argue that a regulation is invalid and, consequently, should not be followed.

Prior to 2011, courts held interpretive and legislative regulations to different standards, giving more authority to legislative regulations that Congress specifically delegated to the Treasury Department to draft. The difference in authoritative weight largely disappeared, however, in 2011 with the Supreme Court decision in *Mayo Foundation.*[11] Going forward, both types of regulations will have the same authoritative weight and will be overturned only in very limited cases such as when, in the Court's opinion, the regulations exceed the scope of power delegated to the Treasury Department,[12] are contrary to the IRC,[13] or are unreasonable.[14]

KEY POINT

The older a Treasury Regulation becomes, the less likely a court is to invalidate the regulation. The legislative reenactment doctrine holds that if a regulation did not reflect the intent of Congress, lawmakers would have changed the statute in subsequent legislation to obtain their desired objectives.

In assessing the validity of long-standing Treasury Regulations, some courts apply the **legislative reenactment doctrine**. Under this doctrine, a regulation is deemed to receive congressional approval whenever the IRC provision under which the regulation was issued is reenacted without amendment.[15] Underlying this doctrine is the rationale that, if Congress believed that the regulation offered an erroneous interpretation of the IRC, it would have amended the IRC to conform to its belief. Congress's failure to amend the IRC signifies approval of the regulation.[16] This doctrine is predicated on Congress's constitutional authority to levy taxes. This authority implies that, if Congress is dissatisfied with the manner in which either the executive or the judiciary has interpreted the IRC, it can invalidate these interpretations through new legislation.

STOP & THINK

Question: You are researching the manner in which a deduction is calculated. You consult Treasury Regulations for guidance because the IRC states that the calculation is to be done "in a manner prescribed by the Secretary." After reviewing these authorities, you conclude that another way of doing the calculation arguably is correct under an intuitive approach. This approach would result in a lower tax liability for the client. Should you follow the Treasury Regulations, or should you use the intuitive approach and argue that the regulations are invalid?

---

[9] Sec. 7805(b).

[10] Sec. 1501.

[11] *Mayo Foundation for Medical Education & Research, et al. v. U.S.*, 107 AFTR 2d 2011-341, 131 S.Ct. 704 (2011).

[12] *McDonald v. CIR*, 56 AFTR 2d 85-5318, 85-2 USTC ¶9494 (5th Cir., 1985).

[13] *Jeanese, Inc. v. U.S.*, 15 AFTR 2d 429, 65-1 USTC ¶9259 (9th Cir., 1965).

[14] *United States v. Vogel Fertilizer Co.*, 49 AFTR 2d 82-491, 82-1 USTC ¶9134 (USSC, 1982).

[15] *United States v. Homer O. Correll*, 20 AFTR 2d 5845, 68-1 USTC ¶9101 (USSC, 1967).

[16] One can rebut the presumption that Congress approved of the regulation by showing that Congress was unaware of the regulation when it reenacted the statute.

Solution: Because of the language "in a manner prescribed by the Secretary," the Treasury Regulations dealing with the calculation are legislative. Whenever Congress calls for legislative regulations, it explicitly authorizes (directs) the Treasury Department to write the "rules." Thus, a challenge based on the existence of a reasonable alternative method is unlikely to succeed in court. Under the *Mayo Foundation* decision, you should reach the same conclusion even if dealing with an interpretive Treasury Regulation.

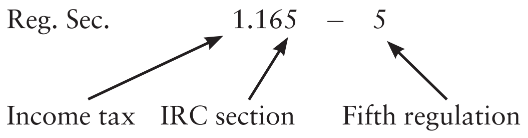
ADDITIONAL COMMENT

Citations serve two purposes in tax research: first, they substantiate propositions; second, they enable the reader to locate underlying authority.

Citations. Citations to Treasury Regulations are relatively easy to understand. One or more numbers appear before a decimal place, and several numbers follow the decimal place. The numbers immediately following the decimal place indicate the IRC section being interpreted. The numbers preceding the decimal place indicate the general subject of the regulation. Numbers that often appear before the decimal place and their general subjects are as follows:

Number	*General Subject Matter*
1	Income tax
20	Estate tax
25	Gift tax
301	Administrative and procedural matters
601	Procedural rules

The number following the IRC section number indicates the numerical sequence of the regulation, such as the fifth regulation. No relationship exists between this number and the subsection of the IRC being interpreted. An example of a citation to a final regulation is as follows:



Citations to proposed or temporary regulations follow the same format. They are referenced as Prop. Reg. Sec. or Temp. Reg. Sec. For temporary regulations the numbering system following the IRC section number always begins with the number of the regulation and an upper case T (e.g., -1T).

Section 165 addresses the broad topic of losses and is interpreted by several regulations. According to its caption, the topic of Reg. Sec. 1.165-5 is worthless securities, which also is addressed in subsection (g) of IRC Sec. 165. Parenthetical information following the text of the Treasury Regulation indicates that the regulation was last revised on March 11, 2008, by Treasury Decision (T.D.) 9386. Section 165(g) was last amended in 2000. A researcher must always check when the regulations were last amended and be aware that an IRC change may have occurred after the most recent regulation amendment, potentially making the regulation inapplicable.

When referencing a regulation, the researcher should fine-tune the citation to indicate the precise passage that supports his or her conclusion. An example of such a detailed citation is Reg. Sec. 1.165-5(j), Ex. 2(i), which refers to paragraph (i) of Example 2, found in paragraph (j) of the fifth regulation interpreting Sec. 165.

ADMINISTRATIVE PRONOUNCEMENTS

The IRS interprets the IRC through **administrative pronouncements**, the most important of which are discussed below. After consulting the IRC and Treasury Regulations, tax advisors are likely next to consult these pronouncements.

TYPICAL MISCONCEPTION

Even though revenue rulings do not have the same weight as Treasury Regulations or court cases, one should not underestimate their importance. Because a revenue ruling is the official published position of the IRS, in audits the examining agent will place considerable weight on any applicable revenue rulings.

Revenue Rulings. In **revenue rulings**, the IRS indicates the tax consequences of specific transactions encountered in practice. For example, in a revenue ruling, the IRS might indicate whether the exchange of stock for stock derivatives in a corporate acquisition is tax-free.

The IRS issues dozens of revenue rulings a year, although the number of rulings issued varies widely from year to year. These rulings do not rank as high in the hierarchy of authorities as do Treasury Regulations or federal court cases. They simply represent the IRS's view of the tax law. Taxpayers who do not follow a revenue ruling will not incur a substantial understatement penalty if they have substantial authority for different treatment.[17] Nonetheless, the IRS presumes that the tax treatment specified in a revenue ruling is correct. Consequently, if an examining agent discovers in an audit that a taxpayer did not adopt the position prescribed in a revenue ruling, the agent will contend that the taxpayer's tax liability should be adjusted to reflect that position.

A revenue ruling appears in the weekly *Internal Revenue Bulletin* (cited as I.R.B.), published by the U.S. Government Printing Office (GPO). Prior to 2009, revenue rulings appeared in the *Cumulative Bulletin* (cited as C.B.), a bound volume issued semiannually by the GPO. An example of a citation to a revenue ruling appearing in the *Cumulative Bulletin* is as follows:

Rev. Rul. 97-4, 1997-1 C.B. 5.

This is the fourth ruling issued in 1997, and it appears on page 5 of Volume 1 of the 1997 *Cumulative Bulletin*. For rulings after 2008, researchers should use citations to the *Internal Revenue Bulletin*. An example of such a citation follows:

Rev. Rul. 2013-8, 2013-15 I.R.B. 763.

For revenue rulings (and other IRS pronouncements) issued after 1999, the full four digits of the year of issuance are set forth in the title. For revenue rulings (and other IRS pronouncements) issued before 2000, only the last two digits of the year of issuance are set forth in the title. The above citation represents the eighth ruling for 2013. This ruling is located on page 763 of the *Internal Revenue Bulletin* for the fifteenth week of 2013. Once a revenue ruling is published in the *Cumulative Bulletin*, only the citation to the *Cumulative Bulletin* should be used. Thus, a citation to the I.R.B. is temporary.

Revenue Procedures. As the name suggests, **revenue procedures** are IRS pronouncements that usually deal with the procedural aspects of tax practice. For example, one revenue procedure deals with the manner in which tip income should be reported. Another revenue procedure describes the requirements for reproducing paper substitutes for informational returns such as Form 1099.

As with revenue rulings, revenue procedures are published in the *Internal Revenue Bulletin* and, prior to 2009, in the *Cumulative Bulletin*. For revenue procedures issued after 2008, the I.R.B. is the final reference. An example of a citation to a revenue procedure appearing in the *Internal Revenue Bulletin* is as follows:

Rev. Proc. 2017-4, 2017-1 I.R.B. 146.

This pronouncement is found in the first issue of the *Internal Revenue Bulletin* on page 146. It is the fourth revenue procedure issued in 2017.

In addition to revenue rulings and revenue procedures, the *Cumulative Bulletin* contains IRS notices, as well as the texts of proposed regulations, tax treaties, committee reports, and U.S. Supreme Court decisions.

SELF-STUDY QUESTION

Are letter rulings of precedential value for third parties?

ANSWER

No. A letter ruling is binding only on the taxpayer to whom the ruling was issued. Nevertheless, letter rulings can be very useful to third parties because they provide insight as to the IRS's opinion about the tax consequences of various transactions.

Letter Rulings. Letter rulings are initiated by taxpayers who ask the IRS to explain the tax consequences of a particular transaction.[18] The IRS provides its explanation in the form of a letter ruling, a response personal to the taxpayer requesting an answer. Only the taxpayer to whom the ruling is addressed may rely on it as authority. Nevertheless, letter rulings are relevant for other taxpayers and tax advisors because they offer insight into the IRS's position on the tax treatment of particular transactions.

---

[17] Chapter C:15 discusses the authoritative support taxpayers and tax advisors should have for positions they adopt on a tax return.

[18] Chapter C:15 further discusses letter rulings.

Originally the public did not have access to letter rulings issued to other taxpayers. As a result of Sec. 6110, enacted in 1976, letter rulings (with confidential information deleted) are accessible to the general public and have been reproduced by major tax services. An example of a citation to a letter ruling appears below:

> Ltr. Rul. 200130006 (July 30, 2001).

The first four digits (two if issued before 2000) indicate the year in which the ruling was made public, in this case, 2001.[19] The next two digits denote the week in which the ruling was made public, here the thirtieth. The last three numbers indicate the numerical sequence of the ruling for the week, here the sixth. The date in parentheses denotes the date of the ruling.

Other Interpretations

ADDITIONAL COMMENT

A technical advice memorandum is published as a letter ruling. Whereas a taxpayer-requested letter ruling deals with prospective transactions, a technical advice memorandum deals with past or consummated transactions.

Technical Advice Memoranda. When the IRS audits a taxpayer's return, the IRS agent might ask the IRS national office for advice on a complicated, technical matter. The national office will provide its advice in a **technical advice memorandum**, released to the public in the form of a letter ruling.[20] Researchers can identify which letter rulings are technical advice memoranda by introductory language such as, "In response to a request for technical advice. . . ." An example of a citation to a technical advice memorandum is as follows:

> T.A.M. 9801001 (January 2, 1998).

This citation refers to the first technical advice memorandum issued in the first week of 1998. The memorandum is dated January 2, 1998.

News Releases. If the IRS wants to disseminate information to the general public, it will issue a **news release**. News releases are written in lay terms and are dispatched to thousands of newspapers throughout the country. The IRS, for example, may issue a news release to announce the standard mileage rate for business travel. An example of a citation to a news release is as follows:

> I.R. News Release 2012-25 (February 17, 2012).

This citation is to the twenty-fifth news release issued in 2012. The release is dated February 17, 2012.

ADDITIONAL COMMENT

Announcements are used to summarize new tax legislation or publicize procedural matters. Announcements generally are aimed at tax practitioners and are considered to be "substantial authority" [Rev. Rul. 90-91, 1990-2 C.B. 262].

Announcements and Notices. The IRS also disseminates information to tax practitioners in the form of **announcements** and **notices**. These pronouncements generally are more technical than information releases and frequently address current tax developments. After passage of a major tax act, and before the Treasury Department has had an opportunity to issue proposed or temporary regulations, the IRS may issue an announcement or notice to clarify the legislation. The IRS is bound to follow the announcement or notice just as it is bound to follow a revenue procedure or revenue ruling. Examples of citations to announcements and notices are as follows:

> Announcement 2007-3, 2007-1 C.B. 376.
> Notice 2007-9, 2007-1 C.B. 401.

The first citation is to the third announcement issued in 2007. It can be found on page 376 of the first *Cumulative Bulletin* for 2007. The second citation is to the ninth notice issued in 2007. It can be found on page 401 of the first *Cumulative Bulletin* for 2007. Notices and announcements issued prior to 2009 appear in both the *Internal Revenue Bulletin* and the *Cumulative Bulletin,* but after 2008 they appear only in the *Internal Revenue Bulletin.*

---

[19] Sometimes a letter ruling is cited as PLR (private letter ruling) instead of Ltr. Rul.

[20] Technical advice memoranda are discussed further in Chapter C:15.

JUDICIAL DECISIONS

Judicial decisions are an important source of tax law. Judges are reputed to be unbiased individuals who decide questions of fact (the existence of a fact or the occurrence of an event) or questions of law (the applicability of a legal principle or the proper interpretation of a legal term or provision). Judges do not always agree on the tax consequences of a particular transaction or event. Therefore, tax advisors often must derive conclusions against a background of conflicting judicial authorities. For example, a U.S. district court might disagree with the Tax Court on the deductibility of an expense. Likewise, one circuit court might disagree with another circuit court on the same issue.

SELF-STUDY QUESTION

What are some of the factors that a taxpayer should consider when deciding in which court to file a tax-related claim?

ANSWER

(1) Each court's published precedent pertaining to the issue, (2) desirability of a jury trial, (3) tax expertise of each court, and (4) when the deficiency must be paid.

Overview of the Court System. A taxpayer may begin tax litigation in any of three courts: the U.S. Tax Court, the U.S. Court of Federal Claims (formerly the U.S. Claims Court), or U.S. district courts. Court precedents are important in deciding where to begin such litigation (see page C:1-21 for a discussion of precedent). Also important is when the taxpayer must pay the deficiency the IRS contends is due. A taxpayer who wants to litigate either in a U.S. district court or in the U.S. Court of Federal Claims must first pay the deficiency. The taxpayer then files a claim for refund, which the IRS is likely to deny. Following this denial, the taxpayer must petition the court for a refund. If the court grants the taxpayer's petition, he or she receives a refund of the taxes in question plus accrued interest. If the taxpayer begins litigation in the Tax Court, on the other hand, he or she need not pay the deficiency unless and until the court decides the case against him or her. In that event, the taxpayer also must pay interest and penalties.[21] A taxpayer who believes that a jury would be sympathetic to his or her case should litigate in a U.S. district court, the only forum where a jury trial is possible.

If a party loses at the trial court level, it can appeal the decision to a higher court. Appeals of Tax Court and U.S. district court decisions are made to the court of appeals for the taxpayer's circuit. The appeals court system is comprised of 11 geographical circuits designated by numbers, the District of Columbia Circuit, and the Federal Circuit.[22] Table C:1-1 shows the states that lie in the various circuits. California, for example, lies in the Ninth Circuit. When referring to these appellate courts, instead of saying, for example, "the Court of Appeals for the Ninth Circuit," one generally says "the Ninth Circuit." All decisions of the U.S. Court of Federal Claims are appealable to one court—the Court of Appeals for the Federal Circuit—irrespective of where the taxpayer resides or does business.[23] The only cases the Federal Circuit hears are those that originate in the U.S. Court of Federal Claims.

ADDITIONAL COMMENT

Because the Tax Court deals only with tax cases, it presumably has a higher level of tax expertise than do other courts. Tax Court judges are appointed by the President, in part, due to their considerable tax experience. The Tax Court typically maintains a large backlog of tax cases, sometimes numbering in the tens of thousands.

The party losing at the appellate level can petition the U.S. Supreme Court to review the case under a **writ of certiorari**. If the Supreme Court agrees to hear the case, it grants **certiorari.**[24] If it refuses to hear the case, it denies certiorari. In recent years, the Court has granted certiorari in only about six to ten tax cases per year. Figure C:1-3 and Table C:1-2 provide an overview and summary of the court system with respect to tax matters.

The U.S. Tax Court. The U.S. Tax Court was created in 1942 as a successor to the Board of Tax Appeals. It is a court of national jurisdiction that hears only tax-related cases. All taxpayers, regardless of their state of residence or place of business, may litigate in the Tax Court. It has 19 judges, including one chief judge.[25] The President, with the consent of the Senate, appoints the judges for a 15-year term and may reappoint them for an additional

---

[21] Revenue Procedure 2005-18, 2005-1 C.B. 798, provides procedures for taxpayers to make remittances or apply overpayments to stop the accrual of interest on deficiencies.

[22] The Federal Circuit has nationwide jurisdiction to hear appeals in specialized cases, such as those involving patent laws.

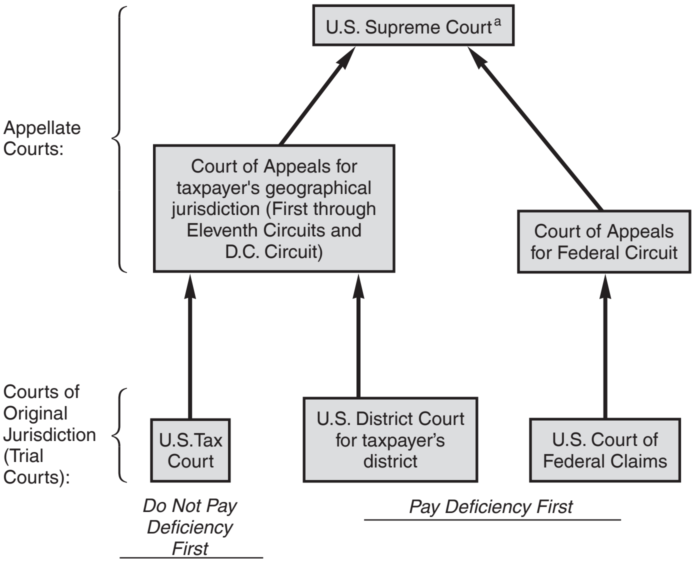
[23] The Court of Claims was reconstituted as the United States Court of Claims in 1982. In 1992, this court was renamed the U.S. Court of Federal Claims.

[24] The granting of certiorari signifies that the Supreme Court is granting an appellate review. The denial of certiorari does not necessarily mean that the Supreme Court endorses the lower court's decision. It simply means the court has decided not to hear the case.

[25] The Tax Court also periodically appoints, depending on budgetary constraints, a number of trial judges and senior judges who hear cases and render decisions with the same authority as the regular Tax Court judges.

▼ TABLE C:1-1
Federal Judicial Circuits

Circuit	States Included in Circuit
First	Maine, Massachusetts, New Hampshire, Rhode Island, Puerto Rico
Second	Connecticut, New York, Vermont
Third	Delaware, New Jersey, Pennsylvania, Virgin Islands
Fourth	Maryland, North Carolina, South Carolina, Virginia, West Virginia
Fifth	Louisiana, Mississippi, Texas
Sixth	Kentucky, Michigan, Ohio, Tennessee
Seventh	Illinois, Indiana, Wisconsin
Eighth	Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota
Ninth	Alaska, Arizona, California, Hawaii, Idaho, Montana, Nevada, Oregon, Washington, Guam, Northern Marina Islands
Tenth	Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming
Eleventh	Alabama, Florida, Georgia
D.C.	District of Columbia
Federal	All jurisdictions (for taxpayers appealing from the U.S. Court of Federal Claims)



U.S. Supreme Court[a]
Appellate Courts:
Court of Appeals for taxpayer's geographical jurisdiction (First through Eleventh Circuits and D.C. Circuit)
Court of Appeals for Federal Circuit
Courts of Original Jurisdiction (Trial Courts):
U.S.Tax Court
U.S. District Court for taxpayer's district
U.S. Court of Federal Claims
Do Not Pay Deficiency First
Pay Deficiency First

[a] Cases are heard only if the Supreme Court grants certiorari.

FIGURE C:1-3 ▶ Overview of Court System—Tax Matters

term. The judges, specialists in tax-related matters, periodically travel to roughly 100 cities throughout the country to hear cases. In most instances, only one judge hears a case.

The Tax Court issues both regular and memorandum (memo) decisions. Generally, the first time the Tax Court decides a legal issue, its decision appears as a **regular decision**. **Memorandum (memo) decisions**, on the other hand, usually deal with factual variations of previously decided cases. Nevertheless, regular and memo decisions carry the same authoritative weight.

At times, the chief judge determines that a particular case concerns an important issue that the entire Tax Court should consider. In such a situation, the words *reviewed by the court* appear at the end of the majority opinion. Any concurring or dissenting opinions follow the majority opinion. A judge who issues a concurring opinion agrees with the basic outcome of the majority's decision but not with its rationale. A judge who issues a dissenting opinion believes the majority reached an erroneous conclusion.

▼ TABLE C:1-2
Summary of Court System—Tax Matters

Court(s) (Number of)	Number of Judges on Each	Personal Jurisdiction	Subject Matter Jurisdiction	Determines Questions of Fact	Trial by Jury	Precedents Followed	Where Opinions Published
U.S. district courts (over 95)	1–28*	Local	General	Yes	Yes	Same court Court for circuit where situated U.S. Supreme Court	*Federal Supplement* *American Federal Tax Reports* *United States Tax Cases*
U.S. Tax Court (1)	19	National	Tax	Yes	No	Same court Court for taxpayer's circuit U.S. Supreme Court	*Tax Court of the U.S. Reports* *CCH Tax Court Memorandum Decisions* *RIA Tax Court Memorandum Decisions*
U.S. Court of Federal Claims (1)	16	National	Claims against U.S. Government	Yes	No	Same court Federal Circuit Court U.S. Supreme Court	*Federal Reporter (pre-1982)* *U.S. Court of Federal Claims* *American Federal Tax Reports* *United States Tax Cases*
U.S. Courts of Appeals (13)	About 20	Regional	General	No	No	Same court U.S. Supreme Court	*Federal Reporter* *American Federal Tax Reports* *United States Tax Cases*
U.S. Supreme Court (1)	9	National	General	No	No	Same court	*U.S. Supreme Court Reports* *Supreme Court Reporter* *United States Reports, Lawyers' Edition* *American Federal Tax Reports* *United States Tax Cases*

*Although the number of judges assigned to each court varies, only one judge hears a case.

Another phrase sometimes appearing at the end of a Tax Court opinion is *Entered under Rule 155*. This phrase signifies that the court has reached a decision concerning the tax treatment of an item but has left computation of the deficiency to the two litigating parties.

SELF-STUDY QUESTION

What are some of the considerations for litigating under the small cases procedure of the Tax Court?

ANSWER

The small cases procedure gives the taxpayer the advantage of having his or her "day in court" without the expense of an attorney. But if the taxpayer loses, the decision cannot be appealed. On the other hand, the IRS also cannot appeal if *it* loses.

Small Cases Procedure. Taxpayers have the option of having their cases heard under the **small cases procedure** of the Tax Court if the amount in controversy on an annual basis does not exceed $50,000.[26] This procedure is less formal than the regular Tax Court procedure, and taxpayers can represent themselves without an attorney.[27] The cases are heard by special commissioners instead of by one of the 19 Tax Court judges. A disadvantage of the small cases procedure for the losing party is that the decision cannot be appealed. The opinions of the commissioners generally are not published and have no precedential value.

Acquiescence Policy. The IRS has adopted a policy of announcing whether, in future cases involving similar facts and similar issues, it will follow federal court decisions that are adverse to it. This policy is known as the IRS **acquiescence policy**. If the IRS wants taxpayers to know that it will follow an adverse decision in future cases involving similar facts and issues, it will announce its "acquiescence" in the decision. Conversely, if it wants taxpayers to know that it will not follow the decision in such future cases, it will announce its "nonacquiescence." The IRS does not announce its acquiescence or nonacquiescence in every decision it loses.

ADDITIONAL COMMENT

The only cases with respect to which the IRS will acquiesce or nonacquiesce are decisions that the government loses. Because the majority of cases, particularly Tax Court cases, are won by the government, the IRS will potentially acquiesce in only a small number of cases.

The IRS publishes its acquiescences and nonacquiescences as "Actions on Decision" first in the *Internal Revenue Bulletin*, then in the *Cumulative Bulletin*. Before 1991, the IRS acquiesced or nonacquiesced in regular Tax Court decisions only. In 1991, it broadened the scope of its policy to include adverse U.S. Claims Court, U.S. district court, and U.S. circuit court decisions.

In cases involving multiple issues, the IRS may acquiesce in some issues but not others. In decisions supported by extensive reasoning, it may acquiesce in the result but not the rationale (*acq. in result*). Furthermore, it may retroactively revoke an acquiescence or nonacquiescence. The footnotes to the relevant announcement in the *Internal Revenue Bulletin* and *Cumulative Bulletin* indicate the nature and extent of IRS acquiescences and nonacquiescences.

These acquiescences and nonacquiescences have important implications for taxpayers. If a taxpayer bases his or her position on a decision in which the IRS has nonacquiesced, he or she can expect an IRS challenge in the event of an audit. In such circumstances, the taxpayer's only recourse may be litigation. On the other hand, if the taxpayer bases his or her position on a decision in which the IRS has acquiesced, he or she can expect little or no challenge. In either case, the examining agent will be bound by the IRS position.

ADDITIONAL COMMENT

If a particular case is important, the chief judge will instruct the other judges to review the case. If a case is reviewed by the entire court, the phrase *reviewed by the court* is inserted immediately after the text of the majority opinion. A reviewed decision provides an opportunity for Tax Court judges to express their dissenting opinions.

Published Opinions and Citations. Regular Tax Court decisions are published by the U.S. Government Printing Office in a bound volume known as the *Tax Court of the United States Reports*. Soon after a decision is made public, Research Institute of America (RIA) and Commerce Clearing House (CCH) each publish the decision in its respective reporter of Tax Court decisions. An official citation to a Tax Court decision is as follows:[28]

> *MedChem Products, Inc.*, 116 T.C. 308 (2001).

The citation indicates that this case appears on page 308 in Volume 116 of *Tax Court of the United States Reports* and that the case was decided in 2001.

---

[26] Sec. 7463. The $50,000 amount includes penalties and additional taxes but excludes interest.

[27] Taxpayers also can represent themselves in regular Tax Court proceedings even though they are not attorneys. Where taxpayers represent themselves, the words *pro se* appear in the opinion after the taxpayer's name. The Tax Court is the only federal court before which non-attorneys, including CPAs, may practice.

[28] In a citation to a case decided by the Tax Court, only the name of the plaintiff (taxpayer) is listed. The defendant is understood to be the Commissioner of Internal Revenue whose name usually is not shown in the citation. In cases decided by other courts, the name of the plaintiff is listed first and the name of the defendant second. For non-Tax Court cases, the Commissioner of Internal Revenue is referred to as *CIR* in our footnotes and text.

From 1924 to 1942, regular decisions of the Board of Tax Appeals (predecessor of the Tax Court) were published by the U.S. Government Printing Office in the *United States Board of Tax Appeals Reports*. An example of a citation to a Board of Tax Appeals case is as follows:

J.W. Wells Lumber Co. Trust A., 44 B.T.A. 551 (1941).

This case is found in Volume 44 of the *United States Board of Tax Appeals Reports* on page 551. It is a 1941 decision.

If the IRS has acquiesced or nonacquiesced in a federal court decision, the IRS's action should be denoted in the citation. At times, the IRS will not announce its acquiescence or nonacquiescence until several years after the date of the decision. An example of a citation to a decision in which the IRS has acquiesced is as follows:

Security State Bank, 85 AFTR 2d 2000-1980, *acq.* 2001-001.

The case appears on page 2000-1980 of Volume 85 of the AFTR, Second Series. In 2001, the IRS acquiesced in this decision. A citation to a decision in which the IRS has nonacquiesced is as follows:

Estate of Algerine Allen Smith, 108 T.C. 412 (1997), *nonacq.* A.O.D. 2000-1.

The case appears on page 412 of Volume 108 of the *Tax Court of the United States Reports*. In 2000, the IRS nonacquiesced in this 1997 decision.

Tax Court memo decisions are not published by the U.S. Government Printing Office. They are, however, published by RIA in *RIA T.C. Memorandum Decisions* and by CCH in *CCH Tax Court Memorandum Decisions*. In addition, shortly after its issuance, an opinion is made available electronically and in loose-leaf form by RIA and CCH in their respective tax services. The following citation is to a Tax Court memo decision:

Edith G. McKinney, 1981 PH T.C. Memo ¶81,181 (T.C. Memo 1981-181), 41 TCM 1272.

McKinney is found at Paragraph 81,181 of Prentice Hall's (now RIA's)[29] 1981 *PH T.C. Memorandum Decisions* reporter, and in Volume 41, page 1272, of CCH's *Tax Court Memorandum Decisions*. The 181 in the PH citation indicates that the case is the Tax Court's 181st memo decision of the year. A more recent citation is formatted in the same way but refers to RIA memo decisions.

Paul F. Belloff, 1992 RIA T.C. Memo ¶92,346 (T.C. Memo 1992-346), 63 TCM 3150.

ADDITIONAL COMMENT

Once the IRS has acquiesced in a federal court decision, other taxpayers generally will not need to litigate the same issue. However, the IRS can change its mind and revoke a previous acquiescence or nonacquiescence. References to acquiescences or nonacquiescences in federal court decisions can be found in the citators.

KEY POINT

To access all Tax Court cases, a tax advisor must refer to two different publications. The regular opinions appear in the *Tax Court of the United States Reports,* published by the U.S. Government Printing Office, and the memo decisions are published by both RIA (formerly PH) and CCH in their own court reporters.

ADDITIONAL COMMENT

In its Internet-based tax service (see page C:1-26), RIA uses a different format for its Tax Court Memorandum Decisions, which in this text appear in parentheses after the "official" RIA citation.

U.S. District Courts. Each state has at least one U.S. district court, and more populous states have more than one. Each district court is independent of the others and is thus free to issue its own decisions, subject to the precedential constraints discussed later in this chapter. Different types of cases—not just tax-related—are adjudicated in this forum. A district court is the only forum in which the taxpayer may have a jury decide questions of fact. Depending on the circumstances, a jury trial might be advantageous for the taxpayer.[30]

District court decisions are officially reported in the *Federal Supplement* (cited as F. Supp.) published by West®. Some decisions are not officially reported and are referred to as **unreported decisions**. Decisions by U.S. district courts on the topic of taxation also are published by RIA and CCH in secondary reporters that contain only tax-related opinions. RIA's reporter is *American Federal Tax Reports* (cited as AFTR).[31] CCH's reporter is *U.S. Tax Cases* (cited as USTC). A case not officially reported nevertheless might be published in the AFTR and USTC. An example of a complete citation to a U.S. district court decision is as follows:

---

[29] Several ownership changes have occurred for publishers of tax service materials. Thomson Reuters added the former Prentice Hall tax materials to the product line of its RIA tax publishing division. RIA and West® are members of Thomson Reuters, Tax and Accounting Division, and CCH is a member of the Wolters Kluwer Tax, Accounting and Legal Division.

[30] Taxpayers might prefer to have a jury trial if they believe a jury will be sympathetic to their case.

> *Alfred Abdo, Jr. v. IRS,* 234 F. Supp. 2d 533, 90 AFTR 2d 2002-7484, 2003-1 USTC ¶50,107 (DC North Carolina, 2002).

ADDITIONAL COMMENT

A citation, at a minimum, should contain the following information: (1) the name of the case, (2) the reporter that publishes the case along with both a volume and page (or paragraph) number, (3) the year the case was decided, and (4) the court that decided the case.

In the example above, the **primary citation** is to the *Federal Supplement*. The case appears on page 533 of Volume 234 of the second series of this reporter. **Secondary citations** are to *American Federal Tax Reports* and *U.S. Tax Cases*. The same case is found in Volume 90 of the second series of the AFTR, page 2002-7484 (meaning page 7484 in the volume containing 2002 cases) and in Volume 1 of the 2003 USTC at Paragraph 50,107. The parenthetical information indicates that the case was decided in 2002 by the U.S. District Court for North Carolina. Because some judicial decisions have greater precedential weight than others (e.g., a Supreme Court decision versus a district court decision), information relating to the identity of the adjudicating court is useful in evaluating the authoritative value of the decision.

ADDITIONAL COMMENT

The U.S. Court of Federal Claims adjudicates claims (including suits to recover federal income taxes) against the U.S. Government. This court usually hears cases in Washington, D.C., but will hold sessions in other locations as the court deems necessary.

U.S. Court of Federal Claims. The U.S. Court of Federal Claims, another court of first instance that addresses tax matters, has nationwide jurisdiction. Originally, this court was called the U.S. Court of Claims (cited as Ct. Cl.), and its decisions were appealable to the U.S. Supreme Court only. In a reorganization, effective October 1, 1982, the reconstituted court was named the U.S. Claims Court (cited as Cl. Ct.), and its decisions became appealable to the Circuit Court of Appeals for the Federal Circuit. In October 1992, the court's name was again changed to the U.S. Court of Federal Claims (cited as Fed. Cl.).

Beginning in 1982, U.S. Claims Court decisions were reported officially in the *Claims Court Reporter,* published by West® from 1982 to 1992.[32] An example of a citation to a U.S. Claims Court decision appears below:

> *Benjamin Raphan v. U.S.,* 3 Cl. Ct. 457, 52 AFTR 2d 83-5987, 83-2 USTC ¶9613 (1983).

The *Raphan* case appears on page 457 of Volume 3 of the *Claims Court Reporter*. Secondary citations are to Volume 52, page 83-5987 of the AFTR, Second Series, and to Volume 2 of the 1983 USTC at Paragraph 9613.

Effective with the 1992 reorganization, decisions of the U.S. Court of Federal Claims are now reported in the *Federal Claims Reporter.* An example of a citation to an opinion published in this reporter is presented below:

> *Jeffrey G. Sharp v. U.S.,* 27 Fed. Cl. 52, 70 AFTR 2d 92-6040, 92-2 USTC ¶50,561 (1992).

The *Sharp* case appears on page 52 of Volume 27 of the *Federal Claims Reporter,* on page 6040 of the 70th volume of the AFTR, Second Series, and at Paragraph 50,561 of Volume 2 of the 1992 USTC reporter. Note that, even though the name of the reporter published by West® has changed, the volume numbers continue in sequence as if no name change had occurred.

---

[31] The *American Federal Tax Reports* (AFTR) is published in two series. The first series, which includes opinions issued up to 1957, is cited as AFTR. The second series, which includes opinions issued after 1957, is cited as AFTR 2d. The *Alfred Abdo, Jr.* decision cited as an illustration of a U.S. district court decision appears in the second *American Federal Tax Reports* series.

[32] Before the creation in 1982 of the U.S. Claims Court (and the *Claims Court Reporter*), the opinions of the U.S. Court of Claims were reported in either the *Federal Supplement* (F. Supp.) or the *Federal Reporter, Second Series* (F.2d). The *Federal Supplement* is the primary source of U.S. Court of Claims opinions from 1932 through January 19, 1960. Opinions issued from January 20, 1960 to October 1982 are reported in the *Federal Reporter, Second Series.*

Circuit Courts of Appeals. Lower court decisions are appealable by the losing party to the court of appeals for the circuit in which the litigation originated. Generally, if the case began in the Tax Court or a U.S. district court, the case is appealable to the circuit for the individual's residence as of the appeal date. For a corporation, the case is appealable to the circuit for the corporation's principal place of business. The Federal Circuit hears all appeals of cases originating in the U.S. Court of Federal Claims.

As mentioned earlier, there are 11 geographical circuits designated by numbers, the District of Columbia Circuit, and the Federal Circuit. In October 1981, the Eleventh Circuit was created by moving Alabama, Georgia, and Florida from the Fifth to a new geographical circuit. The Eleventh Circuit has adopted the policy of following as precedent all decisions of the Fifth Circuit during the time the states currently constituting the Eleventh Circuit were part of the Fifth Circuit.[33]

EXAMPLE C:1-7 ▶ In the current year, the Eleventh Circuit first considered an issue in a case involving a Florida taxpayer. In 1980, the Fifth Circuit had ruled on the same issue in a case involving a Louisiana taxpayer. Because Florida was part of the Fifth Circuit in 1980, under the policy adopted by the Eleventh Circuit, it will follow the Fifth Circuit's earlier decision. Had the Fifth Circuit's decision been rendered in 1982—after the creation of the Eleventh Circuit—the Eleventh Circuit would not have been bound by the Fifth Circuit's decision. ◀

As the later discussion of precedent points out, different circuits may reach different conclusions concerning similar facts and issues.

Circuit court decisions—regardless of topic (e.g., civil rights, securities law, and taxation)—are now reported officially in the *Federal Reporter, Third Series* (cited as F.3d), published by West®. The third series was created in October 1993 after the volume number for the second series reached 999. The primary citation to a circuit court opinion should be to the *Federal Reporter*. Tax decisions of the circuit courts also appear in the *American Federal Tax Reports* and *U.S. Tax Cases*. Below is an example of a citation to a 1994 circuit court decision:

> *Greene v. U.S.*, 185 F. 3d 67, 84 AFTR 2d 99-5415, 99-2 USTC ¶50,701 (3rd Cir., 1999).

The *Greene* case appears on page 67 of Volume 185 of the *Federal Reporter, Third Series*. It also is published in Volume 84, page 99-5415 of the AFTR, Second Series, and in Volume 2, Paragraph 50,701, of the 1999 USTC. The parenthetical information indicates that the Third Circuit decided the case in 1999. (A *Federal Reporter, Second Series* reference is found in footnote 33 of this chapter.)

ADDITIONAL COMMENT

A judge is not required to follow judicial precedent beyond his or her jurisdiction. Thus, the Tax Court, the U.S. district courts, and the U.S. Court of Federal Claims are not required to follow the others' decisions, nor is a circuit court required to follow the decision of a different circuit court.

U.S. Supreme Court. Whichever party loses at the appellate level can request that the U.S. Supreme Court hear the case. The Supreme Court, however, hears very few tax cases. Unless the circuits are divided on the tax treatment of an item, or the issue is deemed to be of great significance, the Supreme Court probably will not hear the case.[34] Supreme Court decisions are the law of the land and take precedence over all other court decisions, including the Supreme Court's earlier decisions. As a practical matter, a Supreme Court interpretation of the IRC is almost as authoritative as an act of Congress. If Congress does not agree with the Court's interpretation, it can amend the IRC to achieve a different result and has in fact done so on a number of occasions. If the Supreme Court declares a tax statute to be unconstitutional, the statute is invalid.

All Supreme Court decisions, regardless of subject, are published in the *United States Supreme Court Reports* (cited as U.S.) by the U.S. Government Printing Office, the *Supreme Court Reporter* (cited as S. Ct.) by West®, and the *United States Reports, Lawyers' Edition* (cited as L. Ed.) by LexisNexis®. In addition, the AFTR and USTC reporters published by RIA and CCH, respectively, contain Supreme Court decisions concerned with taxation. An example of a citation to a Supreme Court opinion appears below:

---

[33] *Bonner v. City of Prichard*, 661 F.2d 1206 (11th Cir., 1981).

[34] *Vogel Fertilizer Co. v. U.S.*, 49 AFTR 2d 82-491, 82-1 USTC ¶9134 (USSC, 1982), is an example of a case the Supreme Court heard to settle a split in judicial authority. The Fifth Circuit, the Tax Court, and the Court of Claims had reached one conclusion on an issue, while the Second, Fourth, and Eighth Circuits had reached another.

> *Boeing Company v. U.S.*, 537 U.S. 437, 91 AFTR 2d 2003-1088, 2003-1 USTC ¶50,273 (USSC, 2003).

According to the primary citation, this case appears in Volume 537, page 437, of the *United States Supreme Court Reports*. According to the secondary citation, it also appears in Volume 91, page 2003-1088, of the AFTR, Second Series, and in Volume 1, Paragraph 50,273, of the 2003 USTC.

Table C:1-3 provides a summary of how the IRC, court decisions, revenue rulings, revenue procedures, and other administrative pronouncements should be cited. Primary citations are to the reporters published by West® or the U.S. Government Printing Office, and secondary citations are to the AFTR and USTC.

SELF-STUDY QUESTION

Is it possible for the Tax Court to intentionally issue conflicting decisions?

ANSWER

Yes. If the Tax Court issues two decisions that are appealable to different circuit courts and these courts have previously reached different conclusions on the issue, the Tax Court follows the respective precedent in each circuit and issues conflicting decisions. This is a result of the *Golsen* Rule.

Precedential Value of Various Decisions

Tax Court. The Tax Court is a court of national jurisdiction. Consequently, it generally rules uniformly for all taxpayers, regardless of their residence or place of business. It follows U.S. Supreme Court decisions and its own earlier decisions. It is not bound by cases decided by the U.S. Court of Federal Claims or a U.S. district court, even if the district court has jurisdiction over the taxpayer.

In 1970, the Tax Court adopted what is known as the *Golsen* Rule.[35] Under this rule, the Tax Court departs from its general policy of adjudicating uniformly for all taxpayers and instead follows the decisions of the court of appeals to which the case in question is appealable. Stated differently, the *Golsen* Rule mandates that the Tax Court rule consistently with decisions of the court for the circuit where the taxpayer resides or does business.

EXAMPLE C:1-8 ▶ In the year in which an issue was first litigated, the Tax Court decided that an expenditure was deductible. The government appealed the decision to the Tenth Circuit Court of Appeals and won a reversal. This is the only appellate decision regarding the issue. If and when the Tax Court addresses this issue again, it will hold, with one exception, that the expenditure is deductible. The exception applies to taxpayers in the Tenth Circuit. Under the *Golsen* Rule, these taxpayers will be denied the deduction. ◀

U.S. District Court. Because each U.S. district court is independent of the other district courts, the decisions of each have precedential value only within its own jurisdiction (i.e., only with respect to subsequent cases brought before that court). District courts must follow decisions of the U.S. Supreme Court, the circuit court to which the case is appealable, and the district court's own earlier decisions regarding similar facts and issues.

EXAMPLE C:1-9 ▶ The U.S. District Court for Rhode Island, the Tax Court, and the Eleventh Circuit have decided cases involving similar facts and issues. Any U.S. district court within the Eleventh Circuit must follow that circuit's decision in future cases involving similar facts and issues. Likewise, the U.S. District Court for Rhode Island must decide such cases consistently with its previous decision. Tax Court decisions are not binding on the district courts. Thus, all district courts other than the one for Rhode Island and those within the Eleventh Circuit are free to decide such cases independently. ◀

U.S. Court of Federal Claims. In adjudicating a case, the U.S. Court of Federal Claims must rule consistently with U.S. Supreme Court decisions, decisions of the Circuit Court of Appeals for the Federal Circuit, and its own earlier decisions, including those rendered when the court had a different name. It need not follow decisions of other circuit courts, the Tax Court, or U.S. district courts.

---

[35] The *Golsen* Rule is based on the decision in *Jack E. Golsen*, 54 T.C. 742 (1970).

EXAMPLE C:1-10 ▶ Assume the same facts as in Example C:1-9. In a later year, a case involving similar facts and issues is heard by the U.S. Court of Federal Claims. This court is not bound by precedents set by any of the other courts. Thus, it may reach a conclusion independently of the other courts. ◀

Circuit Courts of Appeals. A circuit court is bound by U.S. Supreme Court decisions and its own earlier decisions. If neither the Supreme Court nor the circuit in question has already decided an issue, the circuit court has no precedent that it must follow, regardless of whether other circuits have ruled on the issue. In such circumstances, the circuit court is said to be writing on a clean slate. In rendering a decision, the judges of that court may adopt another circuit's view, which they are likely to regard as relevant.

EXAMPLE C:1-11 ▶ Assume the same facts as in Example C:1-9. Any circuit other than the Eleventh would be writing on a clean slate if it adjudicated a case involving similar facts and issues. After reviewing the Eleventh Circuit's decision, another circuit might find it relevant and rule in the same way. ◀

In such a case of "first impression," when the court has had no precedent on which to base a decision, a tax practitioner might look at past opinions of the court to see which other judicial authority the court has found to be "persuasive."

Forum Shopping. Not surprisingly, courts often disagree on the tax treatment of the same item. This disagreement gives rise to differing precedents within the various jurisdictions (what is called a "split in judicial authority"). Because taxpayers have the flexibility of choosing where to file a lawsuit, these circumstances afford them the opportunity to **forum shop**. Forum shopping involves choosing where among the courts to file a lawsuit based on differing precedents.

An example of a split in judicial authority concerned the issue of when it became too late for the IRS to question the tax treatment of items that "flowed through" an S corporation's return to a shareholder's return. The key question was this: if the time for assessing a deficiency (limitations period) with respect to the corporation's, but not the shareholder's, return had expired, was the IRS precluded from collecting additional taxes from the shareholder? In *Kelley*,[36] the Ninth Circuit Court of Appeals ruled that the IRS would be barred from collecting additional taxes from the shareholder if the limitations period for the *S corporation's* return had expired. In *Bufferd*,[37] *Fehlhaber*,[38] and *Green*,[39] three other circuit courts ruled that the IRS would be barred from collecting additional taxes from the shareholder if the limitations period for the *shareholder's* return had expired. The Supreme Court affirmed the *Bufferd* decision,[40] establishing that the statute of limitations for the shareholder's return governed. This action brought about certainty and uniformity within the judicial system.

Dictum. At times, a court may comment on an issue or a set of facts not central to the case under review. A court's remark not essential to the determination of a disputed issue, and therefore not binding authority, is called *dictum*. An example of dictum is found in *Central Illinois Public Service Co.*[41] In this case, the U.S. Supreme Court addressed whether lunch reimbursements received by employees constitute wages subject to withholding. Justice Blackman remarked in passing that earnings in the form of interest, rents, and dividends are not wages. This remark is dictum because it is not essential to the determination of whether lunch reimbursements are wages subject to withholding. Although not authoritative, dictum may be cited by taxpayers to bolster an argument in favor of a particular tax result.

STOP & THINK

Question: You have been researching whether an amount received by your new client can be excluded from her gross income. The IRS is auditing the client's prior year tax return, which another firm prepared. In a similar case decided a few years ago, the Tax Court allowed an exclusion, but the IRS nonacquiesced in the decision. The case involved a taxpayer in the Fourth Circuit. Your client is a resident of Maine, which is in the First Circuit. Twelve years ago, in a case involving another taxpayer, the federal court for the client's district ruled that this type of receipt is not excludable. No other precedent exists. To sustain an exclusion, must your client litigate? Explain. If your client litigates, in which court of first instance should she begin her litigation?

Solution: Because of its nonacquiescence, the IRS is likely to challenge your client's tax treatment. Thus, she may be compelled to litigate. She would not want to litigate in her U.S. district court because it would be bound by its earlier decision, which is unfavorable to taxpayers generally. A good place to begin would be the Tax Court because it is bound by appellate court, but not district court, decisions and because of its earlier pro-taxpayer position. No one can predict how the U.S. Court of Federal Claims would rule because no precedent that it must follow exists.

ADDITIONAL COMMENT

A tax treaty carries the same authoritative weight as a federal statute (IRC). A tax advisor should be aware of provisions in tax treaties that will affect a taxpayer's worldwide tax liability.

TAX TREATIES

The United States has concluded **tax treaties** with numerous foreign countries. These treaties address the alleviation of double taxation and other matters. A tax advisor exploring the U.S. tax consequences of a U.S. corporation's operations in another country should determine whether a treaty between that country and the United States exists. If one does, the tax advisor should ascertain the applicable provisions of the treaty.

KEY POINT

Tax articles can be used to help *find* answers to tax questions. Where possible, the underlying statutory, administrative, or judicial sources referenced in the tax article should be cited as authority and not the author of the article. The courts and the IRS will place little, if any, reliance on mere editorial opinion.

TAX PERIODICALS

Tax periodicals assist the researcher in tracing the development of, and analyzing tax law. These periodicals are especially useful when they discuss the legislative history of a recently enacted IRC statute that has little or no administrative or judicial authority on point.

Tax experts write articles on landmark court decisions, proposed regulations, new tax legislation, and other matters. Frequently, those who write articles of a highly technical nature are attorneys, accountants, or professors. Among the periodicals that provide in-depth coverage of tax-related matters are the following:

Journal of Taxation
The Tax Adviser
Practical Tax Strategies
Taxes—The Tax Magazine
Tax Law Review
Tax Notes
Corporate Taxation
PPC's Guide to Buying or Selling a Business
PPC's Guide to Real Estate Taxation
Estate Planning

The first six journals are generalized; that is, they deal with a variety of topics. As their titles suggest, the next four are specialized; they deal with specific subjects. All these publications (other than *Tax Notes,* which is published weekly) are published monthly, bi-monthly, or quarterly. Daily newsletters, such as the *Daily Tax Report,* published by Bloomberg BNA in print and electronic formats, are used by tax professionals when they need updates more timely than can be provided by monthly or quarterly publications.

Tax periodicals and tax services are secondary authorities. The IRC, Treasury Regulations, IRS pronouncements, and court opinions are primary authorities. In presenting research results, the tax advisor should always cite primary authorities.

TAX SERVICES

OBJECTIVE 5

Consult tax services to research an issue

Various publishers provide multivolume commentaries on the tax law in what are familiarly referred to as **tax services**. Researchers often consult tax services at the beginning of the research process because a tax service helps identify the tax authorities pertaining to a particular tax issue. The actual tax authorities (e.g., IRC, Treasury Regulations, IRS pronouncements, and court cases), and not the tax services, are generally cited as support for a particular tax position. The services are available in print form via the publishers and electronic form via the Internet. (See further discussion at "The Internet as a Research Tool" later in this chapter.) Although each major tax service is an outstanding resource, significant differences exist in the content and organizational scheme from one publisher to the next. For example, each service has its own special features and editorial approach to tax issues along with a great deal of proprietary content. The best way to acquaint oneself with the various tax services and the advantages and disadvantages of each is to use them in researching hypothetical or actual problems.

Organizationally, tax services fall into two types: annotated and topical (although this distinction has become somewhat blurred in the Internet version of these services). An **annotated tax service** is organized by IRC section. The IRC-arranged subdivisions of this service are likely to encompass several topics. The annotations accompany editorial commentaries and include digests or summaries of IRS pronouncements and court opinions that interpret a particular IRC section. They are classified by subtopic and cite pertinent primary authorities. A **topical tax service**, on the other hand, is organized by broad topic, including income taxes, estate and gift taxes, and excise taxes. The topically arranged subdivisions of this service are likely to encompass several IRC sections.

Annotated tax services include the *United States Tax Reporter* and the *Standard Federal Tax Reporter* services, both of which are organized by IRC section. Many tax advisors find these reporters easy to use because of their extensive indexing system. Topical tax services include RIA's *Federal Tax Coordinator Analysis* and Bloomberg BNA's *Tax Management Portfolios*. *Tax Management Portfolios* are popular with many tax advisors because they are very readable yet still provide a comprehensive discussion of a broad range of tax issues. Each portfolio (e.g., Passive Loss Rules, Portfolio 549) covers a particular topic in great detail. However, because the published portfolios do not cover all areas of the tax law, another service may be necessary to supplement the gaps in a portfolio's coverage. Table C:1-4 summarizes the organization and key features of the major tax services.

▼ **TABLE C:1-4**
Summary of Key Features of Tax Services

Name	Publisher	Organization	Key Features
United States Tax Reporter	Thomson Reuters/RIA	IRC section number	• Editorial commentary • Index and findings list • Annotations
Standard Federal Tax Reporter	Wolters Kluwer/CCH	IRC section number	• Editorial commentary • Index and findings list • Annotations
Federal Tax Coordinator Analysis	Thomson Reuters/RIA	Tax topic (income tax by topic, estate and gift taxes, excise taxes)	• Commentary organized by topic with references to primary authority and tabbed access to IRC and Treasury Regulations.
Tax Management Portfolios	Bloomberg BNA	U.S. income, foreign income, state tax, estate and gift tax	• Over 400 specialized booklets with extensive commentary by topic, heavily footnoted and referenced to primary authority.

THE INTERNET AS A RESEARCH TOOL

OBJECTIVE 6

Apply the basics of Internet-based tax research

Internet databases are rapidly replacing print-based services as the principal source of tax related information. These databases encompass not only the IRC, Treasury Regulations, court cases, state laws, and other primary authorities, but also citators and secondary sources such as tax service reporters, treatises, journals, and newsletters. The principal advantages of using Internet-based tax services are ease and speed of access. These services eliminate the need for searching through several volumes of text, the need for consulting numerous cumulative supplements, and the time required to regularly update a print-based library. In addition, Internet based research tools put a vast amount of information in the hands of a tax practitioner without the cost and space requirements of a well equipped print-based tax library.

ADDITIONAL COMMENT

To apply the online research tools discussed in this chapter, users must have access to the described Internet-based tax services at their institution.

Because of these advantages, the Internet has become the principal medium for conveying tax related information to professionals. The most widely used Internet-based research services are RIA's Checkpoint^{TM} (hereafter CHECKPOINT) and CCH IntelliConnect^{TM}/AnswerConnect^{TM}; Westlaw®[42] and LexisNexus are online legal research services that are predominately used by legal professionals.[43] This chapter discusses the use of internet-based tax services in general and uses CHECKPOINT for illustrative purposes. Similar features will exist for other major tax services.

The tax services include a variety of libraries that will vary by vendor (e.g., CCH or RIA) and by subscription type (limited or comprehensive). The core of any tax service covers federal taxes but also can cover state and local taxes, estate planning, payroll taxes, pensions, international tax, and financial planning. The federal libraries will include text of the IRC, Treasury Regulations, IRS pronouncements, court opinions, and other primary sources. In addition, the Internet services will include a section containing daily updates for important tax developments in the subscribed practice areas as well as the annotated and/or topical tax services discussed previously, such as the *United States Tax Reporter* (CCH) and the *Federal Tax Coordinator Analysis* (RIA). State and local libraries will include tax reporters for all 50 states as well as various multi-state tax guides that provide useful state-by-state comparisons for selected state tax topics (e.g., combined reporting and apportionment methods). Other libraries, such as those covering estate and gift taxes, pensions, and payroll taxes, provide detailed information for professionals heavily engaged in these specialized areas of tax practice.

Libraries and databases in Internet services can be searched in three basic ways:

- By keyword
- By citation
- By index

EXAMPLE C:1-12 ▶ Rhonda Researcher's client is a real estate developer and wants to exchange an office building for a residential condominium in the same town. The client wants to know if he can structure the transaction in a tax advantaged way. Rhonda immediately recognizes the situation as a potential like-kind exchange of real property. Therefore, she undertakes a keyword search using the term *like-kind exchange* to quickly uncover potentially applicable documents. She also knows that Sec. 1031 is the relevant IRC section and can search the IRC or Treasury Regulations by citation. On the other hand, if she were unfamiliar with the topic, she could employ several other options. For example, she may browse the index, which is arranged alphabetically by topic. The index entries under "like-kind exchange" direct Rhonda to a number of entries potentially applicable to the transaction. ◀

Most tax professionals conduct tax research using the keyword and citation methods. We discuss these two methods in more detail below.

---

[42] Westlaw® is owned by Thomson Reuters.

[43] The research products discussed in this section (e.g., CHECKPOINT Edge (RIA), CCH IntelliConnect^{TM}/AnswerConnect^{TM}, Westlaw®, and LexisNexus) generally are available only to paid subscribers.

KEYWORD SEARCHES

Searching tax services by keyword is relatively simple, particularly if the researcher is familiar with the Internet. The first step is to select which source (e.g., IRC or editorial materials) to search, perform an initial keyword search, and refine the results after the initial query. The researcher can choose to search across any combination of the available databases. The CHECKPOINT Federal databases include primary sources such as the Internal Revenue Code, Treasury Regulations, and Federal Tax Cases along with editorial databases such as RIA's *Federal Tax Coordinator Analysis*. Deciding which database to include in the search depends partly on the expected complexity of the research question and on the researcher's familiarity with the topic.

The search engines within the services look for the terms selected and many variations of the terms. For example, the search for *auto* will return documents with auto, car, automobile, motor vehicle, passenger vehicle, sedan, and others.[44] Searches will include both singular and plural variations. Any document with the term or terms is returned and ranked by best match according to the search. If two terms are used, the best matches generally are documents where the terms are close together. Choosing effective search terms is critical to success. The search must be broad enough to include relevant documents but not so broad to include hundreds or thousands of documents unlikely to be on point.

For example, if the researcher selects the database containing court cases, the term *property exchange* returns thousands of results that have both the words *property* and *exchange* somewhere in the document. Clearly, this outcome is too broad for a researcher just beginning his or her research. Fortunately, several methods of narrowing the search exist. For example, the keyword search "property exchange" that uses quotation marks around the search phrase will return documents only with that exact phrase. Thus, quotation marks should be used sparingly and only when the researcher knows the precise phrase. Using Boolean connectors is helpful as well. These connectors force the search engine to narrow the search based on the parameters set. Table C:1-5 provides a partial list of connectors available in CHECKPOINT.

Another way to narrow a search is to focus on terms unique to the research question at hand. The goal is to identify tax related terms likely to appear only in relevant tax

▼ TABLE C:1-5
Connectors Used in CHECKPOINT

Connector	Description	Examples
&, and	Retrieves documents with both terms.	property & exchange
|, or	Retrieves documents with either term.	property | exchange
^, not	Retrieves documents with one term but not the other.	property ^ exchange
/n	Retrieves documents in which the first term is separated from the second term by no more than n number of words.	property /5 exchange Locates property within 5 words of exchange
/s	Retrieves documents that contain the first term within 20 words of the second term (or within the same sentence for RIA).	property /s exchange
/p	Retrieves documents that contain the first term within 80 words of the second term (or within the same paragraph for RIA).	property /p exchange
" "	Exact phrase.	"property exchange"
*	Keyword variation.	Deprecia* returns depreciation, depreciate, depreciated, depreciating
?	Keyword variation.	Advis?r returns advisor and adviser

---

[44] Tax services provide a thesaurus tool, which can identify synonyms and suggest alternative terms related to search terms used by the researcher. The search engine automatically searches for synonyms unless the researcher restricts the search to specific terms using Boolean connectors or quotation marks. For example, a search for the specific phrase "automobile depreciation" will not return documents that refer to *auto*, *car*, or *vehicle*.

authorities. For example, stamps are a type of collectible, but the term also will appear in documents discussing taxation of distilled spirits, food stamps, and store stamps and coupons. The researcher should begin the search with limiting terms such as *collectible* rather than the broader term *stamps*. Also, researchers with a good working knowledge of the IRC quickly learn that using IRC sections in search terms is a great way to obtain relevant documents. Browsing the index containing editorial content can identify helpful keywords.

Searching using key words is a skill that improves with practice. Researchers becoming familiar with using the databases will learn to craft search terms that include the most relevant elements of the question at hand. Once the researcher finds a document on point, the information within that document often can be used to narrow future searches. The search can be repeated by adding terms, or the documents returned originally can be searched using a new set of terms. Also, the "search within results" feature offered by major tax services is helpful when the search returns too many documents. However, if searches by keyword search do not return the desired results, other options exist.

SEARCH BY CITATION

Often the desired document is a specific IRC section, Treasury Regulation, court case, IRS pronouncement, or other document. If so, tax services offer searches by specific citation. Researchers must be careful to use exact citations using this tool because close matches will not return the desired document.

Within tax services, the citation search tools provide dedicated boxes in which to type the specific type of document requested. For example, to search for IRC Sec. 267, the researcher simply types 267 in the box labeled Current Code in CHECKPOINT under the "Find by Citation" link. Specific boxes also exist for various Treasury Regulations, court decisions, revenue rulings, revenue procedures, and other IRS pronouncements.

NONCOMMERCIAL INTERNET SERVICES

Many noncommercial institutions, such as governments and universities, allow access to their tax-related databases via the Internet. In "tax-surfing" the Internet, the researcher might first visit the IRS site located at *www.irs.gov*. Although oriented to the layperson, this site contains a wealth of information useful to the tax professional. Such information includes guidelines for electronic filing, IRS forms and instructions, the full text of Treasury Regulations, and recent issues of the *Internal Revenue Bulletin*. Other useful sites include those maintained by the Library of Congress at *www.loc.gov* and the U.S. Government Publishing Office Federal Digital System at *www.govinfo.gov*. From these sites, the researcher can retrieve the text of recent court opinions, tax legislation, committee reports, state and federal tax laws, and much more.

Cornell Law School offers free access to the entire U.S. Code and Code of Federal Regulations, including the Internal Revenue Code and applicable Treasury Regulations, at *law.cornell.edu*. From the same link users can also access a wealth of state law resources, including state constitutions, statutes, and regulations. Instrumental in financial accounting searches is the Electronic Data Gathering, Analysis, and Retrieval (EDGAR) site at *www.sec.gov/search-filings*. EDGAR is a document filing and retrieval service sponsored by the U.S. Securities and Exchange Commission (SEC). It provides access to the full text of documents filed with the SEC by publicly traded companies. These documents include annual financial statements on Form 10-K, quarterly financial statements on Form 10-Q, proxy statements, and prospectuses. The EDGAR database extends from January 1994 to the present and is accessible by company name, central index key, document file number, and keyword.

CITATORS

OBJECTIVE 7

Use a citator to assess tax authorities

Citators serve two functions. First, they trace the judicial history of a particular case (e.g., if the case under analysis is an appeals court decision, the citator indicates the lower court that heard the case and whether the Supreme Court reviewed the case). Second, they list other authorities (e.g., cases and IRS pronouncements) that cite the case or authority in question. These listed authorities are called *citing cases* or *citing rulings*. The judicial history also indicates whether the case is affirmed, reversed or remanded.[45]

Because tax law relies heavily on precedent, the citator provides an index of citing cases and rulings that help the researcher determine the strength of the case or ruling he or she is evaluating. The citator gives full citations for the citing case and lists where the citing cases can be found. It is important to note that the same case may have as many as three decisions (i.e., lower court, court of appeals, and Supreme Court) with each listing having its own list of citing cases. Therefore, if a citing case cites only the Supreme Court decision, the citator will list it only under the Supreme Court cite. The citator allows the researcher to enter case names or case citations. The discussion in this section focuses on the electronic version of the citators, although print versions also exist.

The basic function of a citator is to provide the history of each authority and list cases and pronouncements that have cited the authority. Also, the citator often provides additional information about the citing case, showing whether the citing authorities comment favorably or unfavorably on the cited case or whether they can be distinguished from the cited case.[46]

In addition to tax cases, the citator evaluates revenue rulings and other IRS pronouncements and lists any status changes. Before relying on a revenue ruling or pronouncement, a researcher must confirm that the pronouncement reflects the current position of the IRS. For example, a revoked ruling is one in which the ruling is no longer correct and the correct position is being stated in the new ruling. The IRS does not remove the old ruling from the *Internal Revenue Bulletin* or *Cumulative Bulletin*, but the old ruling does not have authority regarding a transaction occurring after the revocation. Thus, failure to confirm its status could result in an incorrect conclusion. Table C:1-6 provides a list of terms the IRS uses to describe changes in the status of a ruling.

▼ TABLE C:1-6
Terms to Describe Status Changes to IRS Rulings

Term	Description of Term
Amplified	No change in the prior published position has occurred, but the prior position is extended to cover a variation of the fact situation previously addressed.
Clarified	Language used in a prior published position is being made clear because the previous language has caused or could cause confusion.
Distinguished	The ruling mentions a prior ruling but points out an essential difference between the two rulings.
Modified	The substance of a previously published ruling is being changed, but the prior ruling remains in effect.
Obsoleted	A previously published ruling is no longer determinative with respect to future transactions, e.g., because laws or regulations have changed, or the substance of the ruling has been adopted into regulations.
Revoked	A previously published ruling has been determined to be incorrect, and the correct position is being stated in the new ruling.
Superseded	The new ruling merely restates the substance of a previously published ruling or series of rulings.
Supplemented	The ruling expands a previous ruling, e.g., by adding items to a list.
Suspended	The previously published ruling will not be applied pending some future action, such as the issuance of new or amended regulations.

Source: Appendices in IRS Internal Revenue Bulletins.

---

[45] If a case is *affirmed*, the decision of the lower court is upheld. *Reversed* means the higher court invalidated the decision of the lower court because it reached a conclusion different from that derived by the lower court. *Remanded* signifies that the higher court sent the case back to the lower court with instructions to address matters consistent with the higher court's ruling.

[46] When a court distinguishes the facts of one case from those of an earlier case, it suggests that its departure from the earlier decision is justified because the facts of the two cases are different.

USING THE CITATOR

Internet-based versions of the citators are easier to use than print-based citators. For example, assume the researcher is currently reading *Leonarda C. Diaz v. Commissioner of Internal Revenue*, 70 TC 1067 (1978). The researcher can click on the citator, and the service opens up a new tab with a summary of activity of the case. The information provided indicates that the *Diaz* case was first decided by the Tax Court (i.e., TC), and then by the Second Circuit Court of Appeals (i.e., CA-2). It shows that the Second Circuit affirmed (upheld) the Tax Court's decision. Cases underneath the Second Circuit decision cite the *Diaz* decision and might be useful for the researcher to better understand the impact of the case. Cases listed beneath the Tax Court decision cite the Tax Court's opinion.

PROFESSIONAL GUIDELINES FOR TAX SERVICES

OBJECTIVE 8

Describe the professional guidelines that CPAs in tax practice should follow

Professional guidelines for tax services are contained in both government-imposed and professional-imposed tax standards. The following sections briefly describe two types of guidelines—Treasury Department ***Circular 230*** (Rev. 6-2014) and the American Institute of Certified Public Accountants (AICPA) ***Statements on Standards for Tax Services (SSTSs)***. A fuller discussion of these standards appears in Chapter C:15. Monitor updates related to proposed regulations issued in December 2024. See https://www.federalregister.gov/documents/2024/12/26/2024-29371/regulations-governing-practice-before-the-internal-revenue-service.

TREASURY DEPARTMENT *CIRCULAR 230*

Circular 230 sets forth rules to practice before the Internal Revenue Service and pertains to certified public accountants, attorneys, enrolled agents, and other persons representing taxpayers before the IRS. It presents the duties and restrictions relating to such practice and prescribes sanctions and disciplinary proceedings for violating these regulations.

Circular 230 rules, however, are not ethical standards. Instead, the document focuses on the right to represent clients before the IRS. These standards differ from the AICPA's SSTSs in the following ways:

- They apply only to federal tax issues and not state authorities.
- They generally apply only to federal income tax practice.
- They do not provide the depth of guidance found in the SSTSs.
- They give the government the authority to impose monetary penalties for violations of the rules.

Circular 230 provides guidelines for written advice to taxpayers. In June 2014, the IRS substantially revised and simplified the rules and eliminated the distinction between covered opinions and other written advice. Under the new rules, all written advice is held to a "reasonable practitioner standard" that will vary based on the nature and extent of the advice. An email to a client answering a routine tax question will be held to a different standard than will an opinion on the tax effects of a complex transaction. The written advice rules do not apply to training or educational presentations but do apply to marketing and sales presentations.

For all written advice, the practitioner is expected to base the advice on reasonable assumptions, consider relevant facts and circumstances, identify the facts relevant to the advice, be properly skeptical of representations by the taxpayer and others, relate applicable law and authority to the facts, and not base an opinion on the chances that a transaction will or will not be identified by IRS and subject to audit. The revised Section 10.37 of *Circular 230* does note that the IRS representative will consider the "additional risk" associated with opinions related to tax shelters.

AICPA'S STATEMENTS ON STANDARDS FOR TAX SERVICES

Tax advisors confronted with ethical issues frequently turn to a professional organization for guidance. Although the guidelines set forth by such organizations are not *legally* enforceable, they carry significant moral weight, and may be cited in a negligence lawsuit as the proper "standard of care" for tax practitioners. They also may provide grounds for the termination or suspension of one's professional license. One such set of guidelines is the *Statements on Standards for Tax Services* (SSTSs),[47] issued by the American Institute of Certified Public Accountants (AICPA) and referenced in Appendix E.

The SSTSs provide an ethical framework to govern the normative relationship between a tax advisor and his or her client, where, unlike an auditor, a tax advisor acts as the client's advocate. Thus, his or her primary duty is to the client, not the IRS. In fulfilling this duty, the advisor is bound by the highest standards of care.

The AICPA issued a major revision to the SSTSs, effective January 1, 2024. While much of the guidance is unchanged, the revised SSTSs reorganize the standards by area of practice and provide significant new advice relating to safeguarding privacy and the use of modern tax tools. The most recent version of the SSTSs includes four standards that provide guidance for AICPA members in their professional tax practice.

SSTS NO. 1 – *GENERAL STANDARDS FOR MEMBERS PROVIDING TAX SERVICES*

ADDITIONAL COMMENT

SSTS No. 1 states that tax advisors have the right to be an advocate for the taxpayer with respect to any position that otherwise meets the standard.

Advising on Tax Positions. SSTS No. 1 applies to any tax service provided by AICPA members in which the member is required to recommend or advance a tax position. The statement defines a tax position as:

> *a conclusion reached when applicable tax law, regulations, case law, or other regulatory or recognized guidance is applied to a particular transaction, a specific set of facts and circumstances, or a controversy.*

Practitioners take tax positions when preparing tax returns, advising a client during tax consulting engagements, or when representing a client during a tax audit. When the member is acting under the authority of any regulatory authority, such as the IRS or a state taxing authority, the member's primary responsibility is to comply with the standards imposed by the applicable authority. The IRS, for example, outlines these obligations in Circular 230 discussed elsewhere in this chapter. When those standards do not exist or do not apply to a particular service, AICPA members must follow the ethical and professional guidelines established by the SSTS.

Tax professionals provide tax advice in situations where the authority is unclear or evolving. Frequently this advice involves recommending positions that could be challenged or reversed upon audit. This statement describes the minimum level of confidence a member must achieve to advise the taxpayer. Members must have a "good-faith belief" that the position has a "realistic possibility of being sustained" administratively or judicially on its merits if challenged. However, if allowed by a taxing authority (such as the IRS), the member can advise a client to take a position supported by the lower "reasonable basis" standard, if the position is properly disclosed to the taxing authorities. Members are not permitted to take the probability of audit into account when formulating tax positions. A member should, when relevant, advise the taxpayer regarding potential penalty consequences and the opportunity to avoid such penalties through disclosure. The taxpayer has the responsibility to decide whether and how to disclose any position.

The standard highlights the dual responsibility of the member. The U.S. tax system can function only when taxpayers file "true, correct, and complete" returns, but taxpayers also have no obligation to pay more in tax than they legally owe. The tax professional's duty is to meet his or her responsibilities to both the tax system and the taxpayer client.

Knowledge of Errors. An error is any material position, omission, or method of accounting that fails to meet the applicable standards binding on the member. Members have an affirmative duty to promptly inform the taxpayer of any error, regardless of whether the member prepared or signed the return containing the error. The member must notify the client, orally or in writing, about the existence of the error and any corrective action that should be taken. It is then the taxpayer's responsibility to correct or disclose an error or allow the member to do so on the taxpayer's behalf. If the taxpayer fails to make or allow for the proper notification of authorities, the member should consider resigning from the engagement.

---

[47] AICPA, *Statements on Standards for Tax Services*, effective January 1, 2024 (referenced in Appendix E).

Data Protection. The increasing use of technology in business and the growing awareness of data breaches has resulted in a growing sensitivity toward the need to protect taxpayer data. In general, members should make diligent efforts to protect taxpayer data, including any data stored or transmitted electronically. Recommended measures include using commercial security software to prevent unauthorized access to information, encrypting data sent electronically, having strong password policies and firewalls, and using secure internal networks. If members use outside sources involving sensitive taxpayer data, such as commercial data sharing or collaboration platforms, tax return preparation software, and services to convert paper records to electronic data, members should take reasonable steps to confirm these third parties appropriately protect taxpayer data.

Members should collect and store only the minimum sensitive taxpayer information that is necessary to complete the task at hand, and the member should consider steps to take in the event of a data breach. Such steps might include promptly notifying appropriate governmental authorities and any taxpayers potentially impacted by the breach.

Reliance on Tools. Tax professionals are encouraged to use the many effective tools available to them, such as tax research services and tax return preparation software, but the member should exercise appropriate professional judgement when relying on a tool. A member should use a tool to enhance efficiency or understanding of a tax issue, but tools should not replace professional judgement.

SSTS NO. 2 – *STANDARDS FOR MEMBERS PROVIDING TAX COMPLIANCE SERVICES*

Tax Return Positions. Tax compliance services include preparation of original returns, amended returns, claims for refund, and information returns. A tax return position for purposes of this section includes any tax position reflected on the tax return prepared by a member or that the member signs as preparer. The tax return may contain positions proposed by others, but the member must be satisfied the position meets the applicable standards. In providing any compliance services, the member's primary responsibility is to comply with any standard imposed by an applicable taxing authority. If the taxing authority does not specify a standard or the standards are lower than those contained in the SSTSs, members are obligated to comply with the ethical and professional guidelines established by the SSTSs. In general, this standard requires members to have a "good-faith belief" that the tax position has at least a "realistic possibility of being sustained" if challenged. In addition, a member can prepare or sign a return if there is a "reasonable basis" for the position and the position is properly disclosed.

Members should advise clients about penalty exposure of a suggested tax position, and, if applicable, the opportunity to avoid penalties with disclosure. However, a member cannot take a position that exploits the audit selection process of the taxing authority, or that is only an effort to gain negotiating leverage in the event of an audit.

Tax Return Questions. Return preparers often must sign a declaration that the return is "true, correct, and complete." A member should make reasonable effort to obtain from the taxpayer the information necessary to provide appropriate answers to all questions on a tax return before signing as preparer. A member should determine whether omission of an answer to a question affects the completeness of a tax return and whether disclosure is necessary for a complete return.

In certain circumstances, questions or information applicable to the taxpayer may be omitted. Reasonable grounds include the following situations:

- The omitted information is not readily available or is immaterial.
- The meaning of the question as it relates to the taxpayer is uncertain.
- The requested information is voluminous.

Reliance on Information from Others. Tax returns are based on information provided by the taxpayer. When preparing a tax return, members have no obligation to audit or otherwise verify information provided by the client or others. However, members are obligated to use their professional judgment to evaluate the information provided to them and make reasonable inquiries if the information appears incorrect, incomplete, or inconsistent. If the tax law or regulations impose specific record keeping requirements for taxpayers, such as requiring written receipts from the donee organization for any charitable contribution deduction, members should specifically take reasonable steps to satisfy themselves that the condition has been met. Members are specifically encouraged to make use of a taxpayer's returns for one or more prior years in preparing the current tax return, whenever feasible. The practice should help avoid the omission or duplication of items and provide a basis for the treatment of similar or related transactions.

In addition, preparers may seek the advice of other professionals with specialized expertise. A member may in good faith rely on tax positions provided by others but only if the member is satisfied that the tax return position meets the standards described above.

Use of Estimates. For various reasons, precise information about an amount required on a tax return might not be available at the time the return is prepared. If using estimates, the standard does not require members to specifically disclose the use of estimates, but members must not present the information in a way that implies greater accuracy than exists. However, disclosure that estimates were used should be made in some unusual situations, including the death of the taxpayer, the taxpayer has not received a Schedule K-1 by the tax return due date, pending litigation, or instances in which technology failures, fire or other natural disaster has destroyed the relevant records.

Departure from Previous Positions. In most cases, a member will advise clients to adopt tax positions agreed to in a previous administrative proceeding such as an audit, or court decision. However, the member can advise their client to adopt a tax position that departs from a previous position if the tax position otherwise meets the applicable standards.

SSTS NO. 3 – *STANDARDS FOR MEMBERS PROVIDING TAX CONSULTING SERVICES*

General Standard. Members should use professional judgment to ensure their advice is competent and based on applicable standards. Taxpayers should be advised that any tax position or advice is based on the member's understanding of the facts and the law on the date the advice is communicated.

Oral or Written Advice. Members can provide advice orally or in writing. The member should use professional judgment about documenting advice in writing and consider factors, including:

- Importance of the transaction and the amounts involved
- Tax sophistication of the taxpayer
- Specific or general nature of the inquiry

- Technical complexity involved
- Potential penalty consequences, and possibility to avoid penalties through disclosure

The decision to disclose, if appropriate, remains with the taxpayer.

Subsequent Developments. Changes in tax law, judicial precedent, or IRS guidance may impact tax positions previously communicated to the client. Unless specified in the engagement agreement, a member is not responsible for informing the taxpayer of subsequent developments.

SSTS NO. 4 – *STANDARDS FOR MEMBERS PROVIDING TAX REPRESENTATION SERVICES*

General Standard. Members should obtain technical competence in the subject matter involved, including the specific tax area involved, as well as the practices and procedures of the taxing authority. As in all matters, those providing tax representation services should act with integrity and professionalism. If the member becomes aware of taxpayer conduct that might be fraudulent or criminal, the member should consider resigning from the engagement or recommending that the client engage legal counsel.

STOP & THINK

Question: As described in the Stop & Think box on pages C:1-10 and C:1-11, you are researching the manner in which a deduction is calculated. The IRC states that the calculation is to be made "in a manner prescribed by the Secretary." After studying the IRC, Treasury Regulations, and committee reports, you conclude that another way of doing the calculation is arguably correct under an intuitive approach. This approach would result in a lower tax liability for the client. According to the *Statements on Standards for Tax Services,* may you take a position contrary to final Treasury Regulations based on the argument that the regulations are not valid?

Solution: You should not take a position contrary to the Treasury Regulations unless you have a "good-faith belief that the position has a realistic possibility of being sustained administratively or judicially on its merits." However, you can take a position that does not meet the above standard, provided you adequately disclose the position, and the position has a reasonable basis. Whether or not you have met the standard depends on all the facts and circumstances. Chapter C:15 discusses tax return preparer positions contrary to Treasury Regulations.

WHAT WOULD YOU DO IN THIS SITUATION?

Regal Enterprises and Macon Industries, unaffiliated corporations, have hired you to prepare their respective income tax returns. In preparing Regal's return, you notice that Regal has claimed a depreciation deduction for equipment purchased from Macon on February 22 at a cost of $2 million. In preparing Macon's return, you notice that Macon has reported sales proceeds of $1.5 million from the sale of equipment to Regal on February 22. One of the two figures must be incorrect. How do you proceed to correct it? Hint: See SSTS No. 2 in Appendix E.

SAMPLE WORK PAPERS AND CLIENT LETTER

OBJECTIVE 9

Prepare work papers and communicate to clients

Appendix A presents a set of sample work papers, including a draft of a client letter and a memo to the file. The work papers indicate the issues to be researched, the authorities addressing the issues, and the researcher's conclusions concerning the appropriate tax treatment, with rationale therefor.

The format and other details of work papers differ from firm to firm. The sample in this text offers general guidance concerning the content of work papers. In practice, work papers may include less detail.

PROBLEM MATERIALS

Note: To complete the online research problems for this chapter, users must have access to an Internet-based service.

DISCUSSION QUESTIONS

C:1-1 Explain the difference between closed-fact and open-fact situations.

C:1-2 According to the AICPA's *Statement on Standards for Tax Services No. 1,* what is the tax advisor obligated to do when he/she discovers an error?

C:1-3 Explain what is encompassed by the term *tax law* as used by tax advisors.

C:1-4 The U.S. Government Printing Office publishes both hearings on proposed legislation and committee reports. Distinguish between the two.

C:1-5 Explain how committee reports can be used in tax research. What do they indicate?

C:1-6 A friend notices that you are reading the Internal Revenue Code of 1986. Your friend inquires why you are consulting a 1986 publication, especially when tax laws change so frequently. What is your response?

C:1-7 Does Title 26 contain statutory provisions dealing only with income taxation? Explain.

C:1-8 Refer to IRC Sec. 301.
a. Which subsection discusses the general rule for the tax treatment of a property distribution?
b. Where should one look for exceptions to the general rule?
c. What type of Treasury Regulations would relate to subsection (e)?

C:1-9 Why should tax researchers note the date on which a Treasury Regulation was adopted?

C:1-10 **a.** Distinguish between proposed, temporary, and final Treasury Regulations.
b. Distinguish between interpretative and legislative Treasury Regulations.

C:1-11 In 2011, there was a change in the authoritative weight of interpretive versus legislative regulations. Briefly explain what changed and why.

C:1-12 Explain the legislative reenactment doctrine.

C:1-13 **a.** Discuss the authoritative weight of revenue rulings.
b. As a practical matter, what consequences are likely to ensue if a taxpayer does not follow a revenue ruling and the IRS audits his or her return?

C:1-14 **a.** In which courts may litigation dealing with tax matters begin?
b. Discuss the factors that might be considered in deciding where to litigate.
c. Describe the appeals process in tax litigation.

C:1-15 May a taxpayer appeal a case litigated under the Small Cases Procedure of the Tax Court?

C:1-16 Explain whether the following decisions are of the same precedential value: (1) Tax Court regular decisions, (2) Tax Court memo decisions, and (3) decisions under the Small Cases Procedures of the Tax Court.

C:1-17 Does the IRS acquiesce in decisions of U.S. district courts?

C:1-18 The decisions of which courts are reported in the AFTR? In the USTC?

C:1-19 Why do some revenue ruling citations refer to the *Internal Revenue Bulletin* (I.R.B.) and others to a *Cumulative Bulletin* (C.B.)?

C:1-20 Explain the *Golsen* Rule. Give an example of its application.

C:1-21 Assume that the only precedents relating to a particular issue are as follows:

- Tax Court—decided for the taxpayer
- Eighth Circuit Court of Appeals—decided for the taxpayer (affirming the Tax Court)
- U.S. District Court for Eastern Louisiana—decided for the taxpayer
- Fifth Circuit Court of Appeals—decided for the government (reversing the U.S. District Court of Eastern Louisiana)

a. Discuss the precedential value of the foregoing decisions for your client, who is a California resident.
b. If your client, a Texas resident, litigates in the Tax Court, how will the court rule? Explain.

C:1-22 Which official publication(s) contain(s) the following:
a. Transcripts of Senate floor debates
b. IRS announcements
c. Tax Court regular opinions
d. Treasury decisions
e. U.S. district court opinions
f. Technical advice memoranda

C:1-23 Under what circumstances might a tax advisor find the provisions of a tax treaty useful?

C:1-24 What two functions does a citator serve?

C:1-25 Name three primary sources of authority that tax professionals should check against the citator before relying on those sources for important matters.

C:1-26 List three methods of searching the major tax service databases.

C:1-27 Use any major tax service to answer the following questions:
a. What are the principal primary sources?
b. What are the principal secondary sources?

C:1-28 Compare the features of the computerized tax services with those of Internet sites maintained by noncommercial institutions. What are the relative advantages and disadvantages of each? Could the latter sites serve as a substitute for a commercial tax service?

C:1-29 According to the AICPA's *Statements on Standards for Tax Services*, what belief should a member have before taking a pro-taxpayer position on a tax return?

C:1-30 List a member's duties that are excluded under the AICPA's *Statements on Standards for Tax Services*.

C:1-31 List three requirements that apply to written advice under Treasury Department *Circular 230*.

C:1-32 Explain how Treasury Department *Circular 230* differs from the AICPA's *Statements on Standards for Tax Services*.

PROBLEMS

C:1-33 ***Interpreting the IRC.*** Under a divorce agreement executed in 2017, an ex-wife receives from her former husband cash of $25,000 per year for eight years. The agreement does not explicitly state that the payments are excludable from gross income.

a. Does the ex-wife have gross income? If so, how much?

b. Is the former husband entitled to a deduction? If so, is it for or from AGI?
Refer only to the IRC in answering this question. Start with Sec. 71.

c. How did the Tax Cuts and Jobs Act of 2017 change the alimony rules?

C:1-34 ***Interpreting the IRC.*** Refer to Sec. 385 and answer the questions below.

a. Whenever Treasury Regulations are issued under this section, what type are they likely to be: legislative or interpretative? Explain.

b. Assume Treasury Regulations under Sec. 385 have been finalized. Will they be relevant to estate tax matters? Explain.

C:1-35 ***Using IRS Rulings.*** Locate PLR 8733007 and Rev. Rul. 81-219.

a. Briefly summarize the tax issue and conclusion of each ruling.

b. Under what circumstances can a researcher rely on the private letter ruling?

c. Under what circumstances can a researcher rely on the revenue ruling?

C:1-36 ***Using Treasury Pronouncements.*** Which IRC section(s) does Rev. Rul. 2001-29 interpret? Hint: consult the official pronouncement of the IRS.

C:1-37 ***Using a Major Tax Service for a Keyword Search.*** The objective is to locate a general overview of available home office deductions. On the main research tab, select the *Federal Tax Coordinator Analysis*. How many results does the search return for each search term if the terms and connectors option is selected?

a. Search term: home office deduction.

b. Search term: "home office" deduction.

c. Search term: "home office" /5 deduction.

C:1-38 ***Using a Major Tax Service for a Citation Search.*** The objective is to locate a general overview of available home office deductions. You have previously researched the issue and know that Sec. 280A is the primary authority for this issue. In the Keyword Search box, enter 280A and check the IRS Rulings and Releases database and answer the following questions.

a. How many results for Revenue Rulings does the search return for the search term: 280A?

b. Using the search within results function at the Tools and Settings tab, use the new term: home office. How many results does the search return?

c. Does using the search within results function improve your results? Explain why.

C:1-39 ***Determining Acquiescence.***

a. What official action (acquiescence or nonacquiescence) did the IRS Commissioner take regarding the 1985 Tax Court decision in *John McIntosh,* 85 T.C. 31 (1985)? Hint: Consult Actions on Decisions (AOD).

b. Did this action concern *all* issues in the case? If not, explain. (Before answering this question, consult the headnote to the court opinion.)

C:1-40 ***Determining Acquiescence.***

a. What 2015 action (acquiescence or nonacquiescence) did the IRS Commissioner take regarding the 9th Circuit decision in *Voss v. Commissioner,* 116 AFTR 2d 2015-5529? Hint: Consult Actions on Decisions (AOD).

b. What issue did the AOD address?

C:1-41 *Determining Acquiescence.*

a. What original action (acquiescence or nonacquiescence) did the IRS Commissioner take regarding the 1982 Tax Court decision in *Doyle, Dane, Bernbach, Inc.*, 79 T.C. 101 (1982)? Hint: Consult Actions on Decisions (AOD).

b. Did the IRS Commissioner subsequently change his mind? If so, when?

C:1-42 *Evaluating a Case.* Look up *James E. Threlkeld,* 87 T.C. 1294 (1988) and answer the questions below.

a. Was the case reviewed by the court? If so, was the decision unanimous? Explain.

b. Was the decision entered under Rule 155?

c. Consult a citator. Was the case reviewed by an appellate court? If so, which one?

C:1-43 *Evaluating a Case.* Look up *Bush Brothers & Co.,* 73 T.C. 424 (1979) and answer the questions below.

a. Was the case reviewed by the court? If so, was the decision unanimous? Explain.

b. Was the decision entered under Rule 155?

c. Consult a citator. Was the case reviewed by an appellate court? If so, which one?

C:1-44 *Writing Citations.* Provide the proper citations (including both primary and secondary citations where applicable) for the authorities listed below. (For secondary citations, reference both the AFTR and USTC.)

a. *National Cash Register Co.,* a 6th Circuit Court decision

b. *Thomas M. Dragoun v. CIR,* a Tax Court memo decision

c. *John M. Grabinski v. U.S.,* a U.S. district court decision

d. *John M. Grabinski v. U.S.,* an Eighth Circuit Court decision

e. *Rebekah Harkness,* a 1972 Court of Claims decision

f. *Hillsboro National Bank v. CIR,* a Supreme Court decision

g. Rev. Rul. 78-129

C:1-45 *Writing Citations.* Provide the proper citations (including both primary and secondary citations where applicable) for the authorities listed below. (For secondary citations, reference both the AFTR and USTC.)

a. Rev. Rul. 99-7

b. *Frank H. Sullivan,* a Board of Tax Appeals decision

c. *Tate & Lyle, Inc.*, a 1994 Tax Court decision

d. *Ralph L. Rogers v. U.S.,* a U.S. district court decision

e. *Norman Rodman v. CIR,* a Second Circuit Court decision

C:1-46 *Interpreting Citations.* Indicate which courts decided the cases cited below. Also indicate on which pages and in which publications the authority is reported.

a. *Lloyd M. Shumaker v. CIR,* 648 F.2d 1198, 48 AFTR 2d 81-5353 (9th Cir., 1981)

b. *Xerox Corp. v. U.S.,* 14 Cl. Ct. 455, 88-1 USTC ¶9231 (1988)

c. *Real Estate Land Title & Trust Co. v. U.S.,* 309 U.S. 13, 23 AFTR 816 (USSC, 1940)

d. *J. B. Morris v. U.S.,* 441 F. Supp. 76, 41 AFTR 2d 78-335 (DC TX, 1977)

e. Rev. Rul. 83-3, 1983-1 C.B. 72

f. *Malone & Hyde, Inc. v. U.S.,* 568 F.2d 474, 78-1 USTC ¶9199 (6th Cir., 1978)

C:1-47 *Using a Tax Service.* Use the index of any tax service to locate authorities dealing with the deductibility of the cost of a facelift.

a. Cite the authority you find.

b. List the primary IRC section cited as authority.

c. May a taxpayer deduct the cost of a facelift paid in the current year? Explain.

C:1-48 *Using a Tax Service.* Using any tax service, locate Reg. Sec. 1.302-1. Does this Treasury Regulation reflect recent amendments to the IRC? Explain.

C:1-49 *Using a Tax Service.* Using the index of any tax service, search the editorial materials to locate authorities addressing whether termite damage constitutes a casualty loss.

a. Cite the authority you found.

b. Cite at least two primary authorities.

C:1-50 *Using a Tax Service.*

a. Using any tax service, locate Sec. 303. This section states that Sec. 303(a) applies only if the stock in question meets a certain percentage test. What is the applicable percentage?

b. Locate Reg. Sec. 1.303-2(a) in the same service. Does this Treasury Regulation reflect recent amendments to the IRC with respect to the percentage test addressed in Part a? Explain.

C:1-51 *Using a Tax Service.* Using the BNA tax service, identify the number of the BNA portfolio for the following subjects.

a. Innocent spouse relief.
b. Accounting methods.
c. Involuntary conversions.
d. IRAs.
e. Deductibility of legal and accounting fees, bribes, and illegal payments.

C:1-52 *Using a Keyword Search.* Using a keyword search of editorial materials in any tax service, locate authorities dealing with the deductibility of the cost of work clothing by a firefighter. List a revenue ruling addressing this question.

C:1-53 *Using a Citator.* Trace *Biltmore Homes, Inc.,* a 1960 Tax Court memo decision, in the citator.

a. According to the citator, how many times has the Tax Court decision been cited by other courts?
b. How many issues did the lower court address in its opinion? Hint: Refer to the case headnote numbers.
c. Did an appellate court review the case? If so, which one?

C:1-54 *Using a Citator.* Trace *Stephen Bolaris,* 776 F.2d 1428, in the citator.

a. According to the citator, how many times has the Ninth Circuit's decision been cited?
b. Did the decision address more than one issue? Explain.
c. Was the decision ever cited unfavorably? Explain.

C:1-55 *Interpreting a Case.* Using any tax service, refer to the *Holden Fuel Oil Company,* RIA T.C. Memo ¶72,045 (T.C. Memo 1972-45), 31 TCM 184.

a. In which year was the case decided?
b. What controversy was litigated?
c. Who won the case?
d. Was the decision reviewed at the lower court level?
e. Was the decision appealed?
f. Has the decision been cited in other cases?

C:1-56 *Internet Research.* Access the IRS Internet site at *www.irs.gov* and answer the following questions:

a. How does one file a tax return electronically?
b. How can the taxpayer transmit funds electronically?
c. What are the advantages of electronic filing?

C:1-57 *Internet Research.* Access the IRS Internet site at *www.irs.gov* and indicate the titles of the following IRS forms:

a. Form 4506
b. Form 973
c. Form 8725

C:1-58 *Internet Research.* Access the Federation of Tax Administrators Internet site at *www.taxadmin.org/state-tax-forms* and indicate the titles of the following state tax forms and publications:

a. Minnesota Form M-100
b. Oklahoma Form 512
c. North Carolina Form D-403

C:1-59 *Internet Research.* Access the Urban Institute and Brookings Institution Tax Policy Center at *taxpolicycenter.org*. On the home page, search for *state individual income tax rates* and locate the Tax Policy Center's latest summary of each state's rates. Search for the 2022 tax year, which was the most recent available at the time of this publication. Researchers also can locate the file by looking under the *Statistics* tab and then the *State* tab, *Main Features of State Tax Systems*.

a. How many states do not have a state individual income tax?
b. How many states tax only interest and dividends for individuals?
c. What is the top marginal individual income tax rate in Oregon?
d. Of those that do impose an income tax, which state's top marginal rate is lowest?

COMPREHENSIVE PROBLEM

C:1-60 Your client, Mr. Stench, is in the garbage business. He purchased an old excavation site because it has a large hole in which he can dump garbage. Mr. Stench paid $30,000 for the site and, based on appraisals, estimates that the land site will be worth $10,000 when filled. He also estimates that, when filled to capacity, the hole will hold 50,000 "dump-units," and he expects to deposit somewhere between 9,000 and 11,000 dump-units per year. He has asked you if he can depreciate the cost of the site he will use as a garbage dump. In search of your answer, consult the editorial materials in any tax service. Explain the steps to find your answer.

TAX STRATEGY AND CRITICAL THINKING PROBLEM

C:1-61 Your client, Home Products Universal (HPU), distributes home improvement products to independent retailers throughout the country. Its management wants to explore the possibility of opening its own home improvement centers. Accordingly, it commissions a consulting firm to conduct a feasibility study, which ultimately persuades HPU to expand into retail sales. The consulting firm bills HPU $150,000, which HPU deducts on its current year tax return. The IRS disputes the deduction, contending that, because the cost relates to entering a new business, it should be capitalized. HPU's management, on the other hand, firmly believes that, because the cost relates to expanding HPU's existing business, it should be deducted. In contemplating legal action against the IRS, HPU's management considers the state of judicial precedent: The federal court for HPU's district has ruled that the cost of expanding from distribution into retail sales should be capitalized. The appellate court for HPU's circuit has stated in *dictum* that, although in some circumstances switching from product distribution to product sales entails entering a new trade or business, improving customer access to one's existing products generally does not. The Federal Circuit Court has ruled that wholesale distribution and retail sales, even of the same product, constitute distinct businesses. In a case involving a taxpayer from another circuit, the Tax Court has ruled that such costs invariably should be capitalized. HPU's Chief Financial Officer approaches you with the question, "In which judicial forum should HPU file a lawsuit against the IRS: (1) U.S. district court, (2) the Tax Court, or (3) the U.S. Court of Federal Claims?" What do you tell her?

CASE STUDY PROBLEM

C:1-62 A client, Mal Manley, fills out his client questionnaire for the previous year and on it provides information for the preparation of his individual income tax return. The IRS has never audited Mal's returns. Mal reports that he made over 100 relatively small cash contributions totaling $24,785 to charitable organizations. In the last few years, Mal's charitable contributions have averaged about $15,000 per year. For the previous year, Mal's adjusted gross income was roughly $350,000, about a 10% increase from the year before.

Required: Applying *Statements on Standards for Tax Services* No. 2, determine whether you can accept at face value Mal's information concerning his charitable contributions. Now assume that the IRS recently audited Mal's tax return for two years ago and denied 75% of that year's charitable contribution deduction because the deduction was not substantiated. Assume also that Mal indicates that, in the previous year, he contributed $25,000 (instead of $24,785). How do these changes of fact affect your earlier decision?

TAX RESEARCH PROBLEMS

C:1-63 The purpose of this problem is to enhance your skills in interpreting the authorities that you locate in your research. In answering the questions that follow, refer only to *Thomas A. Curtis, M.D., Inc.,* 1994 RIA TC Memo ¶94,015 (T.C. Memo 1994-15), 67 TCM 1958.

a. What was the principal controversy litigated in this case?
b. Which party—the taxpayer or the IRS—won?
c. Why is the corporation instead of Dr. and/or Ms. Curtis listed as the plaintiff?
d. What is the relationship between Ellen Barnert Curtis and Dr. Thomas A. Curtis?
e. Approximately how many hours a week did Ms. Curtis work, and what were her credentials?
f. For the fiscal year ending in 1989, what salary did the corporation pay Ms. Curtis? What amount did the court decide was reasonable?
g. What dividends did the corporation pay for its fiscal years ending in 1988 and 1989?
h. To which circuit would this decision be appealable?
i. According to *Curtis*, what five factors did the Ninth Circuit mention in *Elliotts, Inc.* as relevant in determining reasonable compensation?

C:1-64 Josh contributes $5,000 toward the support of his widowed mother, aged 69, a U.S. citizen and resident. She earns gross income of $2,000 and spends it all for her own support. In addition, Medicare pays $3,200 of her medical expenses. She does not receive financial support from sources other than those described above. Must the Medicare payments be included in the support that Josh's mother is deemed to provide for herself?

Prepare work papers and a client letter (to Josh) dealing with the issue.

C:1-65 Amy owns a vacation cottage in Maine. She predicts that the time during which the cottage will be used in the current year is as follows:

By Amy, solely for vacation	12 days
By Amy, making repairs ten hours per day and vacationing the rest of the day	2 days
By her sister, who paid fair rental value	8 days
By her cousin, who paid fair rental value	4 days
By her friend, who paid a token amount of rent	2 days
By three families from the Northeast, who paid fair rental value for 40 days each	120 days
Not used	217 days

Calculate the ratio for allocating the following expenses to the rental income expected to be received from the cottage: interest, taxes, repairs, insurance, and depreciation. The ratio will be used to determine the amount of expenses that are deductible and, thus, Amy's taxable income for the year.

For the tax manager to whom you report, prepare work papers in which you discuss the calculation method. Also, draft a memo to the file dealing with the results of your research.

C:1-66 Look up *Summit Publishing Company,* 1990 PH T.C. Memo ¶90,288 (T.C. Memo 1990-288), 59 TCM 833, and *J.B.S. Enterprises,* 1991 PH T.C. Memo ¶91,254 (T.C. Memo 1991-254), 61 TCM 2829, and answer the following questions:

a. What was the principal issue in these cases?
b. What factors did the Tax Court consider in resolving the central issue?
c. How are the facts of these cases similar? How are they dissimilar?

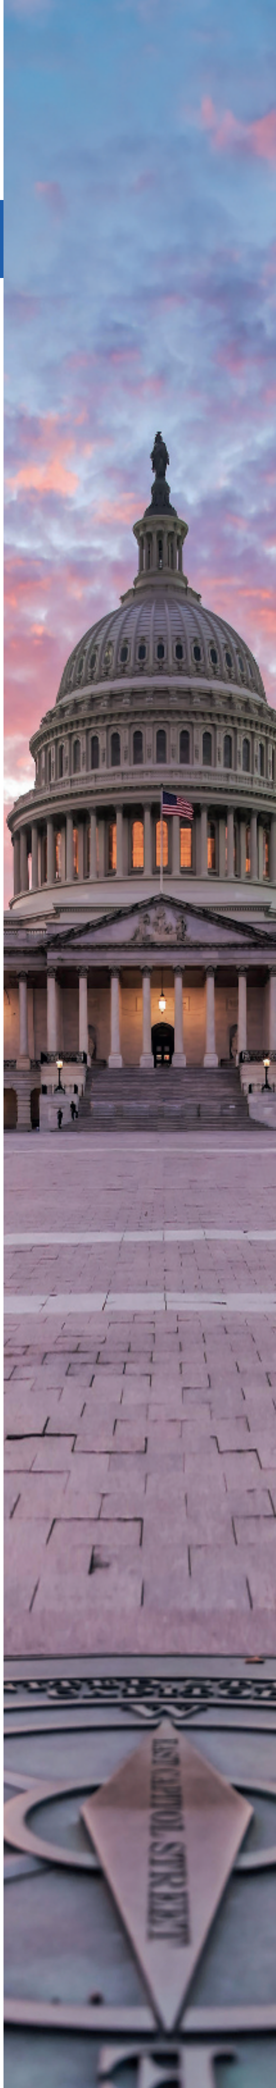
C:1-67 Your supervisor would like to set up a single Sec. 401(k) plan exclusively for the managers of your organization. Concerned that this arrangement might not meet the requirements for a qualified plan, he has asked you to request a determination letter from the IRS. In a brief memorandum, address the following issues:

a. What IRS pronouncements govern requests for determination letters?
b. What IRS forms must be filed with the request?
c. What information must be provided in the request?
d. What actions must accompany the filing?

CHAPTER

2

CORPORATE FORMATIONS AND CAPITAL STRUCTURE



James Byard/Zoonar GmbH/Alamy Stock Photo

LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Discuss the tax advantages and disadvantages of alternative business forms
2. Apply the check-the-box regulations to partnerships, corporations, and trusts
3. Recognize the legal requirements and tax considerations related to forming a corporation
4. Discuss the requirements for deferring gain or loss upon incorporation
5. Explain the tax implications of alternative capital structures
6. Determine the tax consequences of worthless stock or debt obligations
7. Identify tax planning opportunities in corporate formations
8. Comply with procedural rules for corporate formations

CHAPTER OUTLINE

Organization Forms Available...2-2
Check-the-Box Regulations...2-8
Legal Requirements and Tax Considerations Related to Forming a Corporation...2-9
Section 351: Deferring Gain or Loss Upon Incorporation...2-12
Choice of Capital Structure...2-27
Worthlessness of Stock or Debt Obligations...2-32
Tax Planning Considerations...2-34
Compliance and Procedural Considerations...2-36

When starting a business, entrepreneurs must decide whether to organize it as a sole proprietorship, partnership, corporation, limited liability company, or limited liability partnership. This chapter discusses the advantages and disadvantages of each form of business association. Because many entrepreneurs find organizing their business as a corporation advantageous, the chapter looks at the definition of a corporation for federal income tax purposes. It also discusses the tax consequences of incorporating a business. The chapter closes by examining the tax implications of capitalizing a corporation with equity and/or debt and describing the advantages and disadvantages of alternative capital structures.

This text takes a life-cycle approach to corporate taxation. The corporate life cycle starts with corporate formation, discussed in this chapter. Once formed and operating, the corporation generates taxable income (or loss), incurs federal income tax and other liabilities, and makes distributions to its shareholders. Finally, at some point, the corporation might outlive its usefulness and be liquidated and dissolved. The corporate life cycle is too complex to discuss in one chapter. Therefore, additional coverage follows in Chapters C:3 through C:8.

ORGANIZATION FORMS AVAILABLE

OBJECTIVE 1

Discuss the tax advantages and disadvantages of alternative business forms

Businesses can be organized in several forms including

- Sole proprietorships
- Partnerships
- Corporations
- Limited liability companies
- Limited liability partnerships

A discussion of the tax implications of each form is presented below.

ADDITIONAL COMMENT

The income/loss of a sole proprietorship reported on Schedule C carries to page 1 of Form 1040 (via Schedule 1) and is included in the computation of the individual's taxable income. Net income, if any, also carries to Schedule SE of Form 1040 for computation of the sole proprietor's self-employment tax.

ADDITIONAL COMMENT

The qualified business income deduction is allowed for tax years beginning after 2017 and before 2026. The deduction is 20% of qualified business income from a partnership, S corporation, or sole proprietorship (also REIT dividends). See Chapter C:9 for additional details.

SOLE PROPRIETORSHIPS

A **sole proprietorship** is an unincorporated business owned by one individual. It often is selected by entrepreneurs who are beginning a new business with a modest amount of capital. From a tax and legal perspective, a sole proprietorship is not a separate entity. Rather, it is a legal extension of its individual owner. Thus, the individual owns all the business assets and reports income or loss from the sole proprietorship directly on his or her individual tax return. Specifically, the individual owner (proprietor) reports all the business's income and expenses for the year on Schedule C (Profit or Loss from Business) of Form 1040. A completed Schedule C is included in Appendix B, where a common set of facts (with minor modifications) illustrates the similarities and differences in sole proprietorship, C corporation, partnership, and S corporation tax reporting.

If the business is profitable, the profit is included in the proprietor's other income.

EXAMPLE C:2-1 ▶ John, an individual, starts a new computer store, which he operates as a sole proprietorship. John reports a $15,000 profit from the business in its first year of operation. In addition, John is allowed a $3,000 (0.20 × $15,000) qualified business income deduction, so only $12,000 of his profit is taxable. Assuming his marginal tax rate is 24%, John's tax on the $12,000 of taxable profit from the business is $2,880 (0.24 × $12,000).[1] ◀

If the business is unprofitable, the loss reduces the proprietor's total taxable income, thereby generating tax savings.

EXAMPLE C:2-2 ▶ Assume the same facts as in Example C:2-1 except John reports a $15,000 loss instead of a $15,000 profit in the first year of operation. Assuming he still is taxed at a 24% marginal tax rate, the $15,000 loss produces tax savings of $3,600 (0.24 × $15,000). ◀

---

[1] See Chapter C:9 for further discussion of the qualified business income deduction. Example C:2-1 ignores other taxes, such as the self-employment tax. John's tax may increase by an amount other than $2,880 because of other tax items whose amount depends on adjusted gross income, such as limitations on the charitable contributions deduction and the phaseout of the child tax credit.

ADDITIONAL COMMENT

Although this chapter emphasizes the tax consequences of selecting the entity in which a business will be conducted, other issues also are important in making such a decision. For example, the amount of legal liability assumed by an owner is important and can vary substantially among the different business entities.

Tax Advantages. The tax advantages of conducting business as a sole proprietorship include the following:

- The sole proprietor is taxed on the business's income at his or her marginal tax rate. The sole proprietorship is not taxed as a separate entity. This is advantageous if the proprietor's (i.e., the individual's) marginal tax rate is less than the corporate tax rate.
- Profits may qualify for the 20% qualified business income deduction.
- The owner may contribute cash to, or withdraw profits from, the business without tax consequences.
- Although the owner usually maintains separate books, records, and bank accounts for the business, the money in these accounts belongs to the owner personally.
- The owner may contribute property to, or withdraw property from, the business without recognizing gain or loss.
- Business losses may offset nonbusiness income, such as interest, dividends, and any salary earned by the sole proprietor or his or her spouse, subject to the passive activity loss rules and limitation on excess business losses.

Tax Disadvantages. The tax disadvantages of conducting business as a sole proprietorship include the following:

- The profits of a sole proprietorship are currently taxed to the individual owner, whether or not the profits are retained in the business or withdrawn for personal use. By contrast, the profits of a corporation are not taxed to its shareholders until the corporation distributes the earnings as dividends.
- The sole proprietor is taxed on the business's income at his or her marginal tax rate. This may be disadvantageous if the proprietor's marginal tax rate is greater than the corporate tax rate.
- A sole proprietor must pay the full amount of Social Security taxes because he or she is not considered to be an employee of the business. By contrast, shareholder-employees must pay only half their Social Security taxes; the corporate employer pays the other half. (The employer, however, might pass this half onto employees in the form of lower wages or fewer employees hired.)
- Sole proprietorships may not deduct compensation paid to owner-employees. By contrast, corporations may deduct compensation paid to shareholder-employees.
- Certain tax-exempt benefits (e.g., premiums for group term life insurance) available to shareholder-employees are not available to owner-employees.[2]
- A sole proprietor must use the same accounting period for business and personal purposes. Thus, he or she cannot defer income by choosing a business fiscal year that differs from the individual's calendar year. By contrast, a corporation may choose a fiscal year that differs from the shareholders' calendar years.

ADDITIONAL COMMENT

The employee's half of Social Security taxes is 6.2%, and the employee's half of the Medicare tax is 1.45%, for a total of 7.65%. The employer pays the same percentages for its half of these items. In addition, the employee (but not the employer) is subject to an additional 0.9% Medicare tax if the employee's wages exceed a threshold amount ($200,000 unmarried; $250,000 for married filing jointly; $125,000 for married filing separately).

PARTNERSHIPS

A **partnership** is an unincorporated business carried on by two or more individuals or entities for profit. The partnership form often is used by friends or relatives who engage in a business and by groups of investors who want to share the profits, losses, and expenses of an investment, such as a real estate project.

A partnership is a tax reporting, but not taxpaying, entity. The partnership acts as a conduit for its owners. Its income, expenses, losses, credits, and other tax-related items pass through to the partners, who report these items on their separate tax returns.

Each year, a partnership must file a tax return (Form 1065—U.S. Return of Partnership Income) to report the results of its operations. When the partnership return is filed, the preparer must send each partner a statement (Schedule K-1, Form 1065) that reports the

REAL-WORLD EXAMPLE

Entities filed the following number of tax returns in 2023:

Entity	Number
Partnership	5.12 million
C corporation	2.46 million
S corporation	5.88 million

Source: 2023 IRS Data Book

---

[2] Section 162(l) permits self-employed individuals to deduct as a trade or business expense all of the health insurance costs incurred on behalf of themselves, their spouses, and their dependents.

partner's allocable share of partnership income, expenses, losses, credits, and other tax-related items. The partner then must report these items on his or her separate tax return. As with a sole proprietorship, the partner's allocable share of business profits is added to the partner's other income and taxed at that partner's marginal tax rate. A completed Form 1065 appears in Appendix B.

EXAMPLE C:2-3 ▶ Bob, a single taxpayer, owns a 50% interest in the BT Partnership, a calendar year entity. The BT Partnership reports a $30,000 profit in its first year of operation. Bob's $15,000 share passes through from the partnership level to Bob's individual tax return. In addition, Bob is allowed a $3,000 (0.20 × $15,000) qualified business income deduction on his share of pass-through income, so only $12,000 of it is taxable. Assuming Bob is taxed at a 24% marginal rate, his tax on the $12,000 is $2,880 (0.24 × $12,000). Bob must pay the $2,880 tax whether or not the BT Partnership distributes any of its profits to him. ◀

ADDITIONAL COMMENT

Example C:2-3 ignores the self-employment tax applicable to partners.

If a partnership reports a loss, the partner's allocable share of the loss reduces that partner's other income and provides tax savings based on the partner's marginal tax rate. The passive activity loss rules and limitation on excess business losses, however, may limit the amount of any loss deduction available to the partner. (For a discussion of these rules, see Chapter C:9 of this text.)

EXAMPLE C:2-4 ▶ Assume the same facts as in Example C:2-3 except that, instead of a profit, the BT Partnership sustains a $30,000 loss in its first year of operation. Assuming Bob is taxed at a 24% marginal rate, his $15,000 share of the first year loss produces a tax savings of $3,600 (0.24 × $15,000). ◀

TAX STRATEGY TIP

In a limited partnership, the general partner could be a corporation, thereby affording the general owners (shareholders) of the corporation added liability protection.

Organizationally, a partnership can be either general or limited. In a general partnership, the liability of each partner for partnership debts is unlimited. Thus, these partners are at risk for more than the amount of their capital investment in the partnership. In a limited partnership, at least one partner must be a general partner, and at least one partner must be a limited partner. As in a general partnership, the general partners are liable for all partnership debts, and the limited partners are liable only to the extent of their capital investment in the partnership, plus any amount they are obligated to contribute under their partnership agreement. Unless specified in that agreement, limited partners generally may not participate in the management of the partnership business.

Tax Advantages. The tax advantages of doing business as a partnership include the following:

- The partnership as an entity pays no tax. Rather, the income of the partnership passes through to the separate returns of the partners and is taxed directly to them. This is advantageous if the partner's marginal tax rate is less than the corporate tax rate.
- Pass-through income may qualify for the 20% qualified business income deduction.
- Partnership income is not subject to double taxation. Although partnership profits are accounted for at the partnership level, they are taxed only at the partner level.
- Additional taxes generally are not imposed on distributions to the partners. With limited exceptions, partners can contribute money or property to, or withdraw money or property from, the partnership without recognizing gain or loss.
- Subject to limitations, partners can use losses to offset income from other sources.
- A partner's basis in a partnership interest is increased by his or her share of partnership income. This basis adjustment reduces the amount of gain recognized when the partner sells his or her partnership interest, thereby avoiding double taxation.

ADDITIONAL COMMENT

If two or more owners exist, a business cannot be conducted as a sole proprietorship. From a tax compliance and recordkeeping perspective, conducting a business as a partnership is more complicated than conducting the business as a sole proprietorship.

Tax Disadvantages. The tax disadvantages of doing business as a partnership include the following:

- All the partnership's profits are taxed to the partners when earned, even if not distributed.
- A partner's marginal tax rate may be higher than the corporate tax rate.
- A partner is not considered to be an employee of the partnership. Therefore, he or she must pay the full amount of self-employment taxes on his or her share of partnership

income. Some tax-exempt fringe benefits (e.g., premiums for group term life insurance) are not available to partners.[3]

- Partners generally cannot defer income by choosing a fiscal year for the partnership that differs from the tax year of the principal partner(s). However, if the partnership demonstrates a business purpose, or if it makes a special election, it may use a fiscal year in general.

Chapters C:9 and C:10 of this volume discuss partnerships in greater detail.

CORPORATIONS

Corporations fall into two categories: C corporations and S corporations. Both have limited liability. A C corporation is subject to double taxation. Its earnings are taxed first at the corporate level when earned, then again at the shareholder level when distributed as dividends. An S corporation, by contrast, is subject to single-level taxation, much like a partnership. Its earnings are accounted for at the corporate level but are taxed only at the shareholder level.

ADDITIONAL COMMENT

Unlike a sole proprietorship and a partnership, a C corporation is a separate taxpaying entity. This form can be advantageous because the corporate rate is 21%, which may be much lower than an individual shareholder's rate, which might be as high as 37%.

C Corporations. A **C corporation** is a separate entity, and its taxable income is taxed at a flat 21% rate. A C corporation must report all its income and expenses and compute its tax liability on Form 1120 (U.S. Corporation Income Tax Return). A completed Form 1120 appears in Appendix B. Shareholders are not taxed on the corporation's earnings until these earnings are distributed as dividends. If the shareholder is an individual and the dividend is a qualified dividend, it is taxed at a 0%, 15%, or 20% rate. In addition, the 3.8% net investment income tax is imposed on the dividend if the shareholder is an individual and his or her modified AGI exceeds $200,000 ($250,000 if married filing jointly).[4]

EXAMPLE C:2-5 ▶

Jane owns 100% of York Corporation stock. York reports taxable income of $50,000 for the current year, so York pays a corporate income tax of $10,500 (0.21 × $50,000). If the corporation distributes none of its earnings to Jane during the year, she pays no tax currently on York's earnings. However, if York distributes its after-tax earnings to Jane, she must pay tax on $39,500 ($50,000 − $10,500) of dividend income. Assuming Jane's marginal tax rate on capital gains and qualified dividends is 15%, her tax on the dividend income is $5,925 (0.15 × $39,500). The total tax on York's $50,000 of profits, therefore, is $16,425 ($10,500 paid by York + $5,925 paid by Jane). This total tax produces an effective tax rate of 32.85% ($16,425 ÷ $50,000) on the corporate profit. ◀

TAX STRATEGY TIP

If a shareholder is also an employee of the corporation, the corporation can avoid double taxation by paying a deductible salary instead of a dividend. The salary, however, must be reasonable in amount. See Tax Planning Considerations in Chapter C:3 for further discussion of this technique, along with an example demonstrating how the lower tax rate on dividends reduces the difference between salary and dividend payments.

Even when a corporation does not distribute its profits, double taxation may result. The profits are taxed to the corporation when they are earned. Then, effectively, they may be taxed a second time (as capital gains) when the shareholder sells appreciated stock or when the corporation liquidates.

EXAMPLE C:2-6 ▶

On January 2 of the current year, Carl purchases 100% of York Corporation stock for $60,000. In the same year, York reports taxable income of $50,000, on which it pays tax of $10,500. The corporation distributes none of the remaining $39,500 to Carl. On January 3 of the next year, Carl sells his stock to Mary for $99,500 (his initial investment plus the current year's accumulated earnings). Carl must report a capital gain of $39,500 ($99,500 − $60,000). Thus, York's profit is effectively taxed twice—first at the corporate level when earned and again at the shareholder level when Carl sells the appreciated stock at a gain. ◀

Tax Advantages. The tax advantages of doing business as a C corporation include the following:

TAX STRATEGY TIP

By having a corporation retain earnings instead of paying dividends, the shareholder converts current dividend income into deferred capital gains. The corporation, however, must avoid the PHC and accumulated earnings taxes (see Chapter C:5).

- A C corporation is an entity separate and distinct from its owners. Its tax rate may be lower than its owners' marginal tax rates. So long as these earnings are not distributed and taxed to both the shareholders and the corporation, aggregate tax savings may result. If retained in the business, the earnings may be used for reinvestment and the retirement of debt. This advantage, however, may be limited by the accumulated earnings tax and the personal holding company tax. (See Chapter C:5 for a discussion of these two taxes.)

---

[3] Partners are eligible to deduct their health insurance costs in the same manner as a sole proprietor. See footnote 2 for details.

[4] See Chapter I:5 of *Pearson's Federal Taxation: Individuals* for further discussion of the tax treatment of qualified dividends and the 3.8% net investment income tax.

- Shareholders employed by the corporation are considered to be employees for tax purposes. Consequently, they are liable for only half their Social Security taxes, while their corporate employer is liable for the other half.
- Shareholder-employees can receive nontaxable fringe benefits (e.g., premiums paid on group term life insurance and accident and health insurance). The corporation can provide these benefits with before-tax dollars (instead of after-tax dollars). By contrast, because sole proprietors and partners are not considered to be employees for tax purposes, they are ineligible for certain tax-free fringe benefits, although they are permitted to deduct their health insurance premiums.
- A corporation may deduct as an ordinary and necessary business expense compensation and certain benefits paid to shareholder-employees. Within reasonable limits, it may adjust this compensation and these benefits upward to shelter corporate taxable income.
- A C corporation can use a fiscal instead of a calendar year as its reporting period. A fiscal year could permit a corporation to defer income to a later reporting period. (A personal service corporation, however, generally must use a calendar year as its tax year.[5])
- Special rules allow a shareholder to exclude up to 100% of the gain realized on the sale or exchange of stock held more than five years, provided the corporation meets certain requirements.

SELF-STUDY QUESTION

How are corporate earnings subject to double taxation?

ANSWER

Corporate earnings initially are taxed to the corporation. In addition, once these earnings are distributed to the shareholders as dividends, they are taxed again. Because the corporation cannot deduct the distribution, these earnings have been taxed twice. Also, double taxation can occur when a shareholder sells his or her stock at a gain. In either case, the dividends or capital gains are taxed at the applicable capital gains rate.

Tax Disadvantages. The tax disadvantages of doing business as a C corporation include the following:

- Double taxation of income results when the corporation distributes its earnings as dividends to shareholders or, effectively, when shareholders sell or exchange appreciated stock.
- Shareholders generally cannot withdraw money or property from the corporation without recognizing income. A distribution of cash or property to a shareholder generally is taxable as a dividend if the corporation has sufficient earnings and profits (E&P). (See Chapter C:4 for a discussion of E&P.)
- Net operating losses confer no tax benefit to the owners in the year the corporation incurs them, but they generally carry over to offset the corporation's income in future years. For start-up corporations, these losses provide no tax benefit until the corporation earns a profit in a subsequent year. Shareholders cannot use these losses to offset income from other sources. (See Chapter C:3 for a discussion of corporate NOLs.)
- Capital losses confer no tax benefit to the owners in the year the corporation incurs them. They cannot offset the ordinary income of either the corporation or its shareholders. These losses must be carried back or carried over to offset corporate capital gains realized in other years. (See Chapter C:3 for a discussion of corporate capital gains and losses.)

S Corporations. An **S corporation** is so designated because special rules governing its tax treatment are found in Subchapter S of the IRC. Nevertheless, the general corporate tax rules apply unless overridden by the Subchapter S provisions. Like a partnership, an S corporation is a pass-through entity. Income, deductions, losses, and credits are accounted for by the S corporation, which generally is not subject to taxation. They pass through to the separate returns of its owners, who generally are subject to taxation. An S corporation offers its owners less planning flexibility than does a partnership. For example, the number and type of S corporation shareholders are limited, and the shareholders cannot allocate income, deductions, losses, and credits in a way that differs from their proportionate ownership. As mentioned before, like C corporation shareholders, S corporation shareholders enjoy limited liability.

To obtain S corporation status, a corporation must make a special election, and all its shareholders must consent to that election. Each year, an S corporation files an information return, Form 1120-S (U.S. Income Tax Return for an S Corporation), which reports the results of its operations and indicates the items of income, deduction, loss, and credit that pass through to the separate returns of its shareholders.

---

[5] Sec. 441. See Chapter C:3 for the special tax year restrictions applying to personal service corporations.

TAX STRATEGY TIP

Relatively low individual tax rates may increase the attractiveness of an S corporation relative to the C corporation form of doing business.

TAX STRATEGY TIP

If a corporation anticipates losses in its early years, it might consider operating as an S corporation so that the losses pass through to the shareholders. When the corporation becomes profitable, it can revoke the S election if it wishes to accumulate earnings for growth.

Tax Advantages. The tax advantages of doing business as an S corporation include the following:

- S corporations generally pay no tax. Instead, corporate income passes through and is taxed to the shareholders.
- Pass-through income may qualify for the 20% qualified business income deduction.
- The self-employment tax does not apply to S corporation pass-through income.
- The shareholders' marginal tax rates may be lower than a C corporation's tax rate, thereby producing overall tax savings.
- Corporate losses pass through to the separate returns of the shareholders and may be used to offset income earned from other sources. (Other rules, such as those for passive activity losses and basis, may limit loss deductions to shareholders. See Chapter C:11.) This treatment can be beneficial to owners of start-up corporations that generate losses in their early years of operation.
- Because capital gains, as well as other tax-related items, retain their character when they pass through to the separate returns of shareholders, the shareholders are taxed on these gains as though they directly realized them. Consequently, they can offset the gains against capital losses from other sources. Furthermore, they are taxed on these gains at their own capital gains rates.
- Shareholders generally can contribute money to or withdraw money from an S corporation without recognizing gain.
- Corporate profits are taxed only at the shareholder level in the year earned. Generally, the shareholders incur no additional tax liability when the corporation distributes the profits.
- A shareholder's basis in S corporation stock is increased by his or her share of corporate income. This basis adjustment reduces the shareholder's gain when he or she later sells the stock, thereby avoiding double taxation.

EXAMPLE C:2-7 ▶ Chuck owns 50% of the stock in Maine, an S corporation that uses the calendar year as its tax year. In its first year of operation, Maine reports $30,000 of taxable income, all ordinary in character. Maine pays no corporate income tax. Chuck, however, must report his $15,000 share of Maine's income whether or not the corporation distributes this income to him. However, Chuck is allowed a $3,000 (0.20 × $15,000) qualified business income deduction on his share of pass-through income, so only $12,000 of it is taxable. If his marginal rate is 24%, Chuck pays a tax of $2,880 (0.24 × $12,000) on this share. If Maine instead reports a $30,000 loss, Chuck's $15,000 share of the loss reduces his tax liability by $3,600 (0.24 × $15,000). ◀

Tax Disadvantages. The tax disadvantages of doing business as an S corporation include the following:

- Shareholders are taxed on all of an S corporation's current year profits whether or not the corporation distributes these profits and whether or not the shareholders have the wherewithal to pay the tax on these profits.
- If the shareholders' marginal tax rates exceed that for a C corporation, the overall tax burden may be heavier, and the after-tax earnings available for reinvestment and debt retirement may be reduced.
- Nontaxable fringe benefits generally are not available to S corporation shareholder-employees.[6] Ordinarily, fringe benefits provided by an S corporation are deductible by the corporation and taxable to the shareholder. On the other hand, S corporation shareholder-employees pay half of Social Security taxes while the S corporation employer pays the other half.
- S corporations generally cannot defer income by choosing a fiscal year other than a calendar year unless the S corporation can establish a legitimate business purpose for a fiscal year or unless it makes a special election.

Chapter C:11 discusses S corporations in greater detail. In addition, Appendix F compares the tax treatment of C corporations, partnerships, and S corporations.

---

[6] S corporation shareholders may deduct their health insurance costs in the same manner as sole proprietors and partners. See footnotes 2 and 3 for details.

LIMITED LIABILITY COMPANIES

ADDITIONAL COMMENT

Unlike a partnership, an LLC could have only one owner. Under the check-the-box regulations discussed in the next section, such a single-member LLC is typically treated as a disregarded entity. If its one owner is an individual, he or she is taxed as a sole proprietor.

A **limited liability company** (LLC) combines the best features of a partnership with those of a corporation even though, from a legal perspective, it is neither. While offering its owners the limited liability of a corporation, an LLC with more than one owner generally is treated as a partnership for tax purposes. This limited liability extends to all the LLC's owners. In this respect, the LLC is analogous to a limited partnership with no general partners. Unlike an S corporation, an LLC may have an unlimited number of owners who can be individuals, corporations, estates, and trusts. As discussed below, under the check-the-box regulations, the LLC may elect to be taxed as a corporation or be treated by default as a partnership. If treated as a partnership, the LLC files Form 1065 (U.S. Return of Partnership Income) with the IRS.

LIMITED LIABILITY PARTNERSHIPS

REAL-WORLD EXAMPLE

All the Big 4 accounting firms operate in some form of LLP.

The **limited liability partnership** (LLP) business form is attractive to owners of professional service organizations, such as public accounting firms, that adopt LLP status primarily to limit their legal liability. Under state LLP laws, partners are liable for their own acts and omissions as well as the acts and omissions of individuals under their direction. On the other hand, LLP partners are not liable for the negligence or misconduct of the other partners. Thus, from a legal liability perspective, an LLP partner is like a limited partner with respect to other partners' acts but like a general partner with respect to his or her own acts, as well as the acts of his or her agents. Like a general partnership or LLC with more than one owner, an LLP can elect to be taxed as a corporation under the check-the-box regulations. If treated as a partnership by default, the LLP files Form 1065 (U.S. Return of Partnership Income) with the IRS.

CHECK-THE-BOX REGULATIONS

OBJECTIVE 2

Apply the check-the-box regulations to partnerships, corporations, and trusts

Most unincorporated businesses may choose to be taxed as a partnership or a corporation under rules commonly referred to as the **check-the-box regulations**. According to these regulations, an unincorporated business with two or more owners is treated by default as a partnership for tax purposes unless it elects to be taxed as a corporation. An unincorporated business with one owner is by default disregarded as a separate entity unless it elects to be taxed as a corporation.[7] If the one owner is an individual, the entity generally is treated as a sole proprietorship.

TAX STRATEGY TIP

When applying the federal check-the-box regulations, taxpayers also must check to see whether or not their state will treat the entity in a consistent manner for state tax purposes.

An eligible entity (i.e., an unincorporated business) may elect its classification by filing Form 8832 (Entity Classification Election) with the IRS. The form must be signed by each owner of the entity, or any officer, manager, or owner of the entity authorized to make the election. The signatures must specify the date on which the election will be effective. The effective date cannot be more than 75 days before or 12 months after the date the entity files Form 8832. A copy of the form must be attached to the entity's tax return for the election year.

EXAMPLE C:2-8 ▶ On January 10 of the current year, a group of ten individuals organizes an LLC to conduct a bookbinding business in Texas. In the current year, the LLC is an eligible entity under the check-the-box regulations and thus may elect (with the owners' consent) to be taxed as a corporation. If the LLC does not make the election, the LLC, for tax purposes, will be treated as a partnership by default. ◀

EXAMPLE C:2-9 ▶ Assume the same facts as in Example C:2-8 except only one individual organized the LLC. Unless the LLC elects to be taxed as a corporation, the LLC, for tax purposes, will be disregarded by default. Consequently, its income will be taxed directly to the owner as if it were a sole proprietorship. ◀

---

[7] This rule does not apply to corporations, trusts, or certain special entities such as real estate investment trusts, real estate mortgage investment conduits, or publicly traded partnerships. Reg. Sec. 301.7701-2(b)(8). Publicly traded partnerships are discussed in Chapter C:10. Special check-the-box rules apply to foreign corporations. These rules are beyond the scope of this text.

If an entity elects to change its tax classification, it cannot make another election until 60 months after the effective date of the initial election. Following the election, certain tax consequences ensue. For example, following a partnership's election to be taxed as a corporation, the partnership is deemed to distribute its assets to the partners, who are then deemed to contribute the assets to a new corporation in a nontaxable exchange for stock. If an eligible entity that previously elected to be taxed as a corporation subsequently elects to be treated as a partnership or a disregarded entity, it is deemed to have distributed its assets and liabilities to its owner(s) in a liquidation as described in Chapter C:6. In the case of a partnership, the deemed distribution is followed by a deemed contribution of assets and liabilities to a newly formed partnership.[8]

LEGAL REQUIREMENTS AND TAX CONSIDERATIONS RELATED TO FORMING A CORPORATION

OBJECTIVE 3

Recognize the legal requirements and tax considerations related to forming a corporation

LEGAL REQUIREMENTS

State or jurisdictional laws dictate the legal requirements for forming a corporation. These requirements usually include

- Investing a minimum amount of capital
- Filing articles of incorporation
- Issuing stock
- Paying incorporation fees to the state or other jurisdiction

One of the first decisions an entrepreneur must make when organizing a corporation is choosing a state of incorporation. Although most entrepreneurs incorporate in the state where they conduct business, many incorporate in other states with more favorable corporation laws. Such laws might provide for little or no income, sales, or use taxes; low minimum capital requirements; and modest incorporation fees. Regardless of the state of incorporation, the entrepreneur must follow the incorporation procedure set forth in the applicable state statute. Typically, under this procedure, the entrepreneur must file articles of incorporation with the appropriate state agency. The articles must specify certain information, such as the formal name of the corporation; its purpose; the par value, number of shares, and classes of stock it is authorized to issue; and the names of the individuals who will initially serve on the corporation's board of directors. The state usually charges a fee for incorporation or filing. In addition, it periodically may assess a franchise tax for the privilege of doing business in the state. These fees and taxes could be substantial.

ADDITIONAL COMMENT

States are not consistent in how they tax corporations. Certain states do not tax corporations' income. Other states do not recognize an S corporation election, thereby taxing an S corporation as a C corporation.

TAX CONSIDERATIONS

Once the entrepreneur decides on the corporate form, he or she must transfer cash, property (e.g., equipment, furniture, inventory, and receivables), or services (e.g., accounting, legal, or architectural services) to the corporation in exchange for its debt or equity. These transfers may have tax consequences for both the transferor investor and the transferee corporation. For instance, the sale of property for stock usually is taxable to the transferor.[9] However, if Sec. 351(a) applies, any gain or loss realized on the exchange may be deferred. (The rationale for this treatment is that, even though its form changes, the investor's interest in the transferred property continues.) In determining the tax consequences of incorporation, one must answer the following questions:

- What property should be transferred to the corporation?
- What services should the transferors or third parties provide for the corporation?

---

[8] Reg. Sec. 301.7701-3(g). An alternative way for a corporation to be taxed as a pass-through entity is to make an election to be taxed as an S corporation. See Chapter C:11.

[9] Sec. 1001.

- ▶ What liabilities, in addition to property, should be transferred?
- ▶ Do the transferor shareholders have control of the corporation after the transfers?

Example C:2-10 and Table C:2-1 compare the tax consequences of taxable and nontaxable property transfers.

EXAMPLE C:2-10 ▶ For several years Brad has operated a successful manufacturing business as a sole proprietorship. To limit his liability, he decides to incorporate his business as Block Corporation. Immediately preceding the incorporation, he reports the following balance sheet for his sole proprietorship, which uses the accrual method of accounting:

		Adjusted Basis	*Fair Market Value*
Assets:			
Cash		$ 10,000	$ 10,000
Accounts receivable		15,000	15,000
Inventory		20,000	25,000
Equipment	$120,000		
Minus: Depreciation	(35,000)	85,000	100,000
Total		$130,000	$150,000
Liabilities and owner's equity:			
Accounts payable		$ 30,000	$ 30,000
Note payable on equipment		50,000	50,000
Owner's equity		50,000	70,000
Total		$130,000	$150,000

When Brad transfers the assets to Block in exchange for its stock, he realizes a gain because the value of the stock received exceeds his net basis in the assets. If the exchange is taxable, Brad recognizes $5,000 of ordinary income on the transfer of the inventory ($25,000 FMV − $20,000 basis) and, because of depreciation recapture, $15,000 of ordinary income on the transfer of the equipment ($100,000 FMV − $85,000 basis). However, if the exchange meets the requirements of Sec. 351, it is nontaxable. In other words, Brad recognizes none of the income or gain realized on the transfer of assets and liabilities to Block. ◀

STOP & THINK

Question: Joyce has conducted a business as a sole proprietorship for several years. She needs additional capital and wants to incorporate her business. The assets of her business (building, land, inventory, etc.) have a $400,000 adjusted basis and a $1.5 million FMV. Joyce is willing to exchange the assets for 1,500 shares of Ace Corporation stock, each having a $1,000 fair market value. Bill and John each are willing to invest $500,000 cash in Joyce's business for 500 shares of stock. Why is Sec. 351 relevant to Joyce? Does it matter to Bill and John?

Solution: If not for Sec. 351, Joyce would recognize gain on the incorporation of her business. She realizes a gain of $1.1 million ($1,500,000 − $400,000) on her contribution of proprietorship assets to a new corporation in exchange for 60% of its outstanding shares (1,500 ÷ [1,500 + 500 + 500] = 0.60). However, she recognizes none of this gain because she meets the requirements of Sec. 351. Section 351 does not affect Bill or John because each is simply purchasing 20% of the new corporation's stock for $500,000 cash. Nevertheless, their contribution of cash, which counts as property, allows the three shareholders to have 100% control after the transfer. They will not realize or recognize gain or loss unless they subsequently sell their stock at a price above or below the $500,000 cost.

If all exchanges of property for corporate stock were taxable, many entrepreneurs would find the tax cost of incorporating their business prohibitively high. In Example C:2-10, for example, Brad would recognize a $20,000 gain on the exchange of his assets for the corporate stock. Moreover, because losses also are realized in an exchange, without special rules, taxpayers could exchange loss property for stock and recognize the loss while maintaining an equity interest in the property transferred.

▼ TABLE C:2-1
Overview of Corporate Formation Rules

Tax Treatment for:	**Taxable Property Transfer**	**Nontaxable Property Transfer**
Transferors: 1. Gain realized	FMV of stock received Money received FMV of noncash boot property (including securities) received Amount of liabilities assumed by transferee corporation Minus: Adjusted basis of property transferred Realized gain (Sec. 1001(a))	Same as in a taxable transaction
2. Gain recognized	Transferors recognize the entire amount of realized gain (Sec. 1001(c)) Losses may be disallowed under related party rules (Sec. 267(a)(1)) Installment sale rules may apply to the realized gain (Sec. 453)	Transferors recognize none of the realized gain unless one of the following exceptions applies (Sec. 351(a)): a. Boot property is received (Sec. 351(b)) b. Liabilities are transferred to the corporation for a nonbusiness or tax avoidance purpose (Sec. 357(b)) c. Liabilities exceeding basis are transferred to the corporation (Sec. 357(c)) d. Services, certain corporate indebtedness, and interest claims are transferred to the corporation (Sec. 351(d)) The installment method may defer recognition of gain when a shareholder receives a corporate note as boot (Sec. 453)
3. Basis of qualified stock and other property received	FMV (Cost) (Sec. 1012)	Basis of property transferred to the corporation Plus: Gain recognized Minus: Money received (including liabilities treated as money) FMV of noncash boot property Total basis of qualified stock received (Sec. 358(a)) Allocation of total qualified stock basis is based on relative FMVs Basis of noncash boot property is its FMV (Sec. 358(a))
4. Holding period of property received	Day after the exchange date	Holding period of qualified stock received includes holding period of Sec. 1231 property or capital assets transferred; otherwise it begins the day after the exchange date
Transferee Corporation: 1. Gain recognized	The corporation recognizes no gain or loss on the receipt of money or other property in exchange for its stock (including treasury stock) (Sec. 1032)	Same as taxable transaction except the corporation may recognize gain under Sec. 311 if it transfers appreciated noncash boot property (Sec. 351(f))
2. Basis	FMV (Cost) (Sec. 1012)	Generally, same as in transferor's hands plus any gain recognized by transferor (Sec. 362) If the total adjusted basis of all transferred property exceeds the total FMV of the property, the total basis to the transferor is limited to the property's total FMV
3. Holding period	Day after the exchange date	Transferor's carryover holding period for the property transferred regardless of the property's character (Sec. 1223(2))

To allow taxpayers to incorporate without incurring a high tax cost and to prevent taxpayers from recognizing losses while maintaining an equity claim to the loss assets, Congress enacted Sec. 351.

SECTION 351: DEFERRING GAIN OR LOSS UPON INCORPORATION

OBJECTIVE 4

Discuss the requirements for deferring gain or loss upon incorporation

Section 351(a) provides that transferors recognize no gain or loss when they transfer property to a corporation solely in exchange for the corporation's stock if, immediately after the exchange, the transferors are in control of the corporation. Section 351 does not apply to a transfer of property to an investment company, nor does it apply in certain bankruptcy cases.

This rule is based on the premise that, when property is transferred to a controlled corporation, the transferors merely exchange direct ownership for indirect ownership through stock in the transferee corporation, which gives them an equity interest in the underlying assets. In other words, the transferors maintain a continuity of interest in the transferred property. Furthermore, if the only consideration the shareholders receive is stock, they have not generated cash with which to pay their taxes. If the transferors of property receive other consideration in addition to stock, such as cash or debt instruments, they will have the wherewithal to pay taxes and, under Sec. 351(b), may have to recognize some or all of their realized gain.

TAX STRATEGY TIP

A transferor who wishes to recognize gain or loss must take steps to avoid Sec. 351 by deliberately failing at least one of its requirements or by engaging in sales transactions. See Tax Planning Considerations at the end of this chapter for details.

A transferor's realized gain or loss that is unrecognized for tax purposes is not exempt from taxation. It is only *deferred* until the shareholder sells or exchanges the stock received in the Sec. 351 exchange. Shareholders who receive stock in such an exchange take a stock basis that reflects the deferred gain or loss. For example, if a shareholder receives stock in exchange for property and recognizes no gain or loss, the stock basis equals the basis of property transferred less liabilities assumed by the corporation (see Table C:2-1). This tax treatment is discussed later in this chapter. Under an alternative approach, the stock basis can be calculated as follows: FMV of qualified stock received, minus any deferred gain (or plus any deferred loss). This latter approach highlights the deferral aspect of this type of transaction. If the shareholder later sells the stock, he or she will recognize the deferred gain or loss inherent in the basis adjustment.

EXAMPLE C:2-11 ▶ Assume the same facts as in Example C:2-10. If Brad satisfies the conditions of Sec. 351, he will not recognize the $20,000 realized gain ($15,000 gain on equipment + $5,000 gain on inventory) when he transfers the assets and liabilities of his sole proprietorship to Block Corporation. Under the alternative approach, Brad's basis in the Block stock is its FMV decreased to reflect the deferred gain. Thus, Brad's basis in the Block stock is $50,000 ($70,000 FMV − $20,000 deferred gain). If Brad later sells his stock for its $70,000 FMV, he will recognize the $20,000 gain at the time of sale. ◀

ADDITIONAL COMMENT

As will be discussed later in this chapter, the statutory method for arriving at Brad's stock basis is the adjusted basis of property transferred ($130,000) minus liabilities assumed by the corporation ($80,000), again $50,000.

The specific requirements for deferral of gain and loss under Sec. 351(a) are

- The transferors must transfer property to the corporation.
- They must receive stock of the transferee corporation in exchange for their property.
- They must be in control of the corporation immediately after the exchange.

Each of these requirements is explained below.

THE PROPERTY REQUIREMENT

The rule of gain or loss nonrecognition applies only to transfers of property to a corporation in exchange for the corporation's stock. Section 351 does not define the term *property*. However, the courts and the IRS have defined *property* to include cash and almost any other asset, including installment obligations, accounts receivable, inventory, equipment, patents and other intangibles representing know-how, trademarks, trade names, and computer software.[10]

Excluded from the statutory definition of property are[11]

- Services (such as legal or accounting services) rendered to the corporation in exchange for its stock
- Indebtedness of the transferee corporation not evidenced by a security
- Interest on transferee corporation debt that accrued on or after the beginning of the transferor's holding period for the debt

The first of these exclusions perhaps is the most important. A person receiving stock in compensation for services must recognize the stock's FMV as ordinary income for tax purposes. In other words, an exchange of services for stock is a taxable transaction even where concurrent transfers of property for stock are nontaxable under Sec. 351.[12] A shareholder's basis in the stock received in compensation for services is the stock's FMV (not necessarily the FMV of the services).

EXAMPLE C:2-12 ▶ Amy and Bill form West Corporation. Amy exchanges property for 90 shares (90% of the outstanding shares) of West stock. Amy's exchange is nontaxable because Amy has exchanged property for stock and controls West immediately after the exchange. Bill performs accounting services that he normally bills for $12,000 in exchange for ten shares of West stock worth $10,000. Bill's exchange is taxable because he has provided services in exchange for stock. Thus, Bill recognizes $10,000 of ordinary income—the FMV of the stock—as compensation for his services. Bill's basis in the stock is its $10,000 FMV. ◀

THE CONTROL REQUIREMENT

Section 351 requires the property transferors, as a group, to be in control of the transferee corporation immediately after the exchange. A transferor may be an individual or any type of entity (such as a partnership, another corporation, or a trust). Section 368(c) defines *control* as ownership of at least 80% of the total combined voting power of all classes of stock entitled to vote and at least 80% of the total number of shares of all other classes of stock (e.g., nonvoting preferred stock).[13] The minimum ownership levels for nonvoting stock apply to each class of stock rather than to the nonvoting stock in total.[14]

EXAMPLE C:2-13 ▶ Dan exchanges property having a $22,000 adjusted basis and a $30,000 FMV for 60% of newly created Sun Corporation's single class of stock. Ed exchanges $20,000 cash for the remaining 40% of Sun stock. The transaction qualifies as a nontaxable exchange under Sec. 351 because the property transferors, Dan and Ed, together own at least 80% of the Sun stock immediately after the exchange. Therefore, Dan defers recognition of his $8,000 ($30,000 − $22,000) realized gain. (Ed realizes no gain because he contributes cash.) ◀

Because services do not qualify as property, stock received by a person who exclusively provides services does not count toward the 80% control threshold. Unless transferors of property own at least 80% of the corporation's stock immediately after the exchange, the control requirement will not be met, and the entire transaction will be taxable.

EXAMPLE C:2-14 ▶ Dana transfers property having an $18,000 adjusted basis and a $35,000 FMV to newly created York Corporation for 70 shares of York stock. Ellen provides legal services for the remaining 30 York shares valued at $15,000. Because Ellen does not transfer property to York, her stock is not counted toward the 80% ownership threshold. On the other hand, because Dana transfers property to York, his stock is counted toward this threshold. However, Dana is not in control of York immediately after the exchange because he owns only 70% of York stock. Therefore, Dana recognizes all $17,000 ($35,000 − $18,000) of his gain realized on the exchange. Dana's basis in his York stock is its $35,000 FMV. Ellen recognizes $15,000 of ordinary income, the FMV of stock received for her services. Ellen's basis in her York stock is $15,000. The tax consequences to Ellen are the same whether or not Dana meets the control requirement. ◀

---

[10] For an excellent discussion of the definition of *property*, see footnote 6 of *D.N. Stafford v. U.S.*, 45 AFTR 2d 80-785, 80-1 USTC ¶9218 (5th Cir., 1980).

[11] Sec. 351(d).

[12] Secs. 61 and 83.

[13] In determining whether the 80% requirements are satisfied, the constructive ownership rules of Sec. 318 do not apply (see Rev. Rul. 56-613, 1956-2 C.B. 212). See Chapter C:4 for an explanation of Sec. 318.

[14] Rev. Rul. 59-259, 1959-2 C.B. 115.

If the property transferors own at least 80% of the stock immediately after the exchange, they, but not the provider of services, will be in control of the transferee corporation.

EXAMPLE C:2-15 ▶ Assume the same facts as in Example C:2-14, except a third individual, Fred, contributes $35,000 in cash for 70 shares of York stock. Now Dana and Fred together own at least 80% of the York stock (140 ÷ 170 = 0.82) immediately after the exchange. Therefore, the transaction meets the Sec. 351 control requirement, and neither Dana nor Fred recognizes gain on the exchange. Ellen still must recognize $15,000 of ordinary income, the FMV of the stock she receives for her services. ◀

Transferors of Both Property and Services. If a person transfers both services and property to a corporation in exchange for the corporation's stock, *all* the stock received by that person, including stock received in exchange for services, is counted toward the 80% control threshold.[15]

EXAMPLE C:2-16 ▶ Assume the same facts as in Example C:2-14 except that, in addition to providing legal services in exchange for stock worth $15,000, Ellen contributes property having a $9,000 adjusted basis and a $14,000 FMV. In this case, all of Ellen's stock counts toward the 80% ownership threshold. Because Dana and Ellen together own 100% of the York stock, the exchange meets the Sec. 351 control requirement. Therefore, Dana and Ellen do not recognize their gains on the property exchange. However, Ellen still must recognize $15,000 of ordinary income, the FMV of the stock received as compensation for services. ◀

When a person transfers both property and services in exchange for a corporation's stock, the property must have more than nominal value for that person's stock to count toward the 80% control threshold.[16] For advance ruling purposes, the IRS considers the stock received for property to be more than nominal value if it is at least 10% of the value of the stock received for services provided. If this is not the case, the IRS will not issue an advance ruling to the effect that the transaction meets the requirements of Sec. 351.[17]

EXAMPLE C:2-17 ▶ Assume the same facts as in Example C:2-16 except that Ellen contributes only $1,000 worth of property in addition to the legal services. In this case, the IRS will not issue an advance ruling that the transaction meets the Sec. 351 requirements because the FMV of stock received for the property ($1,000) is less than 10% of the value of the stock received for the services ($1,500 = 0.10 × $15,000). Consequently, if the IRS audits Ellen's tax return for the year of transfer, it probably will challenge Dana's and Ellen's position that the transfer is nontaxable under Sec. 351. ◀

Transfers to Existing Corporations. Section 351 applies to transfers to an existing corporation, as well as transfers to a newly created corporation. The same requirements must be met in both cases. Property must be transferred in exchange for stock, and the property transferors must be in control of the corporation immediately after the exchange.

EXAMPLE C:2-18 ▶ Jack and Karen own 75 and 25 shares, respectively, of Texas Corporation stock. Jack transfers property with a $15,000 adjusted basis and a $25,000 FMV to the corporation in exchange for an additional 25 shares of Texas stock. The transaction meets the Sec. 351 control requirement because, immediately after the exchange, Jack owns 80% (100 ÷ 125 = 0.80) of Texas stock. Therefore, Jack recognizes no gain. ◀

If a shareholder transfers property to an existing corporation for additional stock but does not own at least 80% of the stock immediately after the exchange, the control requirement is not met. Thus, Sec. 351 denies tax-free treatment for many transfers of property to an existing corporation by a new shareholder. A new shareholder's transfer of property to an existing corporation is nontaxable only if that shareholder acquires at least 80% of the corporation's stock, or if enough existing shareholders also transfer additional property so that the property transferors as a group, including the new shareholder, control the corporation immediately after the exchange.

---

[15] Reg. Sec. 1.351-1(a)(2), Ex. (3).

[16] Reg. Sec. 1.351-1(a)(1)(ii).

[17] Rev. Proc. 77-37, 1977-2 C.B. 568, Sec. 3.07.

EXAMPLE C:2-19 ▶ Alice owns all 100 shares of Local Corporation stock, valued at $100,000. Beth owns property with a $15,000 adjusted basis and a $100,000 FMV. Beth contributes the property to Local in exchange for 100 shares of newly issued Local stock. The transaction does not meet the Sec. 351 control requirement because Beth owns only 50% of Local stock immediately after the exchange. Consequently, Beth recognizes an $85,000 ($100,000 − $15,000) gain. ◀

If an existing shareholder exchanges property for additional stock to enable another shareholder to qualify for tax-free treatment under Sec. 351, the stock received must be of more than nominal value.[18] For advance ruling purposes, the IRS considers the stock to be more than nominal value if it is at least 10% of the value of the stock already owned.[19]

EXAMPLE C:2-20 ▶ Assume the same facts as in Example C:2-19 except that Alice transfers additional property worth $10,000 for an additional ten shares of Local stock. Now both Alice and Beth are property transferors, and they meet the 80% control requirement. Consequently, neither Alice nor Beth recognizes gain on the exchange. If Alice receives fewer than ten shares, the IRS will not issue an advance ruling that the exchange is tax-free under Sec. 351. ◀

STOP & THINK

Question: Matthew and Michael each own 50 shares of Main Corporation stock having a $250,000 FMV. Matthew wants to transfer property with a $40,000 adjusted basis and a $100,000 FMV to Main in exchange for an additional 20 shares. Can Matthew avoid recognizing $60,000 ($100,000 − $40,000) of the gain realized on the transfer?

Solution: If Matthew simply exchanges the property for additional stock, he must recognize the gain. The Sec. 351 control requirement will not have been met because Matthew will own only 70 of the 120 outstanding shares (or 58.33%) immediately after the exchange.

Gain recognition can be avoided in two ways:

1. Matthew can transfer sufficient property (i.e., $750,000 worth) to Main to receive 150 additional shares so that, immediately after the exchange, he will own 80% (200 out of 250 shares) of Main stock.
2. Alternatively, Michael also can contribute additional property to qualify as a transferor. Specifically, he can contribute to the corporation at least $25,000 (10% of the $250,000 value of the Main stock that he already owns) so that together the two property transferors will own 100% of Main stock immediately after the exchange.

Disproportionate Exchanges of Property and Stock. Section 351 does not require that the value of the stock received by the transferors be proportionate to the value of the property transferred. However, if the value of the stock received is *not* proportionate to the value of the property transferred, the exchange may be treated in accordance with its economic effect, that is, a proportional exchange followed by a constructive gift, compensation payment, or extinguishment of a liability owed by one shareholder to another.[20] If the deemed effect of the transaction is a gift from one transferor to another, for example, the "donor" will be treated as though he or she received stock equal in value to that of the property contributed and then gave some of the stock to the "donee."

EXAMPLE C:2-21 ▶ Don and his son John transfer property worth $75,000 (adjusted basis of $42,000 to Don) and $25,000 (adjusted basis of $20,000 to John), respectively, to newly formed Star Corporation in exchange for all 100 shares of Star stock. Don and John receive 25 and 75 Star shares, respectively. Because Don and John are in control of Star immediately after the exchange, they recognize no gain or loss. However, because Don and John did not receive the stock in proportion to the FMV of their respective property contributions, Don might be deemed to have received 75 shares (worth $75,000), then to have given 50 shares (worth $50,000) to John. If the IRS deems such a gift, it might require Don to pay gift taxes. Don's basis in his remaining 25 shares is $14,000 [(25 ÷ 75) × $42,000 basis in the property transferred]. John's basis in the 75 shares is $48,000 [$20,000 basis in the property transferred by John + ($42,000 − $14,000) basis in the shares deemed to have been gifted by Don]. ◀

[18] Reg. Sec. 1.351-1(a)(1)(ii).

[19] Rev. Proc. 77-37, 1977-2 C.B. 568, Sec. 3.07.

[20] Reg. Sec. 1.351-1(b)(1).

Immediately After the Exchange. Section 351 requires that the property transferors be in control of the transferee corporation "immediately after the exchange." This requirement does not mean that all transferors must simultaneously exchange their property for stock. It does mean, however, that all the exchanges must be agreed to beforehand, and the agreement must be executed in an expeditious and orderly manner.[21]

EXAMPLE C:2-22 ▶ Art, Beth, and Carlos form New Corporation. Art and Beth each transfer noncash property worth $25,000 in exchange for one-third of the New stock. Carlos contributes $25,000 cash for another one-third of the New stock. On January 10, Art and Carlos transfer their property and cash, respectively. Beth transfers her property on March 3. Because all three transfers are part of the same prearranged transaction, the property transferors are deemed to be in control of the corporation immediately after the exchange. ◀

TAX STRATEGY TIP

If one shareholder has a prearranged plan to dispose of his or her stock, and the disposition reduces the ownership of the property transferor shareholders below the required 80% control, such disposition can disqualify the Sec. 351 transaction for all the shareholders. As a precaution, all shareholders should provide a written representation that they do not currently have a plan to dispose of their stock.

Section 351 does not require the property transferors to retain control of the transferee corporation for any specific length of time after the exchange. Control is required only "immediately after the exchange." The IRS has interpreted this phrase to mean that the transferors must not have a prearranged plan to dispose of their stock outside the control group. If they do have such a plan, they are not considered to be in control immediately after the exchange.[22]

EXAMPLE C:2-23 ▶ Amir, Bill, and Carl form White Corporation. Each contributes to White appreciated property worth $25,000 in exchange for one-third of White stock. Before the exchange, Amir arranges to sell his stock to Dana as soon as he receives it. This prearranged plan implies that Amir, Bill, and Carl do *not* have control immediately after the exchange because Bill and Carl own only 66.7% of the stock while Amir has disposed of his interest. Therefore, each must recognize gain on the exchange. ◀

THE STOCK REQUIREMENT

Under Sec. 351, transferors who exchange property solely for transferee corporation qualified stock recognize no gain or loss if they control the corporation immediately after the exchange. For this purpose, qualified stock may be voting or nonvoting and may be common stock or qualified preferred stock. On the other hand, *nonqualified* preferred stock is treated as boot. Preferred stock generally has a preferred claim to dividends and liquidating distributions. Such stock, however, is nonqualified if

- The shareholder can require the corporation to redeem it,
- The corporation either is required to redeem the stock or is likely to exercise a right to redeem it, or
- The dividend rate on the stock varies with interest rates, commodity prices, or other similar indices.

These features render the preferred stock more like cash or debt than like equity. Thus, it is treated as boot subject to the rules discussed below. In addition, stock rights or stock warrants are not considered stock for purposes of Sec. 351.[23]

Topic Review C:2-1 summarizes the major requirements for a nontaxable exchange under Sec. 351.

EFFECT OF SEC. 351 ON THE TRANSFERORS

If all Sec. 351 requirements are met, the property transferors recognize no gain or loss on the exchange of their property for stock in the transferee corporation. The receipt of property other than qualified stock does not necessarily render the entire transaction taxable. Rather, it could result in the recognition of all or part of the transferors' realized gain.

Receipt of Boot. If a transferor receives any money or property other than qualified stock in the transferee corporation, the additional money or property is considered to be **boot**. Boot may include cash, notes, securities, nonqualified preferred stock, or stock in another corporation. Upon receiving boot, the property transferor recognizes gain to the extent of the lesser of the transferor's

[23] Reg. Sec. 1.351-1(a)(1)(ii).

TOPIC REVIEW C:2-1

Major Requirements of Sec. 351

1. The nonrecognition of gain or loss rule applies only to transfers of property in exchange for a corporation's qualified stock. It does not apply to an exchange of services for stock.
2. The property transferors must be in control of the transferee corporation immediately after the exchange. Control means ownership of at least 80% of the voting power and at least 80% of the total number of shares of all other classes of stock. Stock disposed of after the exchange pursuant to a prearranged plan does not meet the "immediately after the exchange" requirement.
3. The nonrecognition rule applies only to the gain realized in an exchange of property for qualified stock. If the transferor receives property other than qualified stock, such property is considered to be boot. The property transferor recognizes gain to the extent of the lesser of the FMV of any boot received or the realized gain.

realized gain or the FMV of the boot property received.[24] A transferor never recognizes a loss in an exchange qualifying under Sec. 351, whether or not he or she receives boot.

The character of the recognized gain depends on the type of property transferred. For example, if the shareholder transfers a capital asset (e.g., stock in another corporation), the recognized gain is capital in character. If the shareholder transfers Sec. 1231 property, such as equipment or a building, the recognized gain is ordinary in character to the extent of any depreciation recaptured under Sec. 1245 or 1250.[25] Thus, depreciation is not recaptured unless the transferor receives boot and recognizes a gain on the depreciated property transferred.[26] If the shareholder transfers inventory, the recognized gain is entirely ordinary in character.

EXAMPLE C:2-24 ▶ Pam, Rob, and Sam form East Corporation and transfer the following property:

Transferor	*Asset*	*Transferor's Adj. Basis*	*FMV*	*Consideration Received*
Pam	Machinery	$ 10,000	$ 12,500	25 shares East stock
Rob	Land	18,000	25,000	40 shares East stock and $5,000 East note
Sam	Cash	17,500	17,500	35 shares East stock

The machinery is Sec. 1231 property, and the land is a capital asset. The exchange meets the requirements of Sec. 351 except that, in addition to East stock, Rob receives boot of $5,000 (the FMV of the note). Rob realizes a $7,000 ($25,000 − $18,000) gain, of which he recognizes $5,000—the lesser of the $7,000 realized gain or the $5,000 boot received. The gain is capital in character because the property transferred was a capital asset in Rob's hands. Pam realizes a $2,500 gain on her exchange of machinery. However, even though Pam would have been required to recapture depreciation had she sold or exchanged the machinery, she recognizes no gain because she received no boot. Sam neither realizes nor recognizes gain on his cash purchase of East stock. ◀

ADDITIONAL COMMENT

If multiple assets were aggregated into one computation, any built-in losses would be netted against the gains. Such a result is inappropriate because losses cannot be recognized in a Sec. 351 transaction.

Computing Gain When Several Assets Are Transferred. Revenue Ruling 68-55 adopts a "separate properties approach" for computing gain or loss when a shareholder transfers more than one asset to a corporation.[27] Under this approach, the gain or loss realized and recognized is computed separately for each property transferred. The transferor is deemed to have received a proportionate share of stock, securities, and boot in exchange for each property transferred, based on the assets' relative FMVs.

EXAMPLE C:2-25 ▶ Joan transfers two assets to newly formed North Corporation in a transaction that meets the 80% control requirement. The total FMV of the assets is $100,000. The consideration received by Joan consists of $90,000 of North stock and $10,000 of North notes. The following data illustrate how Joan determines her realized and recognized gain under the procedure set forth in Rev. Rul. 68-55.

---

[24] Sec. 351(b).

[25] Section 1239 also may require some gain to be characterized as ordinary income. Section 1250 ordinary depreciation recapture will not apply to real property placed in service after 1986 because MACRS mandates straight-line depreciation.

[26] Secs. 1245(b)(3) and 1250(c)(3).

[27] 1968-1 C.B. 140, as amplified by Rev. Rul. 85-164, 1985-2 C.B. 117, and Reg. Sec. 1.362-4(h) Example (6).

	Asset 1	*Asset 2*	*Total*
Asset's FMV	$40,000	$60,000	$100,000
Percent of total FMV	40%	60%	100%
Consideration received in exchange for asset:			
Stock (Stock × percent of total FMV)	$36,000	$54,000	$ 90,000
Notes (Notes × percent of total FMV)	4,000	6,000	10,000
Total proceeds	$40,000	$60,000	$100,000
Minus: Adjusted basis	(65,000)	(25,000)	(90,000)
Realized gain (loss)	($25,000)	$ 35,000	$ 10,000
Boot received	$ 4,000	$ 6,000	$ 10,000
Recognized gain (loss)	None	$ 6,000	$ 6,000

Under the separate properties approach, the loss realized on the transfer of Asset 1 does not offset the gain realized on the transfer of Asset 2. Therefore, Joan recognizes $6,000 of the total $10,000 realized gain, even though she receives $10,000 of boot. Joan's selling Asset 1 to North so as to recognize the loss might be advisable. However, the Sec. 267 loss limitation rules may apply to Joan if she is a controlling shareholder (see pages C:2-34 and C:2-35). ◀

Computing a Shareholder's Basis.

Boot Property. A transferor's basis in any boot property received is the property's FMV.[28]

Stock. A shareholder computes his or her adjusted basis in stock received in a Sec. 351 exchange as follows:[29]

Adjusted basis of property transferred to the corporation
Plus: Any gain recognized by the transferor
Minus: FMV of boot (other than money) received from the corporation
Money received from the corporation
Liabilities assumed by the corporation
Adjusted basis of stock received

EXAMPLE C:2-26 ▶ Bob transfers a capital asset having a $50,000 adjusted basis and an $80,000 FMV to South Corporation. He acquired the property two years ago. Bob receives all 100 shares of South stock, having a $70,000 FMV, plus a $10,000 90-day South note (boot property). Bob realizes a $30,000 gain on the exchange, computed as follows:

FMV of stock received	$70,000
Plus: FMV of 90-day note	10,000
Amount realized	$80,000
Minus: Adjusted basis of property transferred	(50,000)
Realized gain	$30,000

Bob's recognized gain is $10,000, i.e., the lesser of the $30,000 realized gain or the $10,000 FMV of the boot property. This gain is long-term and capital in character. The Sec. 351 rules effectively require Bob to defer $20,000 ($30,000 − $10,000) of his realized gain. Bob's basis in the South stock is $50,000, computed as follows:

Adjusted basis of property transferred	$50,000
Plus: Gain recognized by Bob	10,000
Minus: FMV of boot received	(10,000)
Adjusted basis of Bob's stock	$50,000 ◀

ADDITIONAL COMMENT

Because Sec. 351 is a deferral provision, any unrecognized gain must be reflected in the basis of the stock received by the transferor shareholder and is accomplished by substituting the shareholder's basis in the property transferred for the basis of the stock received. This substituted (exchanged) basis may be further adjusted by gain recognized and boot received.

---

[28] Sec. 358(a)(2).

[29] Sec. 358(a)(1).

If a transferor receives more than one class of qualified stock, his or her basis must be allocated among the classes according to their relative FMVs.[30]

EXAMPLE C:2-27 ▶ Assume the same facts as in Example C:2-26 except Bob receives 100 shares of South common stock with a $45,000 FMV, 50 shares of South qualified preferred stock with a $25,000 FMV, and a 90-day South note with a $10,000 FMV. The total adjusted basis of the stock is $50,000 ($50,000 basis of property transferred + $10,000 gain recognized − $10,000 FMV of boot received). This basis must be allocated between the common and qualified preferred stock according to their relative FMVs, as follows:

$$\text{Basis of common stock} = \frac{\$45{,}000}{\$45{,}000 + \$25{,}000} \times \$50{,}000 = \$32{,}143$$

$$\text{Basis of preferred stock} = \frac{\$25{,}000}{\$45{,}000 + \$25{,}000} \times \$50{,}000 = \$17{,}857$$

Bob's basis in the note is its $10,000 FMV. ◀

SELF-STUDY QUESTION

What is an alternative method for determining the basis of the assets received by the transferor shareholder? How is this method applied to Bob in Example C:2-26?

ANSWER

The basis of all boot property is its FMV, and the basis of qualified stock received is the stock's FMV minus any deferred gain or plus any deferred loss. Bob's stock basis under the alternative method is $50,000 ($70,000 FMV of stock − $20,000 deferred gain).

Transferor's Holding Period. The transferor's holding period for any stock received in exchange for a capital asset or Sec. 1231 property includes the holding period of the property transferred.[31] If the transferor exchanged any other kind of property (e.g., inventory) for the stock, the transferor's holding period for the stock begins on the day after the exchange. Likewise, the holding period for boot property begins on the day after the exchange.

EXAMPLE C:2-28 ▶ Assume the same facts as in Example C:2-26. Bob's holding period for the stock includes the holding period of the capital asset transferred. His holding period for the note starts on the day after the exchange. ◀

STOP & THINK

Question: The holding period for stock received in exchange for a capital asset or Sec. 1231 property includes the holding period of the transferred item. The holding period for inventory or other assets begins on the day after the exchange. Why the difference?

Solution: Because stock received in a Sec. 351 exchange represents a "continuity of interest" in the property transferred, logically the stock should not only be valued and characterized in the same manner as the asset exchanged for the equity claim, but also accorded the same tax attributes. Because the holding period of a capital asset is relevant in determining the character of gain or loss realized (i.e., long-term or short-term) on the asset's subsequent sale, stock received in a tax-free exchange of the asset should be accorded the same holding period for the purpose of determining the character of gain or loss realized on the stock's subsequent sale. By the same token, because the holding period of a noncapital asset is less relevant in determining the character of gain or loss realized on the asset's subsequent sale, stock received in a tax-free exchange of the asset need not be accorded the same holding period for the purpose of determining the character of gain or loss realized on the stock's subsequent sale. Given the very nature of a noncapital asset, this gain or loss generally is ordinary in character, in any event. Moreover, if stock received in exchange for a noncapital asset were accorded a holding period that includes that of the transferred property, a transferor could sell the stock in a short time to realize a long-term capital gain, thereby converting ordinary income (potentially from the sale of the noncapital asset) into capital gain from the sale of stock.

Topic Review C:2-2 summarizes the tax consequences of a Sec. 351 exchange to the transferor(s) and the transferee corporation.

---

[30] Sec. 358(b)(1) and Reg. Sec. 1.358-2(b)(2).

[31] Sec. 1223(1). Revenue Ruling 85-164 (1985-2 C.B. 117) provides that a single share of stock may have two holding periods: a substituted (exchanged) holding period for the portion of such share received in exchange for a capital asset or Sec. 1231 property and a holding period that begins on the day after the exchange for the portion of such share received for inventory or other property. The split holding period is relevant only if the transferor sells the stock received within one year of the transfer date or within five years if the stock is Sec. 1202 stock.

TOPIC REVIEW C:2-2

Tax Consequences of a Sec. 351 Exchange

TO TRANSFEROR(S):

1. Transferors recognize no gain or loss when they exchange property for qualified stock. Exception: A transferor recognizes gain equal to the lesser of the realized gain or the sum of any money received plus the FMV of any non-cash property received. The character of the gain depends on the type of property transferred.
2. The basis of the qualified stock received equals the adjusted basis of the property transferred plus any gain recognized by the transferor minus the FMV of any boot property received minus any money received (including liabilities assumed or acquired by the transferee corporation).
3. The holding period of qualified stock received in exchange for capital assets or Sec. 1231 property includes the holding period of the transferred property. The holding period of stock received in exchange for any other property begins on the day after the exchange.

TO TRANSFEREE CORPORATION:

1. A corporation recognizes no gain or loss when it exchanges its own stock for property or services.
2. The corporation's basis in property received is the transferor's basis plus any gain recognized by the transferor. However, if the total adjusted basis of all transferred property exceeds the total FMV of the property, the total basis to the transferee is limited to the property's total FMV.
3. The corporation's holding period for property received includes the transferor's holding period.

TAX CONSEQUENCES TO TRANSFEREE CORPORATION

A corporation that issues stock or debt for property or services is subject to various IRC rules for determining the tax consequences of that exchange.

ADDITIONAL COMMENT

The nonrecognition rule for corporations that issue stock for property applies whether or not the transaction qualifies the transferor shareholder for Sec. 351 treatment.

Gain or Loss Recognized by the Transferee Corporation. Corporations recognize no gain or loss when they issue their own stock in exchange for property or services.[32] This result ensues whether or not Sec. 351 governs the exchange and whether or not the corporation issues new stock or treasury stock.

EXAMPLE C:2-29 ▶ West Corporation pays $10,000 to acquire 100 shares of its own stock from existing shareholders. The next year, West reissues these 100 treasury shares in exchange for land having a $15,000 FMV. West realizes a $5,000 ($15,000 − $10,000) gain on the exchange but recognizes none of this gain. ◀

Corporations also recognize no gain or loss when they exchange their own debt instruments for property or services. On the other hand, a corporation recognizes gain (but not loss) if it transfers appreciated property to a transferor as part of a Sec. 351 exchange. The amount and character of the gain are determined as though the property had been sold by the corporation for its FMV immediately before the transfer.

EXAMPLE C:2-30 ▶ Alice, who owns 100% of Ace Corporation stock, transfers to Ace land having a $100,000 FMV and a $60,000 adjusted basis. In exchange, Alice receives 75 additional shares of Ace common stock having a $75,000 FMV, and Zero Corporation common stock having a $25,000 FMV. Ace's basis in the Zero stock, a capital asset, is $10,000. Alice realizes a $40,000 gain [($75,000 + $25,000) − $60,000] on the land transfer, of which she recognizes $25,000 (i.e., the FMV of the boot property received). In addition, Ace recognizes a $15,000 capital gain ($25,000 − $10,000) upon transferring the Zero stock to Alice. ◀

Transferee Corporation's Basis for Property Received. A corporation that acquires property in exchange for its stock in a transaction that is taxable to the transferor takes a current cost (i.e., its FMV) basis in the property. On the other hand, if the exchange qualifies for nonrecognition treatment under Sec. 351 and is wholly or partially tax-free to the transferor, the corporation's basis in the property is computed under Sec. 362 as follows:

---

[32] Sec. 1032.

Transferor's adjusted basis in property transferred to the corporation
Plus: Gain (if any) recognized by transferor
Minus: Reduction for loss property (if applicable)

Transferee corporation's basis in property

The transferee corporation's holding period for property acquired in a transaction satisfying the Sec. 351 requirements includes the period during which the property was held by the transferor.[33] This general rule applies to all types of property without regard to their character in the transferor's hands or the amount of gain recognized by the transferor. This rule also applies if the corporation reduces a property's basis under the loss property limitation discussed below.[34]

ADDITIONAL COMMENT

If a shareholder transfers built-in gain property in a Sec. 351 transaction, the built-in gain actually is duplicated. This duplication occurs because the transferee corporation assumes the potential gain through its carryover basis in the assets it receives, and the transferor shareholder assumes the potential gain through its substituted (exchanged) basis in the transferee corporation stock. This result reflects the double taxation characteristic of C corporations.

EXAMPLE C:2-31 ▶

Top Corporation issues 100 shares of its stock for land having a $15,000 FMV. Tina, who transferred the land, had a $12,000 basis in the property. If the exchange satisfies the Sec. 351 requirements, Tina recognizes no gain on the exchange. Top's basis in the land is $12,000, the same as Tina's. Top's holding period includes Tina's holding period. However, if the exchange does *not* satisfy the Sec. 351 requirements, Tina recognizes $3,000 of gain. Top's basis in the land is its $15,000 acquisition cost, and its holding period begins on the day after the exchange date. ◀

ADDITIONAL COMMENT

The term *built-in gain* is often used to refer to the excess of a property's FMV over its adjusted basis. The term *built-in loss* is often used to refer to the excess of a property's adjusted basis over its FMV.

Reduction for Loss Property. Section 362(e)(2) prevents shareholders from generating double losses by transferring loss property to a corporation. The double loss potential exists because the corporation would hold property with a built-in loss, and the shareholders would hold stock with a built-in loss. Accordingly, if a corporation's total adjusted basis (including any increase for gain recognized by the shareholder) for all properties transferred by the shareholder exceeds the properties' total FMV, the basis to the corporation of the properties must be reduced by this excess. The reduction in basis is allocated among the properties in proportion to their respective built-in losses. The limitation applies on a shareholder-by-shareholder basis. In other words, the property values and built-in losses of all shareholders are not aggregated.

EXAMPLE C:2-32 ▶

In a transaction that qualifies for Sec. 351 treatment, John transfers the following assets to Pecan Corporation in exchange for Pecan stock worth $250,000:

Assets	*Adjusted Basis to John*	*FMV*
Inventory	$ 50,000	$ 60,000
Equipment	150,000	120,000
Furniture	90,000	70,000
Total	$290,000	$250,000

John does not recognize any gain or loss, and his basis for the Pecan stock is $290,000 ($290,000 + $0 – $0 – $0 – $0, using the formula on page C:2-18). Note that this basis is $40,000 more than the stock's $250,000 value, thus continuing John's $40,000 net built-in loss for the three assets immediately before the transfer.

If there were no reduction for loss property, Pecan's adjusted basis would be $50,000 for the inventory, $150,000 for the equipment, and $90,000 for the furniture. Pecan thus would have a $10,000 ($60,000 – $50,000) built-in gain for the inventory, a $30,000 ($120,000 – $150,000) built-in loss for the equipment, and a $20,000 ($70,000 – $90,000) built-in loss for the furniture. This $40,000 ($10,000 – $30,000 – $20,000) net built-in loss would duplicate John's $40,000 built-in loss. To avoid this outcome, Pecan generally must reduce its adjusted basis for the assets by $40,000, allocating the reduction to the assets in proportion to their built-in losses. The equipment and furniture, but not the inventory, have a built-in loss, so Pecan determines the bases for the assets as follows:

---

[33] Sec. 1223(2).

[34] Reg. Sec. 1.362-4(c)(3)(i).

	Inventory	*Equipment*	*Furniture*	*Total*
John's adjusted basis	$ 50,000	$150,000	$ 90,000	$290,000
Gain (if any) recognized by John	0	0	0	0
Reduction for loss property	0	(24,000)[a]	(16,000)[b]	(40,000)
Pecan's basis for property	$ 50,000	$126,000	$ 74,000	$250,000

[a] $40,000 × [$30,000 ÷ ($30,000 + $20,000)]
[b] $40,000 × [$20,000 ÷ ($30,000 + $20,000)]

Pecan's $250,000 total basis for the assets equals their total FMV, resulting in a zero net built-in gain or loss. Pecan's holding period for each asset includes John's holding period for it. ◀

A corporation subject to the basis reduction rules described above can avoid this result if the corporation and transferor so elect. Under the election, the corporation need not reduce the bases of the assets received, but the transferor shareholder's basis in stock received for the property is reduced by the amount by which the corporation would have reduced its basis absent the election.

EXAMPLE C:2-33 ▶ Assume the same facts as in Example C:2-32 except John and Pecan elect not to reduce the bases of the assets Pecan received. Under the election, John's basis in his Pecan stock is reduced to $250,000 ($290,000 − $40,000). ◀

A corporation and its shareholders can avoid the basis reduction rules altogether if each shareholder transfers enough appreciated property to offset any built-in losses of other property transferred. This avoidance opportunity exists because, in making the comparison, each shareholder aggregates the adjusted bases and FMVs of his or her property transferred.

EXAMPLE C:2-34 ▶ Assume the same facts as in Example C:2-32 except that the inventory's FMV is $105,000. Pecan's total basis without any reduction for loss property would still be $290,000. This total basis does not exceed the assets' $295,000 total FMV, so there would be no reduction for loss property. Pecan's bases would be $50,000 for the inventory, $150,000 for the equipment, and $90,000 for the furniture. That is, each asset's basis would carry over from John to Pecan, even though some of them have a built-in loss. ◀

ASSUMPTION OF THE TRANSFEROR'S LIABILITIES

When a shareholder transfers property to a controlled corporation, the corporation often assumes the transferor's liabilities. The question arises as to whether the transferee corporation's assumption of liabilities is equivalent to a cash (boot) payment to the transferor. In certain types of transactions, the transferee's assumption of a transferor's liability is treated as a payment of cash to the transferor. For example, in a like-kind exchange, if a transferee assumes a transferor's liability, the transferor is treated as though he or she received a cash payment equal to the amount of the liability assumed. By contrast, if a transaction satisfies the Sec. 351 requirements, Sec. 357 provides relief from such treatment.

General Rule—Sec. 357(a). For the purpose of determining gain recognition, the transferee corporation's assumption of liabilities in a property transfer qualifying under Sec. 351 is *not* considered equivalent to the transferor's receipt of money. Consequently, the transferee corporation's assumption of liabilities does not result in the transferor's recognizing part or all of his or her realized gain. For the purpose of calculating the transferor's stock basis, however, the transferee corporation's assumption of liabilities *is* treated as money received and thus decreases the transferor's stock basis. Moreover, for the purpose of calculating the transferor's *realized* gain, the transferee corporation's assumption of liabilities is treated as part of the transferor's amount realized.[35]

EXAMPLE C:2-35 ▶ Roy and Eduardo transfer the following assets and liabilities to newly formed Palm Corporation:

---

[35] Sec. 358(d)(1).

Transferor	*Asset/ Liability*	*Transferor's Adj. Basis*	*FMV*	*Consideration Received*
Roy	Machinery	$15,000	$32,000	50 shares Palm stock
	Mortgage	8,000	—	Assumed by Palm
Eduardo	Cash	24,000	24,000	50 shares Palm stock

The transaction meets the requirements of Sec. 351. Roy's recognized gain is determined as follows:

FMV of stock received	$24,000
Plus: Palm's assumption of the mortgage liability	8,000
Amount realized	$32,000
Minus: Basis of machinery	(15,000)
Realized gain	$17,000
Boot received	$ –0–
Recognized gain	$ –0–

Although Palm's assumption of the mortgage liability increases Roy's amount realized, Roy recognizes none of his realized gain because the mortgage assumption is not considered to be boot (i.e., a cash equivalent). Eduardo recognizes no gain because he transferred only cash. Roy's stock basis is $7,000 ($15,000 basis of property transferred − $8,000 liability assumed by Palm). Eduardo's stock basis is $24,000, and Palm's basis for the machinery is $15,000. ◀

ADDITIONAL COMMENT

If any of the assumed liabilities are created for tax avoidance purposes, *all* the assumed liabilities are tainted.

The general rule of Sec. 357(a), however, has two exceptions. These exceptions, discussed below, relate to (1) transfers for the purpose of tax avoidance or without a bona fide business purpose and (2) transfers where the liabilities assumed by the corporation exceed the total basis of the property transferred.

ETHICAL POINT

Information about any transferor liabilities assumed by the transferee corporation must be reported with the transferee and transferor's tax returns for the year of transfer (see page C:2-36). Where a client asks a tax practitioner to ignore the fact that tax avoidance is the primary purpose for transferring a liability to a corporation, the tax practitioner must examine the ethical considerations of continuing to prepare returns and provide tax advice for the client.

Tax Avoidance or No Bona Fide Business Purpose—Sec. 357(b). All liabilities assumed by a controlled corporation *are* considered to be money received by the transferor, and therefore boot, if the principal purpose of the transfer of any portion of such liabilities is tax avoidance or if the liability transfer has no bona fide business purpose.

The transfer of liabilities might be considered to be motivated principally by tax avoidance where the transferor incurred the liabilities shortly before the transfer. Thus, the most important factor in determining whether a tax avoidance purpose exists may be the length of time between the incurrence of the liability and its transfer to, or assumption by, the corporation.

The assumption of liabilities normally is considered to have a business purpose if the transferor incurred the liabilities in the normal course of business or in the course of acquiring business property. Examples of liabilities without a bona fide business purpose and whose transfer would cause *all* liabilities transferred to be considered boot are personal obligations of the transferor, including a home mortgage or any other loans of a personal nature.

EXAMPLE C:2-36 ▶

David owns land having a $100,000 FMV and a $60,000 adjusted basis. The land is not encumbered by any liabilities. To obtain cash for his personal use, David transfers the land to his wholly owned corporation in exchange for additional stock and $25,000 cash. Because the cash is considered to be boot, David must recognize $25,000 of gain. Assume instead that David mortgages the land for $25,000 to obtain the needed cash. If shortly thereafter David transfers the land and the mortgage to his corporation for additional stock, the $25,000 mortgage assumed by the corporation will be considered to be boot because the transfer of the mortgage appears to have no bona fide business purpose. David's recognized gain will be $25,000, i.e., the lesser of the boot received ($25,000) or his realized gain ($40,000). This special liability rule prevents David from obtaining cash without boot recognition. ◀

Liabilities in Excess of Basis—Sec. 357(c). Under Sec. 357(c), if the total amount of liabilities assumed by the controlled corporation exceeds the total adjusted basis of all property transferred, the excess liability is taxed as a gain to the transferor. This rule applies regardless of whether the transferor realizes any gain or loss. The rationale for the rule is that the transferor has received a benefit (in the form of a release from liabilities) that exceeds his or her original investment in the transferred property. Therefore, the transferor should be taxed on this excess. The character of the recognized gain depends on the type of property transferred to the corporation. The transferor's basis in the stock received, which is determined using the formula on page C:2-18, is zero.

EXAMPLE C:2-37 ▶ Judy transfers $10,000 cash and land, a capital asset, to Duke Corporation in exchange for all its stock. At the time of the exchange, the land has a $70,000 adjusted basis and a $125,000 FMV. Duke assumes a $100,000 mortgage on the land for a bona fide business purpose. Although Judy receives no boot, Judy must recognize a $20,000 ($100,000 − $80,000) capital gain, the amount by which the liabilities assumed by Duke exceed the basis of the land and the cash. Judy's basis in the Duke stock is zero, computed as follows:

Judy's basis in the property transferred ($10,000 + $70,000)	$ 80,000
Plus: Gain recognized by Judy	20,000
Minus: Liabilities assumed by Duke	(100,000)
Judy's basis in the Duke stock	$ –0–

Note that, without the recognition of the $20,000 gain, Judy's basis in the Duke stock would be a negative $20,000 ($80,000 − $100,000). ◀

STOP & THINK

Question: What are the fundamental differences between the liability exceptions of Sec. 357(b) and Sec. 357(c)?

Solution: Section 357(b) treats all "tainted" liabilities as boot so that gain recognition is the lesser of gain realized or the amount of boot. Excess liabilities under Sec. 357(c) are not treated as boot; they require gain recognition whether or not the transferor realizes any gain. Section 357(b) tends to be punitive in that the "tax avoidance" liabilities cause all the "offending" shareholder's transferred liabilities to be treated as boot even if the transfer of some liabilities do not have a tax avoidance purpose. Section 357(c) is not intended to be punitive. It recognizes that the shareholder has received an economic benefit to the extent of excess liabilities, and it prevents the occurrence of a negative stock basis. In short, Section 357(b) deters or punishes tax avoidance while Sec. 357(c) taxes an economic gain.

KEY POINT

Because of the "liabilities in excess of basis" exception, many cash basis transferor shareholders might inadvertently create recognized gain in a Sec. 351 transaction. However, a special exception exists that protects cash basis taxpayers. This exception provides that liabilities that would give rise to a deduction when paid are not treated as liabilities for purposes of Sec. 357(c).

Liabilities of a Cash Method Taxpayer—Sec. 357(c)(3). In a Sec. 351 tax-free exchange, special problems arise when a taxpayer using the cash or hybrid method of accounting transfers property and liabilities of an ongoing business to a corporation.[36] Often, the principal assets transferred are accounts receivable having a zero basis. Liabilities usually are transferred as well. Consequently, the amount of liabilities transferred may exceed the total basis (but not the FMV) of the property transferred.

Under the general rule of Sec. 357(c), the transferor recognizes gain equal to the amount by which the liabilities assumed exceed the total basis of the property transferred. Section 357(c)(3), however, provides that, in applying the general rule, the term *liabilities* does *not* include any amount that would give rise to a deduction when paid (e.g., accounts payable of a cash basis taxpayer). These amounts also are not considered liabilities for the purpose of determining the shareholder's basis in stock received.[37] Therefore, they generally do not reduce this basis. However, if after all other adjustments the stock's basis exceeds its FMV, these liabilities could reduce stock basis, but not below the stock's FMV.[38]

EXAMPLE C:2-38 ▶ Tracy operates a cash basis accounting practice as a sole proprietorship. She transfers the assets of her practice to Prime Corporation in exchange for all the Prime stock. The balance sheet for the transferred practice is as follows:

---

[36] Sec. 357(c)(3).
[37] Sec. 358(d)(2).
[38] Sec. 358(h)(1).

Assets and Liabilities	*Adjusted Basis*	*FMV*
Cash	$ 5,000	$ 5,000
Furniture	5,000	8,000
Accounts receivable	–0–	50,000
Total	$10,000	$63,000
Accounts payable (deductible expenses)	$ –0–	$25,000
Note payable (on office furniture)	2,000	2,000
Owner's equity	8,000	36,000
Total	$10,000	$63,000

If, for purposes of Sec. 357(c), the accounts payable were considered liabilities, the $27,000 of liabilities transferred (i.e., the $25,000 of accounts payable and the $2,000 note payable) would exceed the $10,000 total basis of assets transferred, and Troy would recognize a $17,000 gain. Because paying the $25,000 of accounts payable gives rise to a deduction, however, they are not considered liabilities for purposes of Sec. 357(c). On the other hand, the $2,000 note payable *is* considered a liability for this purpose because paying it would not give rise to a deduction. Thus, the total liabilities transferred to Prime amount to only $2,000. Because that amount does not exceed the $10,000 total basis of the assets transferred, Tracy recognizes no gain. Moreover, the accounts payable are not considered liabilities for purposes of computing Tracy's basis in her stock because the stock's basis ($8,000) does not exceed its FMV ($36,000). Thus, her basis in the Prime stock is $8,000 ($10,000 − $2,000). ◀

Topic Review C:2-3 summarizes the liability assumption and acquisition rules of Sec. 357.

OTHER CONSIDERATIONS IN A SEC. 351 EXCHANGE

Recapture of Depreciation. If a Sec. 351 exchange is completely nontaxable (i.e., the transferor receives no boot), no depreciation is recaptured. Instead, the corporation inherits the entire amount of the transferor's recapture potential. Where the transferor recognizes some depreciation recapture as ordinary income (e.g., because of boot recognition), the transferee inherits the remaining recapture potential. If the transferee corporation subsequently disposes of the depreciated property, the corporation is subject to recapture rules on depreciation it claimed subsequent to the transfer, plus the recapture potential it inherited from the transferor.

EXAMPLE C:2-39 ▶ Azeem transfers machinery having a $25,000 original cost, an $18,000 adjusted basis, and a $35,000 FMV for all 100 shares of Wheel Corporation stock. Before the transfer, Azeem used the machinery in his business and claimed $7,000 of depreciation. In the transfer, Azeem recaptures no depreciation, and Wheel inherits the $7,000 recapture potential. After claiming an additional $2,000 of depreciation, Wheel has a $16,000 adjusted basis in the machinery. If Wheel

TOPIC REVIEW C:2-3

Liability Assumption and Acquisition Rules of Sec. 357

1. *General Rule (Sec. 357(a)):* A transferee corporation's assumption of liabilities in a Sec. 351 exchange is not treated as boot by the shareholder for gain recognition purposes. On the other hand, the assumption of liabilities is treated as the receipt of money for purposes of determining the transferor's stock basis and amount realized.
2. *Exception 1 (Sec. 357(b)):* All liabilities assumed by a transferee corporation are considered to be money/boot received by the transferor if the principal purpose of the transfer of any of the liabilities is tax avoidance or if no bona fide business purpose exists for the transfer.
3. *Exception 2 (Sec. 357(c)):* If the total amount of liabilities assumed by a transferee corporation exceeds the total basis of property transferred, the transferor recognizes the excess as gain.
4. *Special Rule (Sec. 357(c)(3)):* For purposes of Exception 2, the term liabilities does not include any amount that would give rise to a deduction when paid, e.g., transferor uses the cash or hybrid method of accounting.

now sells the machinery for $33,000, it must recognize a $17,000 ($33,000 − $16,000) gain. Of this gain, $9,000 is ordinary income recaptured under Sec. 1245. The remaining $8,000 is a Sec. 1231 gain. ◀

Computing Depreciation. When a shareholder transfers depreciable property to a corporation in a nontaxable Sec. 351 exchange and the shareholder has not fully depreciated the property, the corporation must use the depreciation method and recovery period used by the transferor.[39] For the year of the transfer, the depreciation must be allocated between the transferor and the transferee corporation according to the number of months each party held the property. The transferee corporation is assumed to have held the property for the entire month in which the property was transferred.[40]

EXAMPLE C:2-40 ▶ On June 10 of Year 1, Carla paid $6,000 for a computer (five-year property for MACRS purposes), which she used in her sole proprietorship business. In Year 1, she claimed $1,200 (0.20 × $6,000) of depreciation. She did not elect Sec. 179 expensing and did not claim any bonus depreciation. On February 10 of Year 2, she transfers the computer and other sole proprietorship assets to King Corporation in exchange for King stock. Because Sec. 351 applies, she recognizes no gain or loss. King must use the same MACRS recovery period and method that Carla used. Depreciation for Year 2 is $1,920 (0.32 × $6,000). That amount must be allocated between Carla and King. The computer is considered to have been held by Carla for one month and by King for 11 months (including the month of transfer). The Year 2 depreciation amounts claimed by Carla and King are calculated as follows:

Carla	$6,000 × 0.32 × 1/12 =	$ 160
King Corporation	$6,000 × 0.32 × 11/12 =	$1,760

King's basis in the computer is calculated as follows:

Original cost	$6,000
Minus: Year 1 depreciation claimed by Carla	(1,200)
Year 2 depreciation claimed by Carla	(160)
Adjusted basis on transfer date	$4,640

King's depreciation for Year 2 and subsequent years is as follows:

Year 2 (as computed above)	$1,760
Year 3 ($6,000 × 0.1920)	1,152
Year 4 ($6,000 × 0.1152)	691
Year 5 ($6,000 × 0.1152)	691
Year 6 ($6,000 × 0.0576)	346
Total	$4,640

◀

If the transferee corporation's basis in the depreciable property exceeds the transferor's basis (e.g., as a result of an upward adjustment to reflect gain recognized by the transferor), the corporation treats the excess amount as newly purchased MACRS property and uses the recovery period and method applicable to the class of property transferred.[41]

EXAMPLE C:2-41 ▶ Assume the same facts as in Example C:2-40 except that, in addition to King stock, Carla receives a $1,000 King note. Consequently, she must recognize $1,000 of gain on the transfer of the computer. King's basis in the computer is calculated as follows:

Original cost	$6,000
Depreciation claimed by Carla	(1,360)
Adjusted basis on transfer date	$4,640
Plus: Gain recognized by Carla	1,000
Basis to King on transfer date	$5,640

The additional $1,000 of basis is depreciated as though it were separate, newly purchased five-year MACRS property. Thus, assuming King does not claim Sec. 179 expensing or bonus

---

[39] Sec. 168(i)(7).

[40] Prop. Reg. Secs. 1.168-5(b)(2)(i)(B), 1.168-5(b)(4)(i), and 1.168-5(b)(8).

[41] Prop. Reg. Sec. 1.168-5(b)(7).

ADDITIONAL COMMENT

Currently, we have no clear guidance on how the corporation depreciates transferred property that has a reduced basis under the loss property limitation rule discussed pages C:2-21 and C:2-22. For now, taxpayers probably should rely on Prop. Reg. 1.168-2(d)(3), which provides a method for calculating depreciation when the transferee's basis is less than the transferor's basis.

depreciation, it claims MACRS depreciation of $200 (0.20 × $1,000) on this portion of the basis in addition to the $1,760 of depreciation on the $4,640 carryover basis. ◀

Assignment of Income Doctrine. The **assignment of income doctrine** holds that income is taxable to the person who earned it and that it may not be assigned to another person for tax purposes.[42] The question arises as to whether the assignment of income doctrine applies where a cash method taxpayer transfers uncollected accounts receivable to a corporation in a Sec. 351 exchange. Specifically, who must recognize the income when it is collected—the taxpayer who transferred the receivable or the corporation that now owns and collects on the receivable? The IRS has ruled that the doctrine does *not* apply in a Sec. 351 exchange if the taxpayer transfers substantially all the business assets and liabilities, and a bona fide business purpose exists for the transfer. Instead, the accounts receivable take a zero basis in the corporation's hands, and the corporation includes their value in its income when it collects on the receivables.[43]

EXAMPLE C:2-42 ▶ For a bona fide business purpose, Ruth, a cash basis taxpayer, transfers all the assets and liabilities of her legal practice to Legal Services Corporation in exchange for all of Legal Services stock. The assets include $30,000 of accounts receivable that will generate earnings that Ruth has not included in her gross income. Because Ruth transfers substantially all the business assets and liabilities for a bona fide business purpose, the assignment of income doctrine does not apply to the receivables transferred, and Legal Services takes a zero basis in the receivables. Subsequently, Legal Services includes the value of the receivables in its income as it collects on them. ◀

The question of whether a transferee corporation can deduct the accounts payable transferred to it in a nontaxable transfer has frequently been litigated.[44] Most courts have held that ordinarily expenses are deductible only by the party that incurred those liabilities in the course of its trade or business. However, the IRS has ruled that in a nontaxable exchange the transferee corporation may deduct the payments it makes to satisfy the transferred accounts payable even though they arose in the transferor's business.[45]

CHOICE OF CAPITAL STRUCTURE

OBJECTIVE 5

Explain the tax implications of alternative capital structures

When a corporation is formed, the way it is financed will determine its capital structure. The corporation may obtain capital from shareholders, nonshareholders, and creditors. In exchange for their capital, shareholders may receive common or preferred stock; nonshareholders may receive benefits such as employment or special rates on products sold by the corporation; and creditors may receive long- or short-term debt. As explained below, each of these alternatives has tax advantages and disadvantages for the shareholders, creditors, and corporation.

CHARACTERIZATION OF OBLIGATIONS AS DEBT OR EQUITY

A corporation generally can deduct its interest expense but cannot deduct dividends it pays, which creates an incentive to use more debt and less equity in its capital structure. Because debt financing often resembles equity financing (e.g., preferred stock), the IRS and the courts have refused to accept the form of the security as controlling.[46] In some cases, debt obligations that possess equity characteristics have been treated as common or preferred stock for tax purposes. In determining the appropriate tax treatment, the courts have relied on a number of factors.

[45] Rev. Rul. 80-198, 1980-2 C.B. 113.

[46] See, for example, *Aqualane Shores, Inc. v. CIR,* 4 AFTR 2d 5346, 59-2 USTC ¶9632 (5th Cir., 1959) and *Sun Properties, Inc. v. U.S.,* 47 AFTR 273, 55-1 USTC ¶9261 (5th Cir., 1955).

Congress enacted Sec. 385 to establish a standard for determining whether a security is debt or equity. Section 385 provides that the following factors be considered in the determination:

- Whether there is a written unconditional promise to pay on demand or on a specified date a sum certain in money in return for adequate consideration in money or money's worth, in addition to paying a fixed rate of interest
- Whether the debt is subordinate to, or preferred over, other indebtedness of the corporation
- The ratio of corporate debt to equity
- Whether the debt is convertible into stock of the corporation
- The relationship between holdings of stock in the corporation and holdings of the interest in question[47]

SELF-STUDY QUESTION

From a tax perspective, why is the distinction between debt and equity important?

ANSWER

Subject to limitations, interest paid with respect to a debt instrument is deductible by the payor corporation. Dividends paid with respect to an equity instrument are not deductible by the payor corporation. Thus, the determination of whether an instrument is debt or equity can provide different results to the payor corporation. Different results apply to the payee as well. Qualified dividends are subject to the applicable capital gains tax rate while interest is taxed as ordinary income.

DEBT CAPITAL

Various provisions govern the tax treatment of (1) the issuance of debt; (2) the payment of interest on debt; and (3) the extinguishment, retirement, or worthlessness of debt. The tax implications of each of these events are examined below.

Issuance of Debt. If a transferor transfers appreciated property in exchange for stock, the transfer will be nontaxable, provided the Sec. 351 requirements have been met. On the other hand, if the transferor transfers appreciated property in exchange for corporate debt as part of a Sec. 351 exchange, the FMV of the debt received will be treated as boot, possibly leading to gain recognition.

Payment of Interest. Sec. 163(j) generally limits a C corporation's interest expense deduction to 30% of its adjusted taxable income if its average annual gross receipts for the previous three years exceeds $31 million (for 2025). This limitation does not apply to smaller C corporations, i.e., those whose average annual gross receipts are $31 million or less. Adjusted taxable income generally is the corporation's taxable income computed without regard to certain items, such as the deduction for interest expense. This limitation can restrict the interest expense deduction when the corporation's debt-to-equity ratio is high or when profitability is low. Many start-up businesses organized as C corporations cannot deduct any interest expense because they incur losses during their start-up phase, resulting in a zero limitation. Any interest expense exceeding the limitation, however, carries over indefinitely. See Chapter C:3 for further discussion of the interest expense deduction limitation.

If a corporation issues a debt instrument at a discount, Sec. 1272 requires the holder to amortize the original issue discount over the term of the obligation and treat the accrual as interest income. The debtor corporation amortizes the original issue discount over the term of the obligation and treats the accrual as an additional cost of borrowing.[48] If the corporation repurchases the debt instrument for more than the issue price (plus any original issue discount deducted as interest), the corporation deducts the excess of the purchase price over the issue price (adjusted for any amortization of original issue discount) as interest expense.[49]

Under Sec. 171, if a corporation issues a debt instrument at a premium, the holder may elect to amortize the premium over the term of the obligation and treat the accrual as a reduction in interest income earned on the obligation. For the debtor corporation, the premium reduces the amount of deductible interest.[50] If the corporation repurchases the debt instrument at a price greater than the issue price (minus any premium treated as income), the corporation deducts the excess of the purchase price over the issue price (adjusted for any amortization of premium) as interest expense.[51]

---

[47] See also *O.H. Kruse Grain & Milling v. CIR*, 5 AFTR 2d 1544, 60-2 USTC ¶9490 (9th Cir., 1960), which lists additional factors that the courts might consider. The Treasury Department also has issued Regulations under Sec. 385 that address several specific situations beyond the scope of this text.

[48] Sec. 163(e).

[49] Reg. Sec. 1.163-7(c).

[50] Reg. Sec. 1.163-12.

[51] Reg. Sec. 1.163-7(c).

Extinguishment of Debt. Generally, the retirement of debt is not a taxable event. Thus, a debtor corporation's extinguishing an obligation at face value does not result in the creditor's recognizing gain or loss. However, amounts received by the holder of a debt instrument (e.g., note, bond, or debenture) at the time of its retirement are deemed to be "in exchange for" the obligation. Thus, if the obligation is a capital asset in the holder's hands, the holder must recognize a capital gain or loss if the amount received differs from its face value or adjusted basis, unless the difference is due to original issue or market discount.

EXAMPLE C:2-43 ▶

Titan Corporation issues a ten-year note at its $1,000 face amount. On the date of issuance, Rick purchases the note for $1,000. Because of a decline in interest rates, Titan calls the note at a price of $1,050 payable to each note holder. Rick reports the premium as a $50 capital gain, and Titan deducts as interest expense total premiums paid to all its note holders. ◀

ADDITIONAL COMMENT

Even though debt often is thought of as a preferred instrument because of the deductibility of the interest paid, the debt must be repaid at its maturity, whereas stock has no specified maturity date. Also, interest usually must be paid at regular intervals, whereas dividends do not have to be declared if sufficient funds are not available to pay them or if the corporation needs to retain funds for operations or growth.

Table C:2-2 presents a comparison of the tax advantages and disadvantages of a corporation's using debt in its capital structure.

EQUITY CAPITAL

In contrast to interest expense, a corporation cannot deduct dividends paid on equity. Corporations can raise equity capital through the issuance of various types of stock. Some corporations issue only a single class of stock, whereas others issue numerous classes of stock. Reasons for the use of multiple classes of stock include

- Permitting nonfamily employees of family owned corporations to obtain an equity interest in the business while keeping voting control in the hands of family members.
- Financing a **closely held corporation** through the issuance of preferred stock to an outside investor, while leaving voting control in the hands of existing common stockholders.

Table C:2-3 lists some of the major tax advantages and disadvantages of using common and preferred stock in a corporation's capital structure.

SELF-STUDY QUESTION

Does the transferee corporation recognize gain on the receipt of appreciated property from a shareholder?

ANSWER

No. A corporation does not recognize gain when it receives property from its shareholders, whether or not it exchanges its own stock. However, the transfer must qualify as a Sec. 351 exchange or the transaction will be taxable to the shareholders.

CAPITAL CONTRIBUTIONS BY SHAREHOLDERS

A corporation recognizes no income when it receives cash or noncash property as a capital contribution from a shareholder.[52] If the shareholders make voluntary pro rata payments to a corporation but do not receive any additional stock, the payments are treated as additional consideration for the stock already owned.[53] The shareholders' respective bases in their stock are increased by the amount of cash contributed, plus the basis of any noncash property contributed, plus any gain recognized by the shareholders. The

▼ TABLE C:2-2

Tax Advantages and Disadvantages of Using Debt in a Corporation's Capital Structure

Advantages:

1. A corporation can deduct interest paid on a debt obligation, subject to limitation.
2. Shareholders do not recognize income in a debt retirement as they would in a stock redemption.

Disadvantages:

1. If at the time the corporation is formed or later when a shareholder makes a capital contribution, the shareholder receives a debt instrument in exchange for property, the debt is treated as boot, and the shareholder recognizes gain to the extent of the lesser of the boot's FMV or the realized gain.
2. If debt becomes worthless or is sold at less than its face value, the loss generally is a nonbusiness bad debt (treated as a short-term capital loss) or a capital loss. Section 1244 ordinary loss treatment applies only to stock (see pages C:2-32 and C:2-33).
3. In some circumstances, business interest deductions are limited.

---

[52] Sec. 118(a).

[53] Reg. Sec. 1.118-1.

▼ TABLE C:2-3

Tax Advantages and Disadvantages of Using Equity in a Corporation's Capital Structure

Advantages:

1. A 50%, 65%, or 100% dividends-received deduction is available to a corporate shareholder who receives dividends. A similar deduction is not available for the receipt of interest (see Chapter C:3).
2. A shareholder can receive common and preferred stock in a tax-free corporate formation under Sec. 351 or a nontaxable reorganization under Sec. 368 without recognizing gain (see Chapters C:2 and C:7, respectively). Receipt of debt securities in each of these two types of transactions generally results in the shareholder's recognizing gain.
3. Common and preferred stock can be distributed tax-free to the corporation's shareholders as a stock dividend. Some common and preferred stock distributions, however, may be taxable as dividends under Sec. 305(b). Distributions of debt obligations generally are taxable as a dividend (see Chapter C:4).
4. Under Sec. 1244, common or preferred stock that the shareholder sells or exchanges or that becomes worthless is eligible for ordinary loss treatment, subject to limitations (see pages C:2-32 and C:2-33). The loss recognized on similar transactions involving debt securities generally is treated as capital in character.
5. Section 1202 excludes 50% of capital gains realized on the sale or exchange of qualified small business (C) corporation stock that has been held for more than five years. For qualified stock acquired after February 17, 2009 and before September 28, 2010, the exclusion is 75%, and for qualified stock acquired after September 27, 2010, the exclusion is 100%.
6. Qualified dividends are taxed at the applicable capital gains rate.

Disadvantages:

1. Dividends are not deductible in determining a corporation's taxable income.
2. Redemption of common or preferred stock generally is taxable to the shareholders as a dividend. Under the general rule, none of the redemption distribution offsets the shareholder's basis for the stock investment. Redemption of common and preferred stock is eligible for exchange treatment only in situations specified in Secs. 302 and 303 (see Chapter C:4).
3. Preferred stock issued to a shareholder as a dividend might meet the definition of Sec. 306 stock. Sale, exchange, or redemption of such stock can result in the recognition of ordinary income instead of capital gain (see Chapter C:4). This ordinary income is taxed as a "deemed dividend" at the applicable capital gains rate.

TYPICAL MISCONCEPTION

The characteristics of preferred stock can be similar to those of a debt security. Often, a regular dividend is required at a stated rate, much like what would be required with respect to a debt obligation. The holder of preferred stock, like a debt holder, may have preferred liquidation rights over holders of common stock. Also, preferred stock is not required to possess voting rights. However, differences remain. A corporation generally can deduct its interest expense but not dividends it pays. Interest income is ordinary income to shareholders, but qualified dividends are subject to the applicable capital gains tax rate.

corporation's basis in any property received as a capital contribution from a shareholder equals the shareholder's basis, plus any gain recognized by the shareholder.[54] Normally, the shareholders recognize no gain when they transfer property to a controlled corporation as a capital contribution.

EXAMPLE C:2-44 ▶ Dot and Fred each own 50% of the stock in Trail Corporation, and each has a $50,000 basis in that stock. Later, as a voluntary contribution to Trail's capital, Dot contributes $40,000 in cash and Fred contributes property having a $25,000 basis and a $40,000 FMV. As a result of the contributions, Trail recognizes no income. Dot's basis in her stock is increased to $90,000 ($50,000 + $40,000), and Fred's basis in his stock is increased to $75,000 ($50,000 + $25,000). Trail's basis in the property contributed by Fred is $25,000—the same as Fred's basis in the property. ◀

If a shareholder-lender gratuitously forgives corporate debt, the debt forgiveness might be treated as a capital contribution equal to the principal amount of the forgiven debt. A determination of whether debt forgiveness is a capital contribution is based on the facts and circumstances surrounding the event.

---

[54] Sec. 362(a).

WHAT WOULD YOU DO IN THIS SITUATION?

Your corporate client wants to issue 100-year bonds. The corporation's CEO reads *The Wall Street Journal* regularly and has observed that similar bonds have been issued by several companies, including several Fortune 500 companies. He touts the fact that the interest rate on these bonds is slightly more than that for 30-year U.S. Treasury bonds. In addition, he expresses the belief that interest on the bonds would be deductible, whereas dividends on preferred or common stock would be nondeductible. You are concerned that the IRS might treat the bonds as equity because of their extraordinarily long term. If the IRS does treat the bonds as such, it might recharacterize the "interest" as dividends and deny your client an interest deduction.

What advice would you give the client now regarding the bond issue? What advice would you give it when it prepares its tax return after the new bonds have been issued?

HISTORICAL NOTE

Nonshareholder capital contributions made before December 23, 2017, generally were nontaxable to the corporation, even if they were made by a customer, potential customer, governmental entity, or civic group.

CAPITAL CONTRIBUTIONS BY NONSHAREHOLDERS

Nonshareholders sometimes contribute capital to a corporation in the form of cash or other property. For example, a city government might make a "contribution to capital" to a corporation in the form of undeveloped land to induce the corporation to locate within the city and provide jobs for citizens of the municipality. If the nonshareholder making such a contribution is a customer, potential customer, governmental entity, or civic group, the contributed property's FMV generally is gross income for the corporation (i.e., it is taxable).[55] Capital contributions made by other nonshareholders are excluded from the corporation's gross income (i.e., it is nontaxable). The corporation's basis for property received as a nonshareholder capital contribution is zero.[56] This precludes the corporation from deducting depreciation or other capital recovery amounts for the property.

If a nonshareholder contributes cash, the basis of any property acquired with the cash during a 12-month period beginning on the day the corporation received the contribution is reduced by the cash amount used to acquire the property.[57] The amount of any cash received from nonshareholders that the corporation does not use to purchase property during the 12-month period reduces the basis (but not below zero) of other property held by the corporation on the last day of the 12-month period. This basis reduction applies to the corporation's other property in the following order:[58]

1. Depreciable property
2. Amortizable property
3. Depletable property
4. All other property

EXAMPLE C:2-45 ►

The City of Springfield contributes $400,000 cash and land with a $2 million FMV to Circle Corporation to induce it to locate there. Circle uses $300,000 of the cash to purchase equipment during the 12-month period following the contribution. Because the City of Springfield is a governmental entity, Circle recognizes $2.4 million of ordinary income. Circle's basis for the land is zero, and its basis for the equipment also is zero ($300,000 cost – $300,000 contributed cash used to purchase it). Circle must reduce the basis for its other assets by $100,000 ($400,000 – $300,000), starting with its depreciable property. ◄

EXAMPLE C:2-46 ►

Assume the same facts as in Example C:2-45 except that Sidney contributes the cash and land to Circle Corporation. Sidney is not a customer, potential customer, representative of the City of Springfield, or representative of a civic organization. Circle does not recognize any gross income. Its bases for the land and equipment are zero, and it must reduce the basis for its other assets by $100,000. ◄

[55] Sec. 118.

[56] Sec. 362(c)(1).

[57] Sec. 362(c)(2).

[58] Reg. Sec. 1.362-2(b). Any basis reduction for a category is applied to properties within it in proportion to their relative bases.

WORTHLESSNESS OF STOCK OR DEBT OBLIGATIONS

OBJECTIVE 6

Determine the tax consequences of worthless stock or debt obligations

Investors who purchase stock in, or lend money to, a corporation usually want to earn a profit and recover their investment. Some investments, however, do not offer an adequate return on capital, and an investor may lose part or all of the investment. In this event, the securities evidencing the investment become worthless. This section examines the tax consequences of stock or debt securities becoming worthless.

SECURITIES

A debt or equity **security** that becomes worthless results in a capital loss for the investor as of the last day of the tax year in which the security becomes worthless. For purposes of this rule, the term *security* includes (1) a share of stock in a corporation; (2) a right to subscribe for, or the right to receive, a share of stock in a corporation; or (3) a bond, debenture, note, or other evidence of indebtedness with interest coupons or in registered form issued by a corporation.[59]

TYPICAL MISCONCEPTION

Probably the most difficult aspect of deducting a loss on a worthless security is establishing that the security is actually worthless. A mere decline in value is not sufficient to create a deduction. The burden of proof of establishing total worthlessness rests with the taxpayer.

In some situations, investors recognize an ordinary loss when a security becomes worthless. Investors who contribute capital, either in the form of equity or debt to a corporation that later fails, generally prefer ordinary losses because such losses are deductible against ordinary income. Ordinary losses that generate a net operating loss (NOL) carry over indefinitely, subject to the 80% of taxable income limitation in the carryover year. (See Chapter C:3 for further discussion of NOLs.) In general, ordinary loss treatment is available in the following circumstances:

- *Securities that are noncapital assets.* An ordinary loss occurs when a security that is not a capital asset in the hands of the taxpayer is sold or exchanged or becomes totally worthless. Securities in this category include those held as inventory by a securities dealer.
- *Affiliated corporations.* A domestic corporation can claim an ordinary loss for any affiliated corporation's security that becomes worthless during the tax year. The domestic corporation must own at least 80% of the total voting power of all classes of stock entitled to vote, and at least 80% of each class of nonvoting stock (other than stock limited and preferred as to dividends). At least 90% of the aggregate gross receipts of the loss corporation for all tax years must have been derived from nonpassive income sources.
- *Section 1244 stock.* Section 1244 permits a shareholder to claim an ordinary loss if qualifying stock issued by a small business corporation is sold or exchanged or becomes worthless. This treatment is available only to an individual who was issued the qualifying stock or who was a partner in a partnership at the time the partnership acquired the qualifying stock. In the latter case, the partner's distributive share of partnership losses includes the loss sustained by the partnership on such stock. Ordinary loss treatment is not available for stock inherited, received as a gift, or purchased from another shareholder. The ordinary loss is limited to $50,000 per year (or $100,000 if the taxpayer is married and files a joint return). Losses exceeding the dollar ceiling in any given year are considered capital in character.

SELF-STUDY QUESTION

Why would a shareholder want his or her stock to qualify as Sec. 1244 stock?

ANSWER

Section 1244 is a provision that may help the taxpayer but that can never hurt. If the Sec. 1244 requirements are satisfied, the individual shareholders of a small business corporation may treat losses from the sale or worthlessness of their stock as ordinary rather than capital in character. If the Sec. 1244 requirements are not satisfied, such losses generally are treated as capital in character.

EXAMPLE C:2-47 ▶ For $175,000, Tammy and her husband Cole purchased 25% of Minor Corporation's initial offering of a single class of stock. Minor is a small business corporation, and the Minor stock satisfies all Sec. 1244 requirements. On September 1 of the current year, Minor filed for bankruptcy. Two years later, the bankruptcy court notifies shareholders that the Minor stock is worthless. In that year, Tammy and Cole can deduct $100,000 of their initial investment as an ordinary loss. The remaining $75,000 loss is treated as capital in character. ◀

---

[59] Sec. 165(g).

If a corporation issues Sec. 1244 stock for property whose adjusted basis exceeds its FMV immediately before the exchange, the stock's basis is reduced to the property's FMV for the purpose of determining the ordinary loss amount.

EXAMPLE C:2-48 ▶ In a Sec. 351 nontaxable exchange, Penny transfers to Small Corporation property having a \$40,000 adjusted basis and a \$32,000 FMV for 100 shares of Sec. 1244 stock. Ordinarily, Penny's basis in the stock would be \$40,000. However, for Sec. 1244 purposes, her stock basis is the property's FMV, or \$32,000. If Penny sells the stock for \$10,000, her recognized loss is \$30,000 (\$10,000 − \$40,000). Her ordinary loss under Sec. 1244 is \$22,000 (\$10,000 − \$32,000 Sec. 1244 basis). The remaining \$8,000 loss is treated as capital in character. (Note also that, under Sec. 362(e)(2), Small would reduce its basis in the transferred property to its \$32,000 FMV.) ◀

Section 1244 loss treatment requires no special election. Investors, however, should be aware that, if they fail to satisfy certain requirements, ordinary loss treatment will be unavailable, and their loss will be treated as capital in character. The requirements are as follows:

- The issuing corporation must be a small business corporation at the time it issues the stock. A small business corporation is a corporation that receives in the aggregate \$1 million or less in money or noncash property (other than stock and securities) in exchange for its stock.[60]
- The issuing corporation must have derived more than 50% of its aggregate gross receipts from "active" sources (i.e., other than royalties, rents, dividends, interest, annuities, and gains on sales of stock and securities) during the five most recent tax years ending before the date on which the shareholder sells or exchanges the stock or the stock becomes worthless.

If a shareholder contributes additional cash or property to a corporation after acquiring Sec. 1244 stock, the amount of ordinary loss recognized on the sale, exchange, or worthlessness of the Sec. 1244 stock is limited to the shareholder's capital contribution at the time the corporation issued the stock.

TAX STRATEGY TIP

If a shareholder contributes additional money or property to an existing corporation, he or she should be sure to receive additional stock in the exchange so that it will qualify for Sec. 1244 treatment if all requirements are met. If the shareholder does not receive additional stock, the increased basis of existing stock resulting from the capital contribution will not qualify for Sec. 1244 treatment.

UNSECURED DEBT OBLIGATIONS

In addition to holding an equity interest, shareholders may lend funds to the corporation. The type of loss allowed if the corporation does not repay the borrowed funds depends on the nature of the loan or advance.

If the unpaid loan was not evidenced by a security (i.e., an unsecured debt obligation), it is considered to be either business or nonbusiness bad debt. Nonbusiness bad debts are treated less favorably than business bad debts. Under Sec. 166, nonbusiness bad debts are treated as short-term capital losses when they become totally worthless (the deductibility of an individual's net capital loss generally is limited to \$3,000). Business bad debts are deductible as ordinary losses without limitation when they become either partially or totally worthless. The IRS generally treats a loan made by a shareholder to a corporation in connection with his or her stock investment as nonbusiness in character.[61] It is understandable why a shareholder might attempt to rebut this presumption with the argument that a business purpose exists for the loan.

An advance in connection with the shareholder's trade or business, such as a loan to protect the shareholder's employment at the corporation, may be treated as an ordinary loss under the business bad debt rules. Regulation Sec. 1.166-5(b) states that whether a bad debt is business or nonbusiness related depends on the taxpayer's motive for making the advance. The debt is business related if the necessary relationship between the loss and the conduct of the taxpayer's trade or business exists at the time the debt was incurred, acquired, or became worthless.

In *U.S. v. Edna Generes,* the U.S. Supreme Court held that where multiple motives exist for advancing funds to a corporation, such as where a shareholder-employee advances funds to protect his or her employment, determining whether the advance is business or nonbusiness related must be based on the "dominant motivation" for the advance.[62] If the advance is only "significantly motivated" by considerations relating to the taxpayer's trade or business, such motivation will not establish a proximate relationship between the bad debt and the taxpayer's trade or business. Therefore, it may result in a nonbusiness bad debt characterization. On the other hand, if the advance is "dominantly motivated" by considerations relating to the taxpayer's trade or business, such motivation usually is sufficient to establish such a proximate relationship. Therefore, it may result in a business bad debt characterization.

---

[60] Regulation Sec. 1.1244(c)-2 provides special rules for designating which shares of stock are eligible for Sec. 1244 treatment when the corporation has issued more than \$1 million of stock.

[61] Here, it is assumed that the loan is not considered to be an additional capital contribution. In such a case, the Sec. 165 worthless security rules apply instead of the Sec. 166 bad debt rules.

Factors deemed important in determining the character of bad debt include the taxpayer's equity in the corporation relative to compensation paid by the corporation. For example, a modest salary paid by the corporation relative to substantial stockholdings in the corporation suggests an investment motive for the advance. Conversely, a substantial salary paid by the corporation relative to modest stockholdings suggests a business motive for the advance. The business motive at issue is the protection of the employee-lender's employment because the advance may help save the business from failing. Reasonable minds may differ on what is substantial and what is modest, and monetary stakes often are high in these cases. Consequently, the determination frequently involves litigation.

KEY POINT

In many closely held corporations, the shareholders are also employees. Thus, when a shareholder-employee makes a loan to the corporation, a question arises as to whether the loan is being made in the individual's capacity as an employee or a shareholder. The distinction is important because an employee loan that is worthless is entitled to ordinary loss treatment, whereas a shareholder loan that is worthless is treated as a nonbusiness bad debt (short-term capital loss).

EXAMPLE C:2-49 ▶ Top Corporation employs Mary as its legal counsel. It pays Mary an annual salary of $100,000. In March of the current year, Mary advances the corporation $50,000 to assist it financially. In October of the current year, Top declares bankruptcy and liquidates. In the liquidation, Mary and other investors receive 10 cents on every dollar advanced. If Mary can show that her advance was dominantly motivated by a desire to preserve her employment, her $45,000 ($50,000 × 0.90) loss will be treated as business bad debt, ordinary in character, and fully deductible in the current year. On the other hand, if Mary shows that the advance was only significantly motivated by a desire to preserve her employment, her $45,000 loss will be treated as nonbusiness bad debt, short-term capital in character, and deductible in this year and in subsequent years (the years in which it is deductible depends on her other capital gains and losses because of the $3,000 limit for an individual's net capital loss deduction). ◀

ADDITIONAL COMMENT

For the act of lending money to a corporation to be considered the taxpayer's trade or business, the taxpayer must show that he or she was individually in the business of seeking out, promoting, organizing, and financing business ventures. *Ronald L. Farrington v. CIR,* 65 AFTR 2d 90-616, 90-1 USTC ¶50,125 (DC Okla., 1990).

A loss sustained by a shareholder who guarantees a loan made by a third party to the corporation generally is treated as a nonbusiness bad debt. The loss can be claimed only to the extent the shareholder actually pays the third party and is unable to recover the payment from the debtor corporation.[63] Occasionally, the IRS treats the amount of a shareholder advance as additional paid-in capital. In such circumstances, any worthless security loss the shareholder claims for his or her equity investment may be increased by this amount.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 7

Identify tax planning opportunities in corporate formations

AVOIDING SEC. 351

Section 351 is not an elective provision. If its conditions are met, a corporate formation is tax-free, even if the taxpayer does not want it to be. Most often, taxpayers desire Sec. 351 treatment because it allows them to defer gains when transferring appreciated property to a corporation. In some cases, however, shareholders find such treatment disadvantageous because they would like to recognize gain or loss on the property transferred.

Avoiding Nonrecognition of Losses Under Sec. 351. If a shareholder transfers to a corporation property that has declined in value, the shareholder may want to recognize the loss so it can offset income from other sources. The shareholder can recognize the loss only if the Sec. 351 nonrecognition rules and the Sec. 267 related party rules do not apply to the exchange.

Avoiding Sec. 351 treatment requires that one or more of its requirements not be met. The simplest way to accomplish this objective is to ensure that the transferors of property own less than 80% of the corporation's stock.

---

[62] 29 AFTR 2d 72-609, 72-1 USTC ¶9259 (USSC, 1972).

[63] Reg. Sec. 1.166-8(a).

Even if a shareholder avoids Sec. 351 treatment, he or she still may not be able to recognize the losses because of the Sec. 267 related party loss rules. Under Sec. 267(a)(1), if the shareholder owns more than 50% of the corporation's stock, directly or indirectly, he or she is a related party and therefore cannot recognize loss on an exchange of property for the corporation's stock or other property. If the transferors of property receive less than 80% of the corporation's voting stock and if the transferor of loss property does not own more than 50% of the stock, the transferor of loss property may recognize the loss.

EXAMPLE C:2-50 ▶

Lynn owns property having a $100,000 basis and a $60,000 FMV. If Lynn transfers the property to White Corporation in a nontaxable exchange under Sec. 351, she will not recognize a loss, which will be deferred until she sells her White stock. If the Sec. 351 requirements are not met, she will recognize a $40,000 loss in the year she transfers the property. If Lynn receives 50% of the White stock in exchange for her property, Cathy, an unrelated individual, receives 25% of the stock in exchange for $30,000 cash, and John, another unrelated individual, receives the remaining 25% for services performed, the Sec. 351 control requirement will not be met because the transferors of property acquire less than 80% of the White stock. Moreover, Lynn will not be a related party under Sec. 267 because she will not own more than 50% of the stock either directly or indirectly. Therefore, Lynn will recognize a $40,000 loss on the exchange. ◀

SELF-STUDY QUESTION

Which tax provisions may potentially limit a transferor shareholder from recognizing a loss on the transfer of property to a corporation?

ANSWER

Such transfer cannot be to a controlled corporation, or Sec. 351 will defer the loss. Even if Sec. 351 can be avoided, losses on sales between a corporation and a more-than-50% shareholder are disallowed under Sec. 267. Thus, to recognize a loss on the sale of property, such shareholder must, directly or indirectly, own 50% or less of the transferee corporation's stock.

Avoiding Nonrecognition of Gain Under Sec. 351. Sometimes a transferor would like to recognize gain when he or she transfers appreciated property to a corporation so the transferee corporation can get a stepped-up basis in the transferred property. Some other reasons for recognizing gain are as follows:

- If the transferor's gain is capital in character, he or she can offset this gain with capital losses from other transactions.
- Individual long-term capital gains are taxed at the applicable capital gains rate, which may be lower than the 21% top tax rate applicable to corporate-level capital gains.
- The corporation's tax rate may be higher than a noncorporate transferor's marginal tax rate. In such case, it might be beneficial for the transferor to recognize gain so the corporation can get a stepped-up basis in the property. A stepped-up basis would either reduce the corporation's gain when it later sells the property or allow the corporation to claim greater depreciation deductions when it uses the property.

ADDITIONAL COMMENT

Any built-in (i.e., unrecognized) gain on property transferred to the transferee corporation is duplicated because such gain may be recognized at the corporate level and at the shareholder level. This double taxation may be another reason for avoiding the nonrecognition of gain under Sec. 351.

A transferor who wishes to recognize gain on the transfer of appreciated property to a corporation can avoid Sec. 351 treatment through one of the following planning techniques:

- The transferor can sell the property to the controlled corporation for cash.
- The transferor can sell the property to the controlled corporation for cash and debt. This transaction involves relatively less cash than the previous transaction. However, the sale may be treated as a nontaxable exchange if the IRS recharacterizes the debt as equity.[64]
- The transferor can sell the property to a third party for cash and have the third party contribute the property to the corporation for stock.
- The transferor can have the corporation distribute sufficient boot property so that, even if Sec. 351 applies to the transaction, he or she will recognize gain.
- The transferors can fail one or more of the Sec. 351 tests. For example, if the property transferors do not own at least 80% of the voting stock immediately after the exchange, the Sec. 351 control requirement will not have been met, and they will recognize gain.
- To trigger gain recognition under Sec. 357(c), the transferors may transfer to the corporation debt that exceeds the basis of all property transferred.

---

[64] See, for example, *Aqualane Shores, Inc. v. CIR,* 4 AFTR 2d 5346, 59-2 USTC ¶9632 (5th Cir., 1959) and *Sun Properties, Inc. v. U.S.,* 47 AFTR 273, 55-1 USTC ¶9261 (5th Cir., 1955).

EXAMPLE C:2-51 ▶ Ten years ago, James purchased land as an investment for $100,000. The land is now worth $500,000. James plans to transfer the land to Bell Corporation in exchange for all its stock. Bell will subdivide the land and sell individual tracts. Because the land is inventory, Bell's gain on the land sales will be ordinary income. James has realized a large capital loss in the current year and would like to recognize capital gain on the transfer of the land to Bell. One way for James to accomplish this objective is to transfer the land to Bell in exchange for all the Bell stock plus a note for $400,000. Because the note is boot, James will recognize $400,000 of gain even though Sec. 351 applies to the exchange. However, if the note is due in a subsequent year, James's gain will be deferred until collection unless he elects out of the installment method. ◀

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 8

Comply with procedural rules for corporate formations

REPORTING REQUIREMENTS UNDER SEC. 351

The significant shareholders and corporation involved in a Sec. 351 exchange must file statements with their income tax returns for the taxable year of the exchange.[65] A significant shareholder's statement must include the following:

- The corporation's name and employer identification number
- The date(s) of the transfer(s) of assets
- The FMVs and bases of the property the shareholder transfers to the corporation
- The date and control number of a private letter ruling issued by the IRS in connection with the exchange, if one was issued (Chapter C:15 discusses private letter rulings.)

The corporation's statement must include the same items except it must include the names and taxpayer identification numbers of the significant shareholders transferring property to it rather than the corporation's name and employer identification number.

ADDITIONAL COMMENT

The required information provided to the IRS by both the transferor-shareholders and the transferee corporation should be consistent. For example, the FMVs assigned to the stock and other properties included in the exchange should be the same for all parties to the transaction.

PROBLEM MATERIALS

DISCUSSION QUESTIONS

C:2-1 What entities or business forms are available for a new enterprise? Explain the advantages and disadvantages of each.

C:2-2 Alice and Bill plan to go into business together. For the first two or three years of operations, they anticipate losses, which they would like to use to offset income from other sources. They also are concerned about exposing their personal assets to business liabilities. Advise Alice and Bill as to what business form would best meet their needs.

C:2-3 Bruce and Bob organize Black LLC on May 10 of the current year. What is the entity's default tax classification? Are any alternative classification(s) available? If so, (1) how do Bruce and Bob elect the alternative classification(s) and (2) what are the tax consequences of doing so?

C:2-4 John and Wilbur form White Corporation on May 3 of the current year. What is the entity's default tax classification? Are any alternative classification(s) available? If so, (1) how do John and Wilbur elect the alternative classification(s) and (2) what are the tax consequences of doing so?

---

[65] Reg. Sec. 1.351-3. A significant shareholder is a property transferor who, immediately after the Sec. 351 exchange, owns at least 5% of the corporation's stock if it is publicly traded (at least 1% if it is not publicly traded).

C:2-5 Barbara organizes Blue LLC on May 17 of the current year. What is the entity's default tax classification? Are any alternative classification(s) available? If so, (1) how does Barbara elect the alternative classification(s) and (2) what are the tax consequences of doing so?

C:2-6 Debate the following proposition: All corporate formation transactions should be taxable events.

C:2-7 What are the tax consequences for the transferor and transferee when property is transferred to a newly created corporation in an exchange qualifying as nontaxable under Sec. 351?

C:2-8 What items are considered to be property for purposes of Sec. 351(a)? What items are not considered to be property?

C:2-9 How is "control" defined for purposes of Sec. 351(a)?

C:2-10 Explain how the IRS has interpreted the phrase "in control immediately after the exchange" for purposes of a Sec. 351 exchange.

C:2-11 John and Mary each exchange property worth $50,000 for 100 shares of New Corporation stock. Peter exchanges services for 98 shares of New stock and $1,000 in cash for two shares of New stock. Are the Sec. 351 requirements met? Explain why or why not. What advice would you give the shareholders?

C:2-12 Does Sec. 351 require shareholders to receive stock equal in value to the property transferred? Suppose Fred and Susan each transfer property worth $50,000 to Spade Corporation. In exchange, Fred receives 25 shares of Spade stock and Susan receives 75 shares. Are the Sec. 351 requirements met? Explain the tax consequences of the exchange.

C:2-13 Does Sec. 351 apply to property transfers to an existing corporation? Suppose Carl and Lynn each own 50 shares of North Corporation stock. Carl transfers property worth $50,000 to North for an additional 25 shares. Does Sec. 351 apply? Explain why or why not. If not, what can be done to qualify the transaction for Sec. 351 treatment?

C:2-14 How are a transferor's basis and holding period determined for stock and other property (boot) received in a Sec. 351 exchange? How does the transferee corporation's assumption of liabilities affect the transferor's basis in the stock?

C:2-15 Under what circumstances is a corporation's assumption of liabilities considered boot in a Sec. 351 exchange?

C:2-16 What factor(s) would the IRS likely consider to determine whether the transfer of a liability to a corporation in a Sec. 351 exchange was motivated by a business purpose?

C:2-17 Mark transfers all the property of his sole proprietorship to newly formed Utah Corporation in exchange for all the Utah stock. Mark has claimed depreciation on some of the property. Under what circumstances is Mark required to recapture previously claimed depreciation deductions? How is the depreciation deduction for the year of transfer calculated? What are the tax consequences if Utah sells the depreciable property?

C:2-18 How does the assignment of income doctrine apply to a Sec. 351 exchange?

C:2-19 What factors did Congress mandate to be considered in determining whether indebtedness is classified as debt or equity for tax purposes?

C:2-20 What are the advantages and disadvantages of using debt in a firm's capital structure?

C:2-21 What are the advantages of Sec. 1244 loss treatment when a stock investment becomes worthless? What conditions must be met to qualify for this treatment?

C:2-22 What are the advantages of business bad debt treatment when a shareholder's loan or advance to a corporation cannot be repaid? What must the debtholder show to claim a business bad debt deduction?

C:2-23 Why might shareholders avoid Sec. 351 treatment? Explain three ways they can accomplish this end.

C:2-24 What are the Sec. 351 reporting requirements?

ISSUE IDENTIFICATION QUESTIONS

C:2-25 Peter Jones has owned all 100 shares of Trenton Corporation stock for the past five years. This year, Mary Smith contributes property with a $50,000 basis and an $80,000 FMV for 80 newly issued Trenton shares. At the same time, Peter contributes $15,000 in cash for 15 newly issued Trenton shares. What tax issues regarding the exchanges should Mary and Peter consider?

C:2-26 Carl contributes equipment with a $50,000 adjusted basis and an $80,000 FMV to Cook Corporation for 50 of its 100 shares of stock. His son, Carl Jr., contributes $20,000 cash for the remaining 50 Cook shares. What tax issues regarding the exchanges should Carl and his son consider?

C:2-27 Several years ago, Bill acquired 100 shares of Bold Corporation stock directly from the corporation for $100,000 in cash. This year, he sold the stock to Sam for $35,000. What tax issues regarding the stock sale should Bill consider?

PROBLEMS

C:2-28 ***Organizational Forms Available.*** Lucia operates a florist business. She is considering either continuing the business as a sole proprietorship or reorganizing it as either a C corporation or an S corporation. Her goal is to withdraw $20,000 of profits from the business annually while minimizing her total tax liability. She expects the business to generate annually $50,000 of taxable income before considering a deductible salary expense (see below). Which business form(s) can best achieve Lucia's goals? Remember that a shareholder is taxed on S corporation income whether withdrawn or not and is not taxed on the actual withdrawals or distributions. Lucia's marginal tax rate is 22% for ordinary income and 15% for qualified dividends, and the tax rate for C corporations is 21%. When considering either corporate option, perform the analysis first by treating any withdrawals as deductible salary payments of the corporation. Then do the analysis by treating them as nondeductible dividends or distributions. Ignore employment and self-employment taxes, as well as any limitations on the qualified business income deduction.

C:2-29 ***Transfer of Property and Services to a Controlled Corporation.*** In the current year, Dick, Evan, and Fran form Triton Corporation. Dick contributes land (a capital asset) having a $50,000 FMV in exchange for 50 shares of Triton stock. He purchased the land three years ago for $60,000. Evan contributes machinery (Sec. 1231 property purchased four years ago) having a $45,000 adjusted basis and a $30,000 FMV in exchange for 30 shares of Triton stock. Fran contributes services worth $20,000 in exchange for 20 shares of Triton stock.

a. What is the amount of Dick's recognized gain or loss?
b. What is Dick's basis in his Triton shares? When does his holding period begin?
c. What is the amount of Evan's recognized gain or loss?
d. What is Evan's basis in his Triton shares? When does his holding period begin?
e. How much income, if any, does Fran recognize?
f. What is Fran's basis in her Triton shares? When does her holding period begin?
g. What is Triton's basis in the land and the machinery? When does its holding period begin? How does Triton treat the amount paid to Fran for her services?

C:2-30 ***Transfer of Property and Services to a Controlled Corporation.*** In the current year, Ed, Fran, and George form Jet Corporation. Ed contributes land (a capital asset) having a $35,000 FMV purchased as an investment four years ago for $15,000 in exchange for 35 shares of Jet stock. Fran contributes machinery (Sec. 1231 property) purchased four years ago and used in her business in exchange for 35 shares of Jet stock. Immediately before the exchange, the machinery had a $45,000 adjusted basis and a $35,000 FMV. George contributes services worth $30,000 in exchange for 30 shares of Jet stock.

a. What is the amount of Ed's recognized gain or loss?
b. What is Ed's basis in his Jet shares? When does his holding period begin?
c. What is the amount of Fran's recognized gain or loss?
d. What is Fran's basis in her Jet shares? When does her holding period begin?
e. How much income, if any, does George recognize?
f. What is George's basis in his Jet shares? When does his holding period begin?
g. What is Jet's basis in the land and the machinery? When does its holding period begin? How does Jet treat the amount paid to George for his services?
h. How would your answers to Parts a through g change if George instead contributed $5,000 in cash and services worth $25,000 for his 30 shares of Jet stock?

C:2-31 ***Control Requirement.*** In which of the following independent situations is the Sec. 351 control requirement met?

a. Olive transfers property to Quick Corporation for 75% of Quick stock, and Mary provides services to Quick for the remaining 25% of Quick stock.
b. Pete transfers property to Target Corporation for 60% of Target stock, and Robert transfers property worth $15,000 and performs services worth $25,000 for the remaining 40% of Target stock.
c. Herb and his wife, Wilma, each have owned 50 of the 100 outstanding shares of Vast Corporation stock since it was formed three years ago. In the current year, their son, Sam, transfers property to Vast for 50 newly issued shares of Vast stock.

d. Charles and Ruth develop a plan to form Tiny Corporation. On June 3 of this year, Charles transfers property worth $50,000 for 50 shares of Tiny stock. On August 1, Ruth transfers $50,000 cash for 50 shares of Tiny stock.

e. Assume the same facts as in Part d except that Charles has a prearranged plan to sell 30 of his shares to Sam on October 1.

C:2-32 ***Control Requirement.*** In which of the following unrelated exchanges is the Sec. 351 control requirement met? If the transaction does not meet the Sec. 351 requirements, suggest ways in which the transaction can be structured so as to meet these requirements.

a. Fred exchanges property worth $50,000 and services worth $50,000 for 100 shares of New Corporation stock. Greta exchanges $100,000 cash for the remaining 100 shares of New stock.

b. Maureen exchanges property worth $2,000 and services worth $48,000 for 100 shares of Gemini Corporation stock. Norman exchanges property worth $50,000 for the remaining 100 shares of Gemini stock.

C:2-33 ***Control Requirement.*** Sam and Veronica own 300 and 200 shares, respectively, of Poly-Electron Corporation stock, which represent all the shares outstanding. The current market value per share is $25. Poly-Electron needs capital to expand its operations, and Veronica is willing to contribute to Poly-Electron silver bullion against which the corporation can borrow operating funds. Veronica purchased the bullion 12 years ago, when its cost was a fraction of its current market value. If Veronica wants to avoid recognizing a gain upon transferring the bullion to the corporation, how many additional shares must she receive in exchange for the bullion, and what value of silver bullion should she contribute to Poly-Electron in exchange for additional shares? Hint: Veronica needs to achieve 80% control of the corporation.

C:2-34 ***Sec. 351 Requirements.*** Al, Bob, and Carl form West Corporation and transfer the following items to West:

		Item Transferred		
Transferor	*Item*	*Transferor's Basis*	*FMV*	*Shares Received by Transferor*
Al	Patent	–0–	$25,000	1,000 common
Bob	Cash	$25,000	25,000	250 preferred
Carl	Services	–0–	7,500	300 common

The common stock has voting rights. The preferred stock does not.

a. Is the exchange nontaxable under Sec. 351? Explain the tax consequences of the exchange to Al, Bob, Carl, and West.

b. How would your answer to Part a change if Bob instead had received 200 shares of common stock and 200 shares of preferred stock?

c. How would your answer to Part a change if Carl instead had contributed $800 cash as well as services worth $6,700?

C:2-35 ***Incorporating a Sole Proprietorship.*** Tom incorporates his sole proprietorship as Total Corporation and transfers its assets to Total in exchange for all 100 shares of Total common stock and $40,000 worth of nonqualified preferred stock. The common stock has a $125,000 FMV. The assets transferred are as follows:

Assets		*Adjusted Basis*	*FMV*
Cash		$ 5,000	$ 5,000
Equipment	$130,000		
Minus: Accumulated depreciation	(70,000)	60,000	90,000
Building	$100,000		
Minus: Accumulated depreciation	(49,000)	51,000	40,000
Land		24,000	30,000
Total		$140,000	$165,000

a. What are the amounts and character of Tom's recognized gains or losses?

b. What is Tom's basis in the Total common and nonqualified preferred stock?

c. What is Total's basis in the property received from Tom?

C:2-36 ***Transfer to an Existing Corporation.*** For the last five years, Ann and Fred each have owned 50 of the 100 outstanding shares of Zero Corporation stock. Ann transfers land having a $10,000 basis and a $25,000 FMV to Zero for an additional 25 shares of Zero stock. Fred transfers $1,000 cash to Zero for one additional share of Zero stock. What amount of the gain or loss must Ann recognize on the exchange? If the transaction does not meet the Sec. 351 requirements, suggest ways in which it can be structured so as to meet these requirements.

C:2-37 ***Transfer to an Existing Corporation.*** For the last three years, Lucy and Marvin each have owned 50 of the 100 outstanding shares of Lucky Corporation stock. Lucy transfers property having an $8,000 basis and a $12,000 FMV to Lucky for an additional ten shares of Lucky stock. How much gain or loss must Lucy recognize on the exchange? If the transaction does not meet the Sec. 351 requirements, suggest ways in which it can be structured so as to meet these requirements.

C:2-38 ***Disproportionate Receipt of Stock.*** Jerry transfers property with a $28,000 adjusted basis and a $50,000 FMV to Texas Corporation for 75 shares of Texas stock. Frank, Jerry's father, transfers property with a $32,000 adjusted basis and a $50,000 FMV to Texas for the remaining 25 shares of Texas stock.

a. What is the amount of each transferor's recognized gain or loss?
b. What is Jerry's basis in his Texas stock?
c. What is Frank's basis in his Texas stock?

C:2-39 ***Sec. 351: Boot Property Received.*** Sara transfers land (a capital asset) having a $30,000 adjusted basis to Temple Corporation in a Sec. 351 exchange. In return, Sara receives the following consideration:

Consideration	*FMV*
100 shares of Temple common stock	$100,000
50 shares of Temple qualified preferred stock	50,000
20 shares of nonqualified preferred stock	20,000
Total	$170,000

a. What are the amount and character of Sara's recognized gain or loss?
b. What is Sara's basis in her common stock, qualified preferred stock, and nonqualified preferred stock?
c. What is Temple's basis in the land?

C:2-40 ***Receipt of Bonds for Property.*** Joe, Karen, and Larry form Gray Corporation. Joe contributes land (a capital asset) having an $8,000 adjusted basis and a $15,000 FMV to Gray in exchange for Gray ten-year notes having a $15,000 face value. Karen contributes equipment (Sec. 1231 property) having an $18,000 adjusted basis and a $25,000 FMV for 50 shares of Gray stock. She previously claimed $10,000 of depreciation on the equipment. Larry contributes $25,000 cash for 50 shares of Gray stock.

a. What are the amount and character of Joe's, Karen's, and Larry's recognized gains or losses?
b. What basis do Joe, Karen, and Larry take in the stock or notes they receive?
c. What basis does Gray take in the land and equipment? What happens to the $10,000 of depreciation recapture potential on the equipment?

C:2-41 ***Transfer of Depreciable Property.*** Nora transfers to Needle Corporation depreciable machinery originally costing $18,000 and now having a $15,000 adjusted basis. In exchange, Nora receives all 100 shares of Needle stock having an $18,000 FMV and a three-year Needle note having a $4,000 FMV.

a. What are the amount and character of Nora's recognized gain or loss?
b. What are Nora's bases in the Needle stock and note?
c. What is Needle's basis in the machinery?

C:2-42 ***Transfer of Personal Liabilities.*** Jim owns 100% of Gold Corporation stock. He transfers a business automobile to Gold in exchange for additional Gold stock worth $25,000 and Gold's assumption of both his $5,000 automobile debt and his $10,000 education loan. The automobile originally cost Jim $60,000 and, on the transfer date, has a $22,500 adjusted basis and a $40,000 FMV.

a. What are the amount and character of Jim's recognized gain or loss?
b. What is Jim's basis in his additional Gold shares?

c. When does Jim's holding period for the additional shares begin?
d. What basis does Gold take in the automobile?

C:2-43 ***Liabilities in Excess of Basis.*** Barbara transfers to Moore Corporation $10,000 cash and machinery having a $15,000 basis and a $35,000 FMV in exchange for 50 shares of Moore stock. The machinery was used in Barbara's business, originally cost Barbara $50,000, and is subject to a $28,000 liability, which Moore assumes. Sam exchanges $17,000 cash for the remaining 50 shares of Moore stock.
a. What are the amount and character of Barbara's recognized gain or loss?
b. What is Barbara's basis in the Moore stock?
c. What is Moore's basis in the machinery?
d. What are the amount and character of Sam's recognized gain or loss?
e. What is Sam's basis in the Moore stock?
f. When do Barbara and Sam's holding periods for their stock begin?
g. How would your answers to Parts a through f change if Sam received $17,000 of Moore stock for legal services (instead of cash)?

C:2-44 ***Transfer of Business Properties.*** Jerry transfers to Emerald Corporation property having a $32,000 adjusted basis and a $50,000 FMV in exchange for all of Emerald's stock worth $15,000 and Emerald's assumption of a $35,000 mortgage on the property.
a. What is the amount of Jerry's recognized gain or loss?
b. What is Jerry's basis in the Emerald stock?
c. What is Emerald's basis in the property?
d. How would your answers to Parts a through c change if the mortgage assumed by Emerald were $15,000 and the Emerald stock were worth $35,000?

C:2-45 ***Incorporating a Cash Basis Proprietorship.*** Ted decides to incorporate his medical practice. He uses the cash method of accounting. On the date of incorporation, the practice reports the following balance sheet:

	Basis	*FMV*
Assets:		
Cash	$ 5,000	$ 5,000
Accounts receivable	–0–	65,000
Equipment (net of $15,000 depreciation)	35,000	40,000
Total	$40,000	$110,000
Liabilities and Owner's Equity:		
Current liabilities	$ –0–	$ 35,000
Note payable on equipment	15,000	15,000
Owner's equity	25,000	60,000
Total	$40,000	$110,000

All the current liabilities would be deductible by Ted if he paid them. Ted transfers all the assets and liabilities to a professional corporation in exchange for all its common stock having a $60,000 FMV plus the corporation's assumption of the liabilities.
a. What are the amount and character of Ted's recognized gain or loss?
b. What is Ted's basis in the stock?
c. What is the corporation's basis in the property?
d. Who recognizes income on the receivables upon their collection? Can the corporation obtain a deduction for the liabilities when it pays them?

C:2-46 ***Transfer of Depreciable Property.*** On January 10 of the current year, Mary transfers to Green Corporation a machine purchased three years ago for $100,000. On the transfer date, the machine has a $60,000 adjusted basis and a $110,000 FMV. Mary receives all 100 shares of Green common stock, worth $100,000, and 10 shares of nonqualified preferred stock worth $10,000.
a. What are the amount and character of Mary's recognized gain or loss?
b. What is Mary's basis in the common and nonqualified preferred stock? When does her holding period begin?
c. What are the amount and character of Green's gain or loss?
d. What is Green's basis in the machine? When does Green's holding period begin?

C:2-47 *Contribution to Capital by a Nonshareholder.* In the current year, the City of Omaha donates land worth $500,000 to Ace Corporation to induce it to locate in Omaha and create an estimated 2,000 jobs for its citizens.

a. How much income, if any, must Ace report on the land contribution?
b. What basis does Ace take in the land?
c. Assume the same facts except the City of Omaha also donated to Ace $100,000 cash, which the corporation used to pay a portion of the $250,000 cost of equipment that it purchased six months later. How much income, if any, must Ace report on the cash contribution? What basis does Ace take in the equipment?
d. How would your answers to Parts a–c change if the contribution is made by a nonshareholder who is not a customer, potential customer, governmental entity, or civic group?

C:2-48 *Choice of Capital Structure.* Kobe transfers $500,000 in cash to newly formed Bryant Corporation for 100% of Bryant's stock. In the first year of operations, Bryant's taxable income before any payments to Kobe is $110,000. Bryant is a C corporation. What total amount of taxable income must Kobe and Bryant each report in the following two scenarios?

a. Bryant pays a $70,000 dividend to Kobe.
b. Assume that when Bryant was formed, Kobe transferred his $500,000 to the corporation for $250,000 of Bryant stock and $250,000 in Bryant notes. The notes are repayable in five annual installments of $50,000 plus 4% annual interest on the unpaid balance. During the current year, Bryant pays Kobe $50,000 in repayment of the first note plus $10,000 interest.

C:2-49 *Worthless Stock or Securities.* Tom and Vicki are married and file a joint income tax return. They each purchase 50% of the stock in Guest Corporation from Al for $75,000. Tom is employed full-time by Guest and earns $100,000 in annual salary. Because of Guest's financial difficulties, Tom and Vicki each lend Guest an additional $25,000. The $25,000 is secured by bonds and is repayable in five years, with interest accruing at the prevailing market rate. Guest's financial difficulties escalate, and it eventually declares bankruptcy. Tom and Vicki receive nothing for their Guest stock or Guest bonds.

a. What are the amount and character of each shareholder's loss on the worthless stock and bonds?
b. How would your answer to Part a change if the liability were not secured by bonds?
c. How would your answer to Part a change if Tom and Vicki had purchased their stock for $75,000 each at the time Guest was formed?

C:2-50 *Worthless Stock.* Duck Corporation is owned equally by Harry, Susan, and Big Corporation. Harry and Susan are single. Eight years ago, Harry, Tom, and Big, the original investors in Duck, each paid $125,000 for their Duck stock. Susan purchased her stock from Tom five years ago for $175,000. No adjustments to basis occur after the stock acquisition date. Duck encounters financial difficulties as a result of a lawsuit brought by a customer who suffered personal injuries from using a defective product. Duck files for bankruptcy, and uses all its assets to pay its creditors in the current year. What are the amount and character of each shareholder's loss?

C:2-51 *Sale of Sec. 1244 Stock.* In a transaction that qualifies for Sec. 351 treatment, Lois transfers property with an $80,000 basis and a $120,000 FMV to Water Corporation in exchange for all 100 shares of Water stock. The shares qualify as Sec. 1244 stock. Two years later, Lois sells the shares for $28,000. Lois is single.

a. What are the amount and character of Lois's recognized gain or loss?
b. How would your answer to Part a change if the FMV of the property were $70,000?

C:2-52 *Transfer of Sec. 1244 Stock.* Assume the same facts as in Problem C:2-51 except that Lois gave the Water stock to her daughter, Sue, six months after she received it. The stock had a $120,000 FMV when Lois acquired it and when she made the gift. Sue sold the stock two years later for $28,000. How is the loss treated for tax purposes?

C:2-53 *Avoiding Sec. 351 Treatment.* Six years ago, Donna purchased land as an investment. The land cost $150,000 and is now worth $480,000. Donna plans to transfer the land to Development Corporation (a C corporation), which will subdivide it and sell individual tracts. Development's income on the land sales will be ordinary in character.

a. What are the tax consequences of the asset transfer and land sales if Donna contributes the land to Development in exchange for all its stock?
b. In what alternative ways can the transaction be structured to achieve more favorable tax results? Assume Donna's marginal tax rate for capital gains is 23.8% (20% + 3.8% on net investment income), and Development's tax rate is 21%.

COMPREHENSIVE PROBLEMS

C:2-54 On March 1 of the current year, Alice, Bob, Carla, and Dick form Bear Corporation and transfer the following items:

	Property Transferred			
Transferor	*Asset*	*Basis to Transferor*	*FMV*	*Number of Common Shares Issued*
Alice	Land	$12,000	$30,000	
	Building	38,000	70,000	400
	Mortgage on the land and building	60,000	60,000	
Bob	Equipment	25,000	40,000	300
Carla	Van	15,000	10,000	50
Dick	Accounting services	–0–	10,000	100

Alice purchased the land and building several years ago for $12,000 and $50,000, respectively. Alice has claimed straight-line depreciation on the building. Bob also receives a Bear note for $10,000 due in three years. The note bears interest at the prevailing market rate. Bob purchased the equipment three years ago for $50,000. Carla also receives $5,000 cash. Carla purchased the van two years ago for $20,000.

a. Does the transaction satisfy the requirements of Sec. 351?

b. What are the amount and character of the gains or losses recognized by Alice, Bob, Carla, Dick, and Bear?

c. What is each shareholder's basis in his or her Bear stock? When does the holding period for the stock begin?

d. What is Bear's basis in its property and services? When does the holding period for each property begin?

C:2-55 Ed and Fay together own 100% of the common stock of an existing corporation. On January 2 of the current year, they made the following additional transfers to the corporation, which qualify under Sec. 351. Ed transferred equipment (having a $55,000 FMV and $36,000 adjusted basis) in exchange for additional common stock worth $40,000, qualified preferred stock worth $9,000, and nonqualified preferred stock worth $6,000. Ed acquired the equipment on March 14 three years ago and claimed $46,000 of depreciation before contributing it to the corporation. Fay transferred inventory (having a $40,000 FMV and $14,000 adjusted basis) and land (a capital asset having a $20,000 FMV and $50,000 adjusted basis) in exchange for additional common stock worth $33,000 and $24,000 cash. Fay acquired the land on February 3 eight years ago. In addition, the corporation assumed $3,000 of Fay's liabilities, which were bona fide business debts with no tax avoidance purpose. These liabilities are general liabilities not associated with any particular asset. For each transferor shareholder, determine the amount realized, gain or loss realized, gain or loss recognized (if any), character of gain or loss recognized, basis of stock received, and holding period of stock received. For the corporation, determine the gain or loss recognized (if any), basis of each property received, and holding period of each property received.

TAX STRATEGY AND CRITICAL THINKING PROBLEMS

C:2-56 Rory, Sarah, and Tony are planning to transfer the following items to RST Corporation when forming it:

- Rory will transfer to RST equipment worth $380,000. Rory's adjusted basis for it is $210,000. Rory will receive in exchange 9,500 shares of RST common stock.
- Sarah will transfer to RST inventory worth $75,000 and a building worth $485,000. Her adjusted basis is $78,000 for the inventory and $440,000 for the building. RST will assume the $180,000 mortgage on the building, which Sarah obtained a few years ago to help finance her purchase of the building. She will receive in exchange 9,500 shares of RST common stock.
- Tony will transfer engineering and managerial services worth $200,000 to RST, as well as $40,000 cash. He will receive in exchange 6,000 shares of RST common stock.

a. Assume the transfers occur as planned. How much gain or loss does each party (Rory, Sarah, Tony, and RST) recognize, and what is the basis of each property received?

b. Suppose Tony transfers only the services worth $200,000 (i.e., no cash) and receives in exchange 5,000 shares of RST common stock. How much gain or loss does each party (Rory, Sarah, Tony, and RST) recognize, and what is the basis of each property received?

c. What are the advantages and disadvantages of Tony transferring the cash? That is, in what ways are the tax consequences of part a advantageous and disadvantageous when compared to those of part b?

C:2-57 Paula Green owns and operates the Green Thumb Nursery as a sole proprietorship. The business has total assets with a $260,000 adjusted basis and a $500,000 FMV. Paula wants to expand into the landscaping business. She views this expansion as risky and therefore wants to incorporate so as not to put her personal assets at risk. Her friend, Mary Brown, is willing to invest $250,000 in the enterprise.

Although Green Thumb has earned approximately $55,000 per year, Paula and Mary expect that, when the landscaping business is launched, the new corporation will incur annual losses of $50,000 for the next two years. They expect profits of at least $80,000 annually, beginning in the third year. Paula and Mary earn approximately $50,000 from other sources. They are considering the following alternative capital structures and elections:

a. Green Thumb issues 50 shares of common stock to Paula and 25 shares of common stock to Mary.

b. Green Thumb issues 50 shares of common stock to Paula and a $250,000 ten-year note bearing a market rate of interest to Mary.

c. Green Thumb issues 40 shares of common stock to Paula plus a $100,000 ten-year note bearing a market rate of interest and 15 shares of common stock to Mary, plus a $100,000 ten-year note bearing a market rate of interest.

d. Green Thumb issues 50 shares of common stock to Paula and 25 shares of preferred stock to Mary. The preferred stock is nonparticipating but pays a cumulative preferred dividend at 4% of its $250,000 stated value.

What are the advantages and disadvantages of each of these alternatives? What considerations are relevant for determining the best alternative?

C:2-58 Assume the same facts as in Problem C:2-57.

a. Given the nursery's operating prospects, what business forms might Paula and Mary consider and why?

b. In light of their proposed use of debt and equity, how might Paula and Mary structure a partnership to achieve their various business and investment objectives?

CASE STUDY PROBLEMS

C:2-59 Bob Jones has a small repair shop that he has run for several years as a sole proprietorship. The proprietorship uses the cash method of accounting and the calendar year as its tax year. Bob needs additional capital for expansion and knows two people who might be interested in investing in the business. One would like to work for the business. The other would only invest.

Bob wants to know the tax consequences of incorporating the business. His business assets include a building, equipment, accounts receivable, and cash. Liabilities include a mortgage on the building and a few accounts payable, which are deductible when paid.

Required: Write a memorandum to Bob explaining the tax consequences of the incorporation. As part of your memorandum examine the possibility of having the corporation issue common and preferred stock and debt for the shareholders' property and money.

C:2-60 Eric Wright conducts a dry cleaning business as a sole proprietorship. The business operates in a building that Eric owns. Last year, Eric mortgaged for $150,000 the building and the land on which the building sits. He used the money for a down payment on his personal residence and college expenses for his two children. He now wants to incorporate his business and transfer the building and the mortgage to a new corporation, along with other assets and some accounts payable. The amount of the unpaid mortgage balance will not exceed Eric's adjusted basis in the land and building at the time he transfers them to the corporation. Eric is aware that Sec. 357(b) could impact the tax consequences of the transaction because no bona fide business purpose exists for the mortgage transfer, which the IRS might consider to have been for a tax avoidance purpose. However, Eric refuses to acknowledge this possibility when you confront him. He maintains that many taxpayers play the audit lottery and that, in the event of an audit, invoking this issue could be a bargaining ploy.

Required: Discuss the ethical issues raised by the AICPA's *Statements on Standards for Tax Services No. 2,* (see Appendix E) as it relates to this situation. Should the tax practitioner act as an advocate for the client? Should the practitioner sign the return?

TAX RESEARCH PROBLEMS

C:2-61 Anne and Michael own and operate a successful business and have decided to take it public. They contribute all the assets of the business to newly formed Spring Corporation, with each receiving in exchange 20% of Spring's common stock (its only class of stock). The remaining 60% is issued to an underwriting company that will sell the stock to the public and charge 10% of the sales proceeds as a commission. Prepare a memorandum for your tax manager explaining whether or not this transaction meets the requirements of Sec. 351.

C:2-62 Bob and Carl transfer property to Stone Corporation for 90% and 10% of Stone stock, respectively. Pursuant to a binding agreement concluded before the transfer, Bob sells half of his stock to Carl. Prepare a memorandum for your tax manager explaining why the exchange does or does not meet the Sec. 351 control requirement. Your manager has suggested that, at a minimum, you consult the following authorities:

- IRC Sec. 351
- Reg. Sec. 1.351-1

C:2-63 In an exchange qualifying for Sec. 351 tax-free treatment, Greta receives 100 shares of White Corporation stock plus a right to receive another 25 shares. The right is contingent on the valuation of a patent contributed by Greta. Because the patent license is pending, the patent cannot be valued for several months. Prepare a memorandum for your tax manager explaining whether the underlying 25 shares are considered "stock" for purposes of Sec. 351 and what tax consequences ensue from Greta's receipt of the 100 shares now and 25 shares later upon exercise of the right.

C:2-64 John plans to transfer the assets and liabilities of his business to Newco in exchange for all of Newco's stock. The assets have a $250,000 basis and an $800,000 FMV. John also plans to transfer $425,000 of business related liabilities to Newco. Under Sec. 357(c), can John avoid recognizing a $175,000 gain (the excess of liabilities over the basis of assets transferred) by transferring a $175,000 personal promissory note along with the assets and liabilities?

C:2-65 Six years ago, Leticia, Monica, and Nathaniel organized Lemona Corporation to develop and sell computer software. Each individual contributed $10,000 to Lemona in exchange for 1,000 shares of Lemona stock (for a total of 3,000 shares issued and outstanding). The corporation also borrowed $250,000 from Venture Capital Associates to finance operating costs and capital expenditures.

Because of intense competition, Lemona struggled in its early years of operation and sustained chronic losses. This year, Leticia, who serves as Lemona's president, decided to seek additional funds to finance Lemona's working capital.

Venture Capital Associates declined Leticia's request for additional capital because of the firm's already high credit exposure to the software corporation. Hi-Tech Bank proposed to lend Lemona $100,000, but at a 10% premium over the prime rate. (Other software manufacturers in the same market can borrow at a 3% premium.) Investment Managers LLC proposed to inject $50,000 of equity capital into Lemona, but on the condition that the investment firm be granted the right to elect five members to Lemona's board of directors. Discouraged by the "high cost" of external borrowing, Leticia turned to Monica and Nathaniel.

She proposed to Monica and Nathaniel that each of the three original investors contribute an additional $25,000 to Lemona, each in exchange for five 20-year debentures. The debentures would be unsecured and subordinated to Venture Capital Associates debt. Annual interest on the debentures would accrue at a floating 5% premium over the prime rate. The right to receive interest payments would be cumulative; that is, each debenture holder would be entitled to past and current interest payments before Lemona's board could declare a common stock dividend. The debentures would be both nontransferable and noncallable.

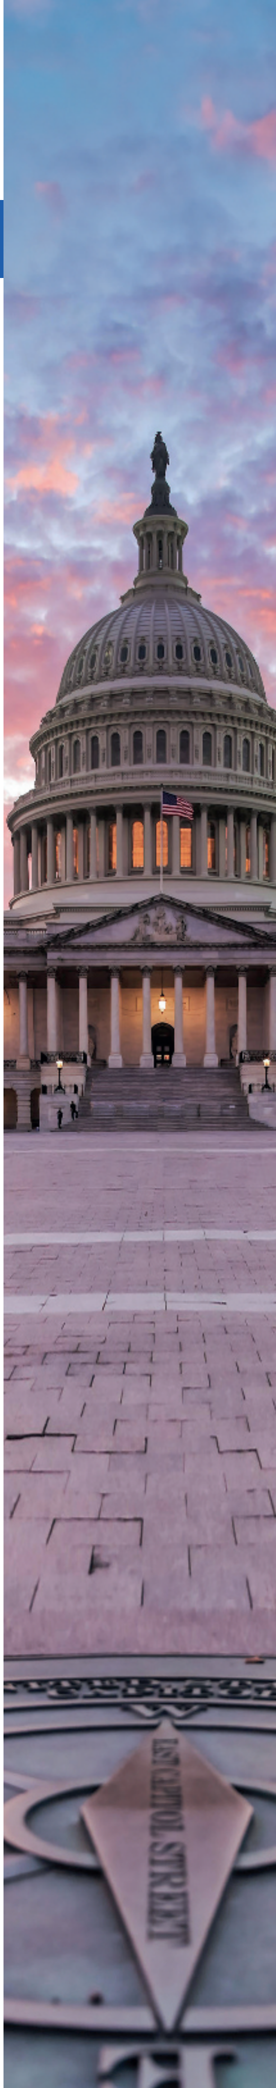
Leticia, Monica, and Nathaniel have asked you, their tax accountant, to advise them on the tax implications of the proposed financing arrangement. After researching the issue, set forth your advice in a client letter. At a minimum, you should consult the following authorities:

- IRC Sec. 385
- *Rudolph A. Hardman*, 60 AFTR 2d 87-5651, 87-2 USTC ¶9523 (9th Cir., 1987)
- *Tomlinson v. The 1661 Corporation*, 19 AFTR 2d 1413, 67-1 USTC ¶9438 (5th Cir., 1967)

CHAPTER

3

THE CORPORATE INCOME TAX



LEARNING OBJECTIVES

After studying this chapter, you should be able to

1. Select tax years and accounting methods for C corporations
2. Calculate deductions particular to corporations and arrive at corporate taxable income and tax liability
3. Recognize what a controlled group is and determine the tax consequences of being a controlled group
4. Identify planning strategies to reduce taxes for corporations and their shareholders
5. Comply with corporate federal income tax filing requirements
6. Determine the financial statement implications of corporate federal income taxes

CHAPTER OUTLINE

Corporate Elections...3-2
Determining a Corporation's Taxable Income and Tax Liability...3-5
Controlled Groups of Corporations...3-21
Tax Planning Considerations...3-27
Compliance and Procedural Considerations...3-29
Financial Statement Implications...3-38

A **corporation** is a separate taxpaying entity that pays tax at a flat 21% rate and must file an annual tax return even if it has no income or loss for the year. This chapter covers the tax rules for **domestic corporations** (i.e., corporations incorporated in one of the 50 states or under federal law) and other entities taxed as domestic corporations under the check-the-box regulations.[1] It explains the rules for determining a corporation's taxable income, loss, and tax liability and for filing corporate tax returns. See Table C:3-1 for the general formula for determining the corporate tax liability. It also discusses the financial implications of federal income taxes. Some of these implications appear briefly in the Book-to-Tax Accounting Comparisons, and a more detailed discussion appears at the end of this chapter.

The corporations discussed in this chapter are sometimes referred to as regular or C corporations because Subchapter C of the Internal Revenue Code (IRC) dictates much of their tax treatment. Corporations that have a special tax status include S corporations (see Chapter C:11) and affiliated groups of corporations that file consolidated returns (see Chapter C:8). A comparison of the tax treatments of C corporations, partnerships, and S corporations appears in Appendix F.

CORPORATE ELECTIONS

OBJECTIVE 1

Select tax years and accounting methods for C corporations

Once formed, a corporation must make certain elections, such as selecting its **tax year** and its accounting methods. The corporation makes these elections on its first tax return. They are important and should be considered carefully because, once made, they generally can be changed only with permission from the Internal Revenue Service (IRS).

CHOOSING A CALENDAR OR FISCAL YEAR

A new corporation may elect to use either a calendar year or a fiscal year as its accounting period. The corporation's tax year must be the same as the annual accounting period used for financial accounting purposes. The corporation makes the election by filing its first tax return for the selected period. A calendar year is a 12-month period ending on December 31. A fiscal year is a 12-month period ending on the last day of any month other than December. Examples of acceptable fiscal years are February 1, 2025, through January 31, 2026, and October 1, 2025, through September 30, 2026. A fiscal year that runs from September 16, 2025, through September 15, 2026, however, is not an acceptable tax year because it does not end on the last day of the month. The IRC requires that a corporation using an unacceptable tax year change to a calendar year.[2]

KEY POINT

Whereas partnerships and S corporations generally must adopt a calendar year, C corporations (other than personal service corporations) have the flexibility of adopting a fiscal year. The fiscal year must end on the last day of the month.

Short Tax Period. A corporation's first tax year might not cover a full 12-month period. If, for example, a corporation begins business on March 10, 2025, and elects a fiscal year ending on September 30, its first tax year covers the period from March 10, 2025, through September 30, 2025. Its second tax year covers the period from October 1, 2025, through September 30, 2026. The corporation must file a **short-period tax return** for its first tax year.[3] From then on, its tax returns will cover a full 12-month period. The last year of a corporation's life, however, also may be a short period covering the period from the beginning of the last tax year through the date the corporation ceases to exist.

Restrictions on Adopting a Tax Year. A corporation may be subject to restrictions in its choice of a tax year. For example, an S corporation generally must use a calendar year (see Chapter C:11), and members of an affiliated group filing a consolidated return must use the same tax year as the group's parent corporation (see Chapter C:8).

A **personal service corporation** (PSC) generally must use a calendar year as its tax year. This restriction prevents a personal service corporation with, for example, a January 31 year-end from distributing a large portion of its income earned during the February through December portion of 2025 to its calendar year shareholder-employees in January

---

[1] Sec. 7701(a)(4). The U.S. tax treatment of foreign corporations is beyond the scope of this text.

[2] Sec. 441(g). Section 441(f) permits accounting periods of either 52 or 53 weeks that always end on the same day of the week (such as Friday).

[3] Sec. 443(a)(2).

▼ TABLE C:3-1
General Rules for Determining the Corporate Tax Liability

Gross income	
Minus:	Deductions and losses
Taxable income before special deductions	
Minus:	Special deductions
Taxable income	
Times:	Corporate tax rate (21%)
Regular income tax before credits and other taxes	
Minus:	Applicable tax credits
Plus:	Personal holding company tax (if applicable) Accumulated earnings tax (if applicable) Book minimum tax (if applicable) Other special taxes (if applicable)
Total tax liability	
Minus:	Estimated tax payments
Net tax due (or refund)	

2026, thereby deferring income largely earned in 2025 to 2026. For this purpose, the IRC defines a PSC as a corporation whose principal activity is the performance of personal services by its employee-owners who own more than 10% of the stock (by value) on any day of the year.[4]

A PSC, however, may adopt a fiscal tax year if it can establish a business purpose for such a year. For example, it may be able to establish a natural business year and use that year as its tax year.[5] Deferral of income by shareholders is not an acceptable business purpose. Even when no business purpose exists, a new PSC may elect to use a September 30, October 31, or November 30 year-end if it meets minimum distribution requirements to employee-owners during the deferral period.[6] If it fails to meet these distribution requirements, the PSC may have to defer to its next fiscal year the deduction for amounts paid to employee-owners.[7]

EXAMPLE C:3-1 ► Alice and Bob form Cole Corporation with each shareholder owning 50% of its stock. Alice and Bob use the calendar year as their tax year. Alice and Bob are both active in the business and are the corporation's primary employees. The new corporation performs engineering services for the automotive industry. Cole must use a calendar year as its tax year unless it qualifies for a fiscal year based on a business purpose exception. Alternatively, it may adopt a fiscal year ending on September 30, October 31, or November 30, provided it complies with certain minimum distribution requirements. ◄

Changing the Annual Accounting Period. A corporation that desires to change its annual accounting period must obtain the prior approval of the IRS unless Treasury Regulations specifically authorized the change or IRS procedures allow an automatic change. A change in accounting period usually results in a short period running from the end of the old annual accounting period to the beginning of the new accounting period. A corporation must request approval of an accounting period change by filing Form 1128 (Application To Adopt, Change, or Retain a Tax Year) by the due date of the short period tax return

---

[4] Sec. 441(i).

[5] The natural business year rule requires that the year-end used for tax purposes coincide with the end of the taxpayer's peak business period. (See the partnership and S corporation chapters and Rev. Proc. 2006-46, 2006-2 C.B. 859, for a further explanation of this exception.)

[6] Sec. 444.

[7] Sec. 280H.

(including extensions). The IRS usually will approve a request for change if a substantial business purpose exists for the change and if the taxpayer agrees to the IRS's prescribed terms, conditions, and adjustments necessary to prevent any substantial distortion of income. A substantial distortion of income includes, for example, a change that causes the "deferral of a substantial portion of the taxpayer's income, or shifting of a substantial portion of deductions, from one taxable year to another."[8]

Under IRS administrative procedures, a corporation may change its annual accounting period without prior IRS approval if it meets the following conditions:

- The corporation files a short-period tax return for the year of change and annualizes its income when computing its tax for the short period.
- The corporation files full 12-month returns for subsequent years ending on the new year-end.
- The corporation closes its books as of the last day of the short-period and subsequently computes its income and keeps its books using the new tax year.
- If the corporation generates a net operating loss (NOL) or net capital loss in the short period, it may not carry back the losses but must carry them over to future years.
- The corporation must not have changed its accounting period within the previous 48 months (with some exceptions).
- The corporation must not have an interest in a pass-through entity as of the end of the short period (with some exceptions).
- The corporation is not an S corporation, personal service corporation, tax-exempt organization, or other specialized corporation.[9]

ADDITIONAL COMMENT

Special NOL carryback rules apply to farming losses and insurance companies.

BOOK-TO-TAX ACCOUNTING COMPARISON

Treasury Regulations require taxpayers to use the same overall accounting method for book and tax purposes. However, the courts have allowed different methods if the taxpayer maintains adequate reconciling workpapers. The IRS has adopted the courts' position on this issue.

ACCOUNTING METHODS

A new corporation must select the overall **accounting method** it will use for tax purposes. The method chosen must be indicated on the corporation's initial return. The three possible accounting methods are: accrual, cash, and hybrid.[10]

Accrual Method. Under the accrual method, a corporation reports income in the year it earns the income and reports expenses in the year it incurs the expenses. A corporation must use the accrual method unless it qualifies under one of the following exceptions:

- It qualifies as a farming business.[11]
- It qualifies as a personal service corporation, which is a corporation substantially all of whose activities involve the performance of services in the fields of health, law, engineering, architecture, accounting, actuarial science, performing arts, or consulting; and substantially all of whose stock is held by current (or retired) employees performing the services listed above, their estates, or (for two years only) persons who inherited their stock from such employees.[12]
- It meets a $31 million (for 2025) gross receipts test. A corporation meets this test for the current tax year if its average annual gross receipts for the immediately preceding three years do not exceed $31 million. If the corporation was not in existence for the entire three-year period, the period during which the corporation *was* in existence may be used.
- It has elected S corporation status.

If a corporation meets one of the exceptions listed above, it may use either the accrual method or one of the following two methods.

---

[8] Reg. Sec. 1.442-1(b)(3). Also see Rev. Proc. 2002-39, 2002-1 C.B. 1046.

[9] Rev. Proc. 2006-45, 2006-2 C.B. 851. For automatic change procedures for S corporations and personal service corporations, see Rev. Proc. 2006-46, 2006-2 C.B. 859.

[10] Sec. 446.

[11] Sec. 448(b)(1).

[12] The personal service corporation definition for the tax year election [Sec. 441(i)] is different from the personal service corporation definition for the cash accounting method election [Sec. 448].

ADDITIONAL COMMENT

A taxpayer meeting the $31 million (for 2025) gross receipts test described previously may treat inventory (1) as non-incidental materials and supplies or (2) in a manner that conforms to the taxpayer's method of accounting used for financial statement purposes.

Cash Method. Under the cash method, a corporation reports income when it actually or constructively receives the income and reports expenses when it pays them. Corporations in service industries such as engineering, medicine, law, and accounting generally use this method because they prefer to defer recognition until they actually receive the income. This method may not be used if the taxpayer does not meet the $31 million (for 2025) gross receipts test and inventories are a material income-producing factor. In such case, the corporation must use either the *accrual* method or the *hybrid* method of accounting.

Hybrid Method. Under the hybrid method, a corporation uses the accrual method of accounting for sales, cost of goods sold, inventories, accounts receivable, and accounts payable, and uses the cash method of accounting for all other income and expense items. Small businesses with inventories (e.g., retail stores) often use this method. Although they must use the accrual method of accounting for sales-related income and expense items, they often find the cash method less burdensome to use for other income and expense items, such as utilities, rents, salaries, and taxes.

DETERMINING A CORPORATION'S TAXABLE INCOME AND TAX LIABILITY

OBJECTIVE 2

Calculate deductions particular to corporations and arrive at corporate taxable income and tax liability

Each year, C corporations must determine their regular income tax liability. In addition to the income tax, a C corporation may be subject to either the personal holding company tax or the accumulated earnings tax, and it may be subject to the book minimum tax. A corporation's total tax liability equals the sum of its regular income tax liability plus any additional taxes that it owes.

This chapter explains how to compute a corporation's regular income tax liability. Chapter C:5 explains the computation of the personal holding company tax, accumulated earnings tax, and book minimum tax.

Like an individual, a corporation is a taxpaying entity with gross income and deductions. However, a number of differences arise between individual and corporate taxation as summarized in Figure C:3-1. This section of the text expands on some of these items and discusses other tax aspects particular to corporations.

CORPORATE TAX RATE

The corporate income tax is 21% of taxable income.[13] This flat rate applies to all corporate taxable income, regardless of its character.

SALES AND EXCHANGES OF PROPERTY

Sales and exchanges of property generally are treated the same way for corporations as for an individual. However, special rules apply to capital gains and losses. Also, corporations are not subject to the 25% tax rate on unrecaptured Sec. 1250 gains, but corporations *are* subject to an additional 20% depreciation recapture rule under Sec. 291 on sales of Sec. 1250 property.

---

[13] Sec. 11(b). Prior to 2018, C corporations faced a graduated tax rate schedule ranging from 15% to 35%. However, two "bubble" rates at 39% and 38% also applied, resulting in a flat 34% tax rate if taxable income was between $335,000 and $10 million and a flat 35% tax rate if taxable income exceeded $18,333,333.

1. **Gross income:** Generally, the same gross income definition applies to individuals and corporations. Certain exclusions are available to individuals but not to corporations (e.g., fringe benefits); other exclusions are available to corporations but not to individuals (e.g., some capital contributions).
2. **Deductions:** Individuals have above-the-line deductions (for AGI) and either itemized deductions (from AGI) or the standard deduction. Corporations do not compute AGI, and their deductions are presumed to be ordinary and necessary business expenses.
3. **Charitable contributions:** Individuals are limited to a percentage of AGI (e.g., 30%, 50%, or 60%, depending on the type of property contributed, the type of recipient organization, and the year contributed). Corporations are limited to 10% of taxable income computed without regard to the dividends-received deduction, capital loss carrybacks, and the contributions deduction itself. Individuals deduct contributions only in the year they pay them. Accrual basis corporations may elect to deduct contributions in the year of accrual if the board of directors authorizes the contributions by year-end, and the corporation pays them by the fifteenth day of the fourth month of the next year (third month if the corporation has a June 30 year-end, for taxable years beginning before January 1, 2026).
4. **Depreciation on Sec. 1250 property:** Individuals generally do not recapture depreciation under the MACRS rules because straight-line depreciation applies to real property. Corporations must recapture 20% of the amount that would be recaptured under Sec. 1245. Individuals are subject to a 25% (and possibly an incremental 3.8%) tax rate on unrecaptured Sec. 1250 gains. Corporations are not subject to this rate.
5. **Capital gains:** The tax rate for a noncorporate taxpayer's net capital gain and qualified dividends is 0%, 15%, or 20%, depending on the taxpayer's filing status and taxable income. Also, 25% and 28% rates apply for gains on certain types of property. In addition, an incremental 3.8% rate applies to net investment income for individuals whose modified AGI exceeds $200,000 ($250,000 for married filing jointly). A corporation's net capital gain is taxed at the 21% corporate tax rate.
6. **Capital losses:** An individual may deduct up to $3,000 of a net capital loss to offset ordinary income and carry over indefinitely any net capital loss exceeding $3,000. A corporation may not offset any ordinary income with a net capital loss but, instead, may carry the net capital loss back three years and forward five years to offset capital gain net income in those years.
7. **Dividends-received deduction:** This deduction is not available to individuals. Corporations receive a 50%, 65%, or 100% special deduction depending on the percentage of stock ownership.
8. **Net operating losses (NOLs):** Individuals must make many adjustments to arrive at the NOL they are allowed to carry over to subsequent years. A corporation's NOL is the excess of its deductions over its gross income for the year. NOLs carry over indefinitely if incurred in tax years beginning after 2017. Also, post-2017 NOLs are subject to an 80% of taxable income limitation in carryover years. Pre-2018 NOLs carry over 20 years and are not subject to the 80% limitation.
9. **Excess business losses:** For tax years beginning after 2020 and before 2029, a limitation on excess business losses applies to noncorporate taxpayers but not to C corporations.
10. **Tax rates:** Individual's ordinary tax rates range from 10% to 37% (for 2025). The corporate tax rate is a flat 21%.
11. **AMT:** Individual AMT rates are 26% or 28%. A 15% book minimum tax applies to certain corporations for tax years beginning after 2022.
12. **Passive losses:** Passive loss rules apply to individuals, partners, S corporation shareholders, closely held C corporations, and personal service corporations. They do not apply to widely held C corporations.
13. **Casualty losses:** Casualty losses are deductible in full by a corporation because all corporate casualty losses are considered to be business related. For years beginning after 2017 and before 2026, personal casualty losses are deductible only if attributable to a federally declared disaster. An exception exists for casualty losses to the extent of casualty gains.
14. **Qualified business income (QBI) deduction:** For 2018–2025, an individual generally is allowed a deduction for 20% of QBI. A corporation is not allowed this deduction.

FIGURE C:3-1 ▶ Differences Between Individual and Corporate Taxation

Capital Gains and Losses. A corporation has a capital gain or loss if it sells or exchanges a capital asset. As with individuals, a corporation nets its long-term capital gains and losses to determine its net long-term capital gain or loss, and it nets its short-term capital gains and losses to determine its net short-term capital gain or loss.

Capital Gain Net Income and Net Capital Gain. A corporation includes in income its capital gain net income (which Sec. 1222(9) defines as capital gains in excess of capital losses). Unlike an individual, a corporation's net capital gain (which Sec. 1222(11) defines as the net long-term capital gain in excess of the net short-term capital loss) is not taxed at a preferential rate; it is taxed at the same 21% tax rate as ordinary income.

ADDITIONAL COMMENT

A C corporation reports its capital gain net income on line 8 of Form 1040.

EXAMPLE C:3-2 ▶ Beta Corporation has a net capital gain of $40,000, gross profits on sales of $110,000, and deductible expenses of $28,000. Beta's taxable income is $122,000 ($40,000 + $110,000 − $28,000). The $40,000 of net capital gain receives no special treatment and is taxed at 21% along with the rest of the corporation's taxable income. Thus, the corporation's tax is $25,620 ($122,000 × 0.21). ◀

Net Capital Loss. If a corporation incurs a net capital loss (which Sec. 1222(10) defines as capital losses in excess of capital gains), it cannot deduct the net loss in the current year. A corporation's capital losses can offset only capital gains. They never can offset the corporation's ordinary income.

A corporation must carry back a net capital loss as a short-term capital loss to the three previous tax years and offset capital gains in the earliest year possible (i.e., the losses carry back to the third previous year first). If the loss is not totally absorbed as a carryback, the remainder carries over as a short-term capital loss for five years. Any unused capital losses remaining at the end of the carryover period expire.

EXAMPLE C:3-3 ▶

For 2025, East Corporation reports gross profit of $150,000, deductible expenses of $28,000, and a net capital loss of $10,000. East reported the following capital gain net income during 2022 through 2024:

Year	*Capital Gain Net Income*
2022	$6,000
2023	–0–
2024	3,000

East has taxable income of $122,000 ($150,000 − $28,000) for 2025. East also has a $10,000 net capital loss that carries back to 2022 first and offsets the $6,000 capital gain net income reported in that year. East receives a refund for the taxes paid in 2022 on the $6,000 of capital gains. The $4,000 ($10,000 − $6,000) remainder of the loss carryback carries to 2024 and offsets East's $3,000 capital gain net income reported in that year. East still has a $1,000 net capital loss carryover to 2026. ◀

ADDITIONAL COMMENT

A corporation accomplishes the net capital loss carryback by filing either Form 1139, Corporation Application for Tentative Refund, or Form 1120X, Amended U.S. Corporation Income Tax Return. Form 1139 usually results in a quicker refund than does Form 1120X but must be filed within one year after the end of the year in which the net capital loss occurred.

Sec. 291: Tax Benefit Recapture Rule. If a taxpayer sells Sec. 1250 property at a gain, Sec. 1250 requires that the taxpayer report the recognized gain as ordinary income to the extent the depreciation taken exceeds the depreciation that would have been allowed had the taxpayer used the straight-line method. This ordinary income is known as Sec. 1250 depreciation recapture. For individuals, any remaining gain is characterized as a combination of unrecaptured Sec. 1250 gain and Sec. 1231 gain. Corporations, however, must recapture as ordinary income an amount equal to 20% of the ordinary income that would have been recognized had the property been Sec. 1245 property instead of Sec. 1250 property.

ADDITIONAL COMMENT

Under the modified accelerated cost recovery system (MACRS), Sec. 1250 depreciation recapture seldom, if ever, occurs for individuals because MACRS requires straight-line depreciation for Sec. 1250 property. Nevertheless, individuals would be subject to the 25% tax rate on unrecaptured Sec. 1250 gains.

EXAMPLE C:3-4 ▶

Texas Corporation purchased residential real estate several years ago for $125,000, of which $25,000 was allocated to the land and $100,000 to the building. Texas took straight-line MACRS depreciation deductions of $10,606 on the building during the period it held the building. In December of the current year, Texas sells the property for $155,000, of which $45,000 is allocated to the land and $110,000 to the building. Texas has a $20,000 ($45,000 − $25,000) gain on the land sale, all of which is Sec. 1231 gain. This gain is not affected by Sec. 291 because land is not Sec. 1250 property. Texas has a $20,606 [$110,000 sales price − ($100,000 original cost − $10,606 depreciation)] gain on the sale of the building. If Texas were an individual taxpayer, $10,606 would be an unrecaptured Sec. 1250 gain subject to a 25% tax rate, and the remaining $10,000 would be a Sec. 1231 gain. However, a corporate taxpayer reports $2,121 of gain as ordinary income. These amounts are summarized below:

	Land	Building	Total
Amount of gain:			
Sales price	$45,000	$110,000	$155,000
Minus: Adjusted basis	(25,000)	(89,394)	(114,394)
Recognized gain	$20,000	$ 20,606	$ 40,606
Character of gain:			
Ordinary income	$ –0–	$ 2,121[a]	$ 2,121
Sec. 1231 gain	20,000	18,485	38,485
Recognized gain	$20,000	$ 20,606	$ 40,606

[a] 0.20 × lesser of $10,606 depreciation claimed or $20,606 recognized gain. ◀

ADDITIONAL COMMENT

Section 291 results in the recapture, as ordinary income, of up to 20% of the gain on sales of Sec. 1250 property. This recapture requirement reduces the amount of net Sec.1231 gains that can be offset by corporate capital losses.

ADDITIONAL COMMENT

If an individual sold the same business property as in Example C:3-4, he or she would recognize $10,606 of nonrecaptured Sec. 1250 gain, $30,000 of Sec. 1231 gain, and no ordinary income.

BUSINESS EXPENSES

Corporations are allowed deductions for ordinary and necessary business expenses, including salaries paid to officers and other employees of the corporation, rent, repairs, insurance premiums, advertising, interest, taxes, losses on sales of inventory or other property, bad debts, and depreciation. No deductions are allowed, however, for interest on amounts borrowed to purchase tax-exempt securities, illegal bribes or kickbacks, fines or penalties imposed by a government, or insurance premiums incurred to insure the lives of officers and employees when the corporation is the beneficiary.

Organizational Expenditures. When formed, a corporation may incur some organizational expenditures, such as legal fees and accounting fees incident to the incorporation process. These expenditures normally must be capitalized. Nevertheless, under Sec. 248, a corporation may elect to deduct the first $5,000 of organizational expenditures. However, the corporation must reduce the $5,000 by the amount by which cumulative organizational expenditures exceed $50,000 although the $5,000 cannot be reduced below zero. The corporation can amortize the remaining organizational expenditures over a 180-month period beginning in the month it begins business.

EXAMPLE C:3-5 ▶ Sigma Corporation incorporates on January 10 of the current year, and begins business on March 3. Sigma elects a September 30 year-end. Thus, it conducts business for seven months during its first tax year. During the period January 10 through September 30, Sigma incurs $52,000 of organizational expenditures. Because these expenditures exceed $50,000, Sigma must reduce the first $5,000 by $2,000 ($52,000 − $50,000), leaving a $3,000 deduction. Sigma amortizes the remaining $49,000 ($52,000 − $3,000) over 180 months beginning in March of its first year. This portion of the deduction equals $1,906 ($49,000/180 months × 7 months). Accordingly, its total first-year deduction is $4,906 ($3,000 + $1,906). ◀

BOOK-TO-TAX ACCOUNTING COMPARISON

Most corporations amortize organizational expenditures for tax purposes over the specified period. For financial accounting purposes, they are expensed currently under ASC 720-15. Thus, the differential treatment creates a deferred tax asset.

A corporation is deemed to have made the Sec. 248 election for the tax year the corporation begins business.[14] If the corporation chooses to forgo the deemed election, it can elect to capitalize the expenditures (without amortization) on a timely filed tax return for the tax year the corporation begins business. Either election, to amortize or capitalize, is irrevocable and applies to all organizational expenditures of the corporation.

A corporation begins business when it starts the business operations for which it was organized. Merely coming into existence is not sufficient. For example, obtaining a corporate charter does not in itself establish the beginning of business. However, acquiring assets necessary for operating the business may be sufficient.

Organizational expenditures include expenditures (1) incident to the corporation's creation; (2) chargeable to the corporation's capital account; and (3) of a character that, if expended incident to the creation of a corporation having a limited life, would be amortizable over that life.

WHAT WOULD YOU DO IN THIS SITUATION?

You are a CPA with a medium-size accounting firm. One of your corporate clients, an electrical contractor, is successful and had $10 million of sales last year. The contracts involve private and government electrical work. Among the corporation's expenses are $400,000 of kickbacks paid to people working for general contractors who award electrical subcontracts to the corporation, and $100,000 of payments to individuals in the electricians' union. Technically, these payments are illegal. However, your client says that everyone in this business needs to pay kickbacks to obtain contracts and to have enough electricians to finish the projects in a timely manner. He maintains that it is impossible to stay in business without making these payments. In preparing its tax return, your client wants you to deduct these expenses. What is your opinion concerning the client's request?

---

[14] Reg. Sec. 1.248-1(c).

Specific organizational expenditures include

- Legal services incident to the corporation's organization (e.g., drafting the corporate charter and bylaws, minutes of organizational meetings, and terms of original stock certificates)
- Accounting services necessary to create the corporation
- Expenses of temporary directors and of organizational meetings of directors and stockholders
- Fees paid to the state of incorporation[15]

Organizational expenditures do not include expenditures connected with issuing or selling the corporation's stock or other securities (e.g., commissions, professional fees, and printing costs) and expenditures related to the transfer of assets to the corporation.

EXAMPLE C:3-6 ▶ Omega Corporation incorporates on July 12 of the current year, starts business operations on August 10, and elects a tax year ending on September 30. Omega incurs the following expenditures while organizing the corporation:

Date	*Type of Expenditure*	*Amount*
June 10	Legal expenses to draft charter	$ 2,000
July 17	Commission to stockbroker for issuing and selling stock	40,000
July 18	Accounting fees to set up corporate books	2,400
July 20	Temporary directors' fees	1,000
August 25	Directors' fees	1,500

Omega's first tax year begins July 12 and ends on September 30. Omega has organizational expenditures of $5,400 ($2,000 + $2,400 + $1,000). The commission for selling the Omega stock is treated as a reduction in the amount of Omega's paid-in capital. Omega deducts the directors' fees incurred in August as a trade or business expense under Sec. 162 because Omega had begun business operations by that date. Assuming a deemed election to amortize its organizational expenditures, Omega can deduct $5,000 in its first tax year and amortize the remaining $400 over 180 months. Thus, its first year deduction is $5,004 [$5,000 + ($400/180 months) × 2 months].

The following table summarizes the classification of expenditures:

			Type of Expenditure		
Date	*Expenditure*	*Amount*	*Organizational*	*Capital*	*Business*
June 10	Legal	$ 2,000	$2,000		
July 17	Commission	40,000		$40,000	
July 18	Accounting	2,400	2,400		
July 20	Temporary directors' fees	1,000	1,000		
August 25	Directors' fees	1,500			$1,500
	Total	$46,900	$5,400	$40,000	$1,500 ◀

BOOK-TO-TAX ACCOUNTING COMPARISON

For tax purposes, a corporation amortizes start-up expenditures over 180 months (after the initial deduction). ASC 915 holds that the financial accounting practices and reporting standards used for development stage businesses should be no different for an established business. The two different sets of rules can lead to different reporting for tax and book purposes.

Start-Up Expenditures. A distinction must be made between a corporation's organizational expenditures and its start-up expenditures. Start-up expenditures are amounts paid or incurred

- To investigate the creation or acquisition of an active trade or business
- To create an active trade or business
- To conduct an activity engaged in for profit or the production of income before the time the activity becomes an active trade or business

Examples of start-up expenditures include the costs for a survey of potential markets; an analysis of available facilities; advertisements relating to opening the business; the training of employees; travel and other expenses for securing prospective distributors, suppliers, or customers; and the hiring of management personnel and outside consultants. The expenditures must be such that, if incurred in connection with the operation of an existing active trade or business, they would be allowable as a deduction in the year paid or incurred.

---

[15] Reg. Sec. 1.248-1(b)(2).

Under Sec. 195, a corporation may elect to deduct the first $5,000 of start-up expenditures. However, this amount is reduced (but not below zero) by the amount by which the cumulative start-up expenditures exceed $50,000. The corporation can amortize the remaining start-up expenditures over a 180-month period beginning in the month it begins business.

A corporation is deemed to have made the Sec. 195 election for the tax year the business to which the expenditures relate begins.[16] If the corporation chooses to forgo the deemed election, it can elect to capitalize the expenditures (without amortization) on a timely filed tax return for the tax year the business to which the expenditures relate begins. Either election, to amortize or capitalize, is irrevocable and applies to all start-up expenditures related to the business.

STOP & THINK

Question: What is the difference between an organizational expenditure and a start-up expenditure?

Solution: Organizational expenditures are outlays made in forming a corporation, such as fees paid to the state of incorporation for the corporate chapter and fees paid to an attorney to draft the documents needed to form the corporation. Start-up expenditures are outlays that otherwise would be deductible as ordinary and necessary business expenses but that are capitalized because they were incurred prior to the start of the corporation's business activities.

A corporation may elect to deduct the first $5,000 of organizational expenditures and the first $5,000 of start-up expenditures (if neither set of expenditures exceeds $50,000). The corporation can amortize the remainder of each set of expenditures over 180 months. Like a corporation, a partnership can deduct and amortize its organizational and start-up expenditures. A sole proprietorship may incur start-up expenditures, but sole proprietorships do not incur organizational expenditures.

Limitation on Deductions for Accrued Compensation. If a corporation accrues an obligation to pay compensation, the corporation must make the payment within 2½ months after the close of its tax year. Otherwise, the deduction cannot be taken until the year of payment.[17] The reason is that, if a payment is delayed beyond 2½ months, the IRS treats it as a deferred compensation plan. Deferred compensation cannot be deducted until the year the corporation pays it and the recipient includes the payment in income.[18]

EXAMPLE C:3-7 ▶ On December 10 of the current year, Bell Corporation, a calendar year taxpayer, accrues an obligation for a $100,000 bonus to Marge, a sales representative who has had an outstanding year. Marge owns no Bell stock. Bell must make the payment by March 15 of next year. Otherwise, Bell Corporation cannot deduct the $100,000 in its current year tax return but must wait until the year it pays the bonus. ◀

Limitation on Net Business Interest. The deductibility of business interest in a given year is limited to the sum of the following amounts:[19]

- Business interest income
- 30% of adjusted taxable income (but not less than zero)
- Floor plan financing interest for motor vehicles

Any amount disallowed because of the above limitation carries over to the next year. The carryover period is indefinite. Corporations meeting the $31 million (for 2025) gross receipts test for small businesses are exempt from this limitation. Business interest does not include investment interest, and business income does not include investment income. For C corporations, adjusted taxable income means taxable income computed without regard to:

---

[16] Reg. Sec. 1.195-1(b).

[17] Temp. Reg. Sec. 1.404(b)-1T.

[18] Sec. 404(b).

[19] Sec. 163(j).

- Income, gain, deduction, or loss not allocable to a trade or business
- Business interest or business interest income
- Any net operating loss deduction
- Any other adjustments provided by the Treasury Department

Regarding the first item, a C corporation usually is deemed to be a trade or business. The term trade or business, however, does not include performing services as an employee, an electing real property trade or business, an electing farming business, or certain regulated utilities. (See Chapters C:9 and C:11 for application of the business interest limitation to partnerships and S corporations.)

ADDITIONAL COMMENT

If a previously disallowed business interest expense carries over to a year in which the small business exemption applies, the carryover will not be limited in that year.

HISTORICAL NOTE

For tax years beginning before 2022, adjusted taxable income was computed without regard to the items listed to the right and without regard to any deduction for depreciation, amortization, or depletion.

EXAMPLE C:3-8 ► Iota Corporation reports the following income and expenses for the current year:

Gross profit from operations	$50,000,000
Long-term capital gain from investments	7,000,000
Operating business expenses	20,000,000
Depreciation deductions	10,000,000
Business interest expense	15,000,000

Assume that Iota's average annual gross receipts for the preceding three years exceeded $31 million, so it does not qualify for the small business exemption. Iota's adjusted taxable income for purposes of the business interest limitation is $27 million ($50,000,000 + $7,000,000 − $20,000,000 − $10,000,000). Therefore, its business interest deduction is limited to $8.1 million ($27,000,000 × 0.30). The remaining $6.9 million of business interest expense carries over to the next year, subject to the limitation in that year. ◄

ADDITIONAL COMMENT

If the tax year had begun before 2022, the $10 million reduction for depreciation would not have applied in calculating adjusted taxable income.

Meals and Entertainment Expenses. A deduction for business meals is limited to 50% of such expenditures. However, no deduction is allowed for any activities involving entertainment, amusement, or recreation, including expenses related to a facility used in connection with these activities. With some exceptions, this disallowance applies even if the expenses are related to the taxpayer's trade or business.

Executive Compensation. Section 162(m) limits the deduction for compensation paid to a "covered" employee to $1 million. A covered employee includes the principal (chief) executive officer and principal (chief) financial officer plus the three highest compensated officers (other than the CEO or CFO) if the compensation of such other officers is required by the Securities Exchange Act of 1934 to be reported to shareholders.

ADDITIONAL COMMENT

For tax years beginning after December 31, 2026, covered employees for Sec. 162(m) purposes will also include the five highest compensated employees (other than the five individuals who are covered employees for pre-2027 tax years). See Sec. 162(m)(3)(C).

Charitable Contributions. The treatment of charitable contributions by individual and corporate taxpayers differs in three ways: the timing of the deduction, the amount of the deduction permitted for contributions of certain noncash property, and the maximum deduction permitted in any given year.

Timing of the Deduction. Corporations may deduct contributions to qualified charitable organizations.[20] Generally, a contribution must have been paid during the year (not just pledged) for a deduction to be allowed for a given year. A special rule, however, applies to corporations using the accrual method of accounting (corporations using the cash or hybrid methods of accounting are not eligible). These corporations may elect to treat part or all of a charitable contribution as having been made in the year it accrued (instead of the year paid) if

---

[20] Sec. 170.

- ▶ The board of directors authorizes the contribution in the year it accrued
- ▶ The corporation pays the contribution on or before the fifteenth day of the fourth month following the end of the accrual year (third month if the corporation has a June 30 year-end, for taxable years beginning before January 1, 2026).

The corporation makes the election by deducting the contribution in its tax return for the accrual year and by attaching a copy of the board of director's resolution to the return. Any portion of the contribution for which the corporation does not make the election is deducted in the year paid.

EXAMPLE C:3-9 ▶ Echo Corporation is a calendar year taxpayer using the accrual method of accounting. In the current year, its board of directors authorizes a $10,000 contribution to the Girl Scouts. Echo pays the contribution on March 10 of next year. Echo may elect to treat part or all of the contribution as having been paid in the current year. If the corporation pays the contribution after April 15 of next year, it may not deduct the contribution in the current year but may deduct it next year. ◀

TAX STRATEGY TIP

The tax laws do not require a corporation to recognize a gain when it contributes appreciated property to a charitable organization. Thus, except for inventory and limited other properties, a corporation can deduct the FMV of its donation without having to recognize any appreciation in its gross income. On the other hand, a decline in the value of donated property is not deductible. Thus, the corporation should sell the loss property to recognize the loss and then donate the sales proceeds to the charitable organization.

Deducting Contributions of Nonmonetary Property. If a taxpayer donates money to a qualified charitable organization, the amount of the charitable contributions deduction equals the amount of money donated. If the taxpayer donates property, the amount of the charitable contributions deduction generally equals the property's fair market value (FMV). However, special rules apply to donations of appreciated nonmonetary property known as ordinary income property and capital gain property.

In this context, **ordinary income property** is property whose sale would have resulted in a gain other than a long-term capital gain (i.e., ordinary income or short-term capital gain). Examples of ordinary income property include investment property held for one year or less, inventory property, and property subject to depreciation recapture under Secs. 1245 and 1250. The deduction allowed for a donation of such property is limited to the property's FMV minus the amount of ordinary income or short-term capital gain the corporation would have recognized had it sold the property.

In some cases, a corporation may deduct the donated property's adjusted basis plus one-half of the excess of the property's FMV over its adjusted basis (not to exceed twice the property's adjusted basis). This special rule applies to inventory if

1. The use of the property is related to the donee's exempt function, and it is used solely for the care of the ill, the needy, or infants;
2. The property is not transferred to the donee in exchange for money, other property, or services; and
3. The donor receives a statement from the charitable organization stating that conditions (1) and (2) will be complied with.

A similar rule applies to contributions of scientific research property if the corporation created the property and contributed it to a college, university, or tax-exempt scientific research organization for its use within two years of creating the property.

EXAMPLE C:3-10 ▶ King Corporation donates inventory having a $26,000 adjusted basis and a $40,000 FMV to a qualified public charity. A $33,000 [$26,000 + (0.50 × $14,000)] deduction is allowed for the contribution of the inventory if the charitable organization will use the inventory for the care of the ill, needy, or infants, or if the donee is an educational institution or research organization that will use the scientific research property for research or experimentation. Otherwise, the deduction is limited to the property's $26,000 adjusted basis. If instead the inventory's FMV is $100,000 and the donation meets either of the two sets of requirements outlined above, the charitable contributions deduction is limited to $52,000, the lesser of the property's adjusted basis plus one-half of the appreciation [$63,000 = $26,000 + (0.50 × $74,000)] or twice the property's adjusted basis ($52,000 = $26,000 × 2). ◀

When a corporation donates appreciated property whose sale would result in long-term capital gain (also known as **capital gain property**) to a charitable organization, the amount of the charitable contributions deduction generally equals the property's FMV. However, special restrictions apply if

- The corporation donates a patent, copyright, trademark, trade name, trade secret, know-how, certain software, or other similar property;
- A corporation donates tangible personal property to a charitable organization and the organization's use of the property is unrelated to its tax-exempt purpose; or
- A corporation donates appreciated property to certain private nonoperating foundations.[21]

In these cases, the amount of the corporation's contribution is limited to the property's FMV minus the long-term capital gain that would have resulted from the property's sale.

EXAMPLE C:3-11 ▶ Fox Corporation donates artwork to the MacNay Museum. The artwork, purchased two years earlier for $15,000, is worth $38,000 on the date Fox donates it. At the time of the donation, the museum's directors intend to sell the work to raise funds to conduct museum activities. Fox's deduction for the gift is limited to $15,000. If the museum plans to display the artwork to the public, the entire $38,000 deduction is permitted. Fox can avoid losing a portion of its charitable contributions deduction by, as a condition of the donation, placing restrictions on the sale or use of the property. ◀

Substantiation Requirements. Section 170(f)(11) imposes substantiation requirements for noncash charitable contributions. If the corporation does not comply, it will lose the charitable contributions deduction. The requirements are as follows:

ADDITIONAL COMMENT

The $500, $5,000, and $500,000 thresholds apply on an aggregate basis for similar property donated to one or more donees.

- If the deduction exceeds $500, the corporation must include with its tax return a description of the property and any other information required by Treasury Regulations.
- If the deduction exceeds $5,000, the corporation must obtain a qualified appraisal and include with its tax return any information and appraisal required by Treasury Regulations.
- If the deduction exceeds $500,000, the corporation must attach a qualified appraisal to the tax return.

The second and third requirements, however, do not apply to contributions of cash; publicly traded securities; inventory; or certain motor vehicles, boats, or aircraft the donee organization sells without any intervening use or material improvement. With regard to these vehicles, the donor corporation's deduction is limited to the amount of gross proceeds the donee organization receives on the sale.

Maximum Deduction Permitted. A percentage limit applies to the amount of charitable contributions a corporation can deduct in a given year. The limit is calculated differently for corporations than for individuals. The charitable contributions deduction by a corporation is limited to 10% of adjusted taxable income. Adjusted taxable income is the corporation's taxable income computed without regard to any of the following amounts:

- The charitable contributions deduction
- The dividends-received deduction[22]
- A capital loss carryback

Contributions that exceed the 10% limit are not deductible in the current year. Instead, they carry over to the next five tax years. Any excess contributions not deducted within those five years expire. The corporation may deduct excess contributions in the carryover year only after it deducts any contributions made in that year. The total charitable contributions deduction (including any deduction for contribution carryovers) is limited to 10% of the corporation's adjusted taxable income in the carryover year.[23]

BOOK-TO-TAX ACCOUNTING COMPARISON

For financial accounting purposes, all charitable contributions can be claimed as an expense without regard to the amount of profits reported. For tax purposes, however, the charitable contributions deduction may be limited. Thus, the charitable contributions carryover for tax purposes creates a deferred tax asset, possibly subject to a valuation allowance.

---

[21] Sec. 170(e)(5). The restriction on contributions of appreciated property to private nonoperating foundations does not apply to contributions of stock for which market quotations are readily available.

[22] Sec. 170(b)(2).

[23] Sec. 170(d)(2).

EXAMPLE C:3-12 ▶ Golf Corporation reports the following results for Years 1 and 2:

	Year 1	*Year 2*
Adjusted taxable income	$200,000	$300,000
Charitable contributions	35,000	25,000

Golf's Year 1 charitable contributions deduction is limited to $20,000 (0.10 × $200,000). Golf has a $15,000 ($35,000 − $20,000) contribution carryover to Year 2. The Year 2 deduction is limited to $30,000 (0.10 × $300,000). Golf's deduction for Year 2 is composed of the $25,000 donated in Year 2 plus $5,000 of the Year 1 carryover. The remaining $10,000 carryover from Year 1 carries over to Year 3 (and Years 4 through 6, if necessary). ◀

Topic Review C:3-1 summarizes the basic corporate charitable contributions deduction rules.

SPECIAL DEDUCTIONS

C corporations are allowed two special deductions: the dividends-received deduction and the net operating loss (NOL) deduction.

Dividends-Received Deduction. A corporation must include in its gross income any dividends received on stock it owns in another corporation. As described in Chapter C:2, the taxation of dividend payments to a shareholder generally results in double taxation. When a distributing corporation pays a dividend to a corporate shareholder and the recipient corporation subsequently distributes these earnings to its shareholders, potential triple taxation of the earnings can result.

TOPIC REVIEW C:3-1

Corporate Charitable Contributions Deduction

1. Timing of the charitable contributions deduction
   a. General rule: A deduction is allowed for contributions paid during the year.
   b. Accrual method corporations may elect to treat contributions approved by their board of directors prior to the end of the tax year and paid within 3½ months of that year-end as having been paid during the tax year of such approval (2½ months for corporations having a June 30 year-end, for taxable years beginning before January 1, 2026).
2. Amount of the charitable contributions deduction
   a. General rule: A deduction is allowed for the amount of money and the FMV of other property donated.
   b. Exceptions for ordinary income property:
      1. If donated property would result in ordinary income or short-term capital gain if sold, the deduction is limited to the property's FMV minus this potential ordinary income or short-term capital gain. Thus, for gain property the deduction equals the property's cost or adjusted basis.
      2. Special rule: For donations of (1) inventory used for the care of the ill, needy, or infants, or (2) scientific research property or computer technology and equipment to certain educational institutions, a corporate donor may deduct the property's basis plus one-half of the excess of the property's FMV over its adjusted basis. The deduction may not exceed twice the property's adjusted basis.
   c. Exceptions for capital gain property: If the corporation donates tangible personal property to a charitable organization for a use unrelated to its tax-exempt purpose, or the corporation donates appreciated property to a private nonoperating foundation, the corporation's contribution for the property is limited to the property's FMV minus the long-term capital gain that would result if the corporation sold the property.
3. Limitation on charitable contributions deduction
   a. The deduction is limited to 10% of the corporation's taxable income computed without regard to the charitable contributions deduction, the dividends-received deduction, and any capital loss carryback (if the limitation is being calculated for a carryback year).
   b. Excess contributions carry over for a five-year period.

EXAMPLE C:3-13 ▶ Adobe Corporation owns stock in Bell Corporation. Bell reports taxable income of $100,000 and pays federal income taxes on its income. Bell distributes its after-tax income to its shareholders. The dividend Adobe receives from Bell must be included in its gross income and, to the extent it reports a profit for the year, Adobe will pay taxes on the dividend. Adobe distributes its remaining after-tax income to its shareholders. The shareholders must include Adobe's dividends in their gross income and pay federal income taxes on the distribution. Thus, Bell's income in this example potentially is taxed three times. ◀

BOOK-TO-TAX ACCOUNTING COMPARISON

A corporation includes dividends in its financial accounting income but does not subtract a dividends-received deduction in determining its book net income. Thus, the dividends-received deduction creates a permanent difference that affects the corporation's effective tax rate but not its deferred taxes.

To partially mitigate the effects of multiple taxation, corporations are allowed a **dividends-received deduction** for dividends received from other domestic corporations and from certain foreign corporations.

General Rule for Dividends-Received Deduction. Corporations that own less than 20% of the distributing corporation's stock may deduct 50% of the dividends received. If the shareholder corporation owns 20% or more of the distributing corporation's stock (both voting power and value) but less than 80% of such stock, it may deduct 65% of the dividends received.[24]

EXAMPLE C:3-14 ▶ Hale Corporation reports the following results in the current year:

Gross income from operations	$300,000
Dividends from 15%-owned domestic corporation	100,000
Operating expenses	280,000

Hale's dividends-received deduction is $50,000 (0.50 × $100,000). Thus, Hale's taxable income is computed as follows:

Gross income	$400,000
Minus: Operating expenses	(280,000)
Taxable income before special deductions	$120,000
Minus: Dividends-received deduction	(50,000)
Taxable income	$ 70,000

◀

ADDITIONAL COMMENT

Limitations do not apply to the 100% deduction for dividends received from an 80% or more owned affiliated corporation. See the discussion on members of an affiliated group that begins on the next page.

Limitation on Dividends-Received Deduction. In the case of dividends received from corporations that are less than 20% owned, the deduction is limited to the lesser of 50% of dividends received or 50% of taxable income computed without regard to any NOL deduction, the dividends-received deduction itself, or any capital loss carryback (if being calculated for a carryback year).[25] In the case of dividends received from a 20% or more owned (but less than 80% owned) corporation, the dividends-received deduction is limited to the lesser of 65% of dividends received or 65% of taxable income computed without regard to the same deductions.

EXAMPLE C:3-15 ▶ Assume the same facts as in Example C:3-14 except Hale Corporation's operating expenses for the year are $320,000. Hale's taxable income before the dividends-received deduction is $80,000 ($300,000 + $100,000 − $320,000). The dividends-received deduction is limited to the lesser of 50% of dividends received ($50,000 = $100,000 × 0.50) or 50% of taxable income before the dividends-received deduction ($40,000 = $80,000 × 0.50). Thus, the dividends-received deduction is limited to $40,000. Hale's taxable income is $40,000 ($80,000 − $40,000). ◀

A corporation that receives dividends eligible for both the 65% dividends-received deduction and the 50% dividends-received deduction must compute the 65% dividends-received deduction first and then reduce taxable income by the aggregate amount of dividends eligible for the 65% deduction before computing the 50% deduction.

---

[24] Secs. 243(a) and (c).

[25] Sec. 246(b).

EXAMPLE C:3-16 ▶ Assume the same facts as in Example C:3-15 except Hale Corporation receives $70,000 of the dividends from a 25%-owned corporation and the remaining $30,000 from a 15%-owned corporation. The tentative dividends-received deduction from the 25%-owned corporation is $45,500 ($70,000 × 0.65), which is less than the $52,000 ($80,000 × 0.65) limitation. Thus, Hale can deduct the entire $45,500. The tentative dividends-received deduction from the 15%-owned corporation is $15,000 ($30,000 × 0.50). The limitation, however, is $5,000 [($80,000 − $70,000) × 0.50]. Note that, in computing this limitation, Hale reduces its taxable income by the entire $70,000 dividend received from the 25%-owned corporation. Thus, Hale can deduct only $5,000 of the $15,000 amount. Hale's taxable income is $29,500 ($80,000 − $45,500 − $5,000). ◀

Exception to the Limitation. The taxable income limitation on the dividends-received deduction does not apply if the tentative dividends-received deduction creates or increases a net operating loss (NOL) for the year.

EXAMPLE C:3-17 ▶ Assume the same facts as in Example C:3-15 except Hale Corporation's operating expenses for the year are $351,000. Hale's taxable income before the dividends-received deduction is $49,000 ($300,000 + $100,000 − $351,000). The tentative dividends-received deduction is $50,000 ($100,000 × 0.50). Hale's dividends-received deduction is not restricted by the limitation of 50% of taxable income before the dividends-received deduction because, after taking into account the tentative $50,000 dividends-received deduction, the corporation has a $1,000 ($49,000 − $50,000) NOL for the year. If Hale's operating expenses were $410,000 instead of $351,000, it would have a $10,000 NOL before the dividends-received deduction ($300,000 + $100,000 − $410,000). Again, the dividends-received deduction is not restricted by the limitation because it increases the NOL. In this case, the corporation has a $60,000 [$(10,000) − $50,000] NOL for the year. ◀

The following table compares the results of Examples C:3-14, C:3-15, and C:3-17:

	Example C:3-14	*Example C:3-15*	*Example C:3-17*	
Gross income	$400,000	$400,000	$400,000	$400,000
Minus: Operating expenses	(280,000)	(320,000)	(351,000)	(410,000)
Taxable income (NOL) before special deductions	$120,000	$ 80,000	$ 49,000	$(10,000)
Minus: Dividends-received deduction	(50,000)	(40,000)	(50,000)	(50,000)
Taxable income (NOL)	$ 70,000	$ 40,000	$ (1,000)	$(60,000)

ADDITIONAL COMMENT

When the dividends-received deduction creates (or increases) an NOL, the corporation ultimately gets the full benefit of the deduction because it can carry over the NOL.

TAX STRATEGY TIP

A corporation can avoid the dividends-received deduction limitation either by (1) increasing its taxable income before the dividends-received deduction so the limitation exceeds the tentative dividends-received deduction or (2) decreasing its taxable income before the dividends-received deduction so the tentative dividends-received deduction creates an NOL.

Of these three examples, the only case where the dividends-received deduction does not equal the full 50% of the $100,000 dividend is Example C:3-15. In that case, the deduction is limited to $40,000 because taxable income before special deductions is less than the $100,000 dividend *and* because the full $50,000 deduction would not create an NOL. The special exception to the dividends-received deduction can create interesting situations. For example, the additional $31,000 of deductions incurred in Example C:3-17 (as compared to Example C:3-15) resulted in a $41,000 reduction in taxable income. Corporate taxpayers should be aware of these rules and consider deferring income or recognizing expenses to ensure being able to deduct the full 50% or 65% dividends-received deduction. If the taxable income limitation applies, the corporation loses the unused dividends-received deduction.

ADDITIONAL COMMENT

If the affiliated group files a consolidated tax return, the recipient of the dividend does not claim the 100% dividends received deduction because the intercompany dividend gets eliminated in the consolidation. See Chapter C:8 for a more detailed definition of affiliated corporations and discussion of consolidated tax returns.

Members of an Affiliated Group. Members of an affiliated group of corporations can claim a 100% dividends-received deduction with respect to dividends received from other group members.[26] A group of corporations is affiliated if a parent corporation owns at least 80% of the stock (both voting power and value) of at least one subsidiary corporation, and at least 80% of the stock (both voting power and value) of each other corporation is owned by other group members. The 100% dividends-received deduction is not subject to a taxable income limitation and is taken before the 65% or 50% dividends-received deduction.[27]

---

[26] Sec. 243(a)(3).

[27] Secs. 243(b)(5) and 1504.

EXAMPLE C:3-18 ▶ Hardy Corporation reports the following results for the current year:

Gross income from operations	$520,000
Dividend received from an 80%-owned affiliated corporation	100,000
Dividend received from a 20%-owned corporation	250,000
Operating expenses	550,000

Hardy does not file a consolidated tax return with the 80%-owned affiliate. Hardy's taxable income before any dividends-received deduction is $320,000 ($520,000 + $100,000 + $250,000 − $550,000). Hardy can deduct the entire dividend received from the 80%-owned affiliate without limitation. The tentative dividends-received deduction from the 20%-owned corporation is $162,500 ($250,000 × 0.65). The limitation, however, is $143,000 [($320,000 − $100,000) × 0.65]. Note that, in computing this limitation, Hardy first reduces its taxable income by the $100,000 dividends-received deduction pertaining to the 80%-owned affiliate. Thus, Hardy can deduct only $143,000 of the $162,500 tentative dividends-received deduction. Hardy's taxable income is $77,000 ($320,000 − $100,000 − $143,000). ◀

Dividends Received from Foreign Corporations. A U.S. corporation that owns at least 10% of the stock in a foreign corporation can claim a 100% dividends-received deduction for the foreign-source portion of dividends received.[28] The amount of the so-called Sec. 245A dividend is based on the ratio of the foreign corporation's undistributed foreign earnings and profits to its total undistributed earnings and profits as of the close of the foreign corporation's tax year. No foreign tax credit or deduction is available to the U.S. corporation with respect to a Sec. 245A dividend. This system is designed to encourage repatriation to the United States of foreign earnings that otherwise might be retained in corporations operating abroad.

Stock Held 45 Days or Less. A corporation may not claim a dividends-received deduction if it holds the dividend paying stock for less than 46 days during the 91-day period that begins 45 days before the stock becomes ex-dividend with respect to the dividend.[29] This rule prevents a corporation from claiming a dividends-received deduction if it purchases stock shortly before an ex-dividend date and sells the stock shortly thereafter. (The ex-dividend date is the first day on which a purchaser of stock is not entitled to a previously declared dividend.) Absent this rule, such a purchase and sale would allow the corporation to receive dividends at a low tax rate—for example, a 10.5% [(100% − 50%) × 0.21] effective tax rate—and to recognize a capital loss on the sale of stock that could offset capital gains taxed at a 21% corporate tax rate.

ADDITIONAL COMMENT

Stock purchased on which a dividend has been declared has an increased value. This value will drop when the corporation pays the dividend. If the dividend is eligible for a dividends-received deduction and the drop in value also creates a capital loss, corporate shareholders could use this event as a tax planning device. To avoid this result, no dividends-received deduction is available for stock held 45 days or less.

EXAMPLE C:3-19 ▶ Theta Corporation purchases 100 shares of Maine Corporation's stock for $100,000 one day before Maine's ex-dividend date. Theta receives a $5,000 dividend on the stock and then sells the stock for $95,000 shortly after the dividend payment date, which occurs within 45 days of the ex-dividend date. Because the stock is worth $100,000 immediately before the ex-dividend date, its value would have dropped to $95,000 ($100,000 − $5,000) immediately after that date. The sale results in a $5,000 ($100,000 − $95,000) capital loss that may offset a $5,000 capital gain. Assuming a 21% corporate tax rate, the following table summarizes the profit (loss) to Theta with and without the 45-day rule.

	If Deduction Is Allowed	*If Deduction Is Not Allowed*
Dividends	$5,000	$5,000
Minus: 21% tax on dividend	(525)[a]	(1,050)
Dividend (after taxes)	$4,475	$3,950
Capital loss	$5,000	$5,000
Minus: 21% tax savings on loss	(1,050)	(1,050)
Net loss on stock	$3,950	$3,950
Dividend (after taxes)	$4,475	$3,950
Minus: Net loss on stock[b]	(3,950)	(3,950)
Net profit (loss)	$ 525	$ –0–

[a] [$5,000 − (0.50 × $5,000)] × 0.21 = $525

[b] This example assumes the corporation has capital gains against which to deduct this capital loss.

---

[28] Sec. 245A.

[29] Sec. 246(c)(1).

The net profit shown in the first column is not available if Theta sells the stock shortly after receiving the dividend because Theta must hold the Maine stock for at least 46 days to obtain the dividends-received deduction. ◀

ADDITIONAL COMMENT

Borrowing money with deductible interest to purchase a tax-advantaged asset, such as stock eligible for the dividends-received deduction, is an example of "tax arbitrage." Many provisions in the IRC, such as the limits on debt-financial stock, are aimed at curtailing tax arbitrage transactions.

Debt-Financed Stock. The dividends-received deduction is not allowed to the extent the corporation borrows money to acquire the dividend paying stock.[30] This rule prevents a corporation from deducting interest paid on money borrowed to purchase the stock, while paying little or no tax on the dividends received on the stock.

EXAMPLE C:3-20 ▶

Palmer Corporation, whose tax rate is 21%, borrows $100,000 at a 10% interest rate to purchase 30% of Sun Corporation's stock. The Sun stock pays a $10,000 annual dividend. If a dividends-received deduction were allowed for this investment, Palmer would have a net profit of $1,365 annually on owning the Sun stock even though the dividend received equals the interest paid. The following table summarizes the profit (loss) to Palmer with and without the debt-financing rule.

REAL-WORLD EXAMPLE

Although sound in theory, the debt-financed stock limitation may be difficult to apply in practice. This difficulty became particularly apparent in a district court case, *OBH, Inc. v. U.S.*, 96 AFTR 2d, 2005-6801, 2005-2 USTC ¶50,627 (DC NB, 2005), where the IRS failed to establish that a corporation's debt proceeds were directly traceable to the acquisition of dividend paying stock.

	If Deduction Is Allowed	*If Deduction Is Not Allowed*
Dividends	$ 10,000	$ 10,000
Minus: 21% tax on dividend	(735)[a]	(2,100)
Dividend (after taxes)	$ 9,265	$ 7,900
Interest paid	$ 10,000	$ 10,000
Minus: 21% tax savings on deduction	(2,100)	(2,100)
Net cost of borrowing	$ 7,900	$ 7,900
Dividend (after taxes)	$ 9,265	$ 7,900
Minus: Net cost of borrowing	(7,900)	(7,900)
Net profit (loss)	$ 1,365	$ -0-

[a][$10,000 − ($10,000 × 0.65)] × 0.21 = $735

This example illustrates how the rule disallowing the dividends-received deduction on debt-financed stock prevents corporations from making an after-tax arbitrage profit by borrowing funds to purchase stocks paying dividends that are less than the cost of the borrowing. ◀

Net Operating Losses (NOLs). If a corporation's deductions exceed its gross income for the year, the corporation has a **net operating loss (NOL)**. The NOL is the amount by which the corporation's deductions (including any dividends-received deduction) exceed its gross income.[31] In computing an NOL for a given year, no deduction is permitted for a carryover of an NOL from a preceding year. However, unlike an individual's NOL, no other adjustments are required to compute a corporation's NOL.

NOLs arising in tax years beginning after 2017 carry over to succeeding tax years indefinitely (i.e., they do not expire), and their deductibility is limited in the carryover year to 80% of taxable income before the NOL deduction. Thus, if the corporation has post-2017 NOL carryovers but no pre-2018 NOL carryovers, the NOL deduction is the lesser of post-2017 aggregate carryovers or 80% of taxable income computed without regard to the NOL deduction. Any amount of NOL carryover deduction disallowed because of the 80% limit carries over indefinitely.[32] NOLs incurred before 2018 carry over 20 years and are not subject to the 80% of taxable income limitation.

BOOK-TO-TAX ACCOUNTING COMPARISON

An NOL carryover for tax purposes creates a deferred tax asset, possibly subject to a valuation allowance.

EXAMPLE C:3-21 ▶

In the current year, Gray Corporation has gross income of $150,000 from operations and $215,000 of expenses. Thus, Gray has a $65,000 ($150,000 − $215,000) NOL. The $65,000 NOL carries over to next year, where Gray has $60,000 of taxable income before the NOL deduction. However, the NOL deduction next year is limited to $48,000 ($60,000 × 0.80). The remaining $17,000 ($65,000 − $48,000) NOL carries over to the following year, subject to the limitation in that year. ◀

---

[30] Sec. 246A.

[31] Sec. 172(c).

[32] Secs. 172(a) and (b). Special rules apply to farming losses and insurance companies. Post-2017 NOLs carried over to 2019 or 2020 also were not subject to the 80% limitation.

If the corporation has both pre-2018 and post-2017 NOL carryovers, it calculates the NOL deduction as follows:

1. Deduct pre-2018 NOL carryovers without regard to the 80% of taxable income limitation (but not more than taxable income).
2. Deduct post-2017 NOL carryovers limited to the lesser of (1) the post-2017 NOL carryovers or (2) 80% of the excess of taxable income over the NOL deduction attributable to pre-2018 NOL carryovers.

Recall that taxable income for this purpose is before the NOL deduction.

EXAMPLE C:3-22 ▶ For the current year, Kappa Corporation has a $60,000 NOL carryover from pre-2018 tax years and a $35,000 NOL carryover from post-2017 tax years. Kappa's current year taxable income before any NOL deduction is $50,000. Kappa deducts $50,000 of the pre-2018 NOL carryover in the current year and has a $10,000 pre-2018 NOL carryover and a $35,000 post-2017 NOL carryover to next year. Next year, Kappa's taxable income before any NOL deduction again is $50,000. Kappa's NOL deduction is $10,000 from the pre-2018 NOL carryover plus $32,000 [($50,000 − $10,000) × 0.80] from the post-2017 NOL carryover, for a total NOL deduction of $42,000. Kappa's post-2017 NOL carryover to the following year is $3,000 ($35,000 − $32,000), subject to the 80% limitation in that year.

Suppose instead that Kappa's taxable income next year is $70,000 instead of $50,000. In that case, the 80% limitation would be $48,000 [($70,000 − $10,000) × 0.80], which is greater than the post-2017 NOL carryover. Thus, Kappa's total NOL deduction would be $45,000 ($10,000 + $35,000), with no NOL carryovers to the next year. ◀

Sequencing the Deduction Calculations. The rules for charitable contributions, dividends-received, and NOL deductions require that these deductions be calculated in the following sequence:

1. All deductions other than the charitable contributions deduction, the dividends-received deduction, and the NOL deduction
2. The charitable contributions deduction
3. The dividends-received deduction
4. The NOL deduction

The charitable contributions deduction is limited to 10% of taxable income before the charitable contributions deduction and the dividends-received deduction, but *after* any NOL carryovers. Once the corporation determines its charitable contributions deduction, it adds back any NOL carryovers and subtracts the charitable contributions deduction before computing the dividends-received deduction. The corporation then deducts the NOL carryover, subject to the 80% of taxable income limitation if applicable.

EXAMPLE C:3-23 ▶ East Corporation reports the following results for the current year:

Gross income from operations	$150,000
Dividends from 30%-owned domestic corporation	100,000
Operating expenses	100,000
Charitable contributions	35,000

East also has a $40,000 NOL carryover from a post-2017 year. East's charitable contributions deduction is computed as follows:

Gross income from operations		$150,000
Plus:	Dividends	100,000
Gross income		$250,000
Minus:	Operating expenses	(100,000)
	NOL carryover	(40,000)
Base for charitable contributions limitation (adjusted taxable income)		$110,000

ADDITIONAL COMMENT

If the NOL carryover to the current year is not fully used in the current year such that some of the NOL carries over to the next year, both the NOL carryover and charitable deduction carryover to the next year must be adjusted [IRC Sec. 170(d)(2)(B)]. The situation becomes even more complex when considering the 80% of taxable income limitation on post-2017 NOLs. These adjustments are beyond the scope of this text.

East's charitable contributions deduction is limited to $11,000 ($110,000 × 0.10). The $11,000 limitation means that East has a $24,000 ($35,000 − $11,000) excess contribution that carries over for five years. East Corporation computes its taxable income as follows:

Gross income		$250,000
Minus:	Operating expenses	(100,000)
	Charitable contributions deduction	(11,000)
Taxable income before special deductions		$139,000
Minus:	Dividends-received deduction ($100,000 × 0.65)	(65,000)
	NOL deduction	(40,000)
Taxable income		$ 34,000

The NOL deduction is limited to $59,200 [($139,000 − $65,000) × 0.80], so East deducts all $40,000 of its NOL carryover. ◀

EXCEPTIONS FOR CLOSELY HELD CORPORATIONS

Congress has placed limits on certain transactions to prevent abuse in situations where a corporation is closely held. Some of these restrictions are explained below.

Transactions Between a Corporation and Its Shareholders. Special rules apply to transactions between a corporation and a controlling shareholder. Section 1239 may convert a capital gain realized on the sale of depreciable property between a corporation and a controlling shareholder into ordinary income. Section 267(a)(1) denies a deduction for losses realized on property sales between a corporation and a controlling shareholder. Section 267(a)(2) defers a deduction for accrued expenses and interest on certain transactions involving a corporation and a controlling shareholder.

In all three of the preceding situations, a controlling shareholder is one who owns more than 50% (in value) of the corporation's stock.[33] In determining whether a shareholder owns more than 50% of a corporation's stock, certain constructive stock ownership rules apply.[34] Under these rules, a shareholder is considered to own not only his or her own stock, but stock owned by family members (e.g., brothers, sisters, spouse, ancestors, and lineal descendants) and entities in which the shareholder has an ownership or beneficial interest (e.g., corporations, partnerships, trusts, and estates).

Gains on Sale or Exchange Transactions. If a controlling shareholder sells depreciable property to a controlled corporation (or vice versa) and the property is depreciable in the purchaser's hands, any gain on the sale is treated as ordinary income under Sec. 1239(a).

EXAMPLE C:3-24 ▶ Ann owns all of Cape Corporation's stock. Ann sells a building to Cape and recognizes a $25,000 gain, which usually would be Sec. 1231 gain or unrecaptured Sec. 1250 gain taxed at the applicable capital gains rates. However, because Ann owns more than 50% of the Cape stock and the building is a depreciable property in Cape's hands, Sec. 1239 requires that Ann recognize the entire $25,000 gain as ordinary income. ◀

BOOK-TO-TAX ACCOUNTING COMPARISON

The denial of deductions for losses involving related party transactions is unique to the tax area. Financial accounting rules contain no such disallowance provision.

Losses on Sale or Exchange Transactions. Section 267(a)(1) denies a deduction for losses realized on a sale of property by a corporation to a controlling shareholder (or vice versa). If the purchaser later sells the property to another party at a gain, that seller recognizes gain only to the extent it exceeds the previously disallowed loss.[35] Should the purchaser instead sell the property at a loss, the previously disallowed loss is never recognized.

EXAMPLE C:3-25 ▶ Quattros Corporation sells an automobile to Juan, its sole shareholder, for $6,500. The corporation's adjusted basis for the automobile is $8,000. Quattros realizes a $1,500 ($6,500 − $8,000) loss on the sale. Section 267(a)(1), however, disallows the loss to the corporation. If Juan later sells the auto for $8,500, he realizes a $2,000 ($8,500 − $6,500) gain. He recognizes only $500 of that gain, the amount by which his $2,000 gain exceeds the $1,500 loss previously disallowed to Quattros. If Juan instead sells the auto for $7,500, he realizes a $1,000 ($7,500 – $6,500) gain but recognizes no gain or loss. The previously disallowed loss reduces the gain to zero but may not create a loss. Finally, if Juan instead sells the auto for $4,000, he realizes and may be able to recognize a $2,500 ($4,000 – $6,500) loss. However, the $1,500 loss previously disallowed to Quattros is permanently lost. ◀

---

[33] Sec. 267(b)(2).

[34] Sec. 267(e)(3).

[35] Sec. 267(d).

KEY POINT

Section 267(a)(2) is primarily aimed at the situation involving an accrual method corporation that accrues compensation to a cash method shareholder-employee. This provision forces a matching of the income and expense recognition by deferring the deduction to the year the shareholder recognizes the income.

Corporation and Controlling Shareholder Using Different Accounting Methods. Section 267(a)(2) defers a deduction for accrued expenses or interest owed by a corporation to a controlling shareholder (or vice versa) when the two parties use different accounting methods and the payee thereby includes the amount in gross income later than when the payer accrues the deduction. Under this rule, accrued expenses or interest owed by a corporation to a controlling shareholder may not be deducted until the shareholder includes the payment in gross income.

EXAMPLE C:3-26 ▶

Hill Corporation uses the accrual method of accounting. Hill's sole shareholder, Ruth, uses the cash method of accounting. Both taxpayers use the calendar year as their tax year. The corporation accrues a $25,000 interest payment to Ruth on December 20 of the current year. Hill makes the payment on March 20 of next year. Hill, however, cannot deduct the interest in the current year but must wait until Ruth reports the income next year. Thus, the expense and income are matched. ◀

Loss Limitation Rules

At-Risk Rules. If five or fewer individuals own more than 50% (in value) of a C corporation's outstanding stock at any time during the last half of the corporation's tax year, the corporation is subject to the at-risk rules.[36] In such case, the corporation can deduct losses pertaining to an activity only to the extent the corporation is at risk for that activity at year-end. Any losses not deductible because of the at-risk rules must be carried over and deducted in a succeeding year when the corporation's risk with respect to the activity increases. (See Chapter C:9 for additional discussion of the at-risk rules.)

Passive Activity Limitation Rules. Personal service corporations (PSCs) and **closely held C corporations** (those subject to the at-risk rules described above) also may be subject to the **passive activity limitations**.[37] If a PSC does not meet the material participation requirements, its net **passive losses** and credits must be carried over to a year when it has **passive income**. In the case of closely held C corporations that do not meet material participation requirements, passive losses and credits are allowed to offset the corporation's net active income but not its portfolio income (i.e., interest, dividends, annuities, royalties, and capital gains on the sale of investment property).[38]

CONTROLLED GROUPS OF CORPORATIONS

OBJECTIVE 3

Recognize what a controlled group is and determine the tax consequences of being a controlled group

Special tax rules apply to corporations under common control to prevent them from falling below specified limitations by spreading certain transactions across a number of small corporations. Three key limitations to which the controlled group rules apply are those pertaining to the Sec. 179 expense, the minimum accumulated earnings credit, and the general business credit.[39] The rules apply to corporations that meet the definition of a controlled group. This section explains how the IRC defines controlled groups and how the special rules apply to controlled groups.

EXAMPLE C:3-27 ▶

Claire plans to form a corporation with a $3.6 million contribution of cash, with the plan to have the corporation invest in business property eligible for the Sec. 179 expensing election (for the sake of this example, assume the corporation does not claim bonus depreciation). If a single corporation, the corporation could expense only $780,000 for the investment because the invested amount exceeds the $3.13 million threshold (for 2025) for phasing out the Sec. 179 limitation. Accordingly, the $1.25 million limitation (for 2025) would be reduced by $470,000 ($3,600,000 − $3,130,000). To avoid this result, Claire instead considers contributing $1.2 million to each of three separate 100% owned corporations. Her intention is to have each corporation expense the entire $1.2 million investment, thereby achieving a $3.6 million current deduction rather than just $780,000. However, this plan would not accomplish her goal because the controlled group rules require that she apportion the single Sec. 179 limitation among the three corporations such that the final result would be the same as having one corporation make the investment. ◀

---

[36] Sec. 465(a).

[37] Secs. 469(a)(2)(B) and (C).

[38] Sec. 469(e)(2).

[39] Secs. 38(c)(6)(B), 179(d)(6), 1561, and 1563.

WHAT IS A CONTROLLED GROUP?

A **controlled group** is comprised of two or more corporations owned directly or indirectly by the same shareholder or group of shareholders. Controlled groups fall into three categories: a parent-subsidiary controlled group, a brother-sister controlled group, and a combined controlled group. Each of these groups is subject to the limitations described above.

ADDITIONAL COMMENT

For purposes of the Sec. 179 expense dollar limitation, a more-than-50% threshold replaces the at-least-80% threshold in defining a parent-subsidiary controlled group.

Parent-Subsidiary Controlled Groups. In a **parent-subsidiary controlled group**, one corporation (the parent corporation) must directly own at least 80% of the voting power of all classes of voting stock, or at least 80% of the total value of all classes of stock, of a second corporation (the subsidiary corporation).[40] The group can contain more than one subsidiary corporation. If the parent corporation, the subsidiary corporation, or any other members of the controlled group in total own at least 80% of the voting power of all classes of voting stock, or at least 80% of the total value of all classes of stock, of another corporation, that other corporation also is included in the parent-subsidiary controlled group.

EXAMPLE C:3-28 ▶ Parent Corporation owns 80% of Axle Corporation's single class of stock and 40% of Wheel Corporation's single class of stock. Axle also owns 40% of Wheel's stock. (See Figure C:3-2.) Parent, Axle, and Wheel are members of the same parent-subsidiary controlled group because Parent directly owns at least 80% of Axle's stock and therefore is its parent corporation, and Wheel's stock is at least 80% owned by Parent (40%) and Axle (40%).

If Parent and Axle together owned only 70% of Wheel's stock and an unrelated shareholder owned the remaining 30%, Wheel would not be included in the parent-subsidiary group. The controlled group then would consist only of Parent and Axle. ◀

EXAMPLE C:3-29 ▶ Beta Corporation owns 70% of Spectrum Corporation's single class of stock and 60% of Red Corporation's single class of stock. Blue Corporation owns the remaining stock of Spectrum (30%) and Red (40%). No combination of these corporations forms a parent-subsidiary group because no corporation has direct stock ownership of at least 80% of any other corporation's stock. ◀

Brother-Sister Controlled Groups. The IRC contains two definitions of a **brother-sister controlled group**. This text will refer to them as the 50%–80% definition and the 50%-only definition. Under the 50%–80% definition, a group of two or more corporations

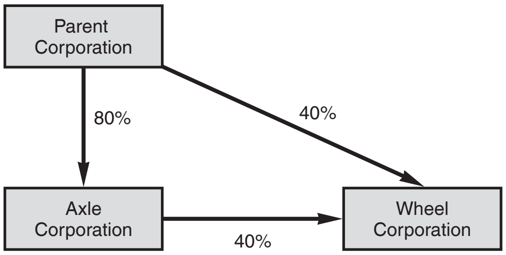

FIGURE C:3-2 ▶ Parent-Subsidiary Controlled Group (Example C:3-28) is a brother-sister controlled group if five or fewer individuals, trusts, or estates own stock that meets both of the following conditions:

---

[40] Sec. 1563(a)(1). Section 1563(d)(1) requires that certain attribution rules apply to determine stock ownership for parent-subsidiary controlled groups. If any person has an option to acquire stock, such stock is considered owned by the person having the option. Section 1563(c) excludes certain types of stock from the controlled group definition of stock.

- More than 50% of the voting power of all classes of stock (or more than 50% of the total value of the outstanding stock) of each corporation, taking into account only the stock ownership that is common with respect to each corporation.[41] A common ownership is the percentage of stock a shareholder owns that is common or identical in each of the corporations. For example, if a shareholder owns 30% of New Corporation and 70% of Old Corporation, his or her common ownership is 30%.
- At least 80% of the voting power of all classes of voting stock (or at least 80% of the total value of the outstanding stock) of each corporation.

Thus, under the 50%–80% definition, the five or fewer shareholders not only must have more than 50% common ownership in the corporations, they also must own at least 80% of the stock of each corporation in the brother-sister group. This definition is narrow because the shareholders must meet two tests.

The 50%-only definition, on the other hand, is broader than the 50%–80% definition in that the five or fewer shareholders must satisfy only the 50% common ownership test described above. Consequently, in situations where the 50%-only definition applies, more corporations may be pulled into the controlled group than under the 50%–80% definition. Table C:3-2 indicates which definition applies to specific situations.

EXAMPLE C:3-30 ▶ North and South Corporations have only one class of stock outstanding, owned by the following individuals:

	Stock Ownership Percentages		
Shareholder	*North Corp.*	*South Corp.*	*Common Ownership*
Walt	30%	70%	30%
Gail	70%	30%	30%
Total	100%	100%	60%

Five or fewer individuals (Walt and Gail) together own at least 80% (actually 100%) of each corporation's stock, and the same individuals own more than 50% (actually 60%) of the corporations' stock taking into account only their common ownership in each corporation. Because their ownership satisfies both tests, North and South are a brother-sister controlled group under the 50%–80% definition. ◀

▼ TABLE C:3-2
Items That Must Be Apportioned if a Controlled Group Exists

Item	Brother-Sister 50%-Only	Brother-Sister 50%–80%	Parent-Subsidiary ≥ 80%	Parent-Subsidiary > 50%
Section 179 expense limitation		x	x	x
Minimum accumulated earnings credit	x	x	x	
General business credit limitation		x	x	

---

[41] Sec. 1563(a)(2). Section 1563(d)(2) requires that certain attribution rules apply to determine stock ownership for brother-sister controlled groups. If any person has an option to acquire stock, such stock is considered to be owned by the person having the option. A proportionate amount of stock owned by a partnership, estate, or trust is attributed to partners having an interest of 5% or more in the capital or profits of the partnership or beneficiaries having a 5% or more actuarial interest in the estate or trust. A proportionate amount of stock owned by a corporation is attributed to shareholders owning 5% or more in value of the corporate stock. Family attribution rules also can cause an individual to be considered to own the stock of a spouse, child, grandchild, parent, or grandparent.

EXAMPLE C:3-31 ▶ East and West Corporations have only one class of stock outstanding, owned by the following individuals:

	Stock Ownership Percentages		
Shareholder	*East Corp.*	*West Corp.*	*Common Ownership*
Javier	80%	25%	25%
Sara	20%	75%	20%
Total	100%	100%	45%

Five or fewer individuals (Javier and Sara) together own at least 80% (actually 100%) of each corporation's stock. However, those same individuals own only 45% of the corporations' stock taking into account only their common ownership. Because their ownership does not satisfy the more-than-50% test, East and West are not a brother-sister controlled group under either the 50%–80% or the 50%-only definition. ◀

An individual's stock ownership can be counted for the 80% test only if that individual owns stock in each and every corporation in the controlled group.[42]

EXAMPLE C:3-32 ▶ Long and Short Corporations each have only a single class of stock outstanding, owned by the following individuals:

	Stock Ownership Percentages		
Shareholder	*Long Corp.*	*Short Corp.*	*Common Ownership*
Al	50%	40%	40%
Beth	20%	60%	20%
Carol	30%	—	—
Total	100%	100%	60%

Carol's stock does not count for purposes of Long's 80% stock ownership requirement because she owns no stock in Short. Only Al's and Beth's stock holdings count, and together they own only 70% of Long's stock. Thus, the 80% test fails. Consequently, Long and Short are not a brother-sister controlled group under the 50%–80% definition, but they are a brother-sister controlled group under the 50%-only definition. ◀

Combined Controlled Groups. A **combined controlled group** is comprised of three or more corporations meeting the following criteria:

- Each corporation is a member of a parent-subsidiary controlled group or a brother-sister controlled group.
- At least one of the corporations is both the parent corporation of a parent-subsidiary controlled group and a member of a brother-sister controlled group.[43]

KEY POINT

The combined controlled group definition does just what its name implies: It combines a parent-subsidiary controlled group and a brother-sister controlled group. Thus, instead of trying to apply the controlled group rules to two overlapping groups, the combined group definition eliminates the issue by combining the groups into one controlled group.

EXAMPLE C:3-33 ▶ Able, Best, and Coast Corporations each have a single class of stock outstanding, owned by the following shareholders:

	Stock Ownership Percentages		
Shareholder	*Able Corp.*	*Coast Corp.*	*Best Corp.*
Art	50%	50%	—
Barbara	50%	50%	—
Able Corp.	—	—	100%

Able and Coast are a brother-sister controlled group under the 50%–80% definition because Art's and Barbara's ownership satisfy both the 80% and 50% tests. Able and Best are a parent-subsidiary controlled group because Able owns at least 80% of Best's stock. Each of the three corporations is a member of either the parent-subsidiary controlled group (Able and Best) or the brother-sister controlled group (Able and Coast), and the parent corporation (Able) of the

---

[42] Reg. Sec. 1.1563-1(a)(3).

[43] Sec. 1563(a)(3).

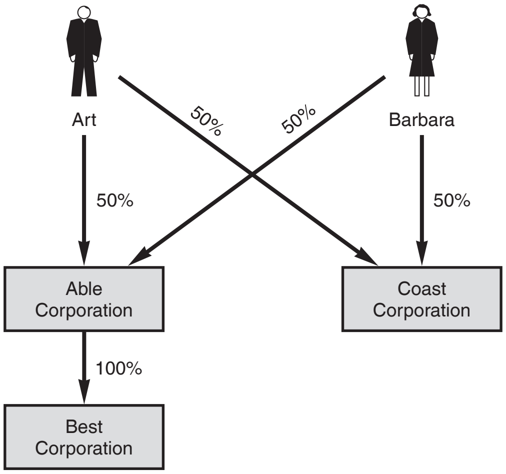

FIGURE C:3-3 ▶ Combined Controlled Group (Example C:3-33)

parent-subsidiary controlled group also is a member of the brother-sister controlled group. Therefore, Able, Best, and Coast Corporations are members of a combined controlled group. (See Figure C:3-3.) ◀

APPLICATION OF THE CONTROLLED GROUP TEST

Controlled group status generally is tested on December 31. A corporation is included in a controlled group if it is a group member on December 31 and has been a group member on at least one-half of the days in its tax year that precede December 31. A corporation that is not a group member on December 31, nevertheless, is considered a member for the tax year if it has been a group member on at least one-half the days in its tax year that precede December 31. Corporations are excluded from the controlled group if they were members for less than one-half the days in their tax year that precede December 31 or if they retain certain special tax statuses such as being a tax-exempt corporation.

EXAMPLE C:3-34 ▶ Ace and Copper Corporations are members of a parent-subsidiary controlled group of which Ace is the common parent. Both corporations are calendar year taxpayers and have been group members for the entire year. They do not file a consolidated return. Bell Corporation, which has a fiscal year ending on August 31, becomes a group member on December 1 of the current year. Although Bell is a group member on December 31 of the current year, it has been a group member for less than half the days in its tax year that precede December 31—only 30 of 121 days starting on September 1. Therefore, Bell is not a member of the Ace-Copper *controlled* group for its tax year beginning on September 1 of the current year. ◀

TAX STRATEGY TIP

A controlled group of corporations should elect to apportion the tax benefits in a manner that maximizes the tax savings from the tax benefits.

SPECIAL RULES APPLYING TO CONTROLLED GROUPS

A controlled group must apportion certain items among its group members, some of which are shown in Table C:3-2 on page C:3-23. For purposes of apportioning the Sec. 179 expense dollar limitation in a parent-subsidiary situation, the corporations are considered a controlled group if the ownership percentage is more than 50% rather than at least 80%.[44]

In addition to the above restrictions, Sec. 267(a)(1) allows no deduction for any loss on the sale or exchange of property between two members of the same controlled group, with control defined as more than 50% rather than as at least 80%. However, in contrast to losses between a corporation and controlling shareholder described earlier in this chapter, a loss realized on a transaction between members of a controlled group is deferred (instead of being disallowed). The original selling member recognizes the deferred loss when the property sold or exchanged in the intragroup transaction is sold outside the controlled group.

---

[44] Secs. 179(d)(6) and (7).

Section 267(a)(2) allows no deduction for certain accrued expenses or interest owed by one member of a controlled group to another member of the same controlled group when the two corporations use different accounting methods so that the payments would be reported in different tax years. (See pages C:3-20 and C:3-21 for a detailed discussion of Sec. 267.) The Sec. 1239 rules that convert capital gain into ordinary income on depreciable property sales between related parties also apply to sales or exchanges involving two members of the same controlled group. Sections 267 and 1239, however, provide special definitions of controlled groups that differ somewhat from those described above. These details are beyond the scope of this text.

TYPICAL MISCONCEPTION

The definitions of a parent-subsidiary controlled group and an affiliated group are similar, but not identical. For example, the 80% stock ownership test for controlled group purposes is satisfied if 80% of the voting power *or* 80% of the FMV of a corporation's stock is owned. For purposes of an affiliated group, 80% of both the voting power *and* the FMV of a corporation's stock must be owned.

CONSOLIDATED TAX RETURNS

Who Can File a Consolidated Return. Some groups of related corporations (i.e., affiliated groups) may elect to file a single income tax return called a **consolidated tax return**. An **affiliated group** is one or more chains of includible corporations connected through stock ownership with a common parent. In general, includible corporations are those other than foreign corporations, certain insurance companies, tax-exempt organizations, S corporations, and a few other specially defined corporations. The required ownership criteria are as follows:

- The common parent must directly own stock with at least 80% of the voting power *and* 80% of the value of at least one includible corporation.
- One or more group members must directly own stock with at least 80% of the voting power *and* 80% of the value of each other corporation included in the affiliated group.[45]

Many parent-subsidiary controlled groups also qualify as affiliated groups and thus are eligible to file a consolidated return in place of separate tax returns for each corporation. The parent-subsidiary portion of a combined group also can file a consolidated tax return if it also qualifies as an affiliated group. Brother-sister controlled groups, however, are not eligible to file consolidated returns because the requisite parent-subsidiary relationship does not exist.

An affiliated group elects to file a consolidated tax return by filing a corporate income tax return (Form 1120) that includes the income and expenses of all its members. Each corporate member of the affiliated group must consent to the original election. Thereafter, any new member of the affiliated group must join in the consolidated return.

BOOK-TO-TAX ACCOUNTING COMPARISON

The corporations included in a consolidated tax return may differ from those included in consolidated financial statements. Page 1 of Schedule M-3 (which is discussed later in this chapter) reconciles financial statement worldwide consolidated net income to financial statement net income (loss) of corporations included in the consolidated tax return.

Advantages of Filing a Consolidated Return. A consolidated return, in effect, is one tax return for the entire affiliated group of corporations. The main advantages of filing a consolidated return are

- Losses of one member of the group can offset profits of another member of the group.
- Capital losses of one member of the group can offset capital gains of another member of the group.
- Profits or gains realized on intercompany transactions are deferred until a sale outside the group occurs (i.e., if one member sells property to another member, the gain is postponed until the member sells the property to someone outside the affiliated group).

In contrast, if the group members file separate returns, members with NOLs or capital losses must carry these losses to other years rather than offset another member's profits or gains in the current year.

Although the losses of one group member can offset the profits of another group member when the group files a consolidated return, some important limitations apply to the use of a member corporation's NOL. These limitations prevent one corporation from purchasing another corporation's NOL carryovers to offset its own taxable income or purchasing a profitable corporation to facilitate the use of its own NOL carryovers. (See Chapters C:7 and C:8.)

The following example illustrates the advantage of a consolidated return election.

SELF-STUDY QUESTION

What is probably the most common reason for making a consolidated return election?

ANSWER

Filing consolidated returns allows the group to offset losses of one corporation against the profits of other members of the group.

---

[45] Sec. 1504(a).

EXAMPLE C:3-35 ► Parent Corporation owns 100% of Subsidiary Corporation's stock. Parent reports $110,000 of taxable income, including a $10,000 capital gain. Subsidiary incurs a $100,000 NOL and a $10,000 capital loss. If Parent and Subsidiary file separate returns, Parent has a $23,100 ($110,000 × 0.21) tax liability. Subsidiary has no tax liability but may be able to use its $100,000 NOL and $10,000 capital loss to offset income and capital gains in other years. On the other hand, if Parent and Subsidiary file a consolidated return, the group's consolidated taxable income is zero and the group has no tax liability. By filing a consolidated return, the group saves $23,100 in taxes for the current year. ◄

Disadvantages of Filing a Consolidated Return. The main disadvantages of a consolidated return election are

- The election is binding on all subsequent tax years unless the IRS grants permission to discontinue filing consolidated returns or the affiliated group terminates.
- Losses on intercompany transactions are deferred until a sale outside the group takes place.
- One member's net Sec. 1231 loss offsets another member's net Sec. 1231 gain instead of being reported as an ordinary loss.
- Losses of an unprofitable member of the group may reduce the deduction or credit limitations of the group below what would be available had the members filed separate tax returns.
- The group may incur additional administrative costs in maintaining the records needed to file a consolidated return.

ADDITIONAL COMMENT

Under Sec. 267 discussed earlier, intercompany losses may be deferred even if the corporations file separate tax returns.

Determining whether to make a consolidated tax return election is a complex decision because of the various advantages and disadvantages and because the election is so difficult to revoke once made. Chapter C:8 provides detailed coverage of the consolidated return rules.

TAX PLANNING CONSIDERATIONS

OBJECTIVE 4

Identify planning strategies to reduce taxes for corporations and their shareholders

COMPENSATION PLANNING FOR SHAREHOLDER-EMPLOYEES

Compensation paid to a shareholder-employee in the form of salary has the advantage of single taxation because, while taxable to the employee, salary is deductible by the corporation. Dividend payments, on the other hand, generally are taxed twice. The corporation is taxed on its income when earned, and the shareholder is taxed on profits distributed as dividends. Double taxation occurs because the corporation may not deduct dividend payments. However, with dividends being taxed at preferential capital gains rates and the corporation being taxed at a low 21% tax rate, the double taxation of corporate income is not as onerous as it has been under past higher tax rate regimes.[46] Specifically, the 21% corporate tax rate provides less of a tax benefit for a salary deduction than in the past, and payroll taxes may further reduce the benefit of salary payments.

EXAMPLE C:3-36 ► Delta Corporation earns $100,000 and wishes to distribute $100,000 or as much of the $100,000 as possible to Mary, its sole shareholder and CEO. Mary's taxable income before any distribution is sufficiently high such that her ordinary marginal tax rate is 37%, and her capital gains rate is 23.8% (20% plus the 3.8% rate on net investment income). The corporation's tax rate is 21%. Ignoring payroll taxes, the following table compares salary and dividend payments to Mary with respect to the $100,000 of partial earnings:

---

[46] The shareholder portion of the double taxation of corporate income does not occur in some situations, such as shares held by tax-exempt entities and Roth IRAs.

	Salary	*Dividend at Capital Gains Tax Rate*
1. Corporate earnings	$100,000	$100,000
2. Minus: Salary deduction	(100,000)	-0-
3. Corporate taxable income	$ -0-	$100,000
4. Times: Corporate tax rate	0.21	0.21
5. Corporate income tax	$ -0-	$ 21,000
6. Dividend to Mary (Line 1 − Line 5)	$100,000	$ 79,000
7. Times: Mary's tax rate	0.37	0.238
8. Mary's tax	$ 37,000	$ 18,802
9. Total tax (Line 5 + Line 8)	$ 37,000	$ 39,802
10. Overall tax rate (Line 9 ÷ Line 1)	37%	39.8%

Thus, in this situation, the double taxation due to paying nondeductible dividends instead of deductible salary increases Mary's overall tax rate from 37% to 39.8%. ◀

The overall tax rates in the previous example can be generalized as follows:

- Salary situation: The individual's marginal tax rate on ordinary income
- Dividend situation: 21% + capital gains tax rate × (1 − 0.21)

EXAMPLE C:3-37 ▶

Using the above formulations, the following table shows results for various levels of taxable income for a married couple filing jointly, along with a 21% corporate tax rate.

ADDITIONAL COMMENT

See the Quick Reference section of the text for a table of breakpoints for the capital gains tax rates based on filing status and taxable income levels.

Taxable Income	*Individual Marginal Tax Rate*	*Capital Gains Tax Rate*	*Salary Overall Tax Rate*	*Dividend Overall Tax Rate*	*Dividend Minus Salary Overall*
$ 50,000	12%	0%	12%	21.00%	9.00%
150,000	22%	15%	22%	32.85%	10.85%
300,000	24%	18.8%	24%	35.85%	11.85%
450,000	32%	18.8%	32%	35.85%	3.85%
550,000	35%	18.8%	35%	35.85%	0.85%
700,000	35%	23.8%	35%	39.80%	4.80%
900,000	37%	23.8%	37%	39.80%	2.80%

Note that the overall tax rate in the dividend situation increases as the tax rate on capital gains increases, while the overall tax rate in the salary situation increases with the taxpayer's marginal tax rate. In this example, the difference between the two is small in the fifth row, where the two overall rates are nearly the same. Also, this example assumes the dividend or salary all remains in one tax bracket. If the amounts cross through more than one bracket, the analysis becomes more complex. For example, see Problem C:3-53 at the end of this chapter. ◀

To avoid double taxation, some owners of closely held corporations prefer to be taxed under the rules of Subchapter S (see Chapter C:11). Other owners of closely held corporations retain C corporation status to benefit from nontaxable fringe benefits, such as health and accident insurance. These fringe benefits are nontaxable to the employee and deductible by the corporation. For both tax and nontax reasons, closely held corporations must determine the appropriate level of earnings to be withdrawn from the business in the form of salary and fringe benefits and the amount of earnings to be retained in the business.

ADDITIONAL COMMENT

Reasonableness of a salary payment is a question of fact to be determined in each case. No formula can be used to determine a reasonable amount.

Advantage of Salary Payments. If a corporation distributes all its profits as deductible salary and fringe benefit payments, it will eliminate double taxation. However, the following considerations limit such tax planning opportunities:

- Regulation Sec. 1.162-7(a) requires salary or fringe benefit payments to be reasonable in amount and to be paid for services rendered by the employee. If the IRS deems compensation to be unreasonable, it may disallow the portion of the salary it deems unreasonable while still requiring the employee to include all compensation in gross income (see Chapter C:4). This disallowance will result in double taxation. The reasonable compensation restriction primarily affects closely held corporations.

- As the chapter discussed earlier, Sec. 162(m) limits the deduction for compensation paid to the corporation's CEO, CFO, or other covered employee to $1 million.[47]
- A corporation is a taxpaying entity independent of its owners and is taxed at a 21% rate. This rate may be lower than the marginal tax rate that applies to an individual taxpayer and provides an incentive to retain some earnings in the corporation instead of paying them out as salaries.
- A combined employee–employer Social Security tax rate of 15.3% generally applies to salaries and wages. Employers and employees are each liable for 6.2% of old age security and disability insurance tax, for a total of 12.4% on wages up to the salary cap ($168,600 for 2024 and $176,100 for 2025). Employers and employees also are each liable for a 1.45% Medicare hospital insurance tax, for a total of 2.9% of all wages. An additional 0.9% for the Medicare hospital insurance tax applies to the employee's portion of wages exceeding $200,000 ($250,000 for married filing jointly). In addition to these federal payroll taxes, state and federal unemployment taxes may be imposed on a portion of wages paid.

TAX STRATEGY TIP

A nontaxable fringe benefit is one of the most cost effective forms of compensation because its amount is deductible by the employer and is not taxable to the employee. Thus, where possible, such fringe benefits are an excellent compensation planning tool. For closely held corporations, however, the tax savings to shareholder-employees are reduced because the nontaxable fringe benefit must be offered to all employees without discrimination.

Advantage of Nontaxable Fringe Benefits. Nontaxable fringe benefits provide two types of tax advantages: a tax deferral or an exclusion. Qualified pension, profit-sharing, and stock bonus plans provide a tax deferral; that is, the corporation's contribution to such a plan is not taxable to the employees when the corporation makes the contribution. Instead, employees are taxed on the benefits when they receive them. Other common fringe benefits, such as the first $50,000 of group term life insurance and accident and health insurance, are exempt from tax altogether; that is, the employee never is taxed on the value of these fringe benefits.

Because the employee excludes the value of such fringe benefits from gross income, the marginal individual tax rate applicable to these benefits is zero. Thus, conversion of salary into a nontaxable fringe benefit provides tax savings for the shareholder-employee equal to the amount of the converted salary times the employee's marginal tax rate, assuming the shareholder-employee could not purchase the same fringe benefit and deduct its cost on his or her individual tax return.

COMPLIANCE AND PROCEDURAL CONSIDERATIONS

OBJECTIVE 5

Comply with corporate federal income tax filing requirements

ESTIMATED TAXES

Every corporation that expects to owe more than $500 in tax for the current year must pay four installments of estimated tax, each equal to 25% of its required annual payment.[48] For corporations that are not large corporations (defined below), the required annual payment is the lesser of 100% of the tax shown on the current year return or 100% of the tax shown on the preceding year return. A corporation may not base its required estimated tax amount on the tax shown on the preceding year return if the preceding year tax return showed a zero tax liability.[49] The estimated tax amount is the corporation's income tax liability that exceeds its tax credits.

---

[47] Sec. 162(m).

[48] Sec. 6655.

[49] Rev. Rul. 92-54, 1992-2 C.B. 320.

Estimated Tax Payment Dates. A calendar year corporation must deposit estimated tax payments in a Federal Reserve bank or authorized commercial bank on or before April 15, June 15, September 15, and December 15.[50] This schedule differs from that of an individual taxpayer. The final estimated tax installment for a calendar year corporation is due in December of the tax year rather than in January of the following tax year, as is the case for individual taxpayers. For a fiscal year corporation, the due dates are the fifteenth day of the fourth, sixth, ninth, and twelfth months of the tax year.

EXAMPLE C:3-38 ▶ Garden Corporation, a calendar year taxpayer, expects to report $144,000 of tax for the current year. Garden's tax liability last year was $120,000. Assuming Garden is not a large corporation, its required annual payment for the current year is $120,000, the lesser of its prior year liability ($120,000) or its current year tax return liability ($144,000). Garden will not incur a penalty if it deposits four equal installments of $30,000 ($120,000 ÷ 4) on or before April 15, June 15, September 15, and December 15 of the current year. ◀

TYPICAL MISCONCEPTION

The easiest method of determining a corporation's estimated tax payments is to pay 100% of last year's tax liability. Unfortunately, for "large corporations," other than for its first quarterly payment, last year's tax liability is not an acceptable method of determining the required estimated tax payments. Also, last year's tax liability cannot be used if no tax liability existed in the prior year or if the corporation filed a short-year return for the prior year.

Different estimated tax payment rules apply to large corporations. A large corporation's required annual payment is 100% of the tax shown on the current year return. A large corporation's estimated tax payments cannot be based on the prior year's tax liability except the first installment. If a large corporation bases its first estimated tax installment on the prior year's liability, any shortfall between the required payment based on the current year's tax liability and the actual payment must be made up with the second installment.[51] A large corporation is one whose taxable income was $1 million or more in any of its three immediately preceding tax years. Controlled groups of corporations must allocate the $1 million amount among its group members.

EXAMPLE C:3-39 ▶ Assume the same facts as in Example C:3-38 except Garden is a large corporation (i.e., it had more than $1 million of taxable income in one of its prior three years). Garden can base its first estimated tax payment on either 25% of its current year tax liability or 25% of last year's tax liability. Garden should use its prior year tax liability as the basis for its first installment because it can reduce the needed payment from $36,000 (0.25 × $144,000) to $30,000 (0.25 × $120,000). However, it must recapture the $6,000 ($36,000 − $30,000) shortfall when it pays its second installment. Therefore, the total second installment is $42,000 ($36,000 second installment + $6,000 recapture from first installment). The third and fourth installments are $36,000 each. ◀

KEY POINT

The amount of penalty depends on three factors: the applicable underpayment rate, the amount of the underpayment, and the amount of time that lapses until the corporation makes the payment.

Penalties for Underpayment of Estimated Tax. The IRS will assess a nondeductible penalty if a corporation does not deposit its required estimated tax installment on or before the due date for that installment. The penalty is the underpayment rate found in Sec. 6621 times the amount by which the installment due by a payment date exceeds the payment actually made.[52] The penalty accrues from the payment due date for the installment until the earlier of the actual date of the payment or the due date for the tax return (excluding extensions).

EXAMPLE C:3-40 ▶ Globe Corporation is a calendar year taxpayer that reported a $100,000 tax liability for 2024. Globe's tax liability for 2023 was $125,000. It should have made estimated tax payments of $25,000 ($100,000/4) on or before April 15, June 15, September 15, and December 15, 2024. If any of these dates fall on a weekend or holiday, a payment made on the next business

---

[50] Sec. 6655(c)(2). If the fifteenth falls on a weekend or holiday, a payment made on the next business day is considered made on the fifteenth due date. Regarding an April 15 due date, the filer also must consider Emancipation Day, which is an observed holiday in Washington, D.C. on April 16. If April 16 falls on Saturday, the observed holiday is the preceding Friday. If it falls on Sunday, the observed holiday is the succeeding Monday.

[51] Sec. 6655(d)(2)(B). A revision to the required estimated tax payment amount also may be needed if the corporation is basing its quarterly payments on the current year's tax liability. Installments paid after the estimate of the current year's liability has been revised must take into account any shortage or excess in previous installment payments resulting from the change in the original estimate.

[52] Sec. 6621. This interest rate is the short-term federal rate as determined by the Secretary of the Treasury plus three percentage points. It is subject to change every three months. The interest rate for large corporations is the short-term federal rate plus five percentage points. This higher interest rate begins 30 days after the issuance of either a 30-day or 90-day deficiency notice.

ADDITIONAL COMMENT

This illustration pertains to 2024 because tax forms for that year are the latest available at the time this text was published.

day is considered to have been made on the due date. No penalty is assessed if Globe deposited or is considered to have deposited the requisite amounts on or before each of those dates. However, if Globe deposited only $16,000 ($9,000 less than the required $25,000) on April 15, 2024, and did not deposit the remaining $9,000 before the due date for the 2024 return, the corporation must pay a penalty on the $9,000 underpayment for the period of time from April 16, 2024, through April 15, 2025. If Globe deposits, or is considered to have deposited, $34,000 on the second installment date (June 15, 2024), so that it has paid a total of $50,000 by the second installment due date, the penalty runs only from April 16, 2024, through June 15, 2024.

Now assume that Globe instead made, or is considered to have made, the following estimated tax payments in 2024:

Date	*Amount*
April 15	$16,000
June 15	16,000
September 15	21,000
December 15	35,000

Form 2220 in Appendix B calculates the underpayments and resultant penalty given this pattern of payments. ◀

Special Computation Methods. In lieu of the current year and prior year methods, corporations can use either of two special methods for calculating estimated tax installments:

- The annualized income method
- The adjusted seasonal income method

The Annualized Income Method. This method is useful if a corporation's income is likely to increase a great deal toward the end of the year. It allows a corporation to base its first and second quarterly estimated tax payments on its annualized taxable income for the first three months of the year. The corporation then bases its third payment on its annualized taxable income for the first six months of the year and its fourth payment on annualized taxable income for the first nine months of the year. (Two other options for the number of months used for each installment also are available.)

EXAMPLE C:3-41 ▶

Erratic Corporation, a calendar year taxpayer, reports current year taxable income of: $10,000 in each of January, February, and March; $20,000 in each of April, May, and June; and $50,000 in each of the last six months of the current year. Assuming a 21% tax rate, Erratic's annualized taxable income and annualized tax are calculated as follows:

TAX STRATEGY TIP

Both the "annualized income exception" and the "adjusted seasonal income exception" are complicated computations. However, due to the large amounts of money involved in making corporate estimated tax payments along with the possible underpayment penalties, the time and effort spent in determining the least amount necessary for a required estimated tax payment are often worthwhile.

Through	*Cumulative Taxable Income*	*Annualization Factor*	*Annualized Taxable Income*	*Tax on Annualized Taxable Income*
Third month	$ 30,000	12/3	$120,000	$ 25,200
Sixth month	90,000	12/6	180,000	37,800
Ninth month	240,000	12/9	320,000	67,200

Assuming Erratic uses the annualized method for all four estimated tax payments, its installments will be as follows:

Installment Number	*Annualized Tax*	*Applicable Percentage*	*Installment Amount*	*Cumulative Installment*
One	$ 25,200	25%	$ 6,300[a]	$ 6,300
Two	25,200	50	6,300[b]	12,600
Three	37,800	75	15,750[c]	28,350
Four	67,200	100	38,850[d]	67,200

[a] $25,200 × 0.25
[b] ($25,200 × 0.50) − $6,300
[c] ($37,800 × 0.75) − $12,600
[d] ($67,200 × 1.00) − $28,350

◀

A corporation may use the annualized income method for an installment payment only if it is less than the regular required installment (including the recapture described in the next sentence). It must recapture any reduction in an earlier required installment resulting from use of the annualized income method by increasing the amount of the next installment that does not qualify for the annualized income method.

For small corporations, the sure way to avoid a penalty for the underpayment of estimated tax is to base the current year's estimated tax payments on 100% of last year's tax. This approach is not possible, however, for large corporations or for corporations that owed no tax in the prior year or that filed a short period tax return for the prior year. This approach also is not advisable if the corporation had a high tax liability in the prior year and expects a low tax liability in the current year.

Adjusted Seasonal Income Method. A corporation may base its installments on its adjusted seasonal income. This method permits corporations that earn seasonal income to annualize their income by assuming income earned in the current year is earned in the same pattern as in preceding years. As in the case of the annualized income exception, a corporation can use the seasonal income exception only if the resulting installment payment is less than the regular required installment. Once the exception no longer applies, any savings resulting from its use for prior installments must be recaptured.

Reporting the Underpayment. A corporation reports its underpayment of estimated taxes and the amount of any penalty on Form 2220 (Underpayment of Estimated Tax by Corporations). A completed Form 2220 using the facts from Example C:3-40 appears in Appendix B.

Paying the Remaining Tax Liability. A corporation must pay its remaining tax liability for the year when it files its corporate tax return. An extension of time to file the tax return, however, does *not* extend the time to pay the tax liability. If any tax remains unpaid after the original due date for the tax return, the corporation must pay interest at the underpayment rate prescribed by Sec. 6621 from the due date until the corporation pays the tax. In addition to interest, the IRS assesses a penalty if the corporation does not pay the tax on time and cannot show reasonable cause for the failure to pay. The IRS presumes that reasonable cause exists if the corporation requests an extension of time to file its tax return and the amount of tax shown on the request for extension (Form 7004) or the amount of tax paid by the original due date of the return is at least 90% of the corporation's tax shown on its Form 1120.[53] A discussion of the failure-to-pay penalty and the interest calculation can be found in Chapter C:15.

STOP & THINK

Question: Why does the tax law permit a corporation to use special methods such as the annualized income method to calculate its required estimated tax installments?

Solution: A large corporation whose income varies widely may not be able to estimate its taxable income for the year until late in the year, and it is not allowed to base its estimates on last year's income. If, for example, a calendar year corporation earns income of $100,000 per month during the first six months of its year, it might estimate its first two installments on the assumption that it will earn a total taxable income of $1.2 million for the year. But if its income unexpectedly increases to $500,000 per month in the seventh month, it would need an annualized method to avoid an underpayment penalty for the first two installments. Were it not for the ability to use the annualized method, the corporation would have no way to avoid an underpayment penalty even though it could not predict its taxable income for the year when it made the first two installment payments.

[53] Reg. Sec. 301.6651-1(c)(4).

REQUIREMENTS FOR FILING AND PAYING TAXES

A corporation must file a tax return, Form 1120 (U.S. Corporation Income Tax Return), even if it has no taxable income for the year.[54] If the corporation did not exist for its entire annual accounting period (either calendar year or fiscal year), it must file a short period return for the part of the year it did exist. For tax purposes, a corporation's existence ends when it ceases business and dissolves, retaining no assets, even if state law treats the corporation as continuing for purposes of winding up its affairs.[55]

A completed Form 1120 corporate income tax return appears in Appendix B. A spreadsheet that converts book income into taxable income for the Johns and Lawrence business enterprise (introduced in Chapter C:2) is presented with the C corporation tax return.

REAL-WORLD EXAMPLE

In 2023, the IRS collected $455.0 billion from corporations, which was 9.7% of the $4.7 trillion collected by the IRS.
